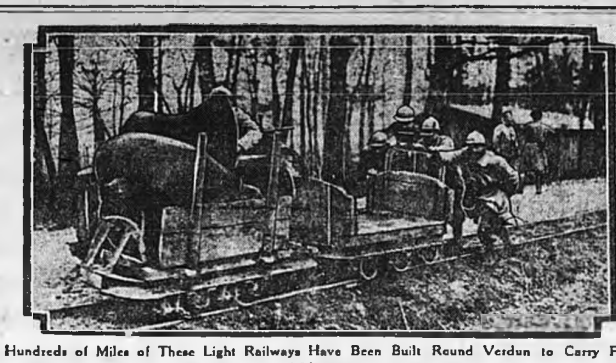
In spite of its lumpy armor, the sturgeon furnishes a valuable and attractive leather. It has been found that when the bony plates are removed the patterns remain on the skin, just as the patterns of alligator scales remain on alligator leather—a circumstance that adds greatly to the value of the product. From the sturgeons that abound on our Pacific Coast and in the Great Lakes we get a tough leather that is used for the making of laces to join leather belting for machinery. It is said that the lacing frequently outwears the belting itself.

There is found in Turkish waters a strikingly unattractive fish called the angel-fish, classed among the littoral sharks. The fish yields an extremely high quality of green leather, much esteemed in the Ottoman dominions.

SUGAR CARDS IN ENGLAND.



Issued to 25,000 Members of a Co-operative Society.

Sugar cards have been issued to the 26,000 members of the Sheffield and Ecclesfield Co-operative Society, says a London despatch. Before sugar can be bought at any of the stores the card, which bears the member's name and number, must be presented. When the quantity bought weekly is half the normal quantity in peace times a record is made on the card. Non-members are not supplied.

The system has been adopted by other societies and is proving most successful in husbanding supplies.

Speaking of the likelihood of the card system being extended to other articles, T. Walton, the general manager, said that his board felt that it would be necessary before very long if supplies diminished as they were doing week by week. Cards for all food might soon be in use.

Sixty miles of thread woven from the fibre of a species of Italian nettle weighs but two and a half pounds.

Hundreds of Miles of These Light Railways Have Been Built Round Verdun to Carry Food and Munitions

EVOLUTION OF AN ARMY OFFICER

SOME OF THE SECRETS OF NECESSARY EFFICIENCY.

Thoroughness, Discipline, Cheerfulness, Fairness and Truthfulness.

A military writer in the London Daily Express says:—

It is no difficult thing to become an officer in these strenuous times. To be a thoroughly efficient one is anything but easy. In the first place, an officer should be thorough in all his dealings—on the barrack square and on the training area, in the barrack-room and in the officers' mess. Discipline is the key to thoroughness, and thoroughness spells reliability. It follows, then, that the very first thing for the young officer to master is discipline. Discipline is the secret of the Guards, of the line regiments which fought at Mons, and of the famous 29th Division, who made their name an the Gallipoli Peninsula.

An officer must understand his profession, he must know the why and wherefore of things: it is not sufficient to give three days C.B. to Private Smith for having a dirty rifle on parade. Private Smith must be made to understand, first, why his rifle is dirty; second, the importance of its being kept spotlessly clean; and, last, that he is being punished in order that it shall be cleaned properly in the future.

"Telling Off."

There are two way of "telling off" a man. The mediocre officer finds fault in this way: "Oh! you've got a dirty rifle, have you? Very well, Sergeant, take this man's name." The offender gets no chance of making his excuse, good or bad, and he is punished, as he thinks, unjustly He goes to his barrack-room and sulks. The good officer hears what the defaulter has to say, reasons with him, points out what happens to men who get "slack," and gently but firmly impresses upon him that he has got to be punished, that he must make the best of it, and that he must not at any time let the offence occur again. In nine cases out of ten the man appreciates this kind of "telling off," and appears on parade with his rifle as it should be. If, as is sometimes the case, the dirty rifle appears again, then the man must be jumped on "hard and proper."

The ideal officer must have spirit and character, cleanliness in thought and action; he must know his men as the flying man knows his engine. If these traits are blended with a thorough knowledge of the soldier's profession, there is not much that is lacking. The officer who is careful in all circumstances, who is just, but firm, with his men, who listens to grievances which are not "grousings," and seeks to remedy them, can do as he likes with his men, no matter what the circumstances may be.

There are many well-meaning young officers who suffer from forgetfulness. There was a subaltern crossing the Mediterranean, on his way to the Dardanelles, who prided himself on his Sandhurst education, on his knowledge of soldiering, and many other things which he did not possess. He was a gay, light-hearted boy, who looked upon everything as a good joke—and the men of his draft called him "Albert." Now one night, after a long afternoon's duties, as officer of the guard, "Albert" turned up to first dinner looking particularly beautiful. The meal started with "Albert" in fine form; as he said, he and his men had done a good day's work, "earned a day's pay today—what."

"Albert's" whiskey and soda had just been brought to him, when, whether by design or ill-luck, his major at an opposite table caught his eye, and, with a murmured apology to his neighbor, pushed back his chair and came over to the young subaltern's table. "Earned your dinner, eh, young man" said the major. "I should smile," replied "Albert," who cultivated American slang among other habits. "And, of course," continued the major, suavely and politely, "your men have had their supper all right—no complaints, eh." "Albert" blushed red from the tip of his beautifully clipped moustache to his plastered hair. He had forgotten. The rest of the incident was short and painful.

Five Cardinal Points.

The real "pukka" officer does not forget. He never "thinks so." He makes it his business to know. There are five sound words stored in the back of every good officer's brain:—

Cheerfulness Accuracy
Pluck Fairness
Truthfulness

The man who hears all these qualities cannot go far wrong. To be able to take a senior officer's dressing down when it is undeserved, and at the same time to store up the words of good advice for future reference; to differentiate between the Tommy who has a "dying grandmother" and the man whose wife is really ill, can only be accomplished by the man who has character and who understands his men.

"Get to know your men" is a maxim which most officers have impressed upon them in the early period of their soldiering. There are some officers who have no secrets with their men. Their minds are as an open book to the good officer. He knows their weaknesses and their good points, listens to their sorrows and their love affairs, and in some cases even helps them write their letters. Men would go through anything for these officers.

ONE SHOT, 2,300 CASUALTIES.

Description of the Famous German 16-inch Howitzers.

In the recent fighting around Verdun no ordeal was more terrible for the devoted French soldiers than the bombardment by the famous German 16-inch howitzers.

These guns—which, by the way, each requires twelve railway cars to transport them—fire a shell which weighs nearl yhalf a ton, and which, stood on end, reaches higher from the ground than the ordinary mantelpiece.

It takes twenty-six hours to set up each gun, that is to say, to assemble the various parts, six hours to adjust the range, 200 men to serve it, and each shot cost $2620.

The gun crew, who fire the gun from a distance of 300 yards, have to wear special protectors for ears, eyes and mouth, and to lie flat on the ground to save themselves from injury during the terrific shock of the discharge. The gun itself is mounted on a foundation twenty-six feet deep, and in this foundation are special mines which the engineer in charge is sworn to explode, and so destroy the gun should there be any danger of it being captured.

As evidence of the enormous damage this gun can do, it may be mentioned that one shot at Liege killed orwounded 2,300 men, and the fortresses of Namur and Maubeuge each surrendered after only two of these gigantic shells had struck them.

JAWBONE OF RICHARD II.

Westminster Abbey Story Says It Was Unearthed by Schoolboy.

Many strange stories are centred in Westminster Abbey, but the following, which the Church Family Newspaper says has been hitherto unpublished, is one of the most remarkable. Ninety years ago, a boy at Westminster School, which adjoins the Abbey, burrowed through the sandstone forming the foundation of one of the walls. Inside the cavity he felt a skeleton, from which he succeeded in removing what turned out to be a human jawbone. He took it home to his father, who visited the Abbey, and formed the opinion that his son had raided the tomb of Richard II.

The bone remained in the family, labeled "Jawbone of Richard II." until late in King Edward's reign, when the then owner sent it to the King with an explanatory letter. The hole made by the by had long since been closed up, and its whereabouts could not be traced, but after many formalities Richard's tomb was opened, and, sure enough, the jawbone of the skeleton was found to be missing. It was replaced, and a parchment manuscript recording the circumstances was deposited in the tomb.

BRITAIN IS IN ACCORD WITH RUSSIA

KING GEORGE ADDRESSES RUSSIAN VISITORS.

Complete Agreement Has Been Reached on Conduct of the War.

King George gave a stirring address at Buckingham Palace recently to the Russian visitors from the Council of the Empire and the Duma. At the Government banquet in the evening Mr. Asquith said Great Britain and Russia are in complete agreement on all points of Eastern policy—Constantinople, Persia, etc.

"However long and however severe the days of our common endurance may be, we will stand together until we have beaten to the ground the forces which now withstand us, and we can begin in peace to rebuild, in concert with one another, the shaken fabric of European civilization."

The King at the palace extended a cordial welcome to the visitors and said:—

"I consider it a privilege that I am enabled to meet you here to-day. My pleasure in doing so is much enhanced by the opportunity thus given me to convey to you, and through you to the great Russian Empire, the heartfelt desire of myself and of my people that the relations of our two countries should become even closer and more intimate.

Russia's Feats of Arms.

"To-day we are pursuing a common aim in the brotherhood of arms. May we remain firmly and lastingly united when we have together attained the victories for which our armed forces are now so valiantly fighting. I can assure you, gentlemen, that the whole nation has followed with the keenest interest and the deepest admiration the marvellous feats of arms performed by the gallant Russian troops throughout this war, and the brilliant achievements which, conjointly with the Russian naval forces, they have recently accomplished, in the face of formidable difficulties, in the Asiatic provinces of the Ottoman Empire.

"The armies of our two countries are engaged on fields widely distant, but I rejoice to think that my gallant sailors have been able to render services in concert with their Russian comrades, and that in other ways my country has gladly given what I believe to be useful and effective help.

Strengthen the Bonds.

"I trust that during your visit to this country you will be able to assure yourselves of the whole-hearted vigor with which my whole Empire is performing its part in this stupendous war, and its determination to make every sacrifice in furtherance of the cause which I and my allies have at heart.

"I would also wish to express my sincere hope that the two countries, with their great resources and their immense possibilities, will understand that it is for the benefit of both to establish close intercourse. Every nation can learn from another and give to another; the better they know each other the more true that becomes, and I earnestly hope that our two countries will give of their best to each other. Community of interests in this respect will go far to strengthen the bonds which at present unite the two nations."

Felt It Coming.

Whenever Robert's mother went away on a visit the little fellow was so badly spoiled by a doting father and grandmother that upon her return it took several applications of the rod to mend his ways.

One day, when she had been absent for a week, a neighbor asked Roger when his mother was coming home.

"Oh, she'll be back very soon now," he replied. "I'm beginning to get pretty bad!"

Tourist (to guide):—"That's a very imposing statue, guide." Guide—"Indeed, you are right, sir; most people are imposed on by it. They think it's marble, but it's only painted wood."

PRINCE OF WALES IN THE STOKEHOLD

WHEN KING GEORGE ACTED AS A SHIP'S FIREMAN.

Memories of the Time He Shoveled Coal into the Furnaces of the Indomitable.

It used to be said our Sailor King that in his early days he was never more at his ease than when on the deck of a man-of-war. He always had the faculty of being able to adapt himself to all circumstances, and it did not surprise his old shipmates—although it greatly astonished the ordinary landlubber—to hear that when on his way home from Canada in 1908 he descended the stokehold of H.M.S. Indomitable and worked in the black inferno for at least forty minutes, says London Answers.

It was Vice-Admiral King-Hall who was captain of the Indomitable, and no doubt when the King invested him with the insignia of a Knight-Commander of the Most Honorable Order of the Bath pleasant memories of the visit to his Canadian Dominions had recurred to his Majesty, if he did not actually call to mind, the incident of the stokehold!

Volunteers Called For.

The Indomitable was making a record passage from the other side of the Atlantic, and it was a case of "all hands to the pumps"—or, rather, "all hands to the furnaces"! Volunteer stokers were called for, so as to get the maximum speed out of the Dreadnought cruiser, and the Prince was among the first to offer his services.

They were readily accepted by the astonished admiral. The Indomitable was ploughing through the "Herring Pond" at the rate of twenty-six knots when the royal stoker went on duty.

There was no time for formalities, and no man more interested in keeping up the vessel's speed than the Prince. The day before he had descended in ordinary attire to look at the stokehold; this time he went down in overalls and a cap-cover ready for the practical experience.

Once below the Prince was directed to the 100-ton bunker in the far corner of the stokehold, and was given a piece of chalk with which to mark up each skid as he filled it.

Having filled five skids, representing fifteen hundredweight of coal, and made four marks, drawing the fifth diagonally through the other four, the Prince stood ready with his shovel till he knew which furnace was to be coaled next.

Then, without any awkwardness or misfires, he shot his six shovelfuls of coal into one furnace, and six shovelfuls into another. He also took a brief turn at raking out the red-hot ashes, with the hot blast on his face.

Kept as Souvenirs.

Though quite in earnest about it all, the Prince smiled when his work was done, and, wiping the dripping perspiration from his brow and beard, remarked in the hearing of the stokers at hand:

"This is warm work! I don't think I'd care for it as a regular job.

His Royal Highness was now blackened with coal-dust from head to foot, for the grime takes effect very quickly in the stokehold.

A member of his Royal Highness' staff pocketed the Prince's piece of chalk as a keepsake, and the men made a hurried scramble to pick up bits of coal that had fallen from his shovel. These fragments they still hold as mementoes of the memorable incident. Moreover, the Prince's shovel was burnished, and was given a place of honor among the Indomitable's treasures.

On reaching the deck the Prince was photographed with his staff in the garb of the royal amateur stoker; that photograph, needless to say, is one of the most treasured souvenirs of the Canadian trip.

This is but one of the "exploits" the King has to his credit. Besides having worked in the stokehold, his Majesty was the first monarch to take a trip in a submarine beneath the surface of the sea. This occurred in Weymouth Bay on board submarine D4 nearly four years ago; since then the King has descended a mine, and learned at first hand something of the pitman's work.

It is better to be dependable than brilliant.

Have Been Tried and Found Good

WHY DODD'S KIDNEY PILLS ARE SO POPULAR

They Are Invaluable As a Tonic and Family Medicine As Well As a Preventive and Cure for the More Serious Kidney Diseases.

Chelmsford, Ont., June 5th (Special.)—"We have found Dodd's Kidney Pills extremely good. We are in good health thanks to Dodd's Kidney Pills."

These are the words of Miss Della Charron, a well known resident here. Others tell the same story. They have tried Dodd's Kidney Pills and found them good.

For Dodd's Kidney Pills as a tonic and family medicine are without an equal. When you feel worn, tired and run down the chances are ten to one that your kidneys are at fault.

When the kidneys become clogged or out of order, the circulation becomes sluggish, the impurities are not strained out of the blood and the result is weariness and lack of energy all over the body.

This condition is not only disagreeable but dangerous as well. The impurities in the blood are the seeds of disease. If they are not removed Rheumatism, Lumbago, Gravel, Dropsy, Diabetes, or Bright's Disease may result.

Guard against these diseases and get back your accustomed energy by using Dodd's Kidney Pills.

THE MONTENEGRIN "KAPA."

National Headdress for Prince and Peasant.

The round cap, or kapa, that the Montenegrin soldiers wear is a history of their country in miniature. The people of Montenegro, writes a correspondent of Pearson's Weekly, have a saying that "kapa talks," and they are not far wrong.

It is the national headdress for war, and it is the same for prince and peasant. In color it is a vivid crimson, but it has a deep black border, which leaves only a small crown of the foundation color visible.

The black border is a sign of mourning for the terrible Battle of Kossovo, when the old Serbian empire, of which Montenegro was a part, was overthrown by the Turks, and the Serbian army was annihilated. The red crown signifies "the field of blood" of the same great fight. When Constantinople falls, and their hereditary enemies are finally driven out of Europe, then, and not until then, will the Montenegrins remove the black border and wear the kapa all red.

On the red crown, in one corner, are five small circles in gold. These have a double significance. They symbolize first the five centuries that have elapsed since Kossovo was fought, and, secondly, the five colors that the Montenegrins see in the rainbow, the sign of hope that one day the glories of the old empire of the Czar Lazar will be restored.

Furthermore, the different insignia of army rank are worn on the rim of the kapa, from the crossed swords of the officer to the simple leaden star of the corporal. Also, the Montenegrin soldier wears his medals, if he has any, on the front of his cap, instead of on his tunic, as the soldiers of all other nations do.

No wonder the people of the Land of the Black Mountain say that "kapa talks"!

It is dangerous to ring a bell during a thunder-storm.

Concentrated Satisfaction

A great many former users of tea and coffee have learned that there is a pure food beverage made from wheat, which has delightful flavor.

It never exacts of its users the tribute of sleeplessness, heart-flutter, headache and other ills often caused by the drug, caffeine, in tea and coffee.

Instant Postum

has a delicious, snappy flavour and is absolutely free from caffeine or any harmful ingredient. Instant Postum is in condensed, soluble form, and wonderfully convenient for the home—for the picnic—for travel—everywhere.

If tea or coffee interferes with comfort or success, as it does for many users, try a shift to Postum.

"There's a Reason"

AN EXCELLENT MEDICINE FOR CHILDHOOD AILMENTS

Baby's Own Tablets are an excellent remedy for childhood ailments. They regulate the bowels, sweeten the stomach, banish colds and simple fevers and cure all minor ills of little ones. Concerning them Mrs. H. N. Elsam, Owls Head, N.S., writes: "I always use Baby's Own Tablets for my little ones and find them an excellent medicine for childhood ailments." The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

SKIING IN NORWAY.

An Exhilarating Sight to See a Troop of Soldiers on Skis.

When anyone writes of skiing in Norway, it is the purely Norwegian aspect of the sport that is of the most interest, says a correspondent of the London Times. Mountain skiing is, with the minor variations, due to local conditions, the same the world over; forest skiing is essentially the pastime of Norway. Those who are accustomed to the long runs over perfect snow common in Switzerland find little pleasure in following narrow and tortuous tracks through forest, and are, of course, incapable of marking out such a track for themselves; for forest skiing requires skill of a wholly different order from that necessary in the open. The paths are often hard and very bumpy, speed is quickly gathered, and great command over the ski is necessary to keep the balance and take the sharp turns between the trees. Few more exhilarating sights can be imagined than a troop of Norwegian soldiers flitting through the forest in Indian file, hard on each other's heels, all going full speed, prodding with their sticks to increase the pace even down the hills, never faltering at the humps, and swinging round the bends without a check.

The course of the fifty-kilometre race, which takes place annually before the great jumping competition at Holmenkollen, is laid right through the great forest of Nordmarken, and is covered by many of the competitors in about four hours and a quarter—not bad going for thirty-one miles up hill, down dale, and cross lakes, with the finish no lower than the start. The track to be followed is marked by little red streamers hung to the trees at intervals. It is laid by officials of the ski club, who delight in choosing the most difficult way they can find, and the actual tracks of whose skis constitute the course.

Last year I spent a night in a hut in the forest and went out in the morning to see the runners pass. They had been going about six miles when they passed me, and I chose a nice, tchick place on a good slope to see them go by. As they must go in single file they are started at two-minute intervals, and a competitor who is caught up with must give his pursuer room to pass him. There were thirty or forty starters, all very young men, and they went through the thicket at full speed. I had the ill-natured satisfaction of seeing two fall who failed to clear a particularly malicious bush with the tips of their skis; they pitched on their heads, but they were up again in a trice. Several of them avoided that particular bush with a side jump taken at the last moment, which served further to increase their pace. They were all going with an easy swing, which carried them with hardly an effort over the ground.

CAT WARNED LOST CRUISER.

When Arethusa Last Left Port Its Pet Refused to Go Aboard.

Seamen may be a superstitious lot, but withal they are scientific. They want to know the reason for things. In witness whereof it the following story of the ill-fated Arethusa, British battle cruiser, hero of a number of thrilling sea frays at the beginning of the war. It was sunk by a mine off the east coast of England last February. A writer in the London Dispatch tells the story:

"Talking to a member of the crew of the late H.M.S. Arethusa, I was interested to learn from him the story of the ship's pet, a cat.

"It is a curious fact that when the Arethusa was taking in oil fuel before leaving port on its last journey the mascot jumped from the cruiser on to the oil craft, and refused, despite all entreaties and caresses, to return to the doomed vessel. The cat had never done this before, and the 'tars' regarded its defection as an ill omen."

STINGING NEURALGIA

The Trouble Due to Nerves Starved for Lack of Good Blood.

An eminent medical writer has said that "neuralgia is the cry of starved nerves for better blood." The one great symptom of this trouble is pain, fierce, stabbing pain, that almost drives the sufferer frantic. The one cause is poor blood; the only cure is to enrich the blood. Heat applied to the inflamed nerves will give relief, but does not cure. Dr. Williams' Pink Pills furnish the blood all the needed elements, and the blood conveys them to the nerves. The only way of getting food or medicine to the nerves is through the blood, and the only way to enrich the blood is through a fair use of Dr. Williams' Pink Pills. In this way neuralgia, sciatica and other nerve disorders are promptly cured, and the whole system benefited and strengthened. Mrs. M. Gleason, R.R. No. 1, Uxbridge, Ont., who was a great sufferer from neuralgia, says: "I suffered intensely from neuralgia for four years. My blood was thin and I was completely run down. I suffered intense pain all the time. At different times I consulted three doctors, but their treatment did no more than give me temporary relief. Then I tried different medicines, but the result was the same—they seemed no good in my case. I was growing steadily worse, and finally could not do a bit of work. The last doctor I consulted could do nothing for me but give me morphine tablets to ease the pain, and by this time I had about resigned myself to a life of pain. Then one of Dr. Williams' almanacs came to our house and I read of similar cases cured through the use of Pink Pills. I got three boxes and before they were all gone the pain began to decrease, and I began to have a better appetite. By the time I had taken six boxes I was again a well woman, and my neighbors could hardly realize that such a change could be made in so short a time. Later I was bothered with eczema and Dr. Williams' Pink Pills cured me. I have found these Pills worth their weight in gold and I cheerfully recommend them to all who are ailing."

You can get these Pills from any medicine dealer or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

Higher Standards

The demonstration farms which the Canadian Pacific has set up, both east and west, have been employed with signal success in one special direction—the setting up of higher standards. Through precept and example the company has brought about a most flattering change in values. In other words, the example and encouragement of the railway company, through these farms and by other means, have caused those who have food products to sell to give closer attention to quality than was their former habit. The company insists upon the first-rate quality of food products on the cars; and has taught the farmers, both east and west, how best to supply A1 quality in butter, eggs, fowl, etc. In the neat and tidy putting up of food products, too, there has been decided improvement. The farmers have been set a fine example; and the people have seen, right at their elbow, that values can be greatly enhanced by careful attention to details.

Arousing Suspicion.

"That fellow pictures the delights of country life so vividly—"

"Yes?"

"That I am constrained to conclude he wants to sell his place."

From first to last shells are made by machinery.

Made in Canada.

400,000 MILES ON HIS YACHT.

Wonderful Record of Lord Brassey and the Sunbeam.

Lord Brassey, who recently celebrated his eightieth birthday, is always associated in the public mind with the ownership of one of the most famous yachts in the world, the Sunbeam.

The Sunbeam has now been presented to the Government of India for war service, and is doing duty as a hospital ship for convalescent officers off Alexandria.

Built forty-two years ago, she has taken her owner all over the world at various times, having sailed approximately 400,000 miles on her—and his—travels.

Holding his "master's ticket," as seaman call a captain's certificate, Lord Brassey has come safely through innumerable dangers with the Sunbeam. Almost at the very start of her first voyage round the world a huge "following" wave as nearly as possible swept half a dozen of the party overboard.

Writing of the incident in her book, "A Voyage in the Sunbeam," Lady Brassey (Lord Brassey's first wife) said:

"We were all sitting or standing about the stern of the vessel, admiring the magnificent dark blue billows following us. A new hand was steering, and just at the moment when an unusually big wave overtook us, he unfortunately allowed the vessel to broach-to a little.

"In a second the sea came pouring over the stern. A coil of rope on which Capt. Lecky (Lord Brassey's skipper and Isabelle (one of the Brassey children) were seated was completely flooded by the sea. Providentially, however, he had taken a double turn around his wrist with a reefing point, and, throwing his other arm round Mabelle, held on like grim death.

"Capt. Lecky, being accustomed to very large ships, had not in the least realized how near we were to the water in our little vessel"—the tonnage of the Sunbeam is only 227 tons—"and was proportionately taken by surprise."

The correct nautical description of the Sunbeam is: "A three-masted topsail schooner, fitted with auxiliary power"—that is to say, she is equipped with both sails and engines.

Over 2,000 women and girls work in one shed alone in a Birmingham munition factory.

Ask for Minard's and take no other

What Mother Knew.

He—"Congratulate me! Last night your sister promised me that she would marry me."

She—"Oh, she promised mother she would marry you long ago."

MINARD'S LINIMENT is the only Liniment asked for at my store and the only one we keep for sale.

All the people use it.

HARLIN FULTON.

Pleasant Bay, C.B.

Get a Decision.

"He called me an ass!"

"Don't stand for it."

"What'll I do?"

"Make him prove it."

Minard's Liniment Lumberman's Friend

What He Was.

They met once before. It was after he had had a stormy meeting at the lady's house with her father.

"Was your father a pirate?" he asked softly, as she flew to his arms and was enveloped by his enraptured embrace. She looked up at him and with the light of love shining in her beautiful eyes.

"Why no, darling, why do you ask?"

He seemed to me to be a great deal of a freebooter," he murmured, as he once more sought her ruby lips.

Minard's Liniment used by Physicians.

A VERY MYSTERIOUS TRICK.

A Simple Bit of Magic That is Very Puzzling.

A puzzling trick which will perplex your friends can be performed with an ordinary egg, some vinegar, and a bottle. Take an uncooked egg and let it stand for 15 or 20 minutes in pure vinegar. At the end of this time you will notice that the shell of the egg has become so soft that you can make a deep dent in it without making a hole.

Get a bottle, the neck of which is smaller than the egg, and with the fingers draw out the shell until you can insert it into the neck of the bottle. After you have the egg inside, pour cold water into the bottle and the egg will resume its original shape.

If the vinegar in which the egg is softened is not strong enough, add about two tablespoonfuls of acetic acid to a cupful of vinegar. Usually, however, ordinary vinegar contains sufficient strength.

Your friends will wonder how you succeeded in getting the egg, unbroken, through the small neck of the bottle. People will sit for an hour examining the bottle and looking for a secret crack where they believe the bottle must have been taken apart.

Keep Minard's Liniment in the house

An Unfortunate Case.

"Can't you find any work at all?"

"Plenty, sir; but everybody wants a recommendation from my last employer.'

"Well, can't you get one?"

"No, sir; he's been dead twenty-eight years."

The Paisley Advocate

PAISLEY, JUNE 14th, 1916

CANADIAN SOLDIERS AGAIN WIN GLORY

The long lists of casualties reported from the front during the past few days show how the Canadian battalions faced the inferno of this greatest war that was ever waged, and fought to the last ditch everywhere, meeting death and winning glory with the historic bravery and coolness of their most dauntless forbears. The London Times, after citing instances of valor, pays this tribute to the soldiers of this Dominion:

"Long after the issues of the minor engagements of this war have been forgotten, and when everybody has ceased to care whether at any moment we gained or lost a hundred yards of ground or a mile of trench, the memory of how the Canadians fought against the hopeless odds near Hooge will be remembered. Canada and the Empire will be proud for generations to come of the men whose deeds I have mentioned no less than their gallant comrades. It was hell over the whole line, hell minute by minute and hour by hour. In some instances the Canadians fought to the last with a pitiful of spirit which the Germans do not know, against guns, rifles and bombs, with broken rifles and bare hands. The enemy bombardment which preceded the attack lasted for four hours, and was unprecedented in its severity. The Canadians stood it hour after hour without the possibility of using the rifle in reply. There is no shadow of any difference of opinion that no troops on earth could have behaved with greater steadiness or more admirable gallantry."

COUNTY COUNCIL

The County Council of the County of Bruce met in the June Session at the Town Hall, Port Elgin, on Monday, June 5th. All members were present.

The members recognized that the June Session was always a strenuous one, and got to work at once. The Road and Bridge Committee reported that the spring freshets this year had dealt very gently with the County bridges, none of them being seriously damaged though some had for a time been in considerable danger of being carried away. A committee was appointed to examine some of the chief bridges and make repairs found necessary.

Communications were read from the Canadian Patriotic League and from the Belgian Relief Committee giving particulars of the work done and thanking very heartily the Council and people of the county of Bruce for their generous treatment of these funds, and for the example they had thereby set for others.

The Government Officials notified the Council that an order in Council had been passed allowing deer shooting on the Peninsula this fall, but no dogs will be allowed. For the next two years after no deer hunting will be allowed there.

Mr Jas. Douglas, Reeve of Hepworth, presented a very instructive report of the proceedings of the Ontario Educational Association, to which he had been sent by the County. A large number of interesting and important matters, especially dealing with Rural schools, were considered and some important legislation may grow out of the Association recommendations.

It was decided to pass a by-law licensing junk dealers in the county.

Grants were made of $2,000 to the Walkerton hospital, $1000 to the Kincardine hospital, $50 each to the villages of Tiverton and Hepworth for roads.

Mr Anderson, of Lucknow, pointed out the difficulty there was in many parts of the county in obtaining magistrates to try cases, and especially license cases, and thought the Government should be asked to appoint police magistrates for districts. The Council, however, declined to take any action in the matter.

A by-law was passed to raise $42,000 for patriotic purposes. This money is required to pay the grants for this purpose made at January session of council. The money is payable under the by-law in ten years. No further grants were made at this session for these purposes.

Messrs C M Bowman and W D Cargill, M P P's, were present on behalf of the Service Preparedness League and explained fully the objects of the League. On motion of Messrs Christie and Hunter the council declared itself fully in sympathy with the objects of the League, and granted $100 towards its expenses.

Special grants were made to Eastnor and Amabel of $100 each to assist in maintaining roads over which the whole traffic of the peninsula moved, and which had to be kept up for the benefit of several townships.

A very lively fight developed over the equalization of the county. For some time the question as to whether or not income and business assessments should be included in the equalization, has been a bone of contention, the representatives of the rural municipalities contending they should be and those from the towns and villages that they should not be. Up to 1913 these were included but in that year Judge Barrett, on an appeal to him, struck these assessments off, leaving the county rates to be levied on real estate only. Last year Judge Klein, on an appeal to him, held they should be included. The equalization committee this year brought in a report recommending that they be not included but on a close vote in council this report was sent back to the committee with instructions to include these assessments. The committee later reported again with them included. After considerable discussion another vote was taken on the question by the whole council, when by a majority of one it was decided that these assessments should not be included. The county rates will therefore again be levied on the real estate only.

Another question of large importance which was before the council was the question of good roads. In January a committee was appointed to look into the question and report, and their report was now presented. The committee had arranged with Mr McLean, of the Government Highways Department to be present and explain the good roads legislation which he did at length and very clearly. He pointed out that other counties had adopted the movement and not one of them had raised any objections or tried in any way to withdraw from it. Many people had the idea that it was an expensive system, but Mr McLean thought this had come from some parts where they had no gravel and had to import crushed stone which ran the cost up considerably. In a county like Bruce where they had fair roads to start on and lots of good gravel the expense would be very light while the roads would be materially improved. The Government was spending large sums of money to help counties in this work and he thought Bruce should take up the question and get its share of the money. The matter was thoroughly discussed at length and the council passed a resolution approving the scheme and appointed a committee to look into it and report at December session.

Messrs Morgan, Gaunton and Sayles addressed the council pointing out the necessity for a children's shelter in connection with the Bruce County Children's Aid Society, and the liability of the county in such matters under the statutes. After full consideration it was decided such a shelter should be provided by the county, and a grant of $500 a year made towards its maintenance. A committee was appointed to look after the matter.

The usual number of accounts were presented for payment, and the usual number of committees appointed to attend to repairs on county bridges.

The committee appointed to consider the adoption of the bridge on the 6th con of the township of Brant as a county bridge reported against its adoption, and this report was adopted.

The citizens of Port Elgin made things most pleasant for the members of the council during the week, and treated the members to an auto trip so they could see all the large county bridges in that section, which was very much appreciated by the council.

Council adjourned to meet at Council Chambers, Walkerton, on Monday, Dec 25th next.

P A MALCOMSON, County Clerk

BRUCE TP. COUNCIL

June 10th, 1916.

As per call of reeve, Bruce Tp Council met on evening of above date. Members all present. Minutes of previous meeting read, a lapse I and signed.

An account was presented by H Boettger for repairs to engine. Settled for $58 53.

Goderich Road committee submitted report and decided to call for tenders for gravel.

Robert Brown was appointed weed inspector in place of Geo Hood, resigned.

Reeve Johnston was appointed to have a l.s. conv ng and to. gravel if he thinks fit, also have an outlet made for the water by the proper parties, and if necessary take proceedings under the Ditches and Watercourses Act.

The Clerk was authorized to ask for tenders for purchase of telephone debentures, tenders to be opened next meeting.

Accounts amounting to $201 39 were passed.

Council adjourned to meet June 24th.

J G MACKAY, Clerk.

MISERABLE FROM STOMACH TROUBLE

Felt Wretched Until He Started To Take "Fruit-a-tives"

534 CHAMPLAIN ST., MONTREAL.

"For two years, I was a miserable sufferer from *Rheumatism and Stomach Trouble*. I had frequent *Dizzy Spells*, and when I took food, felt wretched and sleepy. I suffered from Rheumatism dreadfully, with pains in my back and joints, and my hands swollen.

A friend advised "Fruit-a-tives" and from the outset, they did me good. *After the first box, I felt I was getting well* and I can truthfully say that "Fruit-a-tives" is the only medicine that helped me". LOUIS LABRIE.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

FENIAN RAID 50 YEARS AGO

The following item has been handed to The Kincardine Reporter by Mr. S. McLean, a fenian raid veteran:

On June 1st, 1866, the Fenians crossed to Fort Erie from Buffalo to take Canada. The Canadians had been expecting them for months, but the raid was made so suddenly that we were not prepared, but the news soon spread, though at that time we had no railroad or telegraph connection nearer than Goderich. On the night of the 1st June, 1866, Constable Trainor of Goderich, came to Kincardine on horseback and notified Capt C R Baker to muster his company, which he done in short order. Capt Daniels was also notified as was also the Paisley Co'y. Capt. Sprat of Southampton got his men together and was joined by the Paisley men. Sunday, June 3rd Capt. Rowan embarked on the steamer Silver Spray with these two companies and came to Kincardine. Kincardine's men marched to the dock with the band playing "Just Before the Battle, Mother." The men were all in good spirits. We boarded the vessel and started for Goderich. On arrival we were joined by a company of infantry from Seaforth, Waterloo, making eight companies, also Goderich artillery about 450 men in all.

Tuesday morning a report had gone abroad that seven vessels loaded with Fenians had landed at Bayfield, a town 12 miles south of Goderich. Well, there were some strange sights to be seen as we marched down the street. Men and women running here and there carrying children, bed clothes, etc., on their backs, making for tall timbers. The whole town was excited. This all proved to be a false alarm. The soldiers were marched back to their quarters and dismissed. But this alarm had spread like wildfire, and men came flocking in to Goderich by the score. Some carrying guns, some with swords, others had scythes and pitchforks. You would think there was going to be a "Donny Brook Fair." A few days later our steamer, the Silver Spray, that runs to Southampton, was nearing Goderich on a return trip when the Rock Seat was seen behind the pier, overhauling her fast. Again the bugles sounded the fall in, the artillery took up a position on the point of a hill. They had a cannon already, the rifles behind their breastworks and the infantry in the trenches. The boat saw the movements on land and lowered the flag, which is a sign of peace. They came in the harbor. It proved to be an American revenue cutter, "General Dix" looking for Fenians.

That was about all the excitement we had. There were two British gun-boats, one called the "Rescue" and the other the "Church," that patrolled the lakes at this time.

We were sent home on June 22nd and dismissed. We had 58 men in our company, and all that's left that I know of are Malcom Ross, Robert Hunter and myself in Dunbarton company there we left Thomas McCue, Frank Sellery, and James McCue.

S. McLEAN

Death of Mr. Adam McGill

There passed away in Galt Hospital on Saturday afternoon, one of our well-known citizens, Mr. Adam McGill. The deceased had been failing for several months, and a few weeks ago was stricken with paralysis. As he showed no signs of recovery, it was considered best to have him placed in an hospital, and he was taken to Galt where one of his sons was living, but he was there only eight days before his life ebbed out. Mr. McGill was a resident and business man in Paisley for about 43 years as a harness maker and implement agent. He was born in the township of Esquesing, but the family removed to Osborne Tp., Huron Co., when quite young. There he grew up, and when school days were over he went to learn the harness-making at Fullerton. Later he worked in Stratford and from there came to Paisley, where he opened a shop and for many years did a large business. In 1875 Mr. McGill married Miss Bertha Falconer, who predeceased him in March, 1911. Their family of seven sons survive, viz.: Walter, in Toronto; Louis, in Galt; Howard, in Winnipeg; William, in Calgary; David H., in Grillia; Stanley, in Perth, and Wilfred, who went overseas with the divisional signal corps a couple of months ago, and is now at Shorncliffe. All were present at the funeral except Howard and Wilfred. Mr. McGill was a very sociable and friendly man, and his place of business was always a rendezvous for those who liked a friendly meeting with their fellows. His cheerful greeting to passersby was one of the things that helped to make life pleasant to many others, and came to be anticipated by scores of school children. His warm handclasp and fund of reminiscences will be missed by old boys and girls returning to town on periodical or casual visits. He was one of the charter members of Ahiram Lodge, I.O.O.F., and but very seldom absent from his place in the Lodge meetings. In religion he was a Presbyterian, and in politics a Liberal. The funeral on Tuesday was conducted at the house by Rev. R. A. Facey, B.A., of the Methodist church, and Rev. E. J. McEwen, of Wiarton. At the graveside the Oddfellows took charge. The pall-bearers were five sons and a nephew of the deceased.

—Mr. J. H. Glover has purchased a new McLachlan car.

NEW STRENGTH FOR LAME BACK.

Latest Tale of Long-looked-for Prescription.

Dear Mr. Editor—I suffered form lame back and a constant tired, worn-out feeling. At times I was unable to stand erect and scarcely able to get around. It would usually come on at first with crick in small of my back. I took one box of Dr. Pierce's Anuric Tablets and my back commenced to get better soon after starting to take them. I did not have to walk doubled over as I did before using the "Anuric." It is the best remedy I have ever taken for what it is intended to relieve.

I hope those who are in need of such a remedy will give the "Anuric Tablets" a trial.

(Signed) A. G. DRAKE.

NOTE: Up to this time, "Anuric" has not been on sale to the public, but by the persuasion of many patients and the increased demand for this wonderful healing tablet, Doctor Pierce has finally decided to put it into the drug stores of this country within immediate reach of all sufferers.

Simply ask for Doctor Pierce's Anuric Tablets. There can be no imitation. Every package of "Anuric" is sure to be Doctor Pierce's. You will find the signature on the package just as you do on Dr. Pierce's Favorite Prescription, the ever-famous friend to ailing women, and Dr. Pierce's Golden Medical Discovery, proven by years to be the greatest general tonic. Send 10 cents to Dr. R. V. Pierce, Buffalo, N. Y., for large trial package.

At any rate don't give up hope of being cured of your malady until just a few doses of "Anuric" have proven that it will make you feel like a different person.

EDITOR—Please insert this letter in some conspicuous place in your paper.

TORONTO ONTARIO

Truly Sporting

Outside the station the rain fell in torrents, and the one passenger who had alighted from the last train gazed dismally round. No, there was no help for it; he must take a cab home.

"How much do you charge to drive out to Smith Street?" he called to the solitary jehu.

"Three dollars, sir!" replied the driver.

For a time they haggled, but the cabby refused to come lower than two dollars. At last the prospective fare had a brain wave.

"I say, I'll toss you double or quits! Come, be a sport!"

For a time the cabby refused. Then, in despair of settling the matter any other way, he agreed. The coin was spun; cabby called "heads," and heads it was.

"Rotten luck," growled the fare, whose name, by the way, was Isaacson. "I shall have to walk after all!"

Defective Glasses.

Glasses exactly right two years ago may be far from right to-day. The eyes change. We will examine your eyes free, and will only recommend a change if absolutely beneficial.

A STOPPED WATCH

—one that will not go AT ALL—does not cause as much bother as one that runs now fast, now slow, in an erratic fashion.

The first you don't pretend to depend upon—the other is a constant source of annoyance.

Most people can afford a watch, but no one can afford an uncertain fast and slow one.

And when our Repair Department is so close at hand there is really no excuse for carrying anything but an accurate time-piece, no matter what the first cost was.

Consult us about any watch troubles that may arise.

—"Advertising is the education of the public as to what you are, where you are, and what you have to offer in the way of skill, talent and commodity. The only man who should not advertise is the man who has nothing to offer the world in the way of commodity or service." — Elbert Hubbard.

A REMARKABLE STATEMENT

Mrs. Sheldon Spent $1900 for Treatment Without Benefit. Finally Made Well by Lydia E. Pinkham's Vegetable Compound.

Englewood, Ill. — "While going through the Change of Life I suffered with headaches, nervousness, flashes of heat, and I suffered so much I did not know what I was doing at times. I spent $1900 on doctors and not one did me any good. One day a lady called at my house and said she had been as sick as I was at one time, and Lydia E. Pinkham's Vegetable Compound made her well, so I took it and now I am just as well as I ever was. I cannot understand why women don't see how much pain and suffering they would escape by taking your medicine. I cannot praise it enough for it saved my life and kept me from the Insane Hospital."—Mrs. E. SHELDON, 5617 S. Halsted St., Englewood, Ill.

Physicians undoubtedly did their best, battled with this case steadily and could do no more, but often the most scientific treatment is surpassed by the medicinal properties of the good old fashioned roots and herbs contained in Lydia E. Pinkham's Vegetable Compound.

If any complication exists it pays to write the Lydia E. Pinkham Medicine Co., Lynn, Mass., for special free advice.

THE WESTERN FAIR

The grounds and Buildings at Queen's Park, London, are being put into shape as rapidly as possible for London's great Exhibition to be held this year, September 8th to 16th. The entire park has been in use by the Military authorities since last September and a lot of work has been done, in order to be ready for the Exhibition. The fine new steel Grand Stand will be in readiness to accommodate the large crowds expected. The management have under consideration now the installion of a new system of admission turnstiles for both outside the gates and Grand Stand. The amusement programme this year will be the best way possible to secure and the Midway will be away above the average. There will be two Speed events each day and it is expected that the entire programme both afternoon and evening, will be the best ever offered. Prize Lists, entry forms and all information given on application to the Secretary, A M Hunt, London, Ont.

Homeseekers' Special Train Leaves Toronto 10.40 p.m. Each Tuesday, Commencing May 30th

For the accommodation of homeseekers' and general tourist traffic to Western Canada, through train carrying tourist sleeping and colonist cars will, commencing May 30th, leave Toronto 10.40 p.m. each Tuesday until further notice, running through to Winnipeg. Attention is directed to the remarkable low round trip fares in connection with homeseekers' excursions to Western Canadian via Canadian Pacific Railway. Tickets on sale each Tuesday until October 31st inclusive, and are good to return within two months from date of sale. Apply to any C.P.R. agent for full particulars. W.B. Howard, District Passenger Agent, Toronto.

"KAPLAN"

(20854)

Standard Registered A.T.R.

will be at Central Hotel, Paisley, every Tuesday, from 10 a.m. to 6 30 p.m.

Farmers of this district will do well to study the breeding of Kaplan. He is individually one of the best examples of the American trotting horse, having size, substance, good bone, superb knee and hock action, speed, quality, intelligence, perfect disposition, and is absolutely sound. Inspect him before deciding what sire you will use.

JOS. ACTON, Prop. SANDY McDONALD, Manager

WILD THINGS OF *the* FOREST ROAM IN SAFETY *in this land of a thousand lakes*

[By G. W. BARTLETT, Superintendent of Algonquin Park]

Nature lovers mourn the passing of wild life under the iron heel of industrial progress and the profound concern of these lovers of out-door life would certainly be justified if there were no national reserves within the broad Dominion.

Among the most popular of these glorious national heritages of the people is the Algonquin Provincial Park, 1,754,473 acres in extent, situated two thousand feet above the level of the sea, up in the "Highlands of Ontario." This lovely region, set apart by the Ontario Government in 1893, remains today unspoiled, a perfect refuge for the creatures of the forest, and an ideal pleasure-ground for the people.

It is almost impossible to walk for half an hour from any of the camps or hotels without seeing one or more deer, or running across a beaver dam or other evidence of the existence of wild things.

At the time this territory was set aside for a breeding ground and preserve, all kinds of fur-bearing animals in this section had become almost extinct. Today they have not only filled the park, but have so overrun its boundaries that many adjacent townships are now well stocked with game. This is especially the case with regard to the industrious beaver, who has followed the numerous rivers in the park for hundreds of miles, and is now to be found in sections that had none in the memory of the oldest inhabitants. It is estimated that the increase in beaver for 1916 will be several thousands. Other fur-bearing animals have increased in proportion, and a number of pairs of beaver and other animals are now being taken out annually without any apparent decrease in their numbers. It is expected that a considerable revenue will be realised by the Ontario Government in the future from this source.

Included among the fur-bearing animals to be found in the park, besides the beaver, are the otter, mink, marten, fisher, raccoon, lynx, fox, ermine, musk rat, skunk, wolf and bear. Virginia deer are very abundant, notwithstanding the fact that large hunting parties are to be found each year on all sides, right up to the boundary line of the park. No hunting is allowed in the park, the object being to allow the deer to overflow and thus replenish the hunting grounds outside. Those roaming unmolested inside the park have now become so numerous and tame that splendid pictures are taken of them by the hundreds of people who spend their holidays in cruising from lake to lake through the vast chain of waterways.

At nearly every turn of the river or lake, wild life of some kind is to be seen. Moose have also become numerous in most sections and are often photographed as they feed in the lily pads. Indeed, the prohibition against hunting in the park greatly adds to the opportunities of the picture-hunter, since the wild creatures are much more approachable than in localities where they are persistently hunted.

To the preference of the fishing to be enjoyed in the park there is undisputed testimony. Fish caught in the waters of the park have won each year many of the national competitions open to the anglers of the continent.

At the Park Headquarters at Algonquin Park Station, there is a private collection of mounted specimens of animals and birds that represent all the fur-bearing animals and feathered denizens in this section, and we are always glad to have visitors call in and study them during the summer. Some living specimens will generally be found in the large house erected for the purpose at headquarters by the Government.

The accommodation in the park is such that the most varied tastes can be pleased. There are hotels for those who want to be in the wilderness, yet enjoy all the comforts that good service and social companionship can bring; there are groups of log cabin camps, comfortably furnished and ideal for family parties, with central lodges containing everything ready for you on your return from the tramp; or if you have planned to camp under your own canvas you may step into a canoe at one of the little railway stations on the Grand Trunk which serves the whole of the park and after a short paddle find a site unmarred by the hand of man yet within easy reach of the park outfitting stores.

Many families now go into the park expressly for the camping, making their headquarters at the hotels long enough to get supplies and camping outfit ready for the trip. Then in canoes, and with guides or without them, they launch bravely out into the deep woods, camping where fancy prompts.

THE

Key to Yesterday

By CHARLES NEVILLE BUCK

CHAPTER XVIII.

On an unimportant cross street which cuts at right angles the Boulevard St. Michel, that axis of art-student Paris, stands an old and somewhat dilapidated house, built, after the same fashion as all its neighbors, about a court, and entered by a door over which the concierge presides. This house has had other years in which it stood pretentious, with the pride of a mansion, among its peers. Now, its splendor is tarnished, its respectability is faded, and the face it presents to the street wears the gloom that comes of past glory heightened, perhaps, by the darkly spiritedness of many tenants who have failed to enroll their names among the great.

Yet, for all its forbidding frown, its front bespeaks a certain conscious-of lingering dignity. A plate, set in the door-case, announces that the great Marston painted here a few scant years ago, and here still that more-or-less-distinguished instructor, Jean Hautecoeur, tells his pupils in the second-floor atelier how it was done.

He was telling them now. The model, who had been posed as, "Aphrodite Rising from the Foam," was resting. She sat on the dilapidated throne amid a circle of easels. A blanket was thrown about her, from the folds of which protruded a bare and shapely arm, the hand holding lightly between two fingers the cigarette with which she beguiled her recess.

The master, looking about on the many industrious, if not intellectual, faces, was discoursing on Marston's feeling for values.

"He did not learn it," declared M. Hautecoeur: "he was born with it. He did not acquire it: he evolved. A faulty value caused him pain as a false note causes pain to the true musician." Then, realizing that this was dangerous doctrine from the lips of one who was endeavoring to instill the quality into others, born with less gifted natures, he hastened to amend. "Yet, other masters, less facile, have gained by study what they lacked by heritage."

The room was bare except for its accessories of art. A few well-chosen casts hung about the walls. Many unmounted canvases were stacked in the corners, the floors were chalk-marked where easel-positions had been recorded; charcoal fragments crunched underfoot when one walked across the boards. From the skylight—for the right of the building had only two floors—fell a flood of afternoon light, filtering through accumulated dust and soot. The door upon the outer hall was latched. The students, bizarre and unkempt in the bohemianism of their cult, mixed colors on their palettes as they listened. In their little world of narrow horizons, the discourse was like a prophet's eulogy of a god.

As the master, his huge figure somewhat grotesque in its long, paint-smeared blouse and cap, stood delivering his lecture with much eloquence of gesture, he was interrupted by a rap on the door. Jacques du Bois, whose easel stood nearest the threshold, reluctantly took his pipe from his teeth, and turned the knob with a scowl for the interruption. For a moment, he stood talking through the slit with a gentleman in the hall-way, his eyes meanwhile studying with side-glances the lady who stood behind the gentleman. Then, he bowed and closed the door.

"Someone wishes a word with M. Hautecoeur," he announced.

The master stepped importantly into the hall, and Steele introduced himself. M. Hautecoeur declared that he well remembered monsieur and his excellent painting. He bowed to mademoiselle with unwieldly gallantry.

"Mr. Robert Saxon," began the American, "is, I believe, one of the most distinguished of the followers of Frederick Marston. Miss Filson and I are both friends of Mr. Saxon, and, while in Paris, we wished to visit the shrine of the Marston school. We have taken the liberty of coming here. Is it possible to admit us?"

The instructor looked cautiously into the atelier, satisfied himself that the model had not resumed her throne and nudity, then flung back the door with a ceremonious sweep. Steele, familiar with such surroundings, cast only a casual glance about the interior. It was like many of the smaller schools in which he had himself painted. To the girl, who had never seen a life-class at work, it was stepping into a new world. Her eyes wandered about the walls, and came back to the faces.

"I have never had the honor of meeting your friend, Monsieur Saxon," declared the instructor in English. "But his reputation has crossed the sea! I have had the pleasure of seeing several of his canvases. There is none of unfollowing in the footsteps of Marston who would not feel his life crowned with high success, had he come as close as Saxon to grasping the secret that made Marston Marston. Your great country should be proud of him."

Steele smiled.

"Our country could also claim Marston. You forget that, monsieur."

The instructor spread his hands in a deprecating gesture.

"Ah, mon ami, that is debatable. True, your country gave him birth, but it was France that gave him his art."

"Did you know," suggested Steele, "that some of the unsigned Saxon pictures have passed competent critics as the work of Marston?"

Hautecoeur lifted his heavy brows.

"Impossible, monsieur," he protested; "quite impossible! It is the master's boast that any man who can pass a painting as a Marston has his invitation to do so. He never signs a canvas—it is unnecessary—his stroke—his treatment—these are sufficient signature. I do not belittle the art of your friend," he hastened to explain, "but there is a certain—what shall I say—a certain individualism about the work of this greatest of moderns which is inimitable. One must indeed be much the novice to be misled. Yet, I grant you there was one quality the master himself did not formerly possess which the American grasped from the beginning."

"His virility of touch?" inquired Steele.

"Just so! Your man's art is broader, perhaps stronger. That difference is not merely one of feeling: it is more. The American's style was the outgrowth of the bigness of your vast spaces—of the broad spirit of your great country—of the pride that comes to a man in the consciousness of physical power and currents of red blood! Marston was the creature of a confined life, bounded by walls. He was self-absorbed, morbid, anemic. To be the perfect artist, he needed only to be the perfect animal! He did not understand that. He disliked physical effort. He felt that something eluded him, and he fought for it with brush and mahlstick. He should have used the Alpinstock or the snow-shoe." Hautecoeur was talking with an enthused fervor that swept him into metaphor.

"Yet—" Steele was secretly sounding his way toward the end he sought —"yet, the latter pictures of Marston have that same quality."

"Precisely. I would in a moment more have spoken of that. I have my theory. Since leaving Paris, I believe Marston has gone perhaps into the Alps, perhaps into other countries, and built into himself the thing we urged upon him—the robust vision."

The girl spoke for the first time, putting, after the fashion of the uninitiated, the question which the more learned hesitate to propound:

"What is this thing you call 'the secret? What is it that makes the difference?"

"Ah, mademoiselle, if I knew that!" The instructor sighed as he smiled. "How says the English Fitzerald? 'A hair perhaps divides the false and true.' Had Marston had the making of the famous epigram, he would not have said he mixed his paints with brains. Rather would he have confessed, he mixed them with ideals."

"But I fear we delay the posing," suggested Steele, moving, with sudden apprehension, toward the door.

"I assure you, no!" prevaricated the teacher, with instant readiness. "It is a wearying pose. The model will require a longer rest than the usual. Will not mademoiselle permit me to show her those Marston canvases we are fortunate enough to have here? Perhaps, she will then understand why I find it impossible to answer her question."

When Captain Paul Harris had set his course to France with a slow, long voyage ahead, his shanghaied passenger had gone from stunned unconsciousness into the longer and more complicated helplessness of brain-fever. There was a brushing of shoulders with death. There were fever and unconsciousness and delirium, and through each phase Dr. Cornish, late of the Foreign Legion, brought his patient with studious care—through all, that is, save the brain-fog. Then, as the vessel drew to the end of the voyage, the physical illness appeared to be conquered, yet the awakening had been only that of nerves and bodily organs. The center of life, the mind, was as remote and incommunicable as though the thought nerves had been paralyzed. Saxon was like a country whose outer life is normal, but whose capital is cut off and whose government is supine. The physician, studying with absorbed interest, struggled to complete the awakening. Unless it should be complete, it were much better that the man had died, for, when the vessel dropped her anchor at Havre, the captain led ashore a man who in the parlance of the peasants was a poor "innocent," a human blank-look-book in a binding once handsome, now worn, with nothing inscribed on its pages.

For a time, the physician and skipper were puzzled as to the next step. The physician was confident that the eyes, which gazed blankly out from a face now bearded and emaciated, would eventually regain their former light of intelligence. He did not believe that this helpless creature—who had been, when he first saw him in Puerto Prio, despite blood-discolored face and limp unconsciousness, so perfect a figure of a man—had passed into permanent darkness. The light would again dawn, possibly at first in fitful waverings and flashes through the fog. If only there could be some familiar scene or thing to sugest the past! But, unfortunately, all that lay across the world. So, they decided to take him to Paris, and ensconce him in Captain Harris' modest lodgings in the Rue St. Jacques, and, inasmuch as the captain's lodgings were shared by an one, and his landlady was a kindly soul, Dr. Cornish also resolved to go there. For a few weeks, the sailor was to be home from the sea, and meant to spend his holiday in the capital. As for the physician, he was just now unattached. He had hoped to be in charge of a government's work of health and sanitation. Instead, he was idle, and could afford to remain and study an unusual condition. He certainly could not abandon this anonymous creature whom fate had thrust upon his keeping. Now, six weeks after his accident, Saxon sat alone in the modest apartment of the lodgings in the Rue St. Jacques. Since his arrival in Paris, the walls of that room and the court in the center of the house had been the boundaries of his world. He had not seen beyond them. He had been physically weak and languid, mentally void. They had attempted to persuade him to move about, but his apathy had been insuperable. Sometimes, he wandered about the court like a small child. He had no speech. Often, he fingered a rusty key as a baby fingers a rattle. On the day that Steele and Dusky had gone to the academy of M. Hautecoeur, Dr. Cornish and Paul Harris had left the lodgings for a time, and Saxon sat as usual at a window looking absently out on the court.

ON THE FARM

The Dairy Stable and Clean Milk.

On a farm where live stock is kept greater attention must be paid to cleanliness than on one on which there is no live stock. This is particularly true of a dairy farm, for the success of which thorough sanitation is a necessity.

To obtain the most sanitary conditions, the diary barn should be built on high ground, with good natural drainage and sheltered from the cold winds of winter. Horse stables, poultry houses, hog sheds, privies, and manure pits sould be far enough away not to contaminate the cow stable air. There is always a tendency for the barnyard lots and paddocks surrounding the stable to get muddy and foul, but when the barn is situated on a high, well-drained spot this tendency is reduced to a minimum, as the lots soon become dry after a rain and in the spring when the frost frost leaves the ground. If the yard is inclined to be muddy, it may be improved by drainage and by the use of cinders or gravel. It should be free from mudholes, and manure should not be allowed to accumulate in it. In severe winter weather, or in the spring when the ground is soft and manure can not be hauled to the fields daily, it should be stored in a manure pit some distance from the stable and not in the basement of the barn or any place in the dairy stable.

An ideal site for a barnyard is on a south slope that drains away from the barn. A clean yard is a great help in keeping the cows from becoming soiled by mud and manure.

Drinking water for cows should be fresh and uncontaminated from any source. The well should be so located and protected that there is no danger of pollution of the water by the drainage from the barnyard, manure piles, or other sources. The water tank or trough should be so convenient to the stable that it is unnecessary to expose the cows to extreme cold or severe storms. It should be kept clean and filled with an abundance of fresh pure water, to remove any doubt as to the ability of each animal to satisfy its thirst.

The construction of the dairy barn may be less important in keeping down the bacterial count of the milk than careful methods in handling milk. Proper construction, however, lightens the labor necessary to keep the barn and its equipment in a clean, sanitary condition. In the old-time basement dairy barn little attention was paid to proper ventilation and distribution of the light. This type of barn is not recommended and if used for housing dairy cows the lighting and ventilation should receive special attention.

A one-story dairy stable is a very good type. It should preferably be located with its length extending north and south and have an abundance of window space. If the stable is located this way it receives the purifying benefit of both the morning and afternoon sun. The construction should be such as to keep floor, walls, ceiling, and stable fittings in a clean and sanitary condition. The floor, gutter, and mangers should be hard, impervious to moisture, and free from cracks in which filth may collect. The gutter back of the cows should be large enough to hold the droppings; a width of 16 to 18 inches and a depth of 7 inches are usually sufficient. The gutter should incline so as to drain readily unless the liquid is taken up by absorbents.

All drains and waste pipes should be water-tight and air-tight. Every waste pipe should have a trap to prevent foul air from coming back through the waste pipe.

Those types of stables and mangers are best which present the least possible surface for collecting dirt and dust and the least obstruction to the circulation of air. Stalls of wood have many flat surfaces and cracks which are difficult to keep clean and in case of an outbreak of disease are not easy to disinfect thoroughly. Stalls and swing stanchions made of metal pipe are more sanitary. A low, smooth manger without sharp angles is preferable, for it is easy to keep clean. Cobwebs, dust, or dirt, should not be allowed to accumulate on the walls and ceiling. With a tight, smooth ceiling and smooth walls without ledges there should be little trouble from dust and cobwebs. Whitewash should be freely applied at least twice a year, both to walls and ceiling, as it helps to purify the stable and to keep it light. An abundance of light is necessary—4 square feet of glass per cow is generally sufficient if the windows are well distributed and not obstructed in any way.

Every cow stable should have a system of ventilation to keep the air fresh and pure and the cows comfortable without exposing them to injurious drafts. If the smell in the barn is disagreeable at any time, it indicates that the ventilation is deficient. At least 600 cubic feet of air space should be provided for each cow. The feed room, silo chute, and hay chute should be conveniently located, but at the same time they should be in a separate room to keep the odor and dust out of the stable as much as possible.—Canadian Farm.

An Incentive to Improve the Herd.

When the Dairy Act, relating to paying for milk by test at cheese factories, comes into force there will be an incentive for patrons to select and breed their herds for butter-fat production. Under the old method of paying according to quantity, the patron with the low-testing herd was being paid more than his milk was really worth for making cheese, while the high-testing milk was sold below value. Numerous tests have been made which prove beyond a doubt that there is nothing fair in paying for milk, according to quantity, for cheese-making purposes. A difference of one-half per cent. in the test makes a difference of twelve cents in the value of cheese made, from 100 pounds of milk when cheese is selling at fifteen cents a pound.

No dairyman wants to profit at the expense of his neighbor, and yet in many factory sections this is exactly what has been taking place. Evidently low-testing herds are in the majority or paying on a quality basis would have been universally adopted long ago, and there would have been no need of legislation in order that justice might be meted out to all patrons of factories.

The new Act, is in the interests of the dairy industry, and instead of there being only a few high-testing herds in a factory district as at present, it will tend to raise the average test and incidentally the returns from the dairy herds. Dairymen and cheese makers should co-perate and do all in their power to promote paying for milk according to quality. If the herd gives a low average test, there is a way of improving it. True, the test of the present herd cannot be raised, but by using a bull from high-testing ancestors the offspring usually prove to be better than their dams. The easiest and most satisfactory way of obtaining a high-testing, high-producing herd is to weigh and test the milk from each cow regularly, then save the heifers from the best. Attention must be paid to the breeding of the herd sire. He is considered to be half the herd, and if his ancestors were only average the offspring cannot be much better. By paying attention to breeding, the average yield and quality of milk per cow will be much higher ten years from now than it is at the present time. If the average is raised by 1,000 pounds of milk per cow per year, it will increase the profit by at least ten dollars without additional expense, unless it is in the cost of the sire. The average milk and butter-fat yield can be increased, and we believe it will be done. When the dairyman with milk testing 3 per cent. receives twelve cents per hundred pounds less than his neighbor who sells 3.5 per cent. milk, he will soon begin to apply the ways and means to bringing his herd up to the 3.5 per cent, or even higher test. It isn't a matter of improved stabling or specially-prepared feed that makes the difference. It is the breeding that counts.—Farmer's Advocate.

Fertility and Dairying.

Dairying is the system of farming that will maintain the fertility of the farm without the use of high-priced fertilizers. For two reasons, dairying maintains the fertility of the land. First, because in butter there is almost no plant food of value; and, second, because 90 per cent. of all the grain feeds purchased for the cow, as well as 90 per cent. of all food raised on the farm and fed to the cow, is returned to the farm.

With barnyard manure and an occasional crop of clover, the land will remain productive indefinitely. When we stop to think of it, whenever we sell wheat, corn, or oats, and get one dollar, we sell about 30 cents worth of our farm. When we get one dollar by selling butter, we sell less than one-half a cent's worth of soil.

The land owner who makes his money selling the soil fertility, and in 10 or 50 years leaves the farm worn out, is not a farmer, but a soil robber. He holds the same relation to the soil that a timber thief does to our forests. The tillers of the soil in the future will find their fathers have not been kind to them; that they have inherited barren patches. We should dairy them, because there is present money and future for the farm in it.—J. P. Fletcher, in Farm and Dairy.

Photographer—"I have been taking some moving pictures of life on your farm." Farmer—"Did you catch my men at work?" Photographer—"I think so." Farmer—"Ah, well, science is a wonderful thing. It is more than I have ever done."

If you imagine the world can't get along with out you you are the only one who has that idea.

About the House

Useful Hints and General Information for the Busy Housewife

Selected Recipes.

Onion and Egg Salad.—Mince together five tablespoons onion, two hard-boiled eggs and part of one head of lettuce. Serve on lettuce leaves with boiled dressing.

Sponge Cake Pudding.—Bake sponge cake in ring basin. When cold, fill center with whipped cream and maraschino cherries. Pour thin chocolate sauce around outside and send to table.

Cider Jelly.—Soak a package of gelatine in a cupful of cold water for two hours. Add three cupfuls of sugar and the juice of three lemons, and the grated rind of one lemon. Dissolve this in a quart of boiling water. Add a pint of sweet cider, strain, pour into individual molds and chill.

Steamed Salmon.—Pick over and shred large can of salmon. Add salt, butter and tablespoon of lemon juice. Beat smooth and gradually fold in small cup of whipped cream. Put into buttered mold and steam three-fourths of hour. Turn out, surround with melted butter and parsley and serve.

Strawberry Blanc Mange.—One quart milk, one cup strawberry juice, one-fourth cup sugar, four tablespoons cornstarch. Heat milk to boiling point. Add sugar, strawberry juice and cornstarch which has been rubbed smooth in a little cold milk. Cook until thick and pour into wet molds. When firm turn out and garnish with whole strawberries and serve with sweetened, whipped cream.

Mold Ginger Cream.—One-half cup milk (one gill), yolks of two eggs, one ounce (two tablespoons) sugar, half as much ginger syrup as milk, one cup double cream, one-half ounce preserved ginger, three-fourths ounce gelatin. Make custard of eggs, milk and sugar. When cool add syrup and preserved ginger cut into dice; also gelatin dissolved in two tablespoons water and cream whipped carefully. Stir all together gently and turn out when required. Decorate with chopped jelly.

Potato Nut Cake.—This makes large cake, but it keeps moist and fresh a long time. Two cups granulated sugar, one cup buttered, four eggs, one-half cup milk, one cup mashed potatoes, one one and one-half teaspoons cloves, two teaspoons cinnamon, one-half cup bitter chocolate, two cups flour, two teaspoons baking powder, two cups English walnuts, one teaspoon vanilla. Mix butter, sugar and yolks of eggs together. When thoroughly creamed add cold mashed potatoes. Beat again lightly, then add milk, flour, baking powder, spices, grated chocolate, English walnuts (broken into small pieces) and finally stiffly beaten whites of eggs, with pinch of salt added to them. Bake in shallow pan in moderate oven for about fifty minutes.

Strawberry Roll Pudding.—Two cupfuls bread flour, two tablespoonfuls sugar, two tablespoonfuls butter, three teaspoonfuls baking powder, one-half teaspoonful salt, about three-fourths cupful milk, one box strawberries, sugar. Make biscuit mixture of flour, salt, sugar, baking powder, butter and milk. Roll into oblong one-fourth inch thick and sprinkle thickly with one-half box of berries, quartered. Dredge with sugar. Roll like jelly roll, cut across in slices one-half teaspoonful salt, about three-bake about twenty minutes in moderate oven. Serve with sauce made with rest of berries. Sauce: Crush berries, boil together one-half cupful sugar and three-fourths cupful water five minutes. Add berries and juice and pour onto well beaten egg white, whipping constantly. Add one teaspoonful lemon juice and serve at once.

Plan Your Breakfast With Care.

Many a good housekeeper brings ennui to her home and gives harassed nerves to her husband because she gives too little thought to the problem of planning the morning meal.

The failure may come from several causes, one housekeeper neglects the problem by serving the same breakfast day after day with few variations. The other goes to the extreme of making breakfast a full meal, which means an overloaded stomach and indigestion.

The breakfast menu must have enough food calories to keep the family well nourished. Variety and nourishment are the two cardinal principles in making your breakfast menus count. A well balanced breakfast includes fruit or cereal combined or alone. This should be supplemented by a principal dish, such as eggs and potatoes or chops and potatoes, a bread and a liquid.

Fruits are to be selected as they appear in the market. It is a debatable ground whether fruits are better eaten raw or cooked. It is largely a question which way they are digested more readily by the individual. Apples raw or cooked are wholesome, grape fruit and oranges are healthful and refreshing.

When it comes to selecting breakfast foods you have a large assortment, such as rice, oatmeal, cracked wheat, cornmeal and many others. The main dish can be bacon, chops or eggs cooked in different ways.

Rice and wheat are especially good cereals because they are cheap and nourishing. Rice is used in the whole kernel. It comes in two varieties—brown and white. Brown is a better nutriment. Either kind should be washed well to take out all particles. It should be washed in cold water, so the kernels do not stick; the cold water stakes out the starchy particles. Let the rice dry after washing and before cooking.

Breakfast foods especially require long cooking. These are better cooked in a double boiler for a long time, rather than for a short time directly over the fire. Have water salted and boiling well.

Then add cereal slowly, stirring constantly. Boil for a few minutes, then place upper part in lower part of double boiler.

Useful Hints.

As soon as milk begins to steam it is scalded.

A green salad should be served with a fish meal.

If the oven is too hot sprinkle a little coal on the fire.

Good macaroni is of a brownish color, not pure white.

Don't use solid suds for colored clothes unless you expect them to look muddy.

Ferns will not do well if placed on the window sill. They cannot stand a draught.

It ruins the flavor of vegttables to remain in the cooking water after they are done.

A baked apple is more easily digested than apples prepared in any other way.

When boiling rice add a little lemon juice to the water. This will make the rice fluffly and separate the grains.

When preparing vegetables, cook enough so that there will be enough on hand for a cream soup for the next day's luncheon.

For washing windows, which should on them, use warm water with a on them, pse warm water with a tablespoonful of kerosene added to each pail of water.

When you crush dried bits of bread don't roll with a rolling pin but put them in a clean salt or sugar bag and pound with a potato masher.

There is no more effective way of removing finger-marks from woodwork, window panes or procelain than by wiping them with a cloth moistened with kerosene.

A one-piece nightgowu which is worn out above the waist can be utilized by making a new top with an empire waistline out of the lower half of another nightgown.

A piece of paraffine in your darning bag will save darning. After you have finished darning a hole rub the paraffine on the right side of the darn. This will prevent wear.

Feather pillows should be washed by turning the feathers into cheesecloth bags and soaking them in strong soapsuds with ammonia in it. Rinse in hot soap water then in clear warm water and hang out to dry in the wind and sun.

Ink stains on mahogany can be removed by painting them with a solution of six drops of nitre mixed with a teaspoonful of water. Then rub well with a damp cloth and polish with a dry one.

Wash leather furniture very gently with warm water in which there is a little vinegar, wipe with a dry cloth and then restore the polish by mixing the whites of two eggs and a little turpentine, which is applied with a flannel.

PLIGHT ACROSS ATLANTIC.

Norwegin Aviator the Latest to Discuss the Project.

The London Daily Chronicle publishes the following:

A young Norwegian aviator, Mr. George Kulbech, is at present engaged in preparations for a daring attempt to cross the Atlantic by aeroplane, or rather by means of what he calls a "flying boat" of his own designed. He proposes to start from Jaederen, on the west coast of Norway, but to pay what may be called literally a "flying visit" to England on the way.

"My flying boat" he says, "is built exclusively to solve the problem of the Atlantic, and is, therefore, constructed as a seaworthy boat, its hull being entirely of mahogany. It has two seats, placed side by side, so that the aviators can steer by turns without changing places. Another peculiarity is the mechanism for starting the flying boat's motor, which can be effected by the aviator without leaving his seat.

"The machine is a biplane and has a plane surface of fifty square metres. It can lift a total weight of about 6,000 pounds. The motor is of 250 horsepower; it is watercooled and has a velocity of 1,2000 revolutions a minute. With its full cargo the flying boat can attain a speed of 112 miles an hour, so that we should be able to strike the American coast in a little more than twenty-four hours."

FEEDING HUNGRY YOUNG IRISH.

For some days during the recent Irish Rebellion, food was practically out off from the poorer districts of Dublin. The picture shows the beginning of a joyful dry bread banquet by hundreds of youngsters, gathered together in a narrow street and supplied with bread by the clergyman in the centre of the group.

ROMANCE OF JAS. J. HILL'S LIFE

HE WAS ONCE A DOCK LABORER IN ST. PAUL.

A Glimpse of Some of the Characteristics of the Great Railway Magnate.

One of the intimate friends of the late J. J. Hill, the greatest of American railroaders and the man who opened up the North-Western States of the American Union to settlement a generation ago, is Mr. Elias Rogers, of Toronto, says the Toronto Star.

Mr. Rogers knew J. J. Hill in the early days, having met him first in St. Paul in 1862. Hill formed a strong affection for Mr. Rogers, largely because he had gone to a school in Rockwood presided over by Rev. William Wetherald, a member of the Society of Friends, of whom Mr. Rogers is also a member.

"J. J. Hill was the biggest railroad man in the United States or in the world," said Mr. Rogers. "There was not his equal. Van Horne was a friend of his and there were many points of similarity, but Hill made Van Horne. He brought him to the C. P. R. Strathcona and Stephens wanted Hill to manage the C.P.R., and Hill took hold for a while, but he picked Van Horne to take his place on the C.P.R. and went back to the Great Northern.

Was a Dock Laborer.

"J. J. Hill was a big looking man, although he was not so tall as I. He was square-shouldered with a leonine head. He was blessed with a very strong physique. He had werked as a boy on the farm, and when he came to St. Paul first he worked as a stevedore on the docks. They say the stump is still to be seen of the last tree he chopped at Rockwood. A man named Harris was working with him that day. Harris since came to work for me, and he told me the incident. Hill, who had conceived the idea of going West, laid his axe against a tree.

"'That's the last tree I'm going to chop,' said he.

"He started West on a ten dollar bill next day.

"Hill was a particularly quiet spoken man," continued Mr. Rogers. "But his words always carried weight. He was well read, one of the best read men in America, I suppose. He was well up on such subjects as the modern science of agriculture, botany, flowers, chemistry of soil, and so forth. He was strong in geology. There were few subjects he was not thoroughly familiar with, but he had no fads. Among other things he was a connoisseur on precious stones and jewelry, and had a cultivated taste in matters of art. But he was self-educated, the schooling he had received at Rockwood being chiefly valuable for teaching him how to learn. He had a prodigious memory.

Fond of Old Memories.

"He was fond of indulging in reminiscences. He used to talk to me for an hour at a time of the old days when he was a barefoot boy in Canada. There was one house where he used to call, and the woman there always used to give him a piece of bread and buter, although he never asked for it. He confessed to me that he was always very glad to get it, just the same.

"Hill always had a remarkable capacity for details, but he maintained his breadth of vision. He was opposed to extravagance and display, but was never penurious. He lived in a very nice house in St. Paul, with beautiful grounds around it, but it was not a showy place. He had another house in New York. Mrs. Hill is one of the finest ladies I have ever met. She is not a society woman, although she is accepted everywhere, of course. She is a motherly woman. She is a Roman Catholic, but of the broadest type.

"Hill had a model farm at St. Paul and a laboratory where he kept chemists employed. He had model farms dotted throughout the territory of his railroads to the coast. Here he experimented with crops, and had samples of different soils sent for analysis to St. Paul. Then he would determine what crops were best adapted for each particular region, and what fertilizer was the local requirement. This information he would publish for the benefit of the people, together with the comparisons of the crops in the different districts under the different treatments. His farms could generally produce twice what was produced on the farms of their neighbors. In this way he improved the agricultural standing of the territory through which his lines ran. His methods were always practical rather than mere academical or theoretical. He used to sell improved seed at a nominal figure. He also introduced the best stock. When he became impressed with a farmer as a progressive, common-sense man, he would often present such a man with a fine breeder, and thus improve the stock of his district.

Kind to Animals.

"Hill was very kind to animals, and it was because he saw the stranger's horse was tired, that time at Rockwood, that he carried a pail of water to it. The stranger, in appreciation, gave him a copy of an American newspaper, where he read that men were wanted in Minnesota, and wherefrom he derived his determination to go West.

"Hill wanted to fight for the North in the Civil War in the States, and organized a company. They would not let him go, however, because he was blind in one eye. It was not an apparent infirmity, in fact no one would ever have known it. His other eye was strong and did all the work. He told me himself a couple of years ago that one eye was blind or I would never have known it. He did not wear glasses except in later years to read by.

"He owned most of the First National Bank at St. Paul, and the controlling interest in the Northern Pacific and the Great Northern. The three institutions occupy one building, newly completed, which takes up a whole block and constitute the finest building in St. Paul. The bank is in the centre, with a glass roof, one or two stories high. This allows the Great Northern and the Northern Pacific office buildings to tower up each side, and have plenty of light all around them.

Helped Strathcona.

"J. J. Hill helped to make Strathcona's fortune. I remember talking to Hill during the South African war and remarking on the big expense the Strathcona Horse must be to Sir Donald."

"'He can easily stand it,' said Hill. 'I've made more than that for him in one deal that he knew nothing about.'

"Hill and Strathcona met the first time on the Red River trail between St. Paul and Winnipeg. Each was traveling with a dog sleigh.

"At the time of the first Riel rebellion at Fort Garry, when the people were boused up in the fort, it looked as if they would be starved out. Strathcona sent word to Hill asking if he would get word through to Fort Garry that there would be food there by the time spring opened up. Hill could not trust anybody, so he went himself, traveling by dog-sled a distance of over 400 miles, and taking an Indian with him to cook and help with the dogs. The Indian proved a traitor, however, and when about half way there, he refused to do as he was told, Hill got suspicious. The Indian had been told to cook breakfast, and not obeying, words followed, when the Indian attempted to seize the rifle. Hill was too quick for him, and grabbed it first. He told the Indian to run.

"'If you look around or let up your stride until out of sight you're a dead man,' said Hill. The Indian went straight ahead and stayed not. Hill then started for Fort Garry alone, traveling all day and all night, to get away from any possible pursuit. He was familiar with the Indians around Fort Garry, and was able to work into the barracks during the darkness and deliver his message. He stayed there a short time, and when he started back the river had broken up. He was waylaid by a party of Riel's Indians and forced to cross the river. This he did by swimming among the ice floes while the Indians were shooting. He got his dogs around him and crossed all right, but one of his dogs was shot while in the water. He made for a light and was taken in by a settler and put to bed. He was unable to travel for two or three days, but came out none the worse in the end.

Couldn't Be Idle.

"Hill used to plan vacation trips of two months' duration down the Labrador shore and elsewhere. He was very fond of fishing. But he never stayed out the period he had planned. His business instincts got the better of him. He could never stand being idle long.

"I saw James J. Hill in New York only five weeks ago, and he looked to me as well as ever he did, full of life and energy. He always moved as if on steel springs. I cannot understand how it was that the operation killed him. I thought he was likely to live for ten years or more."

THE FASHIONS

For the June Graduate.

Quite as important as the June bride is the June graduate. She must be just as daintily dressed in misty white, and her future is equally as promising.

It is no longer considered the proper thing for the graduate to be elaborately dressed in silk or satin; many of the daintiest frocks are fashioned by the graduate herself, from the sheer voiles, organdies, nets, or from the dainty flouncings of lace or embroidery. The high schools favor the idea of the graduate fashioning her own dress; some so as far as to suggest the material and the cut for the entire class. Perhaps this does not appeal to the average girl, with her ideas of individuality, but the notion of making her own frock should appeal to her, for this very reason, that she may add little distinctive touches which bring out her own personality.

Simplicity in Cut and Material

The very simplest, most youthful models are chosen for the June graduate. They are usually of organdy, or one of the sheer cottons, very sparingly and simply trimmed. Crepe de Chine or one of the very soft taffetas or satins may also be used, if preferred, but the cottons are more in vogue and daintier.

Net, which is such a general favorite for the typical summer dress, is quite as well liked for the graduation dress and proves extremely practical. White cotton net, combined with taffeta, voile, or organdy, fashions the daintiest of graduation frocks; one which may be worn later for summer afternoons, or the dance.

Skirts are short, sleeves range from the short puff, so charmingly in keeping with bouffant skirts of the moment, to the three-quarter or full length sleeve of organdy, net, Georgette or chiffon. Round necks are particularly modish, although the square neck and the V are also liked. If one wishes to be at the height of the mode, the graduation frock must boast a hooped petticoat. These are so softly boned and so unobtrusive

7104

Commencement Frock of Voile

that the frock looses none of its simplicity but gains in grace.

Shoes, Gloves and a Fan

White kid pumps and white silk stockings are dainty and carry out the "all white" notion; black patent or kid pumps and black stockings, however, are in quite as good form. White silk gloves, if any gloves are worn, are better than kid, being cooler. A small white fan may be carried, both for use and ornament, for fans are extremely dainty this summer. Feathers are being used in the new fans. There are small ostrich feather fans and plain cock feather fans in white and colors. The small spangled silk fan is still favored. Any of these make most acceptable gifts for the graduate. Although the plainer the hair is dressed the better, a bit of tulle or a single comb may be worn, and Colonial silver or rhinestone buckles may adorn the pumps. Very little jewelry, if any, is permissible; a small brooch or a tiny Lavalliere is quite enough.

Summer Frocks of Organdy

Organdy is one of the most generally favored of materials for the summer frock, whether for graduation, garden parties, or summer dances. It comes in all the delicate pastel colorings now favored and is also patterned with dainty, conventionalized designs, on white and colored grounds.

The plain and figured voiles are effective also, and there are many attractive combinations of voile and taffeta, organdy and taffeta, net and organdy and the like.

It is considered most Frenchy to combine organdy and taffeta, or net and taffeta. This is usually done in a frock which one has no idea of

7192

Another Dainty Model for the Graduate

sending to the laundry, although there are at the moment taffetas and satins which wash very well.

The first frock illustrated here is a jumper model adapted from one of Poiret's designs. It is developed in net and taffeta and is a charmingly simple model for the girl who wishes to make her own frock for commencement.

In the second design is a particularly effective frock of plain and figured voile. The figured material is white with a white mercerized ring. The quaint neck line, puffed sleeves and full skirt, make it a very pleasing and youthful frock, suitable for graduation exercises or summer parties.

The Garden Party Hat.

It will do no harm to tell of a hat or two, which, worn with the graduation frock after that wonderful day will complete a most effective garden party, or summer afternoon costume. There are large hats of organdy in the dainty colorings, just the thing for the organdy frock; large black and colored wenchows, stenciled with some quaintly conceived and colored figure, flower or bird; wide brimmed leghorns, with a flower or two on their drooping brims; and many others, for the large hat is again modish. These stenciled hats offer alluring possibilities to the girl who paints or understands the mixing of colors.

These patterns may be obtained from your local McCall dealer or from The McCall Company, 70 Bond St., Toronto, Ont. Dept. W.

JAP ALLIES LIKE MUSIC.

Every Little Girl Taught to Play Guitar and Arrange Flowers.

Our Far Eastern allies, the Japanese, have many charming customs. One, which might very well be copied, has to do with Japanese girls.

Every little girl in Japan is taught two things — one, how to arrange flowers most effectively; and the other, to play the guitar. Whenever you enter a Japanese home you will hear the tinkling of the guitar from some room or other.

So fond are our allies of music, indeed, that they rarely take a meal in their own homes without someone playing to them. If it is not one of the little daughters of the family who plays, it is a hired "singing girl," who comes in for the time being. These singing girls are to be found everywhere in Japan, and their services are always in great demand.

While the family are eating she chants or sings a song of flowers, or relates one of the many legends of the East, all the time sounding her guitar.

BELL 'PHONE 30 — BRUCE 'PHONE 11

We Handle All the Good Things You See Advertised in the Big Magazines.

THIS store is headquarters. You will always find here everything you would expect to find in a similar store—and many things more.

We specialize on articles of genuine merit. Articles we have tested and tried ourselves and we can recommend and indorse.

You will find here all of the good—the best—the pick of the standard household articles advertised in magazines. We add our own guarantee to that of the manufacturer's.

We call your especial attention to the O-Cedar Polish Mop, the greatest boon to cleaner and better housekeeping we know of.

With it you can dust, clean and polish a hardwood floor without getting down on your hands and knees. You can dust the tops of doors, the molding, the tops of high furniture without standing on chairs. You can dust and clean the stair steps and banisters in half the time it usually takes.

You can dust under the bed, and under heavy furniture without moving it, and so on throughout the house—wherever there is dusting to do. You can do it quicker, easier and better with the O-Cedar Polish Mop.

Unlike other dusting mops the O-Cedar Polish Mop can be washed when soiled, and then renewed by adding a few drops of O-Cedar Polish.

We are so confident that you will be delighted with the O-Cedar Polish Mop that we will deliver one to your home on ten days' trial. If it is not satisfactory in every respect we do not expect you to keep it, and will instantly return your money. The price of the O-Cedar Polish Mop, complete, is $1.50. Let us send you one on trial.

Try our "PREMIER" GASOLINE No Water in it.

"ROYALITE" Coal Oil, 20c
"NATIONAL LIGHT" Coal Oil, 25c

GLAMIS

Miss Daisy Cronin spent a few days in Walkerton last week with her brother, Lieut Cronin, of Kincardine.

Miss Jennie McKeeman has returned from Toronto.

Miss Mary Webb is home from Stratford Normal.

Miss McCreath, of Kincardine, has returned to her home after spending some weeks in Glamis.

Mr McCauley was called home to Tara owing to the serious illness of his mother.

Miss Jessie Graham, of Berlin, is visiting at Mr Geo Webb's and at Mr Jas Begg's

Mrs McDermaid received the sad news from Ottawa on Saturday morning telling of the wounding of her son Dan who is in Belgium. He operated one of the machine guns. The many friends here sympathise with Mrs McDermaid in her trouble and trust that the wounds may not be fatal to her brave son.

Miss Nettie Gunn is home from Stratford Normal school.

Mrs Tufford returned to Beamsville on Tuesday.

Quite a number from here attended the anniversary services in the Bapist Church in Tiverton.

Mr and Mrs Reith were called to Toronto, Mrs Reith having received word of her brother's death.

CASTORIA

For Infants and Children

In Use For Over 30 Years

Always bears the Signature of Chas. H. Fletcher

TURNERS

Mr and Mrs James Hutcheson, of Kinley, Sask., are visiting at A Munro's.

Mrs D McKinnon, of Paisley, is visiting at A M Bell's.

Mr and Mrs Enoch Gibbons, spent Sunday with friends on the 12th of Bruce.

Much sympathy is extended to Mr and Mrs Archie Bell in the sudden death of their little girl.

Mrs Henry Dier and Albert are down at Walkerton this week on a business trip.

Mr and Mrs Gilbert Christie are spending a few days with friends in Walkerton.

PINKERTON

Inspector Bald paid his official visit to the school here last week, and reports everything in fine order.

Miss Coulter, of Walkerton, visited her friend Miss Aileen Pinkerton last week.

Mr Adam Reid received official word from Ottawa that his son, Capt J A Reid, had been wounded on June and Capt Reid went overseas in the latter part of March, and had been in Flanders for about four weeks when he was wounded. The latest report is that he is back on duty again.

Miss Sylvia Reid, of Harsiston, spent Sunday at her home here.

Owing to the disagreeable evening, the patriotic dance was a failure so far as attendance was concerned, but a complete success if judged by the excellent time enjoyed by those who were there.

Mrs (Capt) J A Reid returned this week from Blenheim, where she has been visiting.

Rev Mr Crozier, of Guelph, occupied the pulpit here on Sunday last and delivered two able discourses.

Scantor J J Donnelly is building a garage for his new Overland car. Mr Wm Taylor has also purchased an Overland, Mr Geo Gilchrist putting through both deals.

WALKERTON

Forty Germans from Walkerton and surrounding country, who applied to become British subjects, were refused their naturalization papers at the Chancery Sittings here the other day by Mr Justice Clute, of Toronto, on the ground that no subjects of an enemy country shall take the oath of allegiance and become British citizens during the war. Mr Clute bases his finding on the decision of Mr Justice Meredith of the Supreme Court of Canada, who also maintains that such alien citizens must be construed as enemies of the British Empire. If this decision is to be accepted and become recognized throughout Canada then it will put these Germans in a hard plight, for as the law states that it is an offence for any British subject to either buy from or sell to an alien enemy, or carry on business with him in any way, then it would seem a crime for Canadian banks to lend them money, for dealers to buy their produce, or for any Canadian subject to traffic or trade in any way with them. This being the case they would find it almost impossible to sell a horse, cow or a load of hay, or even to purchase a loaf from the baker. Just how they could exist under the circumstances isn't clear, but such, it seems, is the finding of Mr Justice Meredith in Toronto, and followed by Mr Justice Clute at the Chancery Court, Walkerton.

That the truth is stranger then fiction was borne out by the facts that cropped up at the Court of Revision here last week in connection with the various frontage assessments on Walkerton's main business block, running from the Bank of Commerce corner to Mr Albert Benninger's store. Stephan Bros, who are situated about the centre of the block, appealed against a frontage or land assessment of $700, and in order to determine whether they were overcharged or not, a comparative assessment of all the store frontages in the block was gone into. Some amusing, if not edifying, facts came out as the work progressed, and the Court of Revision got a fund of good knowledge that they didn't expect to see on the program that night. The Bank of Commerce corner was the most heavily assessed per foot of land in the block, being nearly half as much again as Stephan Bros' sale. The values began to drop as the assessor worked westward, but suddenly jumped again as it got to Stephan's and went down on the other side until it reached the corner. Such zigzagging on land values of a block where the rates should be pretty near uniform, shows how badly assessment reform is needed in town. As this seems to have been going on for years, Mr Hess, the new assessor, didn't change the established custom, but rather fell in line and doped out the old brand. The next assessment roll is likely to see a change, as the Court of Revision was thoroughly warm under the collar at the strange revelation made. And what is true here was shown to prevail elsewhere in town. For instance, it was shown at the court that while one large house in town was assessed for about half its value, several other smaller houses were assessed for more than they could be sold for. This system has been apparently prevailing so long here that people put up with it because they don't know any different. The publishing of the assessment roll occasionally would overcome the difficulty and each citizen would then be able to see how he was rated in comparison with his neighbor. Of course few to know what the other is assessed for, and from the few flashes in the pan it would seem that this knowledge has been long needed in town.—Herald and Times.

BRANT TP COUNCIL

The municipal council of the township of Brant met at the township hall on Thursday, May 13th. Members all present. Minutes of last meeting read and declared correct.

Johnston—Gregg—That this council do now go into a committee of the whole with the reeve in the chair as a Court of Revision to determine the various appeals against the assessment roll for the current year.—Carried.

The following appeals were heard and disposed of: W Barry, assessment reduced $200; R Burrell, assessment sustained; W D Cargill, business assessment reduced $600; Eli Hopkins, assessment sustained; M Jacklin, assessment reduced $80; C Koehn, assessment reduced $250; J Mortimer, assessment reduced $600; C Maner, assessment reduced $200; Wm Miller, assessment reduced $300; Mrs Pegelo, assessment reduced $50; Fred Wilken, assessment reduced $200; H J Waechter, assessment sustained; S Thaler, assessment reduced $500; Mrs McNaughton, assessment reduced $100; R B Simpson, assessment sustained; E Cronore, assessment reduced $200; Mrs Jane Carnegie, assessment sustained. The following were added to roll: Wm White, laborer, village lot 124, Cargill, tenant; Geo Welsford, laborer, village lot 36, Cargill, tenant.

Rowand—Johnston—That this council do now adjourn as a committee of the whole and transact general business.—Carried.

Rowand—Weir—That the assessment roll as revised be accepted and that the same be the basis upon which the rates and levies for the current year be struck, and that the assessor be paid his salary in full of $100.—Carried.

Weir—Rowand—That Wm Tulloch be appointed pathmaster in div 58 instead of J A Rae, and Jas Metcalf instead of H Crispin in div 23, and that the by-law be changed in accordance with this resolution, also that Ben Stenal be appointed poundkeeper instead of Wm Alexander.—Carried.

Weir—Johnston—That a grant of $10 be given to the Richardson family of Cargill, cheque to be issued to C W Keeling.—Carried.

Gregg—Rowand—That the reeve and clerk issue orders on the treasurer for all accounts passed at this meeting of council.—Carried.

Rowand—Weir—That this council do now adjourn to meet on Monday, June 12th, for the transaction of general business.—Carried.

REAL MODERN JONAH

Seaman Survived the Titanic, Empress, Lusitania, etc.

Pleading guilty at Liverpool to having failed to join his ship, Charles Dunn, seaman, said he had served in the Titanic, sunk in iceberg collision; the Empress of Ireland, lost in collision with Storstad; the Lusitania and the Floraan, torpedoed. In consequence of these experiences seamen generally were alleged to regard Dunn as a "Jonah." Dunn said the other seamen threatened to throw him overboard if he dared to make the trip. He therefore joined the Royal Naval Reserve, but was discharged later as unfit for further service. The Stipendiary: "I think a man who has been through so much deserves some consideration. I shall go out of my way, therefore, to bind you over to be of good behavior."

After the members of the Royal Family, the Archbishop of Canterbury is the first Peer of the Realm.

Overland

Electric Control Buttons at Your Finger Tips

Naturally, you want a car that can be operated easily—you realize that the extent of pleasure and safety in driving depends upon the ease of control.

In most cars the details of control seem to be planned with an eye for convenience in assembling the various parts.

But the Overland control was arranged just as you would arrange it if you were designing a car for your own convenience.

You control the electric magneto, the electric lights, the electric horn, with your finger tips, without bending forward.

To start the motor you merely touch a foot button in the floor.

A woman or girl can drive the Overland in safety. Its control is easy and instinctive.

Let us tell you about the other Overland advantages.

Postage on Soldier's Parcels

For the information of those sending parcels to soldiers in England or at the front we publish the rates of postage as follows: To England the rate is 12c a pound, or any fraction thereof. The limit weight on parcels to England is 11 pounds. To France and Belgium, the rate is 24c for parcels any weight up to three pounds; from three pounds to seven pounds (the limit), the rate 32 cents, not 32c per pound, but for any weight from 3 to 7 pounds. Any letter or parcel for any soldier in a hospital (even if the hospital is not known to the sender), having the word "hospital" marked across it, will be delivered. A custom declaration must be attached to each parcel, for which application should be made at the stamp wicket of Post office.

ADVERTISING RATES

—Mr. and Mrs. R. J. Follis, of Carmangay, Alta., left for their home in the west on Friday after visiting their friends in Chesley and Paisley sections. Mrs Follis is a sister of Messrs. D. J. and Wes Porter.

New Barn

On Saturday Mr Jas Dudgeon, of Willicroft, had a new barn raised to replace the one destroyed by lightning about three months ago. The new barn is 60 ft x 60, and will be one of the best in the locality when completed. There was a good crowd at the raising and the work was accomplished in good shape.

Women's Institute Meetings

The annual summer series of Women's Institute meetings will be held at: Nariva—in Mrs. Wm. Alexander's home, on June 28th; Paisley—Portman's hall, June 29th; Williscroft—Baptist church, June 30th. The speaker assigned to address these meetings is Miss I Job, of Freeman. All ladies cordially invited to attend these interesting meetings.

Third Time Wounded

The name of Pte. Arch. McNeill, son of Mr. and Mrs. Dan McNeill, of Paisley, is among the list of wounded in Monday's reports. Pte. McNeill has been in the trenches since November, 1914, almost continuously. He enlisted with the 48th Highlanders, and went across sea with Col. Currie's command. Recently he was with the 15th Batt. Twice previously he suffered wounds and returned to the trenches after being in hospital. He is one of those men who are in the fight to stay to the finish, if he c

A Day at the Lakeside

July 1st is always Port Elgin's Day. Last year 5,000 people took opportunity to spend a day at the beautiful park on the lake, to witness the races and other big attractions. This year they offer horsemen purses amounting to $1,000 and already horses in the 2.10 and 2.12 class are entered. Then, too, an opportunity will be given to witness a fireworks display excelled only at Toronto fair. These with other platform performances, band music, etc., promise a day and evening everyone will enjoy. Plan to spend the day at Port Elgin. Entrance fee is low, only 15c and 25c. Good accommodation for all. Special train home. Cheap fares. We want you. Bring the family. Give them a day at the lake and enjoy the fun.

WOOL WANTED!

We are in a position to pay you the highest prices for Wool in cash or trade.

See us before selling.

Women's Institute

Miss H. T. Job will address a Woman's Institute meeting in Putnam's hall, Thursday, June 29th, at 2.30. Miss Job has had much experience in public and high school teaching and is a graduate of McDonald Institute, Guelph, and instructor in the University of Alberta. Miss Job will be glad to meet a large number of the patriotic workers of the vicinity, therefore a cordial invitation is extended to all women to hear her. Musical selections will be rendered. Topics—"The Charm of Personality," "Economy in War Time."

$40,000 Damage by Flood on the Little Saugeen

The Lockerby Creek, or Little Saugeen River, is known to be the most potent stream in our county, as far as water power is concerned, because of its perennial source of supply and the degree of fall to its flow from source to mouth. Last week it sprang into new fame by going on the worst rampage ever seen in this section. The heavy rains experienced here about on Friday afternoon and night were mere showers compared with the deluge that descended from the clouds further east. The township of Sullivan is drained by this stream, and it was there the violence of the storm gathered force enough to burst Anderson's new mill dam, then swept down stream, carrying away five other dams and several small bridges. The only dams on the stream that are left standing intact are those at the Paisley electric light power house, and Brown's mill at Lockerby. On Saturday morning the proprietors at Lockerby were warned of the impending danger by telephone so they had time to prepare for the coming of the deluge. The dams destroyed include the Scone dam owned by M. A. Halliday, where power was generated for Chesley electric lights and which it will cost $10,000 to replace. Three dams in Chesley, at the flour mill, at Krug's factory, and at Elliott's mill, also Dawson's mill, and one Elderslie, are the others that were wiped clean out. The Chesley electric lights were snuffed out, but fortunately the Hydro equipment is completed, and that power was turned on the following night. Krug Bros'. dam was worth $2,000. A. Dawson's loss includes $3,000 worth of logs which were in the mill pond but all went out with the flood. The large flour mill was threatened with destruction by undermining. Elderslie Tp. loses two wooden bridges, one on the 2nd con. near Scone, and Hone's on the 25 sideroad. The private bridges at John Allen's, Thos. Allen's, J. Nicholl's and Dan McIntyre's were totally washed away, and R. Stoddart's badly wrecked. Some jams of old timber and rubbish that had lain at points on the stream for over twenty years were moved out entirely, and the banks are strewn everywhere with the debris and wreckage. A tremendous amount of the stuff came over the Lockerby dams. The top stringers at Brown's were taken off and secured before the flood arrived.

—The 160th Batt leaves Walkerton this (Wednesday) morning for London training camp.

—Boy wanted to learn the printing at THE ADVOCATE Office, or a girl to set type.

THE

Key to Yesterday

By CHARLES NEVILLE BUCK

CHAPTER XVIII.—(Cont'd.)

In its center stood a stone jardinière, now empty. About it was the flagged area also empty. In front was the street-door—closed. Saxon looked out with the opaque stare of pupils that admit no images to the brain. They were as empty as the stone jar. Possibly, the sun, borrowing some of the warmth of the spent summer, made a vague appeal animal instinct; possibly, the first ray of mental dawn was breaking. At all events, Saxon rose heavily, and made his way into the area.

At last he wandered to the street-door. It happened to be closed, but the concierge stood near.

"Cordon," inquired the porter, with a smile. It is the universal word with which lodgers in such abodes summons the guardian of the gate to let them in or out.

Saxon looked up, and across the hitherto unbroken vacancy of his pupils flickered a disturbed puzzled tremor of mental groping.

He opened his thin lips, closed them again, then smiled, and said with perfect distinctness:

"Cordon, s'il vous plait."

The concierge knew only that monsieur was an invalid. In his next question was nothing more than simple Gallic courtesy.

"Est-ce que monsieur va mieux aujourd'hui?"

Once more, Saxon's lips hesitated, then mechanically moved.

"Oui, merci," he responded.

The man who found himself standing aimlessly on the sidewalk of the Rue St. Jacques was a man clothed in an old and ill-fitting suit of Captain Harris' clothes. He was long-haired, hollowed-cheeked and bearded like a pirate. At last, he hesitatingly turned and wandered away at random. About him lay Paris and the world, but Paris and the world were to him things without names or meaning.

His unguided steps carried him to the banks of the Seine, and finally he stood on the island, gazing without comprehension at the square towers of Notre Dame, his brows strangely puckered, as his eyes picked out the carvings of the "Last Judgment" and the Galerie des Rois.

He shook his head dully, and, turning once more, went on without purpose until at the end of much wandering he again halted. This time, he had before him the Pantheon's entrance, and confronting him on its pedestal sat a human figure in bronze. It was Rodin's unspeakably melancholy conception, "le Penseur," and it might have stood for Saxon's self as he half-crouched with limbs tense and brows drawn in, in the agony of brooding thought-travail.

Then Saxon's head came up, and into his eyes stole a confused groping, as though reason's tentacles were struggling out blindly for something upon which to lay hold. With such a motive perhaps, the prehistoric man-creature may have thrown up his chin at the bursting into being of thought's first coherent germ. But from "le Penseur" Saxon turned away with a futile shake of his head to resume his wanderings.

Finally, in a narrow cross street, he halted once more, and looked about him with a consciousness of vast weariness. He had traversed the length of many blocks in his aimlessness, crossing and recrossing his own course, and he was still feeble from long days of illness and inertia.

Suddenly, he raised his head, and his lips which had been half-parted in the manner of lips not obeying a positive brain, closed in a firm line that seemed to make his chin and jaw take on a stronger contour. He drew his brows together as he stood studying the door before him, and his pupils were deeply vague and perplexed. But it was a different perplexity. The vacuity was gone.

Automatically, one thin hand went into the trousers-pocket, and came out clutching a rusty key. For another moment he stood regarding the chain turning it over in his fingers. Then, he laughed, and drew back his sagging shoulders. With the gesture, he threw away all imbecility, and followed the inexorable call of some impulse which he could not yet fully understand, but which was neither vague nor haphazard.

At that moment Dr. Cornish, chancing to glance up from his course a block away, stopped dumfounded at the sight of his patient. When he had gathered his senses, and looked again, the patient had disappeared.

Saxon walked a few steps further, turned into an open street-door, passed the concierge with out a word, and toilsomely, but with a purposeful tread, mounted the narrow, ill-lighted stairs. At the turning where strangers usually stumbled, he lifted his foot clear for the longer stride, yet he had not glanced down.

For just a moment, he paused for breath in the hall, upon which opened several doors identical in appearance. Without hesitation, he fitted the ancient key into an equally ancient lock, opened the door, and entered.

At the click of the thrown tumbler of the lock, some of the occupants of the place glanced up. They saw the door swing wide, and frame between its jambs a tall, thin man, who stood unsteadily supporting himself against the case. The black-bearded face was flushed with a burning fever, but the eyes that looked out from under the heavy brows were wide awake and intelligent.

"But Marston will one day return to us," Monsieur Hautecoeur was declaring to Steele and the girl, who, with backs to the door, were studying a picture on the wall. "He will return, and then——"

The instructor had caught the sound of the opening door and he half-turned his head to cast a side glance in its direction. His words died suddenly on his lips. His pose became petrified; his features transfixed with astonishment. His rigid fixity of face and figure froze the watching students into answering tenseness. Even the blanket-wrapped model held a freshly lighted cigarette poised half-way to her lips. Then, the man in the door took an unsteady step forward, and from his trembling fingers the key fell to the floor, where in the dead stillness it seemed to strike with a crash. The girl and Steele wheeled. At that moment, the lips of the bearded face moved, and from them came the announcement:

"Me voici, je viens d'arriver."

The voice broke the hypnotic suspense of the silence as a pin-point snaps a toy balloon.

Hautecoeur sprang excitedly forward.

"Marston! Marston has returned!" he shouted, in a great voice that echoed against the skylight.

As the man stepped forward, he staggered slightly, and would have fallen had he not been already folded in the giant embrace of the lesser master.

Dusha stood as white as the fresh sheets of drawing-paper at her feet. Her fingers spasmodically clenched and opened at her sides, and from her teeth, biting into the lower lip, her breathing came in gasps. The walls seemed to race in circles, and it was with half-realization that she heard Steele calling the man, wildly demanding recognition.

The newcomer was leaning heavily on Hautecoeur's arm. He did not appear to notice Steele, but his gaze met and held the girl's pallid face and the intensely staring eyes that looked into his. For an instant, they stood facing each other, neither speaking; then, in a voice of polite concern, the tall man said:

"Mademoiselle is ill!" There was no note of recognition—only, the solicitous tone of any man who sees a woman who is obviously suffering.

Dusha raised her chin. Her throat gave a convulsive jerk, but she only caught her lips more tightly between her teeth, so that a moment later, when she spoke, there were purplish indentations on its almost bloodless line.

She half-turned to Steele. Her voice was an utterly hopeless whisper, but as steady as Marston's had been.

"For God's sake," she said, "take me home!"

At the door, they encountered the excited physician, who stumbled against them with a mumbled apology as he burst into the atelier.

CHAPTER XIX.

Late that afternoon, in Mrs. Horton's drawing-room at the Hotel Palais d'Orsay, Steele stood at the window, his gaze almost sullen in the moodiness of his own ineffectual sympathy. The day had grown as cheerless as himself. Outside, across the Quai d'Orsay, a cold rain pitted desolately into the gray water of the Seine, and drew a wet veil across the opposite bank. Through the sinking mist, the remote gray branches in the Gardens of the Tuileries stood out starkly naked. Even the vague masses of the Louvre seemed as forbidding as the shadowy bulk of some buttressed prison. The "taxis" slurred by through wet streets, and those persons who were abroad went with streaming umbrellas and hurried steps. The raw chill of Continental hotels permeated the place. He knew that, in the center of the room Dusha sat, her elbows resting on the table top; her eyes, distressfully wide, fixedon the wet panes of the other window. He knew that, if he spoke to her, her lips would shape themselves into a pathetic smile, and her answer would be steady. He knew that she had given herself no luxury of outburst, but that she had remained there, in much the same attitude, all afternoon; sometimes, crushing her small handkerchief into a tight wad of lace and linen; sometimes, opening it out and smoothing it with infinite care into a tiny square upon the table. He knew that her feet, with their small shoes and high-arched, silk-stockinged insteps, twitched nervously from time to time; that the gallant shoulders drooped forward. These details were pictured in his mind, and he kept his eyes stolidly pointed toward the outer gloom so that he might not be forced to see it all again in actuality.

At last, he wheeled with a sudden gesture of desperation, and, going across to the table, dropped his hand over hers.

She looked up with unchanged expression of wide-eyed suffering that has no outlet.

"Dusha, dear," he asked, "can I do anything?"

She shook her head, and, as she answered, it was in a dead voice. "There is nothing to do."

"If I leave you, will you promise to cry? You must cry," he commanded.

"I can't cry," she answered, in the same expressionless flatness of tone.

"Dusha, can you forgive me?" He had moved around, and stood leaning forward with his hands resting upon the table.

"Forgive you for what?"

"For being the author of all this hideous calamity," he burst out with self-accusation, "for bringing him there—for introducing you."

She reached out suddenly, and seized his hand.

"Don't!" she pleaded. "Do you suppose that I would give up a memory that I have? Why, all my world is memory now! Do you suppose I blame you—or him?"

"You might very well blame us both. We both knew of the possibilities, and let things go on."

She rose, and let her eyes rest on him with directness. Her voice was not angry, but very earnest.

"That is not true," she said. "It couldn't be helped. It was written. He told me everything. He asked me to forget, and I held him—because we loved each other. He could no more help it than he could help being himself, fulfilling his genius when he thought he was following another man. There are just some things—" she halted a moment, and shook her head—"some things," she went on quietly, "that are bigger than we are."

(To be continued.)

Progress.

"Where's that hotel that used to advertise, 'All the comforts of a home for $1?'"

"Busted up. The hotel opposite put up a sign: 'None of the discomforts of a home for $2.'"

An expert has thrown a hand grenade thirty-eight yards.

Elephants never use more than one tooth on each side of their jaws at once.

At Milland, (England), munition works now covering sixty-five acres was not very many months ago, green fields.

The best sugar for the sugar bowl is

Lantic Sugar

Its purity and *"fine"* granulation give it the highly sweetening power. It dissolves instantly in your teacup or on your breakfast cereal.

2 and 5-lb Cartons
10 and 20-lb Bags

"The All-Purpose Sugar"

ON THE FARM

The Skim Milk Calf.

Calves raised upon skimmed milk can develop into first class dairy cows. On hundreds of farms, skimmed milk constitutes the main portion of the feed of the young calf and such calves make as good cows as those receiving whole milk.

It costs a great deal less to raise a calf on skimmed milk than on whole milk. By this plan the cream can be sold and made into butter and the proceeds added to the farm income.

Calves do well on skimmed milk whether it is skimmed by hand or with cream separator but skimmed milk from the separator has the advantage of being fresh and warm and sweet when fed. Where as many as three or four cows are milked regularly, a separator will prove a paying proposition. It saves a great deal of time and labor in setting the milk away for the cream to rise and in cleaning milk vessels.

Feeding skimmed milk develops a large stomach in the calf. This is exceedingly desirable because, after a big udder, the most valuable point in a cow is a large, capacious paunch in which she may store her feed. Every great milk cow, without exception, has a large barrel.

Wean Early.

The calf may be allowed to remain with its mother for five or six days, at which time the milk is usually fit to be saved. It should then be taken away from the cow and if possible out of her sight and hearing.

During the first week after removal from its mother, it should receive about 9 lbs. of milk a day, divided into two or three feeds, preferably into three. After this, skimmed milk should begin gradually to replace the whole milk, so that by the time the calf is three weeks old, it is getting getting skimmed milk only, the quantity varying from 12 to 18 lbs. a day according to the size and thriftiness of the calf. A teaspoonful of blood flour added to each feed of skimmed milk aids to its feeding value and prevents scours. The skimmed milk should always be fed warm, 95 to 100 degrees or blood heat, being about right.

The bucket from which the calf is fed should be washed and scalded after each feeding. The use of filthy slop buckets and unclean and sour milk will surely result in unthrifty calves and in a great deal of trouble with scours.

Get On Feed.

Within three or four weeks the calf will begin to eat bran and shelled corn, and will nibble at hay. A small amount of these materials should, therefore, be provided. Good clean clover or alfalfa hay gives the best results. Care should be taken not to give too much grain. A safe rule is to give a little less than the calf will clean up.

At the age of ten to twelve weeks, if a good pasture is available, the calf will be able to get a living from grass. When this is the case, the skimmed milk only, the quantity should be taken at this time to avoid stunting the calf, and enough grain should be given to keep it in a thrifty growing condition ,but not fat.

Teaching the calf to drink out of a bucket requires a little patience. Gently back the calf into a corner of the stall, stand astride the youngester, wet the fingers in the milk and let the calf get a taste of the milk. Then gently lower the head into the pail.—Canadian Farm.

The Farm Office.

Farming is a business and the manager of one is, or should be, a business man. Every city business man has an office because it has proven an asset to his business. A few farmers have also tried it and proven its efficiency.

A few reasons why every farmer should have a business office, even if it is no more than a space partitioned off in the tool house, are as follows:

FOR
HEADAGHES, BILIOUSNESS
CONSTIPATION,
INDIGESTION

Nearly all our minor ailments, and many of the serious ones, too, are traceable to some disorder of the stomach, liver, and bowels. If you wish to avoid the miseries of indigestion, acidity, heartburn, flatulence, headaches, constipation, and a host of other distressing ailments, you must see to it that your stomach, liver and bowels are equal to the work they have to do. It is a simple matter to take 30 drops of Mother Seigel's Syrup daily, after meals, yet thousands of former sufferers have banished indigestion, biliousness, constipation, and all their distressing consequences in just this simple way. Proof by their experience. As a digestive tonic and stomachic remedy, Mother Seigel's Syrup is unsurpassed.

TRY

MOTHER
SEIGEL'S
SYRUP.

THE NEW 1.00 SIZE CONTAINS 3 TIMES AS MUCH AS THE TRIAL SIZE SOLD AT 50c PER BOTTLE.

1. Bulletins adapted to every phase of the farming business are now available, and unless these are filed away, they are never to be found when wanted.

2. He often has business callers who feel averse to walking into the house and talking freely before the women members of the family, but who are at ease when alone with the farmer. An office fitted up cozily with a stove and chairs is a fitting place to take them, especially in cold weather.

3. The time is fast approaching when the successful farmer will know something of science, and an office or den is a good place to make his experiments on soils or other materials, or to keep his samples of fencing, soils or seeds.

4. There is no farmer but keeps some accounts, more or less correct according to the business ability of the man. He should have a place to keep these account books. Neatly printed farm stationery, and a typewriter in his office will help the farmer to find a better market for his products.

The cost of fitting a farm office can depend upon the inclinations of the man. It should contain a desk, preferably roll top on account of its many drawers and pigeon holes, an extension of the 'phone from the house; shelves or cabinet for filing his books, pamphlets and samples; a stove and a table for his experiments. Other equipment may be added as is needed. —G. D. Fuller, in Farm and Dairy.

The Horse Collar.

The horse collar should fit snugly. It should not pinch at the crest of the neck and there should be room enough between the collar and lower part of the neck to admit the hand freely when not pulling. The contact surface of the collar should be smooth and plastic and distributed over as much bearing surface as possible. The incrustations that form on a collar should be removed daily to prevent increased friction. Sweat pads or false collars should not be used except in cases where the animal has been galled or has a collar boil, and in this case a window should be cut in the pad so as to prevent the bearing surface of the collar coming in contact with the injured part.—S. O'Toole, North Dakota Experiment Station.

Any kind of shell is very expensive to produce.

Powdered sulphur quenches fire more rapidly than water.

NEWS FROM ENGLAND

NEWS BY MAIL ABOUT JOHN BULL AND HIS PEOPLE.

Occurrences in the Land That Reigns Supreme in the Commercial World.

The Great Northern Railway Company have withdrawn all dining and restaurant cars on their trains.

The Great Northern station at Holloway, which was closed to the public last September, has now been pulled down.

Eight cases of smallpox have been notified in the Manchester and Salford districts, two of which have proved fatal.

There have been issued in Bradford 443,230 free train tickets to soldiers and Belgians in the last twelve months.

Mrs. Mary Bucknill, who was congratulated by the King on her 100th birthday a month ago, has just died at Braunston, Northamptonshire.

Captain Frederick Warden, who did fine work in the Indian Mutiny, being known as "Warden of Calcutta," has died at Bath, at the age of eighty.

Mr. Alfred Jeff, who has died at Bedford Hospital at the age of 90 years, registered 30,000 births and 21,000 deaths during the 60 years he served as registrar.

Princess Victoria of Schleswig-Holstein opened a Y.M.C.A. hut presented by Luxton, costing $10,000, at Folkestone. The Archbishop of Canterbury dedicated the hut.

A scheme suggested by the Board of Trade for the training of women in horticultural work has been considered by the Parks and Smell Holdings Committee of the L. C. C.

Mr. Wm. Savage, who retired two years ago from the position of chief assistant to Liverpool magistrate's clerk after nearly 52 years' service, has now returned to his old post.

Lady Viola Gore was fined $25 at Southampton under the Alien Restriction Act for failing to notify the presence in a prohibited area of her Swiss maid. The maid was fined $10.

A South Lincolnshire farmer, Mr. George Cauldwell, of St. Lambert's Hall, Weston, who has extensive fens, is now employing over sixty women, and purposes shortly to engage many more.

Mr. Frederick Blaker has died in his ninety-fourth year at Worthing. He was in business in the town for seventy-five years, and was a director of the local gas company for thirty-nine years.

Mr. Arthur Du Cros, M.P., has promised $25,000 to the Extension Fund of the London (Royal Free Hospital) School of Medicine for Women, thus completing the $150,000 for which an appeal was made.

The Marchioness of Exeter, whose husband is at present on one of the fighting fronts with his battery, has been appointed chairman of the County Committee of the Sake of Peterborough, which is to organize women labor on farms."

As a band of the Bedfordshire Regiment was playing a number of recruits to the station at Bedford, two horses, attached to a military transport wagon, ran away and crashed into a crowd of people. One woman was killed and nine other people seriously injured.

Large numbers of girls and young women at present employed in machinery works in Manchester, Salford, Ashton and other parts of Central and East Lanchashire, will be drafter to Woolwich in the next few weeks to take the place of single young men who have ben employed in Government work.

Sergeant Cozall, of the Bedford Regiment, who was rendered totally deaf by a high explosive shell at the front three months ago has recovered his hearing through the sudden shock of falling down stairs at Saffron Walden Red Cross Hospital.

James Logue, an Indian Mutiny veteran who joined the 34th Border Regimnnt as a drummer boy and served under Sir Henry Havelock, has just died at Portmadoc. He was at Cawnpore, Delhi and Lucknow.

A Man's Worth

depends upon his power to produce what the world recognizes as of value.

And when you skirmish around you'll find that this power—which is just power of mind and body—depends to a remarkable degree on the food one eats.

For highest accomplishment one must have the best values in food—food which builds well-balanced bodies and brains.

Grape-Nuts
FOOD

has that kind of value. It contains all the nutriment of whole wheat and barley, including the important mineral elements so often lacking in the usual dietary.

Grape-Nuts comes ready to eat, is easy to digest, nourishing, economical, wonderfully delicious — a help in building men of worth.

DODD'S KIDNEY PILLS CURED WHEN DOCTOR'S FAILED.

Mr. M. A. Morrison Suffered From Kidney Disease for Five Years—Dodd's Kidney Pills Cured Him.

Tarbot, Victoria Co., C.B., June 12th (Special.) — Cured of Kidney trouble of five years' standing and of which three doctors failed to cure him, Mr. M. A. Morrison, a well-known resident of this place has no hesitation in stating that he owes his health to Dodd's Kidney Pills.

"I was so weak I could not walk a quarter of a mile and to-day I am able to attend to my work as well as I was twenty years ago," Mr. Morrison says. "For five years I suffered from Kidney Disease. I was treated by three skilful doctors but got no benefit.

"Then a friend advised me to use Dodd's Kidney Pills. I went to the druggist and got five boxes. Before I had used four boxes I was completely cured.

"I advise anyone suffering from kidney disease to use Dodd's Kidney Pills. Anyone who wants to know more about my cure has only to write to me and I will tell them all about it."

Dodd's Kidney Pills are no experiment. They have been curing kidney disease in all parts of Canada for a quarter of a century. Ask your neighbors about them.

WARRIOR FROM INDIA.

Sir Partab Singh Has Returned to the West Front.

Sir PartabSingh, the famous soldier of India, wants to die in the trenches if he has to die, and although the Indian troops have gone from France to other fighting zones, Sir Partab has returned to the western front at his own request. This veteran Indian fighter, 71 years of age, comes of the mighty Rajput warriors, and since youth has followed the life of a soldier. An Indian writer in one of the London newspapers in telling the story of Sir Partab, says:

"Thirty-eight years ago Sir Partab went to Kabul as a member of the mission thitherwas sent there. Nineteen years later he accompanied the Mohmand expedition as extra aide-de-camp to Gen. Ellis. The next year he served in the same capacity with Gen. Lockhart in the Tirah campaign on the Indian north-west frontier. While serving in the last campaign he received a wound in the hand, which fact, with his characteristic stoicism, he hid from everybody until the Gen. noticed it and ordered the doctor to attend it—just in time to avoid blood poisoning.

"When the Indian troops were being sent to assist in quelling the Boxer Rebellion in China Sir Partab persuaded Lord Curzon, then Viceroy and Governor-General of India, to let him accompany the expeditionary force. While serving in China the Maharaja learned to hate the Prussians, who went out of their way to treat him and other Indian rulers as 'coolies.'

"Sir Partab is as good an administrator as he is a soldier. His administrative genius has been demonstrated by the work that he did in Jodhpur—a state more than three times the size of Belgium and with about as many inhabitants as Denmark—during his two terms of Regency and another as Prime Minister of that state. His rule over Idar, a state in the Bombay Presidency, 2,000 square miles in area, extending from 1902 to 1911, was also progressive and enlightened. He voluntarily abdicated the gadi (throne) of Idar in favor of his adopted son in order to assume the Regency of Jodhpur."

That Knocking.

Miss Pickles—Too bad, I couldn't see you when you called, but I was just having my hair washed.

Miss Dill—And it hadn't been returned, eh?

If you want money go to strangers; if you want advice go to friends; if you want nothing go to relations.

"CONSCIENTIOUS OBJECTORS."

Britain to Enrol Them in Noncombatant Engineering Corps.

The British Government has found a place in the army for the conscientious objectors, men called up for service under the Derby recruiting scheme who had conscientious scruples against fighting and who were excused from enlisting. There were thousands of such and to give them a chance to serve their country, although at the same time cater to their little vanity against bearing arms, the War Office announced the formation, for the period of the war, of the "Noncombatant Corps." The officers and noncommissioned officers will be selected from regular infantry personnel not fit for general service, but fit for service abroad on lines of communication.

Companies of the new corps will be trained in squad drill without arms and in the use of the various forms of tools used in field engineering. The privates will be equipped as infantry, except that they will not be armed or trained with arms of any description.

Pay will be that of infantry of the line, but the men enrolled in the new corps will not be entitled to draw working pay, nor the proficiency pay given to others for professional skill in arms. Officers and men transferred to this corps from other regimants will receive infantry pay, together with proficiency and service pay.

SAWDUST BY-PRODUCTS

Neglect to Utilize It Involves Tremendous Waste.

Few persons have ever given much thought to the sawdust problem. And yet—

Experts of the New York State College of Forestry estimate that 11 per cent. of the lumber cut in the United States every year is wasted in the form of sawdust. That is to say, in sawing the lumber, 11,000,000 feet of perfectly good timber is ground up and left to rot.

Of course, it's impossible to saw up logs without making sawdust. But lumbermen are just beginning to appreciate the fact that there is value in this by-product, and that neglect to utilize it involves tremendous and unjustifiable waste.

A little of the sawdust is used in the form of "wood flour" in making stucco, molding, etc. There is opportunity for the development of big industries along these and similar lines. Vast quantities of the wasted sawdust might be used for the manufacture of good alcohol. Many kinds of sawdust could be used, too, for paper pulp. All such adaptations of this supposedly worthless material not only serve to create wealth directly, but help to conserve our timber supply.

Future generations may find sawdust heaps more profitable than gold mines.

A PATHETIC INCIDENT.

Not long ago a gentleman who had been living fairly well and was thought well of, suddenly died. As was natural, one of the first things after his death, was the straightening up of his estate, and when matters were looked over and an inventory taken of what he was supposed to be possessed of, it was found that it would take almost every available cent to pay the outstanding obligations which he had contracted, with a result that his family would be turned out upon the street.

It was heartrending to see them endeavoring to retain some articles of furniture most dear to them. It looked as though the house which they had been accustomed to live in would have to go, but in packing up and rummaging through some of the furniture what was their relief when they came across a policy for $5,000.00 which the late husband had been carrying unknown to his family in the Crown Life Insurance Company of Toronto.

Notice of the death was sent the Company and a cheque was promptly issued.

The mortgage was paid off, the furniture was safe and there was a considerable amount left over for present needs.

This is an object lesson which should appeal to every one of us and one and all can make the same provision for the family by insuring in the Crown Life.

PARIS MARKETS DWINDLE.

Few Flowers Sold—Ham and Old Iron Fair Has Strange Features.

The Paris flower markets have dwindled a good deal since the war, and some no longer exist, but the flower shops are not doing badly. The lily of the valley is now most in favor. It is the lucky flower, and on May 1, if a young man sent a bunch of it to a lady she felt she stood a chance of missing a little sorrow. But it is also a very profitable flower, and in the woods not far from Paris where it grows in abundance children and women gather it and tie it into bunches to send up to the Paris markets, not for a few pennies, but for a considerable number of francs.

The Ham Fair, which is joined to the Old Iron Fair, is also a typical Paris market, and this year was marked by many strange features. The sale of sausages, for which it is noted, was ostentatiously free from anything suggestive of German production, and one noisy wag stood by his stall in a fantastic costume and called attention to the notice over his head which ran: "Taisez-vous, mefiez-vous, les produits ennemis nous degoutent."

The turning of M. Millerand's famous warning to talkative people in public places to suit his purpose pleased the ham merchant and his customers enormously.

The old iron and the curio mongers also did a fair trade this spring. Although the foreign artists who generally throng there to find studies valuables were noticeably few, several soldiers on leave stood guard over motley collections of rubbish.

A Blessed Boon to Busy Brides—easily and quickly prepared—full of strength-giving nutriment—the cleanest, purest, cereal food in the world, Shredded Wheat with Strawberries. A combination that is a perfect, complete meal. You don't know the greatest of palate joys if you have not eaten it. For breakfast, luncheon or any meal.

Made in Canada.

No Connection.

The Canadian Branch of the Queen Mary's Needlework Guild wish to disclaim any connection with a chain-letter which is being circulated in the name of the Guild by the New York Branch. Though responsibility in no way touches the Canadian Branch, the ladies here regret that such a method of obtaining money for the Queen's Guild has been resorted to, and that it has got into this country, as the chain-letter system has long since been condemned and fallen into disfavor.

IMAGE A PEACE BAROMETER.

French Expect Figure's Fall to Mark End of War.

High overhead above the ruined and desolate streets of Albert, in France, the great gilded figure of the Virgin with the infant Christ still hangs, from the tower of the Church of Notre Dame de Brebieres. For more than a year she has now hung there, at an angle of some fifteen degrees, below the horizontal, face downward to the street below, holding the infant out above her head.

In local French belief the day when the holy figures fall will see the end of the war. The German shell which throws down the Blessed Virgin of Brebieres will shatter the throne of the Hohenzollerns, it is maintained.

During the last week of two the immediate region of Albert has been one of the most active on the whole front. From the neighborhood of Fricourt, by La Boisselle, to Authville and beyond there have been almost nightly raids and blowing up of mines.

Bee Rearing in Denmark.

A careful study of the rearing of bees began in Denmark about 1864. The number of hives that year were estimated at 78,000, but in 1895 the total had increased to 139,000. The great advance in the number of hives was due to the new methods introduced, the most important being the so called Dzierzonske, by which the honey is gathered without injury to the bees. After 1895 the culture of bees made no progress and on June 15, 1914, there were only 97,000 hives.

Some 28,000 persons are engaged agriculture chiefly in connection with some other employment.

TO PROCURE PURE WATER.

A French Scientist Tells How to Make a Filter.

A good filter that will find favor with those who find it necessary to procure pure water from streams has been devised by a French scientist.

An ordinary tin box is soldered to the bottom of a metal water pail. The floor of the box is perforated with rows of wholes which extend through the pail bottom. A coiled spring attaches the cover of the box to the bottom and is made to pass through a tin tube in the center of the box. Alternate layers of powdered carcoal and well-packed cotton wool are now placed in the box, and the pail is suspended in a stream.

Gradually, as a result of air pressure, the pail will fill up with filtered water. Then, by loosening the chain, the spring cover drop back on the box, and the pail, full of water, may be lifted out of the stream. The water may be further sterilized by adding a few crystals of potassium permanganate.

The Paisley Advocate

PAISLEY, JUNE 21st, 1916

—Church union was carried in the Presbyterian General Assembly by a vote of 466 to 88, yet the minority have resolved to continue the Presbyterian church in Canada. Seems to be another case of "wee Free'a." Prohibition is to be put in force in Ontario on Sept. 16th, without a vote being taken. We don't know of any minister who considers this an unreasonable piece of legislation, and popular sentiment favors it very largely. What would they think if the liquor party of Ontario should resolve to continue the traffic in strong drink in the face of a majority temperance vote? To the average layman's mind the action of the anti-church unionist party appears most unreasonable, considering that the last of three-fourths of the ministers and laymen attending the General Assembly being in favor of union should induce the others to follow and work with the majority. The vote of 466 to 88 shows that a great many ministers and elders have thrown aside their love for the Presbyterian church, that church which has been a spiritual power for centuries—cast their ecclesiastical traditions to the winds, and declared their willingness to unite with the Methodists and Congregationalists in promoting the great work that confronts the christian church in Canada. The question was thoroughly debated on the highest plane at the Assembly, and the decision of the majority should rule and be accepted by all, as it would be in any democratic organization. If there is anything in even the primary teachings that have prevailed in the Presbyterian Sunday schools, the anti-unionists are following an inconsistent and unchristian course.

—As is being demonstrated in many ways, the war is giving a great boost to the public ownership or control propaganda. Theories that were before declared to be impracticable have been applied to the industrial and commercial life of those great nations comprising the Allied forces, and public utilities have been taken charge of entirely by the governments for the benefit of the people interested in the war. On the heel of many other great projects comes another of enormous importance, this being a great international bank to facilitate trade after the war is over. The scheme is to be carried out under the co-operation of British, French and Russian Governments, and branches are to be established throughout the world. The dreams of the man of socialistic ideas are beginning to cometrue. International, national, provincial and municipal management of all natural resources such as mineral and coal mines, oil wells, forests, water powers, &c., all public utilities such as railways, steamship lines, telegraphs, telephones, express company business, street railways, lighting plants, etc., have been discussed for many years, but the private ownership party were too hardy to be killed off easily. But since the biggest war ever came upon us governments were compelled, in self-defence of the countries they represent, to take charge of the manufacture of munitions, and this experiment may prove to be a practical demonstration as to the feasibility of the nation undertaking to manufacture many of our requirements on a gigantic scale and furnishing them at first cost to the people, also paying the mechanics and laborers a commensurate rate of wages, rather than perpetuating the old system by which the owners of industries, commercial houses or financial institutions accumulate fortunes while their employees must be satisfied with a rate of wages that is one of the disgraceful things in connection with modern civilization. Private ownership doesn't distribute the products of labor equitably, while state ownership could be made to do so. State ownership would also eliminate the waste of the competitive system, which is so enormous as to be almost incomprehensible and incalculable.

—Some of the Toronto papers printed large illustrations showing society ladies standing on city street corners, alongside their decorated automobiles, selling flowers for patriotic purposes. They dispose of a heap of flowers, of course, but with a little real self sacrificing economy in dress alone these same ladies could apparently afford to turn more money into the same fund. This way of "doing their bit" wouldn't bring them into the limelight, however, and that's the incentive to a lot of this fussy "patriotic" activity.

BAPTIST ASSOCIATION

The 29th annual gathering of the Owen Sound Association of Baptist churches was held in the Baptist church, Paisley, from June 13th to 15th, inclusive. Upwards of 170 delegates and visitors attended, and were warmly welcomed to the town by Reeve Ballachey.

The principal speakers were Prof. Campbell, of McMaster University, who spoke on "Christian Education"; Rev A A McLeod, a returned Missionary from India, on "Foreign Missions"; and Rev E J Stobo, S D T, on "Grand Ligne."

Topics on the programme were ably introduced and discussed by the various speakers, whose thoughts, we are informed, were luminous in sentences of convincing power. They knew what they spoke about. With a strong right hand they wielded the sickle, and their sentences were like sheaves of the finest of wheat. The left hand gripped the subject, and the right hand wielded the sickle, which is called the "sayword." The notes of joy, hope and resolve have been heard. The sense of fellowship in Christ, and of the value of the gospel of the cross has been deeply and continuously present. The tone of our people was never healthier, nor were they ever more fully possessed with the consciousness of a vast opportunity.

The annual meeting of the Women's Mission Circles and Bands was held at the same time, presided over by Mrs (Dr) Burt of Owen Sound.

The following officers of the Association were elected: Moderator, Rev W W Wylie, Durham; Vice-Moderator, F S McLachlan, Paisley; Sec'y-Treas., Rev F Ashton, Bentinck.

Officers for Pastors' and Deacons' Conference: Pres, Rev M Neilson, Paisley; Sec-Treas, F S McLachlan, Paisley.

The next meeting place will be Durham.

Rev H A Reid, in an address on the topic, "Does War Bring a Revival?" cited historical instances in which great spiritual awakenings had followed war, such as that between the North and South in the U S. Hope is now being expressed that when the present contest is past the future life of the nations may become infused with the spirit of Christ.

Prof. Campbell gave an address on "Christian Education," in which he made a special appeal for not only funds for the support of MacMaster University, Woodstock College and Moulton Ladies' College, but also for young men and young women to become students therein. The war is telling upon the colleges by taking away many students and depriving families of the funds required to send sons and daughters to take the educational courses. The revenue of MacMaster has fallen off to such an extent that $20,000 is now urgently needed. Prof Campbell drew attention to the great work of those men who established the Baptist schools, also the strong and efficient work being done in training young men and women who go out to follow various callings in life, including farmers, business and professional men, teachers, etc. The evangelistic spirit which is being carried forth with special force by the teacher graduates is one of the best recommendations for these schools. The teachers particularly are doing christian work outside of their professional positions, winning many souls for Christ.

Rev H Merritt, in presenting the Educational Report, pointed out the fact that students entering the Baptist colleges and university were brought under the tutorship of christian men, and that their influence is clearly reflected in the character of the graduates turned out.

An impressive feature of Wednesday evening's programme was the unveiling of a roll of honor bearing the names of young men from Paisley Baptist church and Bible class who are fighting in Flanders or enlisted for overseas service. A spirited patriotic address was given by Rev Mr McIntyre, of Owen Sound.

Rev R J McEwen spoke on "The Inner Life of the Church and Evangelism." He said that at present there is coldness and dampness coming over the church to-day and spiritual advancement is falling away it is due to a lack of the spirit of prayer. A church organization may have all the outward appearances, but if there is not behind that a faith in God on the part of the people, the work is going to fall flat. Also, that without keeping the fires burning in the family altars the people lose their grip on God. Mr Sayles, in discussing the same topic, impressed the advantages of not losing sight of the social side of life in the conduct of church affairs, also of having the business of congregations managed in a systematic way, as these matters all have an effect upon the inner life and work of the church.

THE CHIEF CHARM OF LOVELY WOMAN

Soft, Clear, Smooth Skin Comes With The Use Of "FRUIT-A-TIVES".

NORAH WATSON
38 Drayton Ave., Toronto.
Nov. 10th, 1915.

A beautiful complexion is a handsome woman's chief glory and the envy of her less fortunate rivals. Yet a soft, clear skin—glowing with health—is only *the natural result of pure Blood.*

"I was troubled for a considerable time with a very *unpleasant, disfiguring Rash*, which covered my face and for which I used applications and remedies without relief. After using "Fruit-a-tives" for one week, the rash is completely gone. I am deeply thankful for the relief and in the future, I will not be without "Fruit-a-tives".

NORAH WATSON.

50c. a box, 6 for $2.50, trial size, 25c. At dealers or sent postpaid on receipt of price by Fruit-a-tives Limited, Ottawa.

Butts—McCartney

On June 10th Miss Ethel McCartney, granddaughter of Mrs. C. Kissack, of Paisley, was united in marriage to Mr. Robert Butts, B.A., of Milton West, Ont. The ceremony took place at the residence of the bride's parents, Dr. and Mrs. J. H. McCartney, at Delaware, Ohio. The bride is well known in Paisley, having spent a summer here. Dr. J. H. McCartney, well known throughout China, has been connected with the Board of Foreign Missions of the M. E. church in Chung King for the past 16 years, and has been surgeon and superintendent of the Chung King Men's Hospital of West China. On the evening of June 10th the doctor left for China, in response to a cablegram. Dr. McCartney is going back to China as an independent missionary, and will be manager of an independent work in Chung King, to which all his many friends wish him success. Next September Mrs. McCartney and the newly-weds, Mr. and Mrs. Butts, will sail for China. Mr. Butts is going out to help Dr. McCartney in his work in Chung King.

Death of a Former Paisley Girl

Mrs Sarah Catharine Gregory, daughter of the late William John and Annie Hull (formerly of Paisley) died at the Private Pavilion of Toronto General Hospital on Saturday, June 17th. Mrs Gregory had been in poor health for several months. The specialist in Toronto advised an operation which was done on Thursday, 15th, June 8th. On the following Wednesday she became unconscious and remained so until the end came at 1.30 a.m. Saturday. Mrs Gregory was 35 years of age and was married in June, 1901, to Thos Gregory. Besides her husband and their six months' old son, she is survived by her mother, a sister Mrs R J Harwood (nee Lily Hull) two brothers—William John and Charles Stewart, now with the 74th Battalion in France. Mrs Gregory was a member of the Anglican Church. The funeral took place on Monday afternoon by motor from her late residence 585½ Bloor St. West, to Mount Pleasant Cemetery, Toronto. Mrs Gregory's father was a grocer in Paisley for a number of years.

Must Obey the Law

Grand Valley Star: On Tuesday afternoon a government Inspector paid Grand Valley inhabitants a surprise visit and found quite a bit of butter in pound prints not conforming to the legal requirements. Some was light weight and some in plain wrappers. Boxes of dairy butter, fresh from the makers, did not have the necessary mark. There was a little unnecessness just what might happen, but as this was the Inspector's first visit and the dealers were perhaps the innocent victims of an indifferent people the incident may be taken as a warning. The Dairy Industry Act of 1914 provides that the pound prints must be full weight and marked whether dairy or creamery. Boxes must also be similarly distinguished. A merchant is not permitted to accept any butter in pound prints that are short weight, but is to return the same to the vendor. So when you next bring your butter to market be sure it is full weight, and in properly marked wrappers or boxes. The use of plain wrappers for any purpose, even for delivering to regular customer, is not permitted. The penalty to both purchaser and vendor for infraction of the Act is a fine of not less than $10.00 and not exceeding $50.00.

—THE ADVOCATE office has a splendid stock of wedding stationery and calling cards on hand, also the most beautiful styles of type, so we are able to turn out the finest lines of wedding invitations, announcements, cards, etc. We can do work fit to invite the best of people to a wedding, so why pay two or three times as much to city printers or engravers?

WE HAVE ENGAGED BUSTER BROWN TO WORK FOR US. HE WILL BE OUR "LITTLE SALESMAN" IN PRINT.

Success of a New Remedy for Backache, Kidneys, Rheumatism.

Dear Mr. Editor—I suffered for years with backache. Last March I tried "Anuric" and have used this new kidney medicine recently discovered by Dr. Pierce, and it was wonderful the way it eased the pain and gave me relief in such a short time. I have tried several medicines, but "Anuric" is the only one that gave satisfaction. I feel it my duty to recommend "Anuric Tablets" to any one who suffers as I did.

(Signed) Mrs. Margaret E. Snider.

Note: Folks in town and adjoining counties are delighted with the results they have obtained by using "Anuric," the newest discovery of Dr. Pierce, who is head of the Invalids' Hotel and Surgical Institute, in Buffalo, N. Y. Those who started the day with a backache, stiff legs, arms and muscles, and an aching head (worn out before the day began because they were in and out of bed half a dozen times at night) are appreciating the perfect rest, comfort and new strength they obtained from Dr. Pierce's Anuric Tablets. To prove that this is a certain uric acid solvent and conquers headache, kidney and bladder diseases and rheumatism, if you've never used the "Anuric," cut this out and send ten cents to Doctor Pierce for a large sample package. This will prove to you that "Anuric" is thirty-seven times more active than lithia in eliminating uric acid—and the most perfect kidney and bladder corrector. If you are a sufferer, go to your best druggist and ask for a 50-cent box of "Anuric." You run no risk for Dr. Pierce's good name stands behind this wonderful new discovery as it has for the past half century for his "Golden Medical Discovery," a general tonic made from roots with pure glycerine which makes the blood pure, his "Favorite Prescription" for weak women and "Pleasant Pellets" for ever ills.

Paint Has Two Duties to Perform

One is to protect—the other to beautify. Paint that doesn't do both is not good enough for your buildings.

Lowe Brothers HIGH STANDARD LIQUID · PAINT

both protects and beautifies—and has many distinct advantages over hand-mixed and cheap paints. It covers more surface—and does it more thoroughly; it is easy to apply, enabling your painter to do the work in less time; it wears from two to three years longer than ordinary paint and holds its color well; it fails only by gradual wear and leaves a good surface for repainting.

"High Standard" saves repairs and makes your buildings worth more. You'll get best results with this good paint. Ask for color card.

—"Advertising is the education of the public as to what you are, where you are, and what you have to offer in the way of skill, talent and commodity. The only man who should not advertise is the man who has nothing to offer the world in the way of commodity or service." — Elbert Hubbard.

PAINS IN SIDE AND BACK

How Mrs. Kelly Suffered and How She was Cured.

Burlington, Wis.—"I was very irregular, and had pains in my side and back, but after taking Lydia E. Pinkham's Vegetable Compound Tablets and using two bottles of the Sanative Wash I am fully convinced that I am entirely cured of these troubles, and feel better all over. I know your remedies have done me worlds of good and I hope every suffering woman will give them a trial."—Mrs. ANNA KELLY, 718 Chestnut Street, Burlington, Wis.

The many convincing testimonials constantly published in the newspapers ought to be proof enough to women who suffer from those distressing ills peculiar to their sex that Lydia E. Pinkham's Vegetable Compound is the medicine they need.

This good old root and herb remedy has proved unequalled for these dreadful ills; it contains what is needed to restore woman's health and strength.

If there is any peculiarity in your case requiring special advice, write the Lydia E. Pinkham Medicine Co. (confidential), Lynn, Mass., for free advice.

SMALL, BRISK BRAINS

Absent-mindedness Spells Craziness of Success With People

The habit of absent mindedness grows on one, too. If you want to "make good," stop the growth and end the habit! Here's a real life example of how it loses friends. Two men met. They were friends. Said one, who was in deep mourning: "I've lost my wife."

The other man absent-mindedly asked: "Oh! Where?"

We ought not to smile, but it's hard not to. There are thousands afflicted with absent-mindedness, mildly or badly. Some know it, other don't. If you belong to either class, make up your mind to keep that mind at home! To let it go wool-gathering, to get "lost in thought," to look vacuous, to have to bring your mind back, while you seek to cover the operation by verbal fumbling, is equivalent to suicide as regards success in life.

Train your mind to be alert, quick; keep it at home, so that when opportunity knocks it's there. Brickness of brain—even if it be a small one—is better than a big brain befuzed and slow.

A Boy Scout Enthusiast

MR. W. F. EATON

formerly of Oshawa, now of Hamilton, has the distinction of commanding the largest troop of Boy Scouts in the British Empire—400 members—and the second largest bugle band in the world—87 members. Mr. Eaton, who is a brother to Sir John C. Eaton, is Commissioner of Boy Scouts for the Counties of Grey, Victoria, Peterboro' and the Town of Markham.

VARIETY IN FOWL FARE

Wise, Terse Hints For the Practical Poultryman

The first two meals of the day should be light ones, provided the fowls are fed three times a day. But the evening meal ought to be all that will be eaten up clean. A busy hen is one that never loses her appetite. There should be one system of feeding, and that system should have a bill of fare containing as great a variety as possible. To be continually adopting somebody else's plan generally works to the detriment of the egg crop. To continue a long-continued single diet is as bad as overfeeding; both induce indigestion, which is apt to debilitate the flock to a disease inviting condition.

VILLAGE COUNCIL

An adjourned meeting of the Court of Revision was held on Wednesday, 14th inst. All the members were in attendance.

Communications read from the Municipal World in answer to the clerk, re Bell Telephone Co's assessment, was read.

George—More—That the assessor's assessment of the Bell Telephone Co, and the roll as corrected at the last sittings of this Court be sustained.—Carried.

The Court of Revision then closed and Council proceeded with general business.

Minutes of last regular and subsequent special meetings were read and confirmed.

Communications read: from Dominion Association of Fire Chiefs; report from Underwriters' Association on fire protective appliances, and recommending the purchase of four chemical fire extinguishers, each of three gallons capacity, kept fully charged, on a hand cart for first response to a fire alarm.

George—Nicholls—That the clerk be and is hereby instructed to obtain list prices of three-gallon capacity fire extinguishers.—Carried.

On motion of Councillors George and Nicholls the clerk was instructed to advertise for gravel, and on motion of Councillors Sparrow and Nicholls the following payments were authorized, viz:

M Leitch	$41 66
Electric Light Co	50 00
Weighmaster	17 10
Oscar McLean	15 60
W Sparrow	24 50
D Thomason	15 75
W Watson	9 45
Thos Sparrow	18 50
J H Maurer	35 00
D Sutherland	1 60

BRANT COUNCIL

The municipal council of the township of Brant met at the township hall, Monday, the 12th day of June. Members all present. Minutes of last meeting read and declared correct.

Rowand—Johnston—That this council hereby authorize the treasurer of this township, Fred Jacklin, to draw from the reserve fund in the Royal Bank at Cargill the sum of $2500 from time to time as required.—Carried.

Johnston—Rowand—That John Whitehead be appointed a director on the District Board of Agriculture of South Bruce for the the ensuing year.

Rowand—Weir—That the clerk be instructed to write Mr Herman Greutzner requesting him to cease removing sand near the road south of Maple Hill bridge as it is endangering the road way.—Carried.

Johnston — Gregg — That the Reeve and Deputy Reeve be authorized to procure legal advice as to the advisability of asking the county judge to decide as to the responsibility of the county for the maintainence and repair of the bridge over the Saugeen River on the 6th concession of the township of Brant.—Carried.

Rowand—Weir—That the Reeve and clerk issue orders on the treasurer for all accounts passed at this meeting of council.—Carried.

Thos Pryor, breaking road, $1 50; J V Reilly, hauling tile and putting in culvert, $4; Jas Reilly, fixing culvert, 2 yds of gravel, $8; Chris Pegelo, grading and drawing tile, $19 85; Wm Leslie, cement tile, $13 80; Fred Jacklin, salary as treas to July 31st, 1916, $35; M A McCallum, half year's salary, postage and telephoning, $103 40; R S Nesbitt, council meeting, $3 70; A Weir, council meeting $3 70; W A Rowand, council meeting, $2 85; Wm Johnston, council meeting, $3 30; D W Gregg, council meeting, $3 50.

Rowand—Weir—That this council do now adjourn to meet on Monday, the 26th day of July, for the transaction of general business.—Carried.

M A McCALLUM, Clerk

Children Cry FOR FLETCHER'S CASTORIA

WALKERTON

Gordon Pinkerton, only son of Mr Albert Pinkerton, general merchant of Pinkerton, completed his Normal School course as a teacher in Stratford last week, and coming to Walkerton on Tuesday last, signed up as a private with the 160th Battalion. The latest pending years of study preparing for his life work, and just as he had qualified to step into one of the numerous openings for teachers, Gordon dons the khaki and goes out to defend the empire, thereby through example teaching in a more eloquent way than words, the duties of citizenship and true loyalty to the flag.

Mr Thos Sinclair, youngest son of Mr Donald Sinclair here, is now a full-fledged doctor, having been successful in his final examination in medicine at Toronto University, as well as passing the Ontario Medical Council. Tom, who is on a visit to his home here, may go overseas with an Army Medical Corps, he having completed a special course in training for the army.

Mr Geo D McKay, who organized the Bruce methods of recruiting, which enabled the 160th to be brought up to full strength in the shortest time and with the least expense of any rural battalion in the Dominion, was asked over the phone on Thursday last by Col Shannon of London to assume the position of Chief Recruiting Officer for the whole of Army District No 1, which reaches from Windsor to Tobermorey, and comprises the counties of Bruce, Huron, Lambton, Essex, Wellington, Waterloo, Middlesex, Oxford and Perth. In this area are three quarters of a million people, of which it is estimated at least one hundred thousand are available for service. The Bruce methods of recruiting, in which every available man of military age is located and personally seen, has made such a hit with the militia, that Mr McKay, who organized the system and pulled off the stunt in Bruce, is thought the proper man to place in charge of the whole district. As the undertaking is such a big one, Mr McKay has not decided yet whether he will accept the job or not, but will accompany the battalion to London on Wednesday to look into the matter and consider the proposition.

Joe If Armstrong, the well known Kinloss sleuth, is no longer numbered with the knights of the baton in Bruce, he having been dismissed as a county constable at the General Sessions of the Peace held before Judge Klein at Walkerton on Tuesday afternoon. As Joe was fired about a year ago from the job of Provincial Constable on the grounds, it seems, of being convicted of being drunk in a local option municipality, the plucking of the robes of office from him has been something of a gradual process. Joe, who was a live wire in the wrestling game, brought much grief to the legal mill, and while he was hastily feathering his own nest and filling the magistrate's figur barrel, his popularity was seriously on the wane. As long as he swung the Provincial baton it seemed useless to disarm him of the hand-cuffs, as he could go out whenever occasion arose and pull off an arrest under the Ontario badge. Seeing him knocked out of the Provincial ring, the County Council, who had heard complaints about the zeal he had exercised in the pulling game, decided to call him off the job, and at the January session requested Judge Klein to strike him off the list of County Constables. But the Judge, not caring to bounce him off his own bat and without any charges, referred the matter to the General Sessions of the Peace and advertised for parties having any charges against the sleuth to send them in. The result was that numerous complaints found their way into the Sessions on Tuesday. The most serious of these would seem to be a case, where Armstrong laid a charge against Philip Weiler of Formosa for holding a raffle of ducks and geese in that village at a shooting match and dragging Weiler, with all his witnesses, away to Kinlough to be tried, instead of laying the charged nearer to Weiler's home. Weiler, who objected to having the case tried at so great a distance as Kinlough, had a charge laid against himself at Formosa, and paid a fine of $1.00 for the offence. Armstrong, however went ahead with the Kinlough prosecution and Weiler, besides being mulcted with another fine, was stuck for some $19 00 extra for magistrate's fees and costs of witnesses travelling there, etc. This dragging of defendants, with with their witnesses away long distances from home to be tried and thus heaping up the unnecessary expenses, was seriously condemned by the Bruce County Council some years ago. It would also seem that Armstrong was in the habit getting parties who wanted complaints laid to make a cash deposit with him or at least insure his remuneration in some way, it coming out in evidence that a man named Devine had advanced him $10 to prosecute an action for alleged assault against another party. On hearing the charges the Session, which is composed of various magistrate and reeves, with Judge Klein presiding, found against Armstrong and dismissed him from the role of a County Constable of Bruce, a job which we understand he has held for upwards of a quarter of a century.—Herald and Times.

A THOUGHTFUL GIFT

Send THE ADVOCATE to the absent member of the family or to the distant friend. It is as good as a letter from home and is a weekly visitor. You can better imagine how the home paper is appreciated when you are absent yourself and a copy is forwarded to you.

MARRIED

WILSON—ROSS—At the residence of the bride's parents, on June 14th, by Rev. A. MacNab, James Edger Wilson, to Miss Mary Irsale, daughter of Mr. and Mrs. W. J. Ross, Loyal.

BARCLAY—BANCE—At St. Elizabeth's Church, Richfield, Ct., on June 6th, by the Rev. H. C. Bushkuhl, Mr J. Boyd Barclay (formerly of Paisley) to Miss Mary Frances Bance, of Berkley, Ohio.

DIED

GREGORY—On June 17th, at the Private Pavilion of the General Hospital, Toronto, Sarah Catherine Hall, beloved wife of Thos. Gregory, 363 Bloor St. The deceased was the eldest daughter of Mrs. W. J. Hall, formerly of Paisley.

¶ Report changes required to our Local Manager *to-day*.

The Bell Telephone Co. of Canada.

"KAPLAN"

(208½)

Standard Registered A.T.R.

will be at Central Hotel, Paisley, every Tuesday, from 10 a.m. to 6 30 p.m.

Farmers of this district will do well to study the breeding of Kaplan. He is individually one of the best examples of the American trotting horse, having size, substance, good bone, superb knee and hock action, speed, quality, intelligence, perfect disposition, and is absolutely sound. Inspect him before deciding what sire you will use.

JOS. ACTON, Prop. SANDY McDONALD, Manager

Concrete Bridge Contract

TENDERS will be received on Tuesday, June 27th, at 3 o'clock p. m., for the bridge, lot 21, con 11, Bruce, for a new re-inforced concrete bridge. JAS. JOHNSON, G. CHRISTIE, P. DOBSON, Com.

Street Gravel Wanted

TENDERS at a rate per cubic yard, will be received by the undersigned up to the 8th day of July next, for the supply and delivery of street gravel, in quantities and at such places as may be required. Qualities subject to inspection. Separate offers, for north and south part, may be made. J C GIBSON, Town Clerk.

Our Summer Session

During July and August for school teachers, high school students and others, continues until Aug. 26th, when fall term opens.

ELLIOTT Business College

Yonge and Charles Sts., Toronto

Invites you to use the holidays to good advantage. It will pay. The demand for bookkeepers, stenographers, typists, commercial teachers, &c., has been during the last nine months more than six times the supply. Write for catalogue.

BARRISTER, SOLICITOR AND NOTARY PUBLIC

OFFICE—TOWN HALL, PAISLEY

MEDICAL

D. H. E. EAGE, Physician, Surgeon and Accoucheur, Specialist in diseases of the Eye, Ear, Nose and Throat. Late house surgeon Kingston General Hospital. Office hours—10 to 11 a.m., 1 to 4 p.m. Successor to Dr. O'Neill.

D. H. P. T. HOUSTON, Honor Graduate of Toronto University, Licentiate of the Royal College of Physicians and Surgeons of Edinburgh and Glasgow, post-graduate Coombe Lying-in Hospital, Dublin, late assistant Edinburgh Eye Infirmary. Specialty—Diseases of the Eye, Ear, Nose and Throat. Successor to Dr. Morrison.

DENTAL

DR. A. H ALLEN

DENTIST, formerly of Toronto.

Graduate of the Royal College of Dental Surgeons of Ontario. Honor Graduate of Toronto University Dental Department. Master of Dental Surgery. Graduate of the Dominion Post Graduate School of Prosthetic Dentistry, New York. Over Mrs. Moir's Drug store, opposite the Post Office.

VETERINARY

R. B. GRANT, V. S., Graduate of Ontario Veterinary College, Toronto. Government Inspector of contagious diseases and apply Tuberculin test in cattle. Also a specialty. Stock and lame cattle. Rooms for horses. Oxygen gas treatment for milk fever. Office and residence opposite the old Northern Hotel.

Court Saugeen, C.O., No. 88

MEETS in Oddfellow Hall on the second Wednesday evening of each month, at 8 o'clock. Sojourning brethren welcomed.

A. E. ARCHER, R.S.
W. ARMER, C.R.

Sign and Carriage Painting, House-Decorating and Wall Papering

The undersigned is prepared to do all classes of work in the most stylish, neat and satisfactory manner. Orders executed promptly. Will be glad to receive your patronage, whether in town or country.

W. H. BAKER, Paisley

The Housewife's Corner

Dainty Dishes.

Red Kidney Bean Salad.—One can beans, one finely cut onion, six sliced cucumber pickles, salt as desired. Pour over salad-dressing of oil, lemon juice and paprika, toss and serve on lettuce leaves.

Tomato and Bean Salad.—Peel medium-sized, ripe, firm tomatoes; scoop out seeds and part of pulp, salt and invert. To one cup baked beans add one-half cup tomato pulp, one onion chopped fine, and two stalks of celery chopped very fine. Mix with French dressing, fill tomato cups and chill.

Roast Fillet of Veal.—Remove bone from fillet, which is thick piece from upper part of leg, and fill cavity with highly seasoned and very moist stuffing. Tie or skewer into round shape. Dredge with salt, pepper and flour. Put strips of pork over top and bake. Allow one-half hour to pound. Cover with buttered paper to keep meat from burning. Add water when flour has browned and baste often.

Cherry Bread.—Fill deep earthen pudding dish two-thirds full of cherries, blackberries or green apples. Add a little sugar, but not enough to make very sweet, and put in just enough water to keep fruit from sticking and grating or two of nutmeg. Pat and pull into shape piece of bread dough just ready to knead into loaf for cover for fruit. It should be one-half inch thick. Lay over fruit and cover with soup plate or another pudding dish that fits tightly. Bake or steam pudding with fire that is not too quick for at least one hour. When done, turn out on large, round platter, fruit on top. Serve hot, with sugar and cream. Delicious.

Baked Cherry Dumplings.—Sift together one pint flour, one-half teaspoon salt and one teaspoon baking powder. Rub in one tablespoon shortening. Add sweet milk enough to make soft dough. Roll out one-half inch thick and cut into four-inch quarters. Fill each square with as many cherries as it will contain and sprinkle generously with sugar. Fold edges of dumplings over and place them in floured pan. Bake one-half hour and serve with hard sauce, or cream and sugar.

Margaret's Cake.—One cup sugar; 2 eggs; 1-3 cup butter; ½ cup milk; 3 teaspoonfuls baking powder; pinch of salt; ½ teaspoonful powdered cinnamon; enough flour to roll. Cream the butter and sugar and then add the well beaten eggs with milk and the other ingredients, mixing in the flour gradually until there is enough to enable you to roll the mixture out about ⅛-inch thick. Have the oven very hot, and sprinkle the cookies with sugar just as you are putting them in.

Scotch Shortbread.—Half-pound flour; ¼ pound butter; 2 ounces sugar; rind of ½ lemon; 1 tablespoon rice flour; a few strips of angelica. Take out one tablespoonful of the flour and put in the rice flour instead, then add the butter and the grated lemon rind, and work into a smooth solid dough. Roll out thin and cut into triangular pieces. Pinch the edges into a little up and down wave prick all over the top with a fork and put a small strip of angelica in the centre of each. Bake very gently for 20 or 30 minutes, and let them cool in the baking tin.

Berry Sandwich.—Close white bread; butter; powdered sugar; berries; lemon juice. To about 12 large berries take a tablespoonful of butter and an equal quantity of the sugar; cream the butter and sugar well together and put on ice to harden. Mash the strawberries and a tablespoonful of lemon juice together and rub through a sieve. Blend the fruit into the creamed butter and sugar and put back on the ice. Cut the bread into very thin slices and cut off the crusts. Spread evenly with the mixture, and either put another slice on top and cut into sandwiches or roll up and tie with a white ribbon.

Braised Beef and Carrots.—Have butcher cut nice piece of brisket or shoulder into suitable pieces for serving, rejecting superfluous fat. Heat a little bacon fat or drippings in kettle, toss meat in fat and sear it quickly on all sides, then let it simmer until juices that have been liberated are absorbed again. Let the meat brown, but do not let it scorch. Season with grated onion, salt an dpeper, then pour on enough hot water to make nice brown gravy, almost covering meat. Cover and let simmer about two hours, then add scraped carrots, sliced lengthwise, laying them on top. In about an hour everything should be tender. However, this depends on age of beef. When serving heap carrots in center of dish, thicken gravy with a little dissolved flour, boil smooth and pour around carrots.

Some Ways of Saving.

By this time we are all of us more or less familiar with advice on the subject of economy and do not need apologize to use up odds and ends of bread in puddings and to save vegetable peelings for stock.

But there are many little ways of saving not generally known or apt to be regarded as too trivial to matter. However, nothing is too unimportant to count in these days, and even fractions of cents soon add up into dollars.

It is surprising what a lot of waste goes on if you try to hurry your cooking.

Milk puddings, for instance, should always be cooked slowly, because if milk is cooked quickly it wastes by evaporation. The same rule applies to soups, which should always be simmered in a covered vessel. On the other hand, if you are boiling bones for stock they should be boiled fast to extract the goodness.

After washing currants for cakes or puddings they should not be dried too quickly or they will lose some of their goodness. The best plan is to wash a quantity at a time instead of washing just the number you require for a particular dish.

Most of the moisture may be removed by shaking the currants in a clean dry cloth kept for the purpose, and afterward they can be spread out on a large dish to dry.

It is more economical to add pepper to such dishes as stews at the last minute. If you season them at first much of the aroma is lost in the process of cooking, and therefore more is required.

It is not always economy to cook slowly, especially in the case of haricots or lentils. These take so long to cook that if you are cooking on a gas stove a great deal of gas is used. Haricots, lentils and split peas should always be left to soak over night in cold water and a small lump of dripping added to the salted water in which they are boiled. This helps to soften them and cook in almost half the time.

If you want to economize in plate and knife powder try rubbing knives, forks and spoons with a soft rag dipped in potato water. This removes all stains and warm soapy water and a chamois leather, are sufficient to keep silver as bright as need be.

Paraffin is an excellent substitute for metal polish; people who have once used it generally think it much better.

Things to Remember.

The secret of a light omelet is to froth the eggs. One egg well beaten is worth two not well beaten.

When a pudding is boiled in a basin, it should fill the basin.

Roasting meat cannot be basted too much or too often.

The part which is to be topmost in the dish should, when boiling be downmost in the pan.

Salted and smoked meat should be put into cold water, brought slowly to the boil, then simmered.

Water boils when it gallops; fat when it is still.

Puddings made with suet should be lightly mixed.

When ketchup is used, be sparing with the salt.

Green vegetables should be boiled fast, with the saucepan lid off.

To leave bread or vegetables in stock or soup turns these eatable sour.

Root vegetables should be boiled gently, with the lid on the pan.

All vegetables, excepting old potatoes, should be put into plenty of fast-boiling salted water.

The liquor used in boiling meat or roots should never be thrown away. Soups and sauces may be made of it.

Broiled meat must be turned often; put the cut side to the fire.

A handful of salt will often clear a fire from smoke for broiling.

When baking powder has been used there must be no delay in baking.

The bars of a gridiron should be greased and made hot before being used.

Meat from which soup or gravy is to be used should be put into coldwater.

If a pie or cake browns too quickly while baking, a sheet of paper should be laid on the top.

Puddings should be plunged into plenty of fast-boiling water, and kept boiling hard till done.

MUNICIPAL SANITATION.

Proper Facilities for Destruction of Refuse Should be Provided.

A garbage "dump" is a disgrace to any city or town. Of what advantage is it to remove the numerous private rubbish-heaps to build up a gigantic communal rubbish-heap? Is the unsightliness or the dangerous filthiness in any wise reduced by piling all the refuse into one vast, festering, disease-breeding mass? It may be some advantage to those parts of the town remote from the dump, but only at the expense of some other portion of the city and it is grossly unfair. No true citizen from a high-class residential district could feel satisfied if the cleanliness of his particular portion of the town were achieved by the utter spoiling of some other portion. Any man who is proud of his city would feel as much shame that there should be a filthy civic backyard as that his own backyard should be dirty. The only satisfactory method of removing refuse is to burn it in an incinerator or, failing that, to have it buried.

"Your husband is a great home-lover, isn't he?" "Yes, especially on the evenings when were invited out together."

NO. 2 CANADIAN STATIONARY HOSPITAL AT BOULOGNE.

The picture gives a view of the main building which was formerly a girls' school, now being used under an efficient Canadian staff of doctors as a military hospital. It has been in operation almost since the beginning of the war and has rendered invaluable service. The hospital is under the command of Lt.-Col. J. T. Clarke, formerly of Toronto.

ROOFING FOR FARM BUILDINGS.

Metal Covering Is Far Superior to the Old-Fashioned Shingle.

The distinct advantages of Sheet Metal coverings for buildings of all classes has rapidly brought them to the fore during recent years, especially so because of the development of mechanical appliances to perfect the manufacture of various types of metal shingles, sidings, tiles, etc.

Until recent years, however, the wooden shingle was the most popular on account of its durability and cheapness. Fifty years ago, when good stock was in abundance and labor cheap, the farmers used to manufacture their own shingles by sawing, splitting and sawing, and there are many roofs yet throughout the country where split or shaved cedar shingles were applied fifty years ago. These shingles were generally about from ⅜ to ½ inch thick and time and weather have reduced the thickness of the exposed portion of these shingles to that of cardboard. Under the natural tendency of things, however, the days of split or shaved cedar shingles are passed and in recent years or toward the latter quarter of the 19th century, the shingle became the product of the saw mill, and the manufacturers of shingles were not always very particular as to the kind of stock they used and employed butts and all kinds of sap, and the outcome of all this was that the shingles were put on the market at a price that commanded trade, but gave little satisfaction. The farseeing farmer, however, when he could afford it, employed steel and it was a common thing and is to-day a universal practice to use metal in some form for covering their buildings.

Until recent years a galvanized iron roof was a luxury, but the introduction of modern machinery has reduced the cost of galvanizing to a minimum, and through the perfection of up-to-date machinery, many safe and prosperous firms in Canada have been able to put on the market a very substantial and practically everlasting roof in the form of metal shingles at a very moderate cost.

The great feature about the metal shingle and roofing is that it does not take an expert workman to apply it. Any unskilled buyer with a moderate degree of adaptability, a pair of snips and a hammer can apply these up-to-date shingles and roofing and sidings.

The greatest virtue of the metal covering and one recognized by Insurance Companies is that the risk from fire and lightning is minimized by the use of metal roofing. They now offer the farmers special inducements in the way of reduced premiums to encourage the use of galvanized iron covering. The people themselves, recognizing the opinion of the best authorities, soon found that a building covered with an iron roof, which roof was connected to the ground by a water-spout or even a wire contact, was absolutely proof against a lightning bolt. They also recognized that lumber, timbers from another fire fighting on a metal roof did no damage whatever, and all these factors leads to a larger consumption and use of metal roofing to such an extent that the wooden shingle fire hazard is being steadily eliminated.

Another important factor in favor of the metal shingle and roofing is the weight. Wooden shingles would average about 250 lbs. to the 100 sq. ft. Slate would average about 600 lbs., whereas a first class metal roof will not average 100 lbs., thereby lessening the strength of the superstructure and trusses. Likewise it has been proven beyond any shadow of doubt that heavy and wet snow will not remain on sloping metal roof, whereas it will attach itself to wooden shingles as readily as plaster will to lathing, and this snow load averages sometimes 60 lbs. to the square foot.

The question now is which is the most economical kind of metal roof to use when service is to be considered? Most of the farmers in the Dominion have in recent years used an enormous quantity of corrugated iron, but all the best authorities on metal roofing are unanimous in their opinion, based upon long experience, that the corrugated iron roof, while cheap at first cost, is not an economical material to use, inasmuch as all nail heads are exposed to the action of frost and snow, and after only a few years the whole roof is liable to become loose and be susceptible to high winds which would damage same.

The metal shingle of to-day is the last word in roof covering; it is rainproof, fireproof, lightning-proof, frost proof; all nails used to apply a metal shingle roof are covered up with the succeeding sheet which prevents the snow and frost from causing any disturbance, the sheets are fitted with locks on all sides which give ample room for contraction and expansion, and metal shingles are giving the same degree of satisfaction to-day as they did when applied nearly thirty years ago.

When speaking of durability of a metal roof, galvanized materials only are referred to. Farmers in this country nearly twenty years ago applied painted roofing, and the repainting of this roofing, which in some cases should have been an annual affair was neglected, and the consequence was that corrosion set in, and their roofs rapidly deteriorated, but this is not the case with galvanized roofing.

In the rural municipalities, where sulphurous acid gases are not prevalent, a galvanized roof made of good material and properly applied should give satisfaction for half a century at least. In fact, it will give satisfaction—the test of time has proven it.

In the march of progress, some of the up-to-date farmers recognizing the many superior qualities of metal over wood are now adopting a steel superstructure for their barns.

This method of construction has many advantages over the old timber constructed barn inasmuch as extra more space, convenience in operating hay fork and slings is obtained as well as far easier and quicker erection of building. These steel brace barns are supplied complete in every detail, saving the farmer the worry and trouble of assembling materials.

HOW HE GOT HIS DISCHARGE.

Soldier Picked Up Bits of Paper Until He Found Right One.

A man in the West Kent Yeomanry who fought at Gallipoli and is just back in London by way of Alexandria says that the following veracious tale is a favorite one with the lads out there.

A certain Tommy suddenly developed something like a mania for picking up loose scraps of paper. Wherever he was, in the trenches or out of them, he spent most of his time looking for any stray bits of paper and gathering them up. This soon became a nuisance, but drastic orders to refrain and long terms of "C.B." alike failed to cure him. He went on picking up bits of paper.

Finally, in desperation, they sent him to France, thinking a change of scene might affect a cure, but, arrived there, his mania for gathering up paper fragments got worse instead of better. Finally he was removed to the base, where he continued his paper chase. At last giving him up as a hopeless case, they sent him to London for examination as to the soundness of his mind. A board sat on him. They decided that he was dotty and should be invalided out of the army. They gave him his discharge, written on a neat piece of paper.

The soldier surveyed this with gratification.

"Aha!" said he. "That's the bit of paper I've been looking for!"

Horseflesh Eaten in Hungary.

Horseflesh and dogflesh are commonly eaten by the lower classes in Hungary as one of the food scarcity. There are meatless days a week, and some cuts for meat, such as rice, are very scarce. The action of Germany in clearing Hungary of corn and flour earlier in the war caused a dearth from which the country has never recovered. It also caused much bitterness against Germany.

SCIENCE FACTS.

A new motor attachment for bicycles is carried behind the saddle and imparts its power by friction against the rear wheel.

Official figures put Russia's petroleum production last year at about 69,000,000 barrels, a gain of 2,000,000 barrels in a year.

Around the central tube of a new antiseptic telephone mouthpiece is a container for disinfectants that gives off fumes in such a way as to kill all germs that enter the device.

For lessening automobile headlight glare there has been invented a set of spiral plates so mounted on the outer rim that they can be swung across the lens as much as is desired.

The government of New Zealand is building a five-mile railroad tunnel at a cost of nearly $5,000,000 to give close connection between the east and west coasts of South Island.

According to an Italian physician the channel from the mouth to the stomach is the seat of the senses of hunger and thirst, which he claims to have suppressed by cocaine injections.

The AUTOMOBILE

Operation of the Clutch.

A great many people who own and drive automobiles have a very hazy idea of the operation of the clutch, and to the brand-new motorist this part of the car is a mechanical mystery.

The purpose of the clutch is to connect the motor with the gearset. As its names implies, it grasps or clutches the rotating crankshaft or flywheel and thus acts as the connecting link between motor and gearset.

The cone clutch is merely a cork in a bottle arrangement, according to a writer in Motor Print. When the cork fits loosely in the neck, the bottle cannot be turned by rotating the cork, but if the cork is driven in tightly, turning it will move the bottle with it. In the cone clutch the cork is forced in by a spring and released by depressing a pedal.

The disk or plate clutch is illustrated by placing a quarter between two nickels, and holding these three disks between the thumb and the forefinger. When no pressure is applied the larger coin may be readily rotated with the fingers of the other hand, but when the three are pinched together it is very difficult to turn the quarter.

The contracting clutch is most descriptive of the term "clutch" and resembles a brake. When the hand is loose the clutch is disengaged, and when contracted it grasps the drum tightly and thus drives the car.

The expanding clutch likewise resembles an expanding brake.

The cone clutch is simplest and consists merely of a conical member which fits into the conical hole in the flywheel. A stiff spring forces the cone surface into engagements, and pressing the clutch pedal releases it.

The necessity for a clutch arises from the fact that a gasoline engine, unlike an electric motor or a steam engine, cannot be started from rest under its own power. It is necessary to have the gasoline engine running while the car is still, and then a device must be provided for transmitting this power to the rear wheels. This is the function of the clutch.

How Car is Started.

A clutch must start the car smoothly so that no shock will be given to the car or its occupants. Consequently the cone surface is faced with leather or an asbestos fabric. The give in these materials provides a much gentler engagement than if bare metal were used. At first the amount of power transmitted through these lightly rubbing surfaces is so small that the car does not start, but as the clutch cone moves further the leather is compressed more and more; the pressure between the surfaces gradually increases, and, as it does, the force transmitted becomes greater, until it is sufficient to move the car. Still further engagement of the clutch cone causes the speed of the gear-set mainshaft gradually to rise until it becomes equal to that of the crankshaft, when the two revolve as one without slippage.

Multiple Disk Clutches.

In addition to easy starting the clutch should be capable of considerable slipping as is required in traffic, and should have a small mass so that when it is released it will soon lose its momentum.

With a multiple disk clutch half the disks are keyed to the clutch casing and the alternate ones to the transmission shaft. This construction allows the disks a certain amount of endwise movement so that when the clutch is engaged they are forced tightly together by a spring. When the pressure of the spring is removed the clutch is disengaged.

The disks are made of steel, as a rule, although sometimes the alternate ones are bronze. They are thin and comparatively light, so that generally speaking this clutch slows down very quickly and permits easy gear changing.

Some multiple disk clutches run in oil and some are dry.

When clutches are used without oil they generally have asbestos facings on one set of plates. This clutch is also provided with cork inserts to improve the smooth action to the limit.

THE SUNDAY SCHOOL

INTERNATIONAL LESSON.

JUNE 25.

Lesson XIII.—The Philippian Christians.—Phil. I. 1-11; 4. 1-9.

Golden Text, Phil. 4. 8.

1. Going on to perfection. At Philippi, where the gospel was first preached in Europe, there was evidently an excellent Christian community life. Paul commends them for their good fellowship and does not rebuke them for any pagan sins. Yet he would stimulate them to further development. Therefore he turns his attention to their mental habits. He urges them to get the mind that was in Jesus. To this end he suggests a discipline of thought. Was their weakness a tendency to light-mindedness? Were they subject to being blown hither and yon by the varying winds of Grecian thought? He suggests to them the cultivation of the habit of fixed attention.

2. An attitude of mind. The development of a definite attitude of mind is essential to the prosecution of any line of conduct, individual or social. Before the social program of Christianity can be carried through the peoples of the earth must learn to think in Christian terms. The world cannot have peace while people continually think about war. When the European war first broke out the people thought mostly of its horrors. They were talking about it being the last world-war. They were thinking how methods of world-peace could be proposed. Gradually their minds became accustomed to the awful happenings of the battlefields. The tragedy lost its power to move them. It is remarkable that events which have thrilled the world before the war, are now regarded as very ordinary happenings. It is an outstanding example of the law that what fills the mind for any length of time will ultimately determine conduct. The teachers of Christianity to-day must follow Paul's example and endeavor dauntlessly to fix the minds of the people upon the great principles taught by Jesus.

3. Wanted—A social mind. The real reason for the slow advance of the Christian social program is that the majority of Christians have thought of religion only in terms of individual salvation and conduct. The result is they cannot see the woods for the trees. On the other hand, there are, of course, some extremists who cannot see the trees for the woods. The artist and the scientist, however, when they go out walking, can see both. So the Christian must learn to think of life in both its individual and social aspects and to apply the teaching of Jesus to both of them jointly, knowing that only so can that teaching effect life as a whole. There is perhaps less danger of thinking too much in social terms because all the personal interests of life tend to make us think in individual terms. Very few of those who in all nations ardently desire world-peace are willing to have their nation pay the necessary price; for example, the submission of undeveloped territories and peoples which are now under national control, and also of the highways of commerce, to international jurisdiction. How many people would be willing to have their income limited in order to provide a fair income for folks now below them? Most of us have got to go a long way in the development of social emphasis in our thinking before we are in danger of losing our balance. We need the discipline of social thinking in order to meet one of the greatest needs of the church today, the development of social mindedness.

4. The method of cultivation. "If there is any virtue or anything deemed worthy of praise, cherish the thought of this thing," adds Paul. In other words, think positively. Those who have a social mind too often think in negative terms. They are mere critics constantly finding fault with the existing order of things, but never touching the community life for its improvement. Those who have the vision of the social ideal of Jesus will never be harmed by constantly thinking of the best in life. They can never settle down in contentment. They can never be mere shallow optimists as they contemplate the gains which have been won. Such contemplation will not lead them into the arm chair, but, as the earnest of what may yet be accomplished, it will inspire them to continued endeavor. Christian social workers need constantly to think in positive terms. The earth is always pulling us down; we need constant sight of the stars to pull us up. The minds of children should be filled with big things. They should be led out from their own narrow interests into contemplation of the great needs of child life in the community. Such mental discipline will develop big lives and efficient social servants.

Japs Exporting Umbrellas.

The export trade in Japanese umbrellas is rapidly increasing. In recent year the exports amounted in value to $6,500,000, and this year the figures are expected to be exceeded. Manufacturers in Japan are now overwhelmed with orders from China, India and other countries in the South Pacific because of the falling off of imports from England and Europe generally.

Mr. Slicer—"I was reading the other day that there are eight hundred ways of cooking potatoes." Mrs. Slicer—"Yes?" Mr. Slicer—"Well, my dear, don't you think that if you tried hard you could learn one of them?"

For Marjorie's Sake

"You'll be sure and tell Mr. Maver how sorry I am that there should have been this delay in payment. The times are not what they were, and the war, of course——"

The old man who stood just within the doorway coughed nervously, as if hoping that that would fill the gap in the string of his excuses.

His companion—a broad, bullet-headed figure, who remained with one foot on the top step, and the other pushed meaningly into the passage beyond, as if to take care that the door wasn't closed—unemotionally detached a stamp from the sheet he took from his pocket, licked it, placed it on a strip of blue paper, scribbled something on it with a pen, and handed it over to the other.

"Mr. Maver don't care a donkey's head about excuses," he growled. "Money's what he wants, every time."

He turned away without another word, and the old man watched him until he disappeared in the fog.

Then he closed the door and turned back into the passage. The old house was very still and silent, and he was alone there, as he had been alone for twenty-five years. It had been his own house once. It was still legally his own house; but, as he had to pay interest to Mr. Maver for the money he had raised on it to keep body and soul together, his proprietary rights were little more than technical.

Mr. Thomas Dodd—old Tommy Dodd, as all the children in the neighborhood called him, largely out of affection—was well past seventy. His hair was snow-white, and his face, untouched by the magic hand of Time, was like that of a child.

He lit a candle in the passage, and by its light examined the money he had in his pocket. It was twenty-nine shillings—all the money he had in the world, now that he had paid Mr. Maver the quarterly interest on the mortgage—a quarterly interest that would fall due again in a few days.

"Perhaps I shall die before then," he said to himself. "That would be the best way out. If I should have to leave here——"

He began to tremble so that the candle traced weird gyrating shadows upon the ceiling. Steadying himself with one hand on the wall, he tottered down the broad passage to a door at the further end. There he paused a moment, as if frightened, holding the handle.

"Well, I've always been in one a year on this day," he muttered to himself—"this day that she ran away from me—my Marjorie, my little Marjorie."

He turned the handle and opened the door. As he did so, an odor of dust and damp assailed him. He held up the candle, shading his eyes.

From out of the darkness there leapt up a strange, fantastic scene. The room was a large one, and down the middle of it stretched a table laid for dinner. There were glass and plate and silver candlesticks there, but the silver was tarnished and the glass was covered deep with dust. There were vases filled with what had once been flowers, but the flowers had mouldered beyond recognition. In the middle of the table stood a large, heavily-iced cake, which was now almost tumbling to pieces from the tunnelling of the mice that scampered away at the sight of the candle. The old man entered the ghostly room, and, closing the door, stood looking about him. At the far end was a sideboard, crowded with an odd collection of worm-eaten, tarnished goods—a lace shawl that was hanging together as if by a miracle, some silver knives and forks almost black with the action of the atmosphere, an open jewel-case, out of the dust of which there shone dimly, as the candle-light lit upon it, the glowing of a precious stone.

"Marjorie—my little Marjorie!" he cried. "Oh, why did you leave me—why did you leave me?"

With a trembling hand he set the candle on the table and sank upon his knees. From out of the past came the picture that was never absent from the mirror of his mind—of the scene which the room commemorated.

Marjorie's wedding-day! The table had been laid for the guests—the presents displayed! She was to have been the wife of Lionel Maver—that very Maver who had advanced money on the security of old Mr. Dodd's house, and was so exacting in the payment of the interest. And Marjorie had fled, without an explanation, except for a few hurried lines to say that she could not marry Lionel Maver—that her father was to forget, and, if he would, forgive her.

He had never known where she had gone, or what she had done. The bridegroom had searched for her in vain, and then savagely accused her father of being party to the flight. She had left him broken-hearted and alone, and he had kept that room, where her marriage-feast was to have been, exactly as it had appeared on her wedding-day. And that was twenty-five years ago!

"Oh, Marjorie, Marjorie, my little Marjorie!"

On the silence of the old house broke the vibrating clamor of the knocker. Old Mr. Dodd rose half dazedly to his feet, and then, as the knock was repeated, he picked up the candle and hurried to the door. As he opened it, letting in the fog that was gathering with the fall of the winter evening, a tall, burly figure, greeted him.

"Didn't expect to see me so early, did you?" said a strong, lusty voice.

It was some moments before old Mr. Dodd collected his wits sufficiently to realize who his visitor was. Then he remembered. It was one of the wounded Australian soldiers whom he had visited at the hospital—a certain Private John Carew—to whom he had taken a great liking, and whom, forgetful of his financial difficulties, he had asked to come and dine with him that evening.

"Oh, my dear Mr. Carew, please come in," he said, flushing with excitement. "I'm so glad that you called early, because—it's inhospitable of me, I know, but my wits go woolgathering these days—I'd almost forgotten you were coming!"

The young man stamped into the passage and followed his host into an adjoining room. He was nearly six feet two, big and bronzed, and the old man with the bowed shoulders and the child-like face contrasted curiously with him.

"I'm not going to stay now, Mr. Dodd, but I just came to tell you a piece of news I've had. My mother's come over from Australia, and arrives at Waterloo at six o'clock to-night. I thought I'd tell you in time myself, so that you can put that dinner off."

Old Mr. Dodd forgot in an instant the fact that he only had twenty-nine shillings left in the world. He had wanted so much this young man to dine with him. Though he had forgotten all about the function, he remembered now that he had been looking forward to it for days.

"But your mother," he stammered pleadingly. "Perhaps your mother would do me the great honor of dining here as well? I—I should be so disappointed!"

There were almost tears in his eyes. The big colonial's face lit up with a smile.

"You can count on us, then, Mr. Dodd," he said. "I wouldn't disappoint you for worlds, and I know mother wouldn't. Anybody who has been a friend to me is a friend of hers. We'll be here at seven o'clock punctually."

It was only when his visitor had gone that old Mr. Dodd began to think once more of pounds, shillings and pence.

He had just twenty-nine shillings. He counted them over thoughtfully. They would provide a very excellent dinner for three. And after that—well, it would at any rate only have been a question of a few days, and what did a few days matter to one who had lived so long?

Abruptly he put all these thoughts from him and began bustling about to put the room in order. Almost exhausting his small stock of coal, he made a glowing fire, and then laid the table. This done, he buttoned himself into a tight-fitting top-coat and sallied out into the darkness and fog.

At a neighboring small restaurant he ordered and paid for a substantial four-course dinner, which was to be sent in punctually at a quarter past seven. With what remained he bought some flowers for the mother of his gallant guest.

These preparations took him so long, and he became so excited and enthusiastic about every purchase, that it was close upon seven before he got back to his house. A taxi-cab was standing by the pavement, and dimly through the da s he could see a soldier with a oy his side.

"What a curious old place, Jack," he overheard the lady remark. "I can't see much for the fog, but just the outline of the building reminds me of the old home I used to live in when I was a child."

Old Mr. Dodd hurried forward.

"I'm so sorry to have kept you," he said. "Please let me get you out of this cold."

He fumbled with the latchkey and opened the door. As he did so, the wind blew out the candle in the passage.

"How very stupid of me!" he exclaimed. "But I'll open the door of the dining-room, and you'll be able to see."

Closely followed by his guests, he walked down the passage and threw open the dining-room door.

"Now pray let me have the honor of shaking you by the hand, madam," he said, in his gentle, old-fashioned way.

But the lady did not answer him. She was looking round the room with staring, wondering eyes. Suddenly, with a cry, she staggered towards the table and, putting her hands upon it, as if to support herself, turned and faced her host. All the blood had fled from her cheeks, and her face was ghastly in the candlelight.

"I trust, madam, that you are not——" old Mr. Dodd began nervously.

But the lady cut him short. Holding out her arms, she staggered towards him.

"Father!" she cried. "Oh, my dear, dear father, to think that I should come back to my old home like this!"

The old man gazed at her in dazed wonder.

"Marjorie," he gasped—"my little Marjorie!"

* * * * * *

The dinner was cold when they sat down to it, because they had much to tell—how Marjorie, thinking she was obeying her father's wishes, had forced herself to regard Mr. Maver as her future husband, and then, on the night before her wedding, had fled secretly to the man she loved—to John Carew—with him to battle through misfortune, at the other end of the world, to wealth and comfort.

"I thought I must have broken your heart, father dear, and I couldn't write to you. I thought it best for your own peace and happiness to go out of your life."

"My peace and happiness!" he exclaimed; and then, without another word, he took her by the hand and led her to that fantastic room which he had kept as a shrine to her memory.

And that was the nearest he ever got to any expression of reproach.—London Answers.

All in life worth having has its price. It must be paid for in effort, and in tears, and can be had on no cheaper terms.

"Yesterday," said Jabrob, "I refused a poor woman a request for a small sum of money, and in consequence of my act I passed a sleepless night. The tones of her voice were ringing in my ears the whole time." "Your softness of heart does you credit," said Malison. "Who was the woman?" "My wife."

To the Older Boys of Ontario. . . .

A CALL TO CAMP.

Choice, representative Older Boys, between the ages of fifteen and twenty years, are hereby called to Camp for seven days on the shores of Lake Couchiching at Geneva Park, to camp, to live under canvas, away from the piles of brick and stone that we call cities; to the open sky; to breathe pure oxygen; to bathe in sun and water; to sleep upon a bed of boughs beside the trail; to hear the whisper of the trees; and from the daily vocation of the village and the farm to sit beside the campfire when the sun has set; to ply the oar and wield the paddle in the moonlight; to dive in the cool waters of the lake at dawn and to watch the stars at night; to eat fish and fowl and the delicacy of fish with the fragrance of the forest all about you; to commune night and morn and mid-day with God's great out-of-doors. This is the Call!

To confer, to study the guide-book of the boy, the man and nations; to learn to live right, to speak true, to help the weak, to follow the Christ; to note rules of righteous living in prophet, priest and sage, and to apply them to our daily life and service; to become acquainted with the Bible. To study plans for the home Sunday School, and programs of service and activities to be done; to hear men who have travelled life's trail tell the story; to discuss the ways by which men earn their daily bread, without in the man's world; to play and sail and hike at night, when the day is done and to do it in the spirit of the Master of Men. This is the Call!

The call is to the Tenth Annual Ontario Boys' Camp Conference which is to be held on the beautiful grounds of Geneva Park, seven miles over Lake Couchiching from Orillia; the dates are July 22nd to 29th.

This conference cannot easily be described. It is a Boys' Camp, with all that suggests in the way of fun and fellowship.

It is more than a vacation, though each afternoon will be given over to recreation in the form of organized sports on land and water, and under the supervision of an expert physical director assisted by a number of athletes.

It will be a conference on modern methods of boys' work, discussing the problems of older boys and offering help in their solution.

Vocational guidance will be a prominent feature. These life work talks will be given by a number of successful business and professional men, under the guidance of Arthur B. Farmer, B.A., of the Sheldon School of Salesmanship, vocational and business science.

It will be a training school in the principles of leadership, especially appealing to the ambitious boy eager to make the most and best of life's opportunities.

It will be a place of great visions, wholesome inspirations, and high resolves.

Character is contagious. Here boys will form lasting friendships, not only with boys from other schools, but with Christian men from the colleges they hope soon to enter. Here, too, they will come to know men whose names stand for success and honor in the commercial world.

The boy of to-day is to be the leader of to-morrow, so how necessary it is that at the time when character is being formed, ideals set up, and responsibilities of life service realized, the boy should have the opportunity of fellowship with older men who have actualized their visions of earlier years. These leaders, comprising the strongest group ever gathered for a conference of this kind, have been chosen not merely because of their personal qualities and interest in older boys, but because they are recognized as specialists in the various lines of work they are to present.

They include the following: Professor Wm. H. Greaves, M.A., Department of Public Speaking, Victoria College; Professor E. R. Groves, teacher of Sociology, New Hampshire State College, Mass.; Arthur Black Farmer, B.A., teacher of Vocational Guidance, Character, Analysis, Salesmanship and Business Science, Sheldon School of Business Science, Toronto; E. M. Robinson, International Y.M.C.A., Boys' Work Secretary, New York City; and the following Canadian boys' leaders under whose joint organization the camp is promoted: Sunday School Commission of the Church of England, Rev. J. W. Storey; the Baptist Conventions of Ontario and Quebec, Rev. P. K. Dayfoot, M.A.; the Methodist Church Young People's and Sunday School Departments, W. H. Vaughan; the Presbyterian Sabbath Schools and Young People's Departments, Rev. C. A. Myers, M.A.; the Ontario Sunday School Association, Rev. E. W. Halpenny, B.D.; the National Council of the Young Men's Christian Association, Taylor Statten, Wm. R. Cooke, G. H. Hutchinson; J. P. Hagerman of Toronto Central Branch Y.M.C.A.; W. H. Wood of Brodieville Community Y.M.C.A.

The programme is based upon the Canadian standard efficiency tests which sets up for the boys of Canada a programme of life activities making for strong characters physically, intellectually, religiously and socially. Every day in the camp will be full of fun and worth while activities including swimming, fishing, sailing, canoeing, baseball, tennis, track games, group studies, vocational and practical talks, etc. Boys' Sunday School classes, Y.M.C.A. Square Clubs, High School Clubs, and other groups of older boys are entitled to representation.

A training course on boys' work for male teachers, pastors and superintendents, is to be held simultaneously and for the week following. (Send for special programme.)

The following is a testimony written by one of the boys of last year's camp, and many others of a similar strain could be produced:

"It has given me an insight into the possibilities of the work that I did not know it possessed and showed me how little I really knew. It has helped me by giving me the chance to rub up against the right kind of fellows and showing me what kind of a fellow I ought to be.

It has showed me how to treat subjects of which I already knew the theory before the fellows in an interesting way. It has given me the inspiration to go home and endeavor to be a man, clean in thought, speech and action and to try to develop into a live wire and try in spite of discouragements to try and help our fellows to do the same thing through the C.S. E.T., and in every other way I can.

But above all this conference has given me a clearer vision of the spirit of my Master and what He means to me and may mean to the other fellow if they only catch the vision of service, and I hope I may be able to help some of them to catch that vision of service, to themselves first, to their fellows and to the world brotherhood.

And I hope to be able to put this camp conference before the school, the township and county in such a way that next year a greater number of fellows will be persuaded to take the opportunity to come and get next year what I am getting this."

At this time of world crisis it is a call to men and women of Ontario to use every means at their disposal for the development of stronger men; if our boys best powers are called out they shall respond when they are in world-leadership by giving us greater laws and administration for agriculture, science, industry and also social conditions actuated by a religious dynamic of heretofore undreamed of purity and nobility. The camp leaders aspire to such a lofty objective by touching the lives of our boys particularly during the impressionable years of 15-18.

Send to any of the above boxes for further information and registration blanks, or to E. D. Otter, Secretary, Promotion Committee, care of Ontario Sunday School Association, 299 Queen St. West, Toronto.

1200 OPIUM DENS IN PARIS.

Even Flower Girls Peddle Drugs in the French Capital.

The war has incidentally revealed the existence in Paris of a number of opium smokers, cocaine and morphine users that was unsuspected before. Monsieur Charles Bernard, deputy for the district of Montmartre, where he is engaged in the drug business, estimates the number of opium dens now in existence at 1200.

"Even the flower girls on the street," he says, "have been drawn into the traffic in stupefacients. Recently a girl in short skirts and with a vicious expression offered a bouquet of violets to a passer-by. The man wanted no violets, but the girl's expression excited his pity and he toward her two sous. 'But it's 20 francs,' she said softly. Then approaching near enough to whisper, she added, 'there's some 'coco' inside.'

"'Coco' is the familiar term used in the quarter for cocaine, of which there was a little paper concealed in the heart of the bouquet. There are other quarters of Paris also where the same practice has taken root."

An elegantly dressed woman got out of a taxi in front of a fashionable bar in the centre of Paris and asked the footman of the establishment if he would please fill her lighter with gasoline. A plainclothes man standing by seized the lighter when it was filled and it was found to contain a solution of chlohydrate or morphine. These incidents show how forbidden drugs are procured. There are said to be at least 30 illicit establishments in Montmartre where morphine is to be had, including bars, cafes, restaurants and hotels.

The Chamber of Deputies has just voted a law raising the maximum penalty for illicity traffic in opium and kindred drugs from 3000 francs ($600) to 10,000 francs ($2000) fine and from two months to two years' imprisonment.

Remarkable Endurance.

"Wanted—Girl; farmhouse; must lived two years."

PRIVILEGES OF AMBASSADORS

CANNOT BE FORCED TO PAY HIS JUST DEBTS.

The Embassy is Recognized as Piece of Country Which It Represents.

The tragic death of the first secretary of the Italian Ambassador at a London hotel recently had a curious sequel, says London Tit-Bits. The Ambassador put forth the unusual plea of "diplomatic immunity," and the result was that no inquest was held. The last occasion on which this plea was put forward was when, many years ago, attempts to hold inquests on deceased members of the Chinese Embassy were defeated by recourse to the act.

Ambassadors, however, have many peculiar privileges of which the general public know very little. In the first place, an embassy or legation is, to all intents and purposes, a piece of the country which he represents, and consequently an ambassador and his staff are not affected by the ordinary laws of the country in which the legation stands. This was emphasized some years ago when a certain gentleman whose name was well known at the particular period was kidnapped into the Chinese Legation. An inspector from Scotland Yard immediately proceeded to the legation and released the prisoner. This was a most serious breach of international law, and created quite a sensation in diplomatic circles at the time.

Cannot be Sued.

An ambassador cannot be sued. In fact he is immune from legal proceedings by a statute which was passed to appease the wrath of Peter the Great of Russia, whose ambassador was actually arrested in London for a debt of £50.

In 1909 Bethmann Hollweg, the German Ambassador in London, claimed to be exempt from rates in respect of his residence at Walton-on-Thames, and although the Walton authorities took the matter up with the treasury, the latter upheld the ambassador's claim. Again, in Washington, in 1904, a member of the British Embassy successfully claimed to be outside the law when charged with exceeding the motor speed limit.

An ambassador cannot be forced to pay his bills or forced to give evidence in the law courts. He is free from paying custom duties, and if his footman is summoned for being drunk and incapable in the streets (this has actually happened in London) he can save him from being fined.

Exceptional Rights.

The most curious of an ambassador's privileges is that when dismissed from an audience with the sovereign to which he is accredited, he may turn his back to the court. He also has the right to demand admission to the sovereign by day or by night. An ambassador's wife is regarded as almost as important a person as the ambassador. Not only is she addressed as "Your Excellency," but any insult offered to her is as much an affront and even a cause for war, as would be one offered to her husband or his country.

The ambassadress has the right to sit in the presence of the sovereign of the country to which her better half is accredited, and, like her husband, cannot be arrested or sued for debt.

RUSSIANS MANY RACES.

Population is Most Varied of Any Country in the World.

The population of Russia is more varied than that of any country of the world. It consists of over 140 different peoples, nationalities, and races, all differing in their customs, religion, language, and dress. There are: Fifty million Great Russians, or actual Russians or "Muscovites" (the inhabitants of the former Grand Duchy of Moskva), now ruling all Russia.

Twenty million Little Russians, formerly a part of Poland.

Twelve million Poles.

Six million white Russians; formerly a part of Poland.

Two million Lithuanians; formerly a part of Poland.

Two million Germans.

One million and a half Armenians.

One million and a half Roumanians.

Five million Jews.

Sixty million of 130 other different nations and races, as: Tartars, Kurds, Bashkirs, Samoyedes, Kirghizes, Kalmuchs, Turks, Bulgars, Greeks, Gipsies, and 120 others. Mostly all of these live in groups and clans on their ancient territory.

Badly Needed.

"There will be no meeting of the Good Health Society Tuesday evening because of the illness of so many of the members."

Town Visitor (to farmer, whose chickens he has been admiring)—"I suppose you had to kill all these chickens yourself?" Farmer—"Oh, no; we keep hens for that purpose."

"You can't fool the people all the time," announced the investigator. "I know it," replied the Trust Magnate. "There is plenty of profit in fooling half of them half the time."

BELL 'PHONE 30 — BRUCE 'PHONE 11

We Handle All the Good Things You See Advertised in the Big Magazines.

THIS store is headquarters. You will always find here everything you would expect to find in a similar store—and many things more.

We specialize on articles of genuine merit. Articles we have tested and tried ourselves and we can recommend and indorse.

You will find here all of the good—the best—the pick—of the standard household articles advertised in magazines.

We add our own guarantee to that of the manufacturer's.

We call your especial attention to the O-Cedar Polish Mop, the greatest boon to cleaner and better housekeeping we know of.

With it you can dust, clean and polish a hardwood floor without getting down on your hands and knees. You can dust the tops of doors, the moulding, the tops of high furniture without standing on chair. You can dust and clean the stair steps and banisters in half the time it usually takes.

You can dust under the bed, and under heavy furniture without moving it, and so on throughout the house—wherever there is dusting to do. You can do it quicker, easier and better with the O-Cedar Polish Mop.

Unlike other dusting mops the O-Cedar Polish Mop can be washed when soiled, and then renewed by adding a few drops of O-Cedar Polish.

We are so confident that you will be delighted with the O-Cedar Polish Mop that we will deliver one to your home on two days' trial. If it is not satisfactory in every respect we do not expect you to keep it, and will instantly return your money. The price of the O-Cedar Polish Mop, complete, is $1.50. Let us send you one on trial.

Try our "PREMIER" GASOLINE No Water in it.

EDEN GROVE

Rev Mr Fiddis will deliver his farewell sermon in the Methodist church next Suuday morning. Everybody welcome.

Mrs Connors spent the week end with Walkerton friends.

Mr P O'Reilly is busy shipping several cars of hay from here and Paisley to Niagara-on-the-Lake for the horses in connection with the camp there.

We notice a few soldiers still visiting our burg. Don't know if they are trying to get the young ladies to enlist or embark.

Mr and Mrs Thos Desmond were visiting Walkerton friends Saturday.

If the council cannot afford to extend the cement walk up to the school they should at least have a few electric lights on the principal treets.

Our agent has returned from his holiday trip and looks about as much in need of a wife as ever. But Billy says where there is life there is hope.

Just one more week to become a June bride, and still none in sight, isn't that awful?

Mr Campbell, who has been visiting at the home of Mr and Mrs H Pearson, cor King St and Railroad Ave, left for Brantford Thursday.

The G T R is giving single fare only 1st, fare and one third June 30th, July 1st, returning July 3rd.

Mrs Todd spent Monday with Cargill friends.

Mr Thos Desmond, the new weigh master, was doing business on a large scale last week. He was weighing hay.

Mrs Campbell, of Leamington, is enjoying a few weeks' visit at the home of Mr Emery.

Mr Reynolds visited friends in Cargill on Monday.

There were quite a number of porkers in Tuesday. Our buyers had a busy time. Price $10.40.

Mr Elias Bailey and nephew, of Paisley, called on friends in the Grove Sunday.

It will soon be time the straw hat was having its innings.

Miss Mae Fordyce, of Paisley, enjoyed Sunday at her home here.

Mr Desmond shipped a few cars of oats last week.

Mr and Mrs Rousseau, Mr and Mrs McKeeman spent Sunday with Walkerton friends.

On and after Monday, June 26, the morning and afternoon trains going south will probably be 20 minutes earlier than at the present leaving this station.

The young men will have a chance to treat their fair maidens to ice cream Thursday evening.

Miss Laura Subject visited her home at Elmwood on Monday.

Mr and Mrs Rousseau, Miss Subject and Mr Will Jackson motored over to Chesley last week.

Mr and Mrs Gregg, Paisley, were guests of Mr and Mrs Gregg, King St. East, on Sunday.

Mr John Seifer was a visitor to Walkerton Saturday.

Owing to the heavy rains on Friday the section men patrolled the track ahead of the night express. G T R employees always believe in safety first.

Mrs Child and daughter were Walkerton visitors last week.

During the summer the store will close on Mondays, Wednesdays and Fridays at 6 p.m.

Children Cry
FOR FLETCHER'S
CASTORIA

GLAMIS

Mr Hector McLean, of Winnipeg, a former Glamis boy, is spending a few days at Mr Jas Thompson's and seeing old friends before leaving for overseas service.

Rev Mr Reith has returned from Toronto, Mrs Reith and Miss Louise remaining there for a short time.

Quite a number from here took in the meetings of the Owen Sound Association which was held in Paisley last week.

Mr Jas Thompsons motored to Underwood on Sunday, and took in the Oddfellows' service there.

Mr McCauley returned to Willliscroft on Monday. We are sorry to learn that his mother's illness continues to be very serious.

Mrs Beaton and family, who have been living here for some time, have returned to Toronto.

Ptes Kitchen, McDermaid, McLennan, Thompsons, Sundayed at their homes here, returning to Walkerton on Monday.

We are glad to learn that Mr Neil McFarlane, who has been very ill with typhoid, is on the road to recovery.

CANTIRE

Wild strawberries are ripe.

Farmers are experiencing great difficulty this year owing to the continued wet weather in getting the corn and roots planted. Many have been unable to get on the land, and the task of keeping down the grass and weeds promises to be a laborious one.

There was a ripple of excitement in this neighborhood on Friday when it was learned that following Friday's downpour of rain the river had gone on the rampage. A sight of this kind had never been witnessed here before, the water coming like a tidal wave and sweeping everything before it. A huge jam that has been accumulating at the rear of Neil Reid's lot for a great number of years, and was regarded by most as a permanent fixture, was swept away, and huge masses of stumps, logs and trees came swirling down. These striking heavily at Dan McIntyre's bridge, that structure was lifted bodily and carried down to Robt Stoddart's od next lot. Although the bridge was badly shaken, neighbors were apprised by phone of the danger of the bridge on the 4th opposite Mr Stoddart's and soon a willing crowd gathered and assisted in breaking the jam and keeping it from lodging at the bridge at the road. All along the course of the stream the river banks are littered with sawlogs, rails, bridge timber, and barb wire. Owing to the scarcity of help the old-fashioned bees will have to be resorted to for rebuilding bridges.

Mrs Harry Duke, of Toronto, returned to her home after a month's visit with her nephew, Mr John Eason.

Mrs Alex Munn, accompanied by her daughter, Mrs Gross, of Chesley, were visitors at Mr D Reid's on Friday last.

On Monday last Mrs John A McIntyre received news of the death of her grandfather, a Mr Miller of Tara, and attended the funeral on Tuesday.

Pte Irwin Eason spent the week end at the old home.

CASTORIA

SECOND CON. ELDERSLIE

Miss Johnston and Mrs W McBeath were guests of Mrs Robt Jefkin's on Friday and Saturday.

Mrs G Addison is in Owen Sound hospital having treatment for throat trouble.

The annual picnic of S S No 2 will be held in Alex Campbell's Woods on June 30th.

S S No 12 intend to hold one also, but final arrangements are not completed yet.

Miss Ellen Kemp is spending a few days with Mr and Mrs J Caldwell.

The 2nd con S.S. will hold a patriotic service entitled "Heroes," on Sunday, June 23rd. A special programme of music and recitations is being prepared, and all are invited. It is the closing Sunday for this term.

Not in the memory of the oldest inhabitant of this community has there been such destruction caused by water as occurred here on Saturday, June 17th. The very heavy rain of Friday caused an overflow some miles up the river, which brought down the wreckage of dams and bridges, trees and fences, logs, etc, and carried away Dawson'sdam here and damaged the mill badly. By 10 o'clock a m all the flats along the river were a surging, roaring, seething rush of water, but by noon it was subsiding again. The heaviest loser in this community will be Arch Dawson. It would be hard to exactly estimate his loss, as the inside of the mill is badly wrecked, the dam is completely cleaned out, and large quantities of timber, lumber, shingles, slabs, etc, are gone. Within a distance of two miles six bridges are completely gone, those on 25 s r, A McGregor's on lot 24 Thos Patterson's, Wilson Patterson's, Mrs D Allen's and W J Allen's on lot 17. The culvert at 20th sideroad is also washed out. All the farmers whose land is along the river bank will certainly not need to be idle waiting for harvest, as there is an unlimited quantity of rubbish to clear away, besides the labor of rebuilding bridges and fences.

Scores of sightseers from all directions visited the scene of the flood on Saturday afternoon and Sunday.

A Dawson's boat was left high and dry on the top of stumps and logs 15 or 20 feet above low water.

CARGILL

Mr Wm Anderson, of Walkerton, spent Sunday with his mother here.

Ptes C Adair, F Anderson, John Clancy, of the 160th, spent Sunday at their homes here.

Rev Mr Homer was in London the past week attending the Synod.

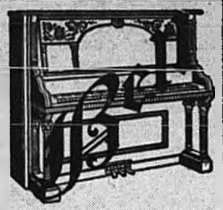
D D G M Loughheed officiated at the dedication of the new Masonic hall at Port Elgin last Thursday night.

A number from here attended the 160th sports in Walkerton on Saturday.

Miss Verna Loughheed, of Hanover, spent Sunday at her home here.

Very successful anniversary services were held in the Anglican church last Sunday morning and evening, when Rev Canon Pace, of London, preached very able sermons. A supper was held on Monday evening, after which speeches were delivered by Mr W D Cargill, M L A, Revs Homer and Fiddis.

Mrs C Martyn and babe left for their home in Winnipeg on Tuesday, after a visit to Mr Chas Hamilton.



Rev Mr Fiddis, who has been pastor of the Methodist church here for the past two years, preaches his farewell sermon on Sunday evening next.

Pupils from surrounding schools are here this week writing on the entrance examinations. The number is considerably less than last year, there being only 14 candidates as against 27 at the former examination. Mr Willoughby, of Walkerton, is presiding.

TARA

Mr. Norman Monkman, son of Mr. Thomas W. Monkman, Con. 3, Arran, has made the supreme sacrifice in giving his life for his country, having been killed in France recently. The sad news was telegraphed to his father on Saturday. Deceased was 26 years and ten months old and enlisted at Oyen, Alberta, in November, 1914, with the 3rd Mounted Rifles, going overseas to England a year ago this month. He went to France last September and saw considerable fighting during the past few months. Ten years ago he went to Alberta and had been farming a half section of land near Oyen. He is survived by his father 3 sisters and 3 brothers who have the sincere sympathy of the entire community. Norman was liked by all who made his acquaintance and he gave his life for his country and in the cause of right and justice.

A case of criminal assault was tried here last Friday before Magistrate McDonald, the defendant being Charles Calhoon and the plaintiff Samuel Kingston, two Elderslie farmers. It appears that bad feeling has existed between the two parties for some considerable time and on the first day of June the two men met on the road, Kingston driving in a buggy. Some hot words passed between them and Calhoon tried to pull Kingston out of the buggy and failing to do so he jumped into the buggy and beat his opponent with his fists so badly that a doctor was called to tend the plaintiff's injuries. After hearing all the evidence Magistrate McDonald committed Calhoon for trial before the judge, bail being given. C. B. Start appeared for the plaintiff and C. J. Mickle for defendant. The case has created considerable interest as both parties are well known in the district.—Leader

Travel where you will—in Canada or abroad—you will find that

A Complete Car in Every Particular
And It's a Car You Will Be Proud to Own

It's the first complete car at anywhere near so low a price.

It stands out alone—boldly—unapproached—a powerful five-passenger touring car complete for only $850.

Note that word "complete."

That means Electric Starter, Electric Lights, Electric Horn, Magnetic Speedometer—in fact, every necessary item. Nothing is lacking. There are no extras to buy.

Note that it is not a small car. The wheelbase is 104 inches. The tires are four-inch size—many cars costing more have smaller tires.

And it is a perfect beauty—snappy, stylish, speedy.

In every way it's a car you will be proud to own and ride in.

No wonder there's a rush to possess the car the world has been waiting for.

Don't delay—see us at once and talk it over.

Guaranteed Clothes!

You get a complete and absolute guarantee when you buy made-to-measure clothes here—the guarantee means what it says—you're the judge.

You'll find that we don't ask you why the clothes are unsatisfactory or how—if you say they're not right, we don't argue about the matter.

That sort of a guarantee, added to the very evident advantage of wearing custom-tailored clothes, makes them all the wiser choices.

I. S. CRUICKSHANK

It is astonishing how much vital force some people waste in hating. For all hate is force wasted, and worse than wasted. The old Romans had many terse, pithy sayings that embodied the strong good sense which led them to the heights of earthly power. One of them was: "Resist beginnings." You can not resist the fury of the conflagration; stamp out the spark. It is almost impossible to check hatreds that have been allowed free course; never let them. An animosity will sometimes spring up before one knows it; make its life brief.

—The face of Fisher's mill dam sprung a leak on Monday afternoon, and before it was noticed there was a large hole washed out. It gave a number of men a good deal of work for a few hours to get it in shape to prevent a complete break.

Red Cross—S. S. No. 10 Bruce and Greenock

The last shipment of goods sent by the Red Cross workers of S.S. No 10 Bruce and Greenock consisted of: 13 pairs of socks, 7 field shirts, 3 hospital shirts.

A THOUGHTFUL GIFT

Send THE ADVOCATE to the absent member of the family or to the distant friend. It is as good as a letter from home and is a weekly visitor. You can better imagine how the home paper is appreciated when you are absent yourself and a copy is forwarded to you.

—Grey County Council has decided to contribute $96,000 to the Canadian Patriotic and Red Cross Funds, paying at the rate of $8,000 per month for two years.

—Mr. Norman Allen, who has been on the teaching staff of St. Andrew's College, Toronto, came home for a few days' vacation at the closing of the term, but returned to the city on Tuesday to join join the Divisional Signal Co. and train for overseas service.

—The gold watch advertised as lost, was brought to THE ADVOCATE office by Mrs. McKenzie, who found it on Queen St., just as she was starting out to the country a couple of weeks ago. The lady who lost the time piece will be pleased to have it returned by the honest finder.

—Pte Charles Stanley Moore, whose name appeared among the list of casualties recently as suffering from shock, is a Paisley born boy, son of the late Rev A P Moore, a former rector of the Church of the Ascension, Paisley. His mother is now living at Princeton, Ont. She received the sad news of her son's condition upon the day she returned to her home from treatment in the Ontario Sanitarium at Woodstock.

—Boy wanted to learn the printing at THE ADVOCATE Office, or a girl to set type.

—Constable Leitch found the window blinds down in the pool room at the Balmoral hotel one evening lately, and lodged a complaint for the infraction of a regulation. When tried before Magistrates Gibson and Batkelley, the case was dismissed, costs to be paid by defendant.

—Dr. Jessie M. McGavin, of Portland, Oregon, was spending a couple of days re-visiting the scenes of her childhood in Paisley, and gave THE ADVOCATE a call to get tidings of old friends. Dr. McGavin is the daughter of Mr. McGavin who, prior to his death, ran a tannery business on the bank of the Willow Creek, at Rose St. bridge. The family went to Winnipeg a good many years ago, and several of the members are now successful teachers and doctors. No doubt many of our readers will remember them, and be pleased to learn of their success in life.

The Right Kind

A former Bruce boy who recently enlisted at Winnipeg, giving up a good business and leaving wife and children to do so, received a letter from his parents, who say they do not believe in war, protesting against the step he had taken and saying now if he thought he was doing right in leaving his wife and children and going to the war where he might lose his life. To this the soldier replied that his wife and children would be better off without him under British rule than they would be with him under German rule. It would be hard to frame a better reply than that. If you are an expert, try it. —Lucknow Sentinel.

Lantic Sugar

is packed by automatic machinery in strong white cotton bags and cartons at the refinery.

This is far safer and more sanitary than sugar packed by hand in a weak paper bag which breaks at a touch. No hand touches LANTIC SUGAR until you open it yourself. Just cut off the corner of the carton and pour out the sugar as you need it.

10 and 20-lb Bags

"The All-Purpose Sugar"

THE

Key to Yesterday

By CHARLES NEVILLE BUCK

CHAPTER XIX.

"But, now——" He stopped.

"But, now—" the quiet of her words hurt the man more than tears could have done—"now, his real life has claimed him—the life that only loaned him to me."

The telephone jangled suddenly, and Steele, whose nerves were all on edge, started violently at the sound. Mechanically, he took up the instrument from its table-rest, and listened.

"Yes, this is Mr. Steele. What? Mr. St. John? Tell him I'll see him down there—right for me." Steele was about to replace the receiver, when Duska's hand caught his first.

"No," she said quickly, "have him come here."

"Wait. Hold the wire." The man turned to the girl.

"Duska, you are only putting yourself on the rack." She shook her head with the old determination. "Have him come here," she repeated.

"Send Mr. St. John up," ordered the Kentuckian tersely.

One might have seen from his eyes that, when Mr. St. John arrived, his reception would be ungracious. The man felt all the stored-up savagery born of his helpless remonstrance. It must have some vent. Every one and everything that had contributed to her misery were alike hateful to him. Had he been able to talk to Saxon just then, his unreasoning wrath would have poured itself forth as readily and bitterly as on St. John. The sight of the agent standing in the door a few moments later, inoffensive, even humble, failed to mollify him.

"I shall have the two pictures delivered within the next day," ventured the Englishman.

Steele turned brutally on the visitor.

"Do you mean to risk remaining in Paris now?" he demanded.

At the tone, St. John stiffened. He was humble because these people had been kind. Now, meeting hostility, he threw off his lowly demeanor.

"Why, may I ask, should I leave Paris?" There was a touch of delicately shaded defiance in the questioning voice.

"Because, now, you must reckon with Mr. Saxon for pirating his work! Because he may choose to make you walk the plank."

Steele whipped out his answer in rapid, angry sentences.

St. John met the eyes of the Kentuckian insolently.

"Pardon the suggestion that you misstate the case," he said, softly. "I have never sold a picture as a Marston that was not a Marston—it would appear unconsciously I was, after all, honest. As for Mr. Saxon, there is, it seems, no Mr. Saxon. That gentleman was entirely mythical. It was an alias, if you please."

It was Steele who winced now, but his retort was contemptuously cool:

"Do you fancy Mr. Marston will accept that explanation?"

"Mr. Steele—" the derelict drew back his thin shoulders, and faced the other with a glint in the pale pupils that was an echo of the days when he had been able to look men in the face. "Before I became a scoundrel, sir, I was a gentleman. My daughter is extremely ill. I must remain with her, and take the chance as to what Mr. Marston may choose to do. I shall hope that he will make some allowance for a father's desperate—if unscrupulous—effort to care for his daughter. I hope so particularly inasmuch as that daughter is also his wife."

Steele started forward, his eyes going involuntarily to the girl, but she sat unflinching, except that a sudden pain of pain crossed the hopelessness of her eyes. Somewhere among Duska Filson's ancestors, there had been a stoic. Instantly Steele realized that it was he himself who had brought about the needless cruelty of that reminder. St. John had disarmed him, and put him in the wrong.

"I beg your pardon, sir," he said.

"I came here," said St. John slowly, "not only to notify you about your canvases. There was something else. You were both very considerate when I was here before. It is strange that a man who will do dishonest things still clings to the wish that his occasional honest motives shall not be misconstrued. I don't want you to think that I intentionally lied to you then. I told you Frederick Marston was dead. I believed it. Before I began this—this piracy, I investigated, and satisfied myself on the point. Time corroborated me. It is as though he had arisen from the grave. That is all."

The man paused; then, looking at the girl, he continued:

"And Mr Saxon—" he hesitated a moment upon the name, but went resolutely on—"Mr. Saxon will recover. When he wakes next, the doctors believe, he will awake to everything. After his violent exertion and the shock of his partial realization, he became delirious. For several days perhaps, he must have absolute quiet, but he will take up a life in which there are no empty spaces."

The girl rose, and, as she spoke, there was a momentary break in her voice that led Steele to hope for the relief of tears, but her tone steadied itself, and her eyes remained dry.

"Mr. St. John," she said slowly, "may I go and see—your daughter?"

For a moment, the Englishman looked at her quietly, then tears flooded his eyes. He thought of the message of the portrait, and, with no information except that of his own observing eyes, he read a part at least of the situation.

"Miss Filson," he said with a simple a dignity as though his name had never been tarnished, as though the gentleman had never decayed into the derelict, "my daughter would be happy to receive you, but she is in no condition to bear startling news. By her own wish, we have not in seven years spoken of Mr. Marston. She does not know that I believed him dead, she does not know that he has reappeared. To tell her would endanger her life."

"I shall not go as a bearer of news," the girl assured him; "I shall go only as a friend of her father's and—because I want to."

St. John hesitatingly put out his hand. When the girl gave him hers, he bent over it with a catch in his voice, but a remnant of the grand manner, and kissed her fingers in the fashion of the old days.

Driving with Steele the next morning to St. John's lodgings, the girl looked straight ahead steadfastly. The rain of the night had been forgotten, and the life of Paris glittered with sun and brilliant abandon. Pleasure-worship and vivacious delight seemed to lie like a spirit of the dewy-tinted summer on the boulevards. Along the Champs Elysees, from the Place de la Concorde to the Arc de Triomphe, flowed a swift, continuous parade of motors, bearing in state gaily dressed women, until the nostrils were filled with a strangely blended odor of gasoline and flowers. The pavement cafes and sidewalks flushed color, and echoed laughter. Nowhere, from the spot where the guillotine had stood to the circle where Napoleon decreed his arch, did there seem a niche for sorrow.

"Will you wait here to see to what he awakens?" questioned Steele.

Duska shook her head.

"I have no right to wait. And yet —yet, I can't go home!" She leaned toward him, impulsively. "I couldn't bear going back to Kentucky now," she added, plaintively; "I couldn't bear it."

"You will go to Nice for a while," said Steele, firmly. He had fallen into the position of arranging their affairs. Mrs. Horton, distressed in Duska's distress, found herself helpless to act except upon his direction.

The girl nodded, apathetically.

"It doesn't matter," she said.

Then, she looked up again.

"But I want you to stay. I want you to do everything you can for both of them." She paused, and her next words were spoken with an effort: "And I don't want—I don't want you to speak of me. I don't want you to try to remind him."

"He will question me," demurred Steele.

Duska's head was raised with a little gesture of pride.

"I am not afraid," she said, "that he will ask you anything he should not—anything that he has not the right to ask."

CHAPTER XX.

When he turned back, a day later, from the turmoil of the station, from the strenuous labor of weighing trunks, locating the compartment in the train, subsidizing the guards, and, hardest of all, saying good-bye to Duska with a seeming or normal cheerfulness, Steele found himself irritably out of measure with the quick step of Paris. Mrs. Horton and the girl were on their way to the Riviera. He was left behind to watch results, almost, it seemed to him, to sit by and observe the post mortem on every hope in the lives of these people. Nice should still be quiet. The tidal wave of "trippers" would not for a little while sweep over its rose-covered slopes and white beaches and dazzling esplanades, and the place would afford the girl at least every soothing influence that nature could offer. That would not be much, but it would be something.

As for himself, he felt the isolation of Paris. On a desert, a man may become lonely; in deep forests and on high mountains, he may come to know and hate his own soul in solitude, but the last note of aloofness, of utter exile, is that which comes to him who looks vainly for one face in a sea of other faces, whose small cosmos lies in unwept and unnoticed ruin in the midst of a gaint city that moves along its indifferent way to the time of dance-music. In the hotel, there was the chatter of tourists. His own tongue was prattled by men and women whose lives seemed to revolve around the shops of the Rue de la Paix, or whose literature was the information of the guide-books. He felt that everyone was invading his somberness of mood with trivialities, until, in revulsion against the whole stage-setting of things, he had himself and his luggage transported to the Hotel Voltaire, where the life about him was the simpler life of the less pretentious quais of the Seine.

After his dejeuner, he sat for a time attempting to readjust his ideas. He had told Saxon that he would never again speak of love to Duska. Now, he realized how barren of hope it would ever be for him to renew his plea. She had bankrupted his heart. He had buried his own hopes, and no one except himself had known at what cost to himself. He had taken his place in the niche dedicated to closest friend, just outside the inner shrine reserved for the one who could penetrate that far. Now, he was in a greater distress. Now, he wanted only her happiness, and as he had never wanted it before. Now, he realized that the only source through which this could come was the source that seemed hopelessly clogged. There was no doubt of his sincerity. Even his own intimate questioning acquitted him of self-consideration. Could he at that moment have had one wish fulfilled by some magic agency or miracle, that wish would have been that he might lead Robert Saxon, as Robert Saxon had been, to Duska, with all his memory and love intact, and free from any incumbrance that might divide them. That would have been the gift of all gifts, and the only gift that would leave the look of heart hunger and despair from her eyes.

ON THE FARM

Sprays for Potatoes.

The Colorado potato beetle and the cucumber flea beetle are the commonest insects which injure the potato tops. The former can be readily killed with Paris green in the proportion of eight ounces to 12 ounces to a 10 gallon barrel of water, or with arsenate of lead in the proportion of two to three pounds or 40 gallons of water. Paris green kills quicker than arsenate of lead but the latter adheres better than Paris green, hence a mixture of both in the proportion of eight ounces of Paris green and one and a half pounds of arsenate of lead to 40 gallons of water will kill quickly and adhere well to the foliage.

The poisons mentioned will, to some extent, check the cucumber flea beetle, but in addition to them, a better preventive is a covering of Bordeaux mixture, on the foliage. The Bordeaux mixture should also be used to control the early and late blights of potatoes, the latter disease causing rot. These are two of the commonest diseases.

To control the early and late blight of potatoes spraying with Bordeaux mixture, should be begun before the disease appears and the plants kept covered until autumn. It is safer to start spraying with Bordeaux mixture when spraying for the potato beetles. The poison of the latter may be mixed with the Bordeaux. From three to four sprayings or more will be required, the number depending on the weather. Taking the average of three years, the increase of yield from spraying with Bordeaux mixture was at the rate of 94 bushels an acre. In some years it is much larger.

The importance of keeping plants growing as late as possible is well illustrated in an experiment where the total crop of marketable potatoes per acre when dug on September 1st was 234 bushels per acre, whereas in the same field the same variety yielded 353 bushels marketable potatoes per acre when left undug until September 22nd, or in three weeks the crops had increased by 119 bushels per acre of marketable potatoes. Bordeaux mixture is made in the proportion of six pounds bluestone, four pounds lime and 40 gallons of water. Spraying mixtures should be used at the proper time and thoroughly, if good results are to be expected.—W. T. Macoun, Dominion Horticulturist, Ottawa.

Separator Milk For Calves.

In writing of his experience in calf rearing and the value of separator skim-milk as calf food, in the "Jersey Bulletin," Prof. C. L. Haecker of the Minnesota experiment station says:

I have made calf rearing my business for over twenty years, and during the last fifteen have placed my reliance on skim-milk. For growing calves I consider separator skim-milk at least equal to whole milk, though calves will not lay on as much fat as they will when whole milk is fed; but they will make as good growth and be as thrifty on skim-milk. There is nothing in butter fat that a calf can use in building body tissue. Butter and body fat, and nutriment for this purpose can be supplied more cheaply with flax meal, which contains from 30 to 35 per cent. oil.

My system of feeding is very uniform. When the calf is dropped I let it suck once and then remove it from the dam. If it is removed in the morning I give it no feed until the following morning. I give from three or four pints of its mother's milk twice a day, immediately after milking the dam. A small calf gets the e pints and a large calf four pints. This I continue for about one week. Then for one week I give it whole milk half and skim milk half twice a day, giving it only from three to four pints. The third week I feed all separated skim-milk, but put in the milk a teaspoonful of ground flax. I gradually increase the skim-milk and flax meal so that, by the end of the fourth month, it is receiving a heaping tablespoonful of flax meal and ten pints of milk twice a day. After the first month it has access to a little early-cut hay and a little whole oats, or a mixture of whole oats and bran or shorts.

The important points are strict regularity in time of feeding, quantity and temperature of milk, which should be from 98 to 100 degrees F. From the first of June the skim milk should be pasteurized so it will not get sour.

It has been the general opinion among farmers that separator skim-milk was not strong or nutritious feed and that a large mess must be given to make up in quantity what they supposed it lacked in quality, and the result was that calves were overfed and indigestion was produced, which was followed by scours and blout.

Feed the Young Foal.

Are you giving that young foal the proper care? To become a strong, sound horse when matured the foal must be well nourished and given every advantage possible.

At this time of the year mares and colts are allowed to spend at least a part of the time in the pasture. The foal should be taught to eat grain very early. By placing the feed box from which the dam eats her grain low, the foal, at about two months of age, will begin nibbling with the mother and will soon acquire a taste for the grain.

A pen built in one corner of the field made high enough to keep the mare out and allow the colt to pass under will make it possible to feed the foal grain with very little difficulty. Allow the mare in the enclosure with the foal for a few times, and it will soon learn to go in itself. Keep a liberal supply of grain, preferable oats and bran, and perhaps some cracked corn, in the feed box. To induce the dam to loiter about with the colt, have the pen near a shade tree or the salt box.

By weaning time the foal will have become thoroughly accustomed to eating grain and will wean very easily, beside being in better condition as a result of this additional feed.

Try this plan this year and you will be surprise to find a sleek, fat, well-grown colt at weaning time.—C. S Anderson, in Farm and Dairy.

Dressing Percentage.

The average dressing percentage of hogs is 75, while of cattle it is 52, and of sheep 48. Part of this difference is due to the method of figuring. In the case of the hog the hide, head and feet are included in the carcass weight, while in the case of cattle and sheep the head, hide and feet are not included. Then the hog is very thick fleshed and has a small digestive system. Cattle and sheep have large paunches and digestive systems. Sheep dress out lowest, due to the wool and the rather light fleshing of the carcass.

The dressing percentage of animals of each class varies widely. This is due to the amount of flesh, especially fat present on the carcass, and somewhat to the thickness of the hide and size of the heads and legs, and to the amount of fill or the amount of feed and water present in the digestive tract at the time of slaughtering. For the hogs the dressing percentage varies from 65% to 85% with an average of 75%. For cattle it ranges from 48% to 70% with an average of 53%, and for sheep from 44% to 56% with an average of 48%.—W. H. Peters, North Dakota Experiment Station.

Rosie—"Mary Smith was married this morning." Josie—"Who's the happy man?" Rosie—"Her father."

— GOOD DIGESTION —
When your digestion is healthy, weakness and pain are curtain and diseases is limited.

Mother Seigel's Syrup corrects and stimulates the digestive organs, and thus removes the many diseases which arise from indigestion.

WORK FOR WAR CRIPPLES.

German Government Providing Tasks for Them.

Germany's prompt and continuing efforts to care for her war cripples are described in the Medical Record by Douglas C. McMurtrie, editor of the American Journal of Care for Cripples. Mr. McMurtrie says that "the manner in which the problem is being met is unquestionably sound."

Care of the wounded was not difficult to organize on an adequate scale. The other part of the work was harder and a careful publicity campaign was made throughout the country to rid people of the idea that a crippled man was useless. Employers were urged for patriotic reasons to re-employ all crippled men possible. The government is setting the example by retaining cripples in the service of the State-owned railways.

It has been pointed out that the government can go further and, in placing orders or awarding contracts, insist that a proportion of the workers employed be war cripples.

The segregation of cripples is discouraged. They are returned as far as possible to their own communities and their own jobs. Where the crippling has unfitted a man for the same task he is trained for one as near like it as he can perform, the idea being to utilize the training he already has as far as is possible. Mr. Murtrie cites several examples.

A young paperhanger, who had lost his leg, showed artistic ability and is in a trade school studying to be a decorative artist. His former employer will re-engage him.

A baker, whose left foot was crushed, is being instructed in bookkeeping and commercial arithmetic that he may enter the grain trade and manage the bakery of a dead relative.

A young farmer, who lost one arm, is studying agricultural science and learning to write with his left hand. It has been arranged that he shall look after the business end of his brother's farm.

Some people are willing to be good if paid for it, and others are good for nothing.

Doctor Tells How To Strengthen Eyesight 50 per cent In One Week's Time In Many Instances

A Free Prescription You Can Have Filled and Use at Home.

Philadelphia, Pa. Do you wear glasses? Are you a victim of eye strain or other eye weaknesses? If so, you will be glad to know that according to Dr. Lowlie there is real hope for you. Many whose eyes were failing say they have had their eyes restored through the principle of this wonderful free prescription. One man says, after trying it: "I was almost blind; could not see to read at all. Now I can read everything without any glasses and my eyes do not water any more. At night they would pain dreadfully, now they feel fine all the time. It was like a miracle to me." A lady says she used it and "Threw away my glasses after using it for fifteen days and can see everything nearly clear. I can even read fine print without glasses." It is believed that thousands who wear glasses can now discard them in a reasonable time and multitudes more will be able to strengthen their eyes so as to be spared the trouble and expense of ever getting glasses. Eye troubles of many descriptions may be wonderfully benefited by following the simple rules. Here is the prescription: Go to any active drug store and get a bottle of Bon Optic tablets. Drop one Bon Optic tablet in a fifth of a glass of water and allow to dissolve. With this liquid bathe the eyes two to four times daily. You should notice your eyes clear up perceptibly right from the start and inflammation will quickly disappear. If your eyes are bothering you, even a little, take steps to save them now. Don't wait. It is too late. Many hopelessly blind might have been saved if they had only used Bon Optic in time.

Note: Another prescription which is also said to strengthen the eyesight in many cases, is as follows: Obtain from your druggist one ounce of Optona and apply a few drops in the eyes two or three times daily. This is said to relieve many cases where glasses seemed necessary. Eyes tested, fitted and glasses supplied by mail. Write Optona Co., Dept. 1000, Kalamazoo, Mich.

Is to be sold in Toronto by Valman Drug Co.

Economical.

"He inherited a fortune."

"Did he take good care of it?"

"Splendid. The first thing he did after getting it was to decide not to spend too much money for a monument to the rich uncle who left it to him."

EXTERMINATE THE HOUSE-FLY

Attack Filthy, Disease-carrying Pest In Its Breeding-grounds.

The house-fly is the dirtiest of all vermin. It visits the filthiest places imaginable and then distributes the filth over our food. It carries the germs of typhoid, infantile diarrhoea, and other intestinal diseases, and, probably, assists in the spread of tuberculosis. Hence, it is not merely very dirty but exceedingly dangerous as well.

Means of protection against flies are common; doors and windows may be screened, fly papers, traps, 'swatters', and poison may be employed to kill those that do enter the house. But these purely defensive measures ar not enough. The war must be carried into the enemy's country; the fly must be exterminated.

To wage war with the adult fly is to go into a ceaseless battle that can never be decisive in man's favor. The flies form such a numerous host that it is impossible to kill them all in a single season and a very few survivors are sufficient to propagate an equally numerous host the season following.

The only way to exterminate the fly is to attack it in the larval or maggot form. Flies lay their eggs in manure or garbage; ten days from the time of hatching the maggots emerge as winged insects, fully equipped for distributing disease-breeding bacteria. But a city with clean backyards and clean stable premises would be a flyless city, for it would have abolished the flies' breeding-grounds. The plan of campaign against these annoying and dangerous pests is thus plain; we must clean up, not once or twice a year, but all the time. Persons with dirty back-yards should be prosecuted. Privies should be abolished wherever possible and, where allowed, should be kept continually disinfected and be cleaned twice weekly. The piling of refuse in disgusting and unsightly "dumps" should never be permitted. If the town cannot afford an incinerator, the refuse should be buried.

Experiments conducted by the U.S. Dept. of Agriculture have shown that the fly larvae in manure and other refuse may be killed by treatment with borax, one pound of borax being sufficient to treat 16 cu. ft., or very nearly 13 bushels of manure. If used in larger quantities, the borax may prove injurious to plants. The borax should be sifted over the manure, particularly near the edges of the pile, which should then be sprinkled with four gallons of water. This treatment wil kill 98 to 99 per cent of all the larvae in the manure. At 11 cents per pound for borax, it is estimated that the cost would be 2 cents per horse per day. This cost could be very greatly reduced by employing calcined colemanite instead of Borax, if the former were imported in large quantities. One pound of colemanite will treat 11 bushels of manure and its larvicidal action is as effective as that of borax.

ST. JOHN AMBULANCE.

First Aid Work of the Canadian Pacific Railway Centre.

"A most successful year, notwithstanding the general depression." This is the pleasing statement contained in the sixth annual report of the Canadian Pacific Railway Centre of the St. John Ambulance Association. For the twelve months, ending September 30, 1915, no less than 1,816 passed qualifying examinations out of a total of 2,564 who presented themselves for instruction at the classes.

In all the departments of the C.P.R. Centre of the Association, which spreads over the country, a greater zeal than ever was manifested for work, and the support of the superintending officials of the C.P.R. is in no small way responsible for a good deal of the advancement made. Wives and daughters of C.P.R. employees have taken advantage of the free course of training offered, and now no less than 825 ladies have taken out the certificate of qualification from the Association.

Under the auspices of the C.P.R. Centre instruction was given to the Borden Battery and Ammunition Column before leaving Montreal for the front. Afterwards the certificates of merit were presented to the officers and men by His Royal Highness the Duke of Connaught.

An important feature of the work of the C.P.R. Centre was the bringing of a large number of the lady clerks of the C.P.R. into touch with the Red Cross Society, an organization to which they proved a valuable asset.

Three men were saved from drowning at Winnipeg by W. T. Davies, C. P.R. ambulance instructor, and William Newcombe, a C.P.R. constable. Sir Donald Cameron presented the medal of the Royal Canadian Humane Society to each in recognition of their bravery.

Particulars were obtainable of 3,780 cases where first aid had been administered by members of the C.P.R. Centre. The cases were thus divided: Atlantic Centre, 9; Eastern Division, 130; Ontario Division, 136; western lines, 3,440.

Concluding the report of the C.P.R. Centre pays a glowing tribute to the late Lieutenant-Colonel Lacy R. Johnson, who had been chairman of the Centre under review and also of the whole Association. During his time as chairman nearly 7,000 employees of the C.P.R. passed the qualifying examinations, and in this way made themselves better citizens of the Dominion.

FIENDISH WAY OF FIGHTING.

Some of the Terrors and Humors of the Bomb.

An Irish officer, writing from the British front in Flanders about bombs and bomb-throwing contrivances, says:

The more you have to do with bombs the more afraid of them you become, for you cannot play with explosives all day without going aloft sooner or later. The toil of good men who have been blown to pieces by their own bombs is long and sad.

Bomb-throwing as an art is still in its infancy; it changes almost from day to day. At best, it is a fiendish way of fighting, for it inflicts ghastly injuries.

Yet bombing, like many other aspects of the war, has its humorous side, and I have seen a whole trench helpless with laughter at the sight of two men running opposite ways to avoid a sausage bomb from a German trench mortar. They collided, and sat down facing each other, like vaudeville comedians. The bomb dropped between them, almost touching them both—and then failed to explode.

One morning twenty or more members of the general staff came round to our trench to witness a test of a new catapult arrangement for throwing bombs to the distance of two hundred and fifty yards. With great interest they watched the screwing down of the great arm and the fastening of the bomb in position. Then upward and forward swung the arm; but the missile, not having been properly secured, instead of hurtling in the direction of the enemy, rose gently a few feet in the air, and then turned to descend again into the trench.

Such a rapid and complete disappearance of staff officers had never before been seen. They fled like rabbits, and as they rounded the corner of th trench, the bomb went off a few feet from the ground, completely destroying the catapult.

A Sensible Thing To Do

When the drug, caffeine—the active principle in tea and coffee—shows in headache, nervousness, insomnia, biliousness, jumpy heart, and so on, the sensible thing to do is to quit both tea and coffee.

It's easy, having at hand the delicious pure food-drink

Instant Postum

It is made from wheat roasted with a bit of wholesome molasses and is free from any harmful substance.

POTATOES CAUSE IDIOCY.

Physicians Also Say They Sometimes Produce Palsy.

Vodka, forbidden forever in Russia by the Czar, is distilled from potatoes, and the new edict may be regarded as yet another shade of ignominy cast upon the long-suffering tuber, for it is interesting to note that the very evils ascribed to vodka drinking today were formerly attributed to eating potatoes, says the London Chronicle.

Nat such a great while ago a learned Frenchman wrote a treatise to show how idiocy had increased since the introduction of the potato into Europe, and our own medical men in past times condemned it as a cause of palsy and other hideous diseases.

Women Sweep Streets.

Because of the dearth of male labor owing to the war, the streets are being brushed and burnished by feminine hands in English towns.

He is Just One More of The Many

WHO HAS FOUND NEW HEALTH IN DODD'S KIDNEY PILLS.

Philip McLeod Tells How He Suffered from Kidney Trouble for Years and Found a Quick and Complete Cure in Dodd's Kidney Pills.

Tarbot, Victoria Co., C.B., June 12th (Special.)—Philip McLeod is just one more of the many residents in this neighborhood who have found new health in Dodd's Kidney Pills.

"I have used Dodd's Kidney Pills with great success," Mr. McLeod states. "For years I had kidney trouble and could get nothing to help me. Hearing of what Dodd's Kidney Pills have done for others led me to use them. Five boxes cured me completely.

"I have recommended Dodd's Kidney Pills to many people. I cannot speak too highly of them."

The testimony of people who have been cured is better than all the theory in the world. Dodd's Kidney Pills are purely and simply a kidney remedy. If you have kidney trouble all you need to do is to ask others. They will tell you that Dodd's Kidney Pills will cure you.

They will also tell you that Dodd's Kidney Pills cure rheumatism, dropsy, heart disease, diabetes, gravel and Bright's disease. That is because all these diseases are either kidney diseases or are caused by diseased kidneys.

Could Be Nothing Else.

"What makes your hair so white?" said little Clara to her dear grandpa, as she sat on the old gentleman's knee. "I am very old, dear," was the reply. Then he added, with a fine disregard for truth, "I was in the ark, you know." The little lady looked at him with renewed interest. "Were you really?" she asked. "Are you Noah?" "No," "Then you are Shem?" "No." "Ham, then?" "No, I'm not Ham." "Then you're Japhet?" Smilingly the old gentleman shook his snowy head, greatly enjoying the joke. "Then, grandpa," said Clara, her childish tones strong and decided, "you're beat!"

Minard's Liniment used by Physicians.

Town From Station.

A countryman has various ways of sizing up London, and this is one of them. A Scottish soldier arriving at King's Cross with his kit was met at the station by one of those kind women who have banded themselves together to welcome and befriend such men. She offered him rest and refreshment and other kindnesses, but the Scot refused everything.

"But is there nothing I can do for you?" urged the kindly lady.

"Well, ma'am," replied the soldier, "I'd be obliged, if you'd tell me how far is the toon from the station."

THE COST OF FIRES.

Canada Pays Dearly for Indifference and Carelessness.

The Dominion Superintendent of Insurance has issued an abstract report of fire insurance business in Canada for 1915. The report gives an interesting insight into what Canada is paying as the price of her indifference and carelessness with fire

In 1915 Canada had an approximate fire loss of $15,000,000. Fire insurance companies paid out for fire losses $14,030,298, or approximately $1,500,000 less than the fire loss. The owners of destroyed property consequently had to bear the latter loss.

Fire insurance companies collected from the people in premiums $26,530,293, which, added to the margin of $1,500,000, gives an approximate total of $28,008,000. This latter figure represents only the actual cash outlay as represented by insurance protection, and value of property consumed in excess of insurance. To this must be added the loss in disruption of business, damage through hasty removal of property, the expense of upkeep of fire departments, extra water-supply, privat fire protection, etc.

That much the greater portion of this loss may be avoided is shown by a report of the fire chief of Vancouver, B. C., for March, covering the causes of fires in the cases of the 36 alarms responded to by the fire department in that city, as follows: Children playing with matches, 2; lamp thrown on stove, 1; Chimney fires, 9; overheated stoves and furnaces, 3; unknown origin, 5; electric heater left turned on, 1; smoke scare, 1; backfire in carburetor, 1; grease on stove, 1; defective chimney, 1; hot ashes, 2; spontaneous combustion, 1; gasolene explosion, 1; electrical origin, 2; overheated coal oil stove, 2; defective fire-place, 1; overheated chimney, 1; smoking in bed, 1.

Canada cannot afford to continue this sacrifice of money, materials and labour, especially when every effort should be made to husband her resources.

Keep Minard's Liniment in the house

Costly.

I was cured of a severely sprained leg by MINARD'S LINIMENT.
JOSHUA A. WYNACHT.
Bridgewater.

Caught Unexpectedly.

A young Tommy was hauled before his commanding officer. He had exceeded his leave by two days. "Well," said the officer, "what have you to say for yourself?" "I'm awfully sorry," replied Tommy. "I really couldn't get back before. I was detained by business." The officer (severely)—"So you wanted two more days of grace, did you?" "No, sir," answered Tommy, off his guard for a moment, "of Marjorie."

Sore Eyes Granulated Eyelids, Eyes inflamed by exposure to Sun, Dust and Wind quickly relieved by Murine Eye Remedy. No Smarting, just Eye Comfort. At Your Druggist's 50c per Bottle. Murine Eye Salve in Tubes 25c. For Book of the Eye free ask Druggists or Murine Eye Remedy Co., Chicago

The Chaps Were Insulted.

The visitor to the training camp was quite taken aback at the number of black eyes and bruised faces he saw everywhere. "What's been the trouble?" he asked his friend, a corporal. "Most of your fellows look as if they had been in the wars." "Had a row with the next regiment, that's all," replied the corporal in an off-hand tone. "What about?" "Oh, the beggars sat a sentry to watch their towel while it was hanging to dry, and our chaps felt insulted."

Thought His Hearing Was Bad.

Some wounded soldiers were waiting to go before the Invalid Board, with a view to getting sick leave. Among them was a private who had lost his leg, and when his name was called he hobbled into the room. "What's the matter with you, my man?" asked the presiding officer, speaking from force of habit. The soldier was surprised, but, with a straight face, he remarked, quietly—"Aa'm no' shair, sir; but Aa think it's ma hearin' that's bad."

Ask for Minard's and take no other

The Bantams Were Betting.

This is the latest story concerning Glasgow's Bantam Battalion. The enemy had exploded a mine underneath a British trench, and when things had settled down again some men were found to be missing. A search party was sent out, and came upon two of the "missing." They had been indulging in a hot argument, and as the rescuers came upon them they were arranging a bet as to which end of the trench was blown up first.

The Paisley Advocate

PAISLEY, JUNE 28th, 1916

—Whether tried in the small village or in the great cities, the closing of liquor selling places reduces the criminal records. In Chicago, since the closing of saloons on Sunday, the period has been marked by the lowest crimina record in forty-four years.

—With wool at 45c a pound it is not a mere figure of speech to say that the sheep raisers are reaping their harvest of golden fleeces this year. We heard of one man who brought in a little load for which he received $105.

—The spirit of the girls of the Alexandra and St. Marys Industrial School in Toronto is worthy of emulation by every person in Canada. These girls have been very busy making money and knitting socks for the soldiers, and even proposed to do without the usual turkey dinner on Christmas Day so that they might subscribe $25 to the Belgian Relief Fund. This sounds like genuine patriotic sacrifice.

—An English Board of Education has issued a warning against tea drinking, in a circular which outlines a system of health-teaching in the public schools. It says that tea-drinking is positively injurious and is unnecessary, and it adds that the old idea that a diet of bread and butter and tea was very nourishing is absurd. The circular asserts that persons who drink tea continuously to aid their nerves, become quickly exhausted and reaction invariably results. This is indeed a severe blow to our grandmothers' idea of the cup of tea at supper.

Unusually dry, or excessively wet weather such as we have experienced this spring, cause a great deal of discussion and speculation as to why these extremes come upon us. An enquiry sent by a Wentworth Co. man to the Toronto meteorological headquarters elicited the explanation that the rainfall is dependent upon cyclonic movements which occur within the fairly regular circulation of the atmosphere. These cyclonic movements vary somewhat in different years, and in seasons when they are more numerous than usual the rainfall is excessive. The problem as to why the circulation of the earth's atmosphere varies somewhat from season to season is as yet unsolved, but we know now that the sun is a variable star and it is probably that the varying heat affects the atmospheric circulation. Rev. Irl R. Hicks, of St. Louis, Mo., is the exponent of a theory which explains the weather changes more fully. The exactitude with which his forecasts are fulfilled may be taken as proof of the correctness of his theory. Prof. Hicks bases his weather forecasts upon the fact that the sun, the moon, the other planets and the stellar constellations each and all have more or less influence upon the earth's atmosphere, these influences being exerted according to the relative positions of each to the others and to the earth at all times, these positions varying very much because of the different orbits traversed by the planets, and the difference in the length of time each planet takes to revolve around the sun, the centre of our solar system. In round numbers Mercury goes around the sun every 88 days, Venus 224 days, Farth 365 days; Mars 687 days; Jupiter 4,382 days; Saturn 10,759 days; Uranus 30,686 days; Neptune 60,126 days. Mercury and Venus each trip around the sun go to the opposite side of the sun from the earth, but never to the opposite side of the earth from the sun. All the other planets have orbits outside the earth. Many of our readers may have these astronomical facts and figures in their minds, but we venture to say that few, indeed, have considered them as having any connection with our weather conditions. Prof. Hicks takes the dates on which notable astronomic events occur, figures out the cause they are supposed to exert upon the atmosphere of the earth, whether they operate singly or in combination, and is able to give forecasts showing the desturbing causes and things to expect from day to day and month to month throughout the whole year, his almanac being issued in December for the following year.

—The party conventions for nominating candidates for our next parliamentary elections are coming on, and the usual preliminary canvass is beginning to be in evidence. This is a time for the elector to be wide awake to the importance of having the right men selected and the right policy endorsed by his party convention. We must necessarily abide by the party system of government and selection of members for our parliament, but we are not still obliged to follow the old hackneyed way of allowing the heelers to run the whole system, as they did very largely at times not so far back in our history. Every intelligent elector should be prepared to take an interest in provincial and dominion politics, and see to it that not old party traditions only are upheld by the leaders and conventions, but that the most progressive ideals are brought forward and made a part of the platforms upon which candidates are to make their stand. "Preparedness" has come to be a prominent word in big politics of this world, and it can well be adopted in our very own party affairs. Every man who reads a newspaper these times must recognize that Canada and Canadians are to-day confronted with some of the most portentous political, social and economic problems that any nation has ever had to grapple with, and that we as Canadians must be up and doing if we are to meet these problems as they should be met. The future of our nation depends upon the foresight and grasp with which we manage our affairs during the next twenty to fifty years, which period is expected to bring to our Dominion the greatest and most rapid development that any young nation has ever experienced. There are questions arising in the political arena upon which parties may reasonably espouse either side, but there are others, and frequently these are the most important matters to be dealt with, upon which there should be no party division line, further than as to the measure of advance or reform that should be given. Much needed legislation has been defeated by wily opponents using one or other of the parties as a strong force against placing such new laws upon the statute books or against any action being taken. Parties have also been used to promote schemes that were not in the interests of the country. In the light of past experience the electors of Canada should, we again say, be more "prepared" than ever before for the ensuing election campaigns. This is Canada's century, and the voters should be Canadians in election matters, not mere Grit or Tory partizans.

Another Paisley Boy Wounded

On Saturday official advice was received by Mr and Mrs I Stanley that their son Lawrence had been slightly wounded on May 11th. Lawrence enlisted at Edmonton on Oct 30th, 1915, with the First Canadian Pioneers corps, which was mobilized at Winnipeg. The detachment went to England in December, and Lawrence has been on duty at the front in France since March, only recently being in Belgium, where he was when wounded. Later advices by mail from himself and wire from the medical officer, state that Lawrence is suffering from a gunshot and shock. He is in hospital at Bologne.

HIS HEART BADLY AFFECTED

"Fruit-a-tives" Soon Relieved This Dangerous Condition

632 Gerrard St. East, Toronto.

"For two years, I was a victim of Acute Indigestion and Gas In The Stomach. It afterwards *attacked my Heart* and I had pains all over my body, so that I could hardly move around. I tried all kinds of Medicine but none of them did me any good. At last, I decided to try "Fruit-a-tives". I bought the first box last June, and now I am well, *after using only three boxes*. I recommend "Fruit-a-tives" to anyone suffering from Indigestion".

FRED J. CAVEEN.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

LOCAL AND DISTRICT NEWS

Mr. Wm. Giles Enlists, as His Sons Were Rejected

Mr. Wm. Giles, a former resident of the Wiarton road north, is now wearing the khaki. Both his sons had volunteered for service, but for some physical defects were not accepted, and then Mr. Giles concluded it was up to him to represent the family in the overseas army of Empire defenders.

School Board

A special meeting of the School Board was held on Monday evening, when the levy for this year was struck at $3,000, the same as in 1915. It was decided to advertise for three new teachers, this being necessary for several reasons: Miss Sinclair's term of engagement has expired, resignations were in from Messrs. Rendall and Newton, and according to a new regulation of the Department of Education one of the continuation staff must have the qualifications for teaching art. The secretary was instructed to write Mr. W. J. Chisholm, M.A., of Peterboro, thanking him for the picture he recently donated to the public school.

For Red Cross

The Women's Patriotic League have received acknowledgement of $100 sent to headquarters for Red Cross purposes. They also shipped a bale of supplies consisting of 66 pair socks, 90 face cloths, 3 military flannel shirts, 6 sheets, 18 pillow covers, 1 pair pillows, 12 personal property bags, 48 handkerchiefs, 18 Turkish towels, 18 linen towels, 12 tea towels, 1 muffler, 1500 mouth wipes, 6 helpless shirts, 1 pair blankets. This includes donations from Knox church branch, the Beaver Club of high school girls, the Baptist class, Bluevale Ladies' Aid and $5 from Miss Jean Miller. There is still a lot of Red Cross sewing to do. Call and get your share.

The Weeds! The Weeds!!

They are tremendous this season. Neglected back lots and side streets are shoulder high with grass, burdocks, red dock and such tall varieties of wild stuff. The ox-eye daisy, wild carrot and other profuse bloomers are beginning to show a glare of white, white everywhere. We note by the Niagara Falls Review that the city council has bought a mower to keep the weeds down. Paisley Council might hire one and clean up all the town high ways and by ways right now charging the expense to the general rate. Then they could also turn the machine on those lots where the owners do not perform their sacred duty of citizenship in this respect and charge a reasonable sum to the owner and collected in the taxes. A man with a scythe might cut the weeds but work of mowing all the bay standing on Paisley streets would be too extensive a contract for any due to take.

Wilson—Ross

A very quiet wedding was solemnized at the home of Mr. and Mrs. W. J. Ross, Lovat, on Wednesday, June 14th, when their second daughter, Mary Jessie, was united in marriage to Mr. James Edgar Wilson, 14th con Greenock. The ceremony was performed by Rev. Mr. MacNab, the contracting parties standing beneath an arch of evergreens, flags and flowers. The wedding march was played by Miss Margaret Sharpe. The bride, who was given away by her father, was attired in a gown of silk embroidered net over duchess satin, with veil and orange blossoms, and carried a boquet of carnations, roses and maiden hair fern. The groom's gift to the bride was a gold watch and fob, and to the orgenists a pearl brooch. Immediately after the ceremony the guests sat down to a sumptuous repast, the tables being decorated for the occasion. The bride received many useful and beautiful gifts. The rest of the evening was spent in games and music till the small hours of the morning, when the happy couple left for the groom's home, 14th con Greenock, where they are followed by the best wishes of their many friends.

From the Front

Extracts from letters received by Mrs. D. McGillivray, 12th con. Bruce, from her son Neil, now in France with the 7th Battalion: May 21.—The battalion is in rest billets at present, in tents more or less pretentious, and we have plenty of good provisions. We buy eggs from the farmers near. The children peddle them ready boiled for two pence each, which is treble the price they usually are here. Farming is carried on as usual up to the firing lines. The country here is very pretty but flat, and has been once overrun by the Germans, but never again. Their failure at Verdun tells them they are beaten, but how long before they will give in to it remains with themselves; they know the price. It is very quiet tonight, but Fritz will soon be shooting his stars, but like himself they are of the descendant type. June 6.—Have been at the front for two weeks in the reserve company of our battalion. Our work was at night and in the day we were not allowed out of our dugouts lest we fall a prey to snipers or shrapnel. Each dugout held four and we crawled into them on all fours, so were quite satisfied to come out to the trenches for a few hours at night. Water for our ablutions is a bit scarce save what is lying in old shell holes. All drinking water is treated with chemicals. June 10—Things are more lively now. Our battalion has been under the hottest artillery fire possible for the past 48 hours, and our ranks are considerably thinned. With machine guns snapping at us from all sides and shells of all descriptions bursting above and around us all we could do was to dig ourselves in and lie low for hours at a time. It is hard to describe in a letter just what modern warfare is like. I have only been here a few days, but I know that only those who have been through this war can realize what the boys who have held these trenches for the past year came through.

Death of Sergt. D. McKerracher

That the insidious attacks of diseases to which humanity is heir may prove more deadly in many cases than the most penetrative missiles of warfare or the most destructive explosives thrown from an enemy's heaviest ordnance is, it might be said, demonstrated by the death of Sergt. Duncan McKerracher, assistant paymaster of the 160th Battalion, which occurred at his home here on Friday last. The deceased was the second and youngest son of Mr and Mrs Hugh McKerracher. He had just attained his majority in years and fatally entered upon what promised to become a very successful business career when he enlisted last winter in the service of King and country. Two weeks after, as stated at the funeral by Lieut-Col Weir, commanding officer of the 160th, Sergt McKerracher did not appear to be feeling very well and was given outside work at recruiting. He became no better, however, and was soon compelled to relinquish the duties of his office and go to the hospital at London, where he remained until he came home about two weeks ago. The cause of his death was toxic poisoning due to diseased condition of the liver and kidneys, and which could not be remedied by any means known to medical science. He had been a strong, robust, athletic youth, and neither friends nor acquaintances ever entertained the remotest idea that life would be wrested from him by disease in the days of his early manhood. He was one of the most likable and popular boys who has grown up in our midst, and developed into a genial, courteous and clean-living young man, overflowing with vigorous enthusiasm of life. He attended Paisley schools until he entered the employ of the Standard Bank. After working up from junior to accountant in the local branch he filled positions in several other branches, and was in Hamilton prior to enlisting. The funeral, which took place from the family residence on Sunday afternoon, was attended by one of the largest gatherings of the kind that has ever occurred in Paisley, many sympathizing friends coming by auto cars from Walkerton, Chesley, Port Elgin, Kincardine and other neighboring towns. The service was conducted by Rev G C Little, B.A., of Knox church, assisted by Rev L W Dicht, of the Church of Ascension, and at the close Col Weir, in well chosen words, expressed the tribute of the Battalion officers and men to the memory of their deceased comrade, Sergt. McKerracher. He had been a valued officer in the pay department, and done good service in recruiting, and would be remembered by his fellow soldiers as he lived. The Col stated that it was the intention that a military funeral should be held, and arrangements had been made for it, but on Saturday the medical officer had discovered numerous cases of measles and other contagious diseases amongst the men, which prevented any part of the Battalion leaving camp at London for the time being. Paymaster Shaw was the only other officer from the 160th. The pallbearers were three members of the 160th Pioneers, who are still at Walkerton, and three soldiers born on leave from other battalions—Ptes John McArthur, W McLeod and L Winch. The floral offerings surpassed in profusion and beauty anything ever seen here before, and were carried to the cemetery by twenty-eight young men walking in the procession, each bearing a wreath or design. To the bereaved father, mother, brother and sister, the sympathy of a very wide circle of friends goes out in their great bereavement.

The eyes at forty require assistance

When you are ill usage, reading or near work becomes an exertion, and glasses of just enough strength to relieve all strain should be obtained. We are experts in this line. We examine eyes free of charge and guarantee satisfaction.

A STOPPED WATCH

—our that will not go AT ALL—does not cause as much bother as one that runs now fast, now slow, in an erratic fashion.

The first you don't pretend to depend upon—the other is a constant source of annoyance.

Most people can afford a watch, but no one can afford an uncertain fast and slow one.

And when our Repair Department is so close at hand there is really no excuse for carrying anything but an accurate time-piece, no matter what the first cost was.

Consult us about any watch troubles that may arise.

W. C. T. U. Convention

The annual Convention of Bruce County W C T U was held in Walkerton on June 15 and 16. The County was well represented by delegates, the reports and discussions were interesting and helpful. Mrs Ashcroft of Wiarton presided. Mrs Pugsley, of Toronto, was the Convention speaker, and also conducted a School of Method in which she spoke upon the subjects, "Our Constitution," and "What are our duties to be under the Prohibition Bill?" A question drawer contained some twenty questions which Mrs Pugsley untangled. The year's work was very creditable. About $300 was raised for all purposes, the chief contributions being to the Prohibition Campaign Fund, the Y M C A Missionary at the front, and the Gift Fund to supply chocolate and soup for the soldiers. Four life members were secured and 33 new regular members. The officers elected were: President, Mrs Ashcroft, Wiarton; Rec Sec'y, Mrs A Chapman, Wiarton; Treas., Mrs F P Moore, Teeswater; 1st Vice-Pres, Mrs H B Putnam, Paisley; 2nd Vice-Pres, Mrs Halliday, Chesley; W W Sec, Mrs A Watt, Wiarton. Four county life membership pins were presented to Mesdames Stauffer and Rife of Walkerton, Shier and Christian of Port Elgin.

Paisley

—"Advertising is the education of the public as to what you are, where you are, and what you have to offer in the way of skill, talent and commodity. The only man who should not advertise is the man who has nothing to offer the world in the way of commodity or service." — Elbert Hubbard.

Patriotism and Religion

This was the theme of Rev. Mr. Little's sermon in Knox church on Sunday morning, being chosen as appropriate to the approaching anniversary of the organization of the Dominion of Canada. We hear a great deal about patriotism at present, said the speaker, but all is not patriotism that goes under that name. A cheap thing is very much in evidence as a substitute. Song singing and flag waving are not the essential things. When there is nothing more the patriotism is of a very poor quality. Real patriotism goes deeper, and cannot always be fully expressed. The love of country is stronger than death. That man who has no deep affection for his fatherland has undergone a destructive change in his make-up. Though we may be scattered to all parts of the earth, there is still clinging an affection for our home land that cannot be obliterated. There have been governments that were the greatest enemies of their country, their administration almost sweeping out the love of country from the hearts of the people. There are those who love their country only for what they can get out of it. The grafter class should be ostracized by society. Shame on the man who takes advantage of his country's distress to bleed her. What has religion to do with patriotism? is asked. Religion is the love of God, and out of the love of God springs the love of country, that country which God gave us. He made it rich in its hills and its fields with a wealth of mineral treasure and natural products. What a fair Dominion God has given to us in Canada, and been developed by our pioneer settlers. That land which turns its back upon Him who made it stands to suffer the same loss as Israel did when the people fostered sin, associated with sinners and established temples of idolatry. The patriot is one who loves his country. He is a true builder—constructive, not destructive, and does what he can to protect his fellows from evils of vice. Patriotism is fostered by religion, as shown by a study of the history of nations. Christ laid down the foundation principles of patriotism when he said "Love thy neighbor as thyself." True patriotism gives us a vision for the future, makes man a dreamer, and inspires him to hope and work for a realization of his dreams; into a nation to the highest ideals of government and fellowship; invites us to love our land not only for its advantages and privileges but for its liberty. The spiritual and social freedom enjoyed by Britons is the strongest bond that is binding together this Empire. Without that bond defenders would not now be willingly flocking from all parts of the world to fight in its behalf. There are always enemies to patriotism, and those who would pour shackles upon the subjects. But so long as God is on the throne, so long as we are guided by His words and inspired thereby we will never submit to any disintegrating influences. "Love thy neighbor as thyself" was meant to begin at Jerusalem and extend to all other peoples. We shall see the love of country perfected when it embraces a love of all lands of the earth.

Children Cry FOR FLETCHER'S CASTORIA

Automobile Accident

A bad accident happened near Spence's swamp on Monday afternoon when the automobile in which were Mr. and Mrs. Jas. Chapman of Port Elgin, Rev. R. J. Harris of Southampton, and Rev. Mr. Barker of Port Elgin, skidded and turned turtle in the ditch. Mrs. Chapman was pinned underneath the car but escaped injury, while the three men were thrown clear of the auto and all escaped injury except Mr. Chapman, who had his collar bone broken. The injured man was brought to Tara where he was given medical attention, later being taken to his home in Port Elgin. The automobile was badly damaged.—Leader.

Teacher Wanted

TEACHER WANTED for S.S. No. 10 Bruce and Greenock, duties to commence Sept. 1st, 1916. Applications to be in by July 15th, duly stating salary and qualifications to ROBT. COLWELL, R. R. No 2, Paisley.

Street Gravel Wanted

TENDERS at a rate per square yard, will be received by the undersigned up to the 6th day of July next, for the supply and delivery of street gravel, in quantities and at times and places as may be required. Qualities subject to inspection. Separate offers, for north and south parts, may be made. J. C. GIBSON, Town Clerk.

AUCTION SALE

— OF —

STORE GOODS AT WILLISCROFT

(6 Miles from Dobbinton or Paisley)

I have instructions to sell by public auction at the store at Williscroft, on

SATURDAY, JULY 8th

beginning at one o'clock, sharp,

Dry Goods, as follows:

Cottons, Dress Linings, Prints, Toweling, Cretonnes, Crepe, Shirting, Muslins, Wrapperette, Satins, Aproning, Canvass, Duck, Flannelette, Embroidery, Laces, Stair Carpet, Insertions, Ribbons, Corsets, Table Linen, Table Oilcloth, Underclothes, Overalls, Shirts, Shirt Waists, Ladies' and Gents' Hosiery, Sweater Coats, Mitts and Gloves, Ladies' Coats, Gents' Collars, Men's Caps, Ladies' and Children's Straw Hats, Thread, Buttons, Pins; Boots, Shoes and Rubbers for ladies, gents and children; Turnip Seed, Peat's Stock Food, Spices, Xmas Stock, Tags, Patent Medicines, Clothes Reels, Butter Prints, Baskets, Wash Boards, Mops, Rakes, Brushes, Whetstones, Paper Cutter, Wall Paper and hundreds of other articles too numerous to list; 4 showcases, Toledo Scales, Self-Stove Pipes and Stove, Coffee Mill, 1 Buggy, 1 Cutter, 1 set Bobsleighs.

I will also sell the store with dwelling and barn. This is a splendid opportunity for anyone intending to start in business. This will be a genuine clean sweep sale, without reserve. Terms, cash.

WM. WARDELL, Auct.

SEEKING TO ASSIST THOSE WITHOUT SIGHT

The first institution for the blind in Canada was the Nazareth School, which was started by a French priest, Father Rousselot, in Montreal, in 1861, and is still carried on to-day by the Grey Nuns. In 1863 the Halifax School for the Blind was opened, and about 12 years later the present head, Sir Frederick Fraser, himself a blind man, was appointed. The Ontario blind school at Brantford was started in 1871, and has not been remarkable for any special development of work among the blind, although some people think the chief value of this school has been to demonstrate the futility of attempting to train the adult blind and children in one institution. This school was commenced solely for the training of children, but adults have been admitted from time to time. The first known institution for the blind was the Valentin Hauy Association in Paris, Valentin Hauy being the first to educate a blind man. It was here that raised print came into use, and Louis Braille, who perfected the Braille system of printing for the blind, was a pupil of this school, and afterwards a teacher. In 1791 the school was taken by the Revolutionists. To-day it is still carried on in Paris under the name of the National Institute for Blind Young People.

What it is hoped may be done for the blind all over Canada may be best explained by an extract from the letter of Sir Frederick Fraser, head of the Halifax college for the blind, addressed to the secretary of the Canadian free library for the blind in Toronto: "I know that the Canadian free library is in itself a big institution which is doing a grand work, but cannot you and those associated with you in this work broaden your sphere of operations, so as to meet the needs of the blind of the Province? The first requisite would be a training shop in the capital city, then the establishment, through your field secretary, of local workshops in other parts of the Province, and the securing of legislation for the maintenance or aiding of such shops. I would suggest that you discuss this question and see if we in Canada cannot take a progressive step that will insure employment not only to blinded soldiers but to other blind workers."—Grace E. Kennedy.

Civilizing India

Sanitary conditions in Southern India are receiving the attention of the Government of Madras Presidency, which has under consideration schemes for opening up congested areas and for town planning along sanitary lines. At an industrial exhibition in the city of Madras much space was devoted to a "model village," and lectures were given daily on health topics and town planning.

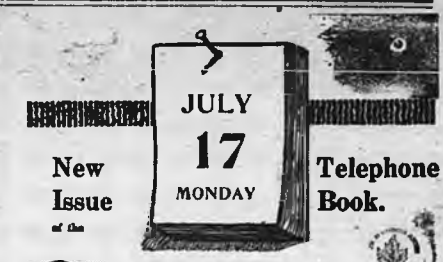
Tropics Waken Up

Two gymnasium outfits for the national schools of the city of Guatemala have been ordered by the Guatemalan Government, one for use by pupils of the general school and the other for a girls' school.

Bumble Bees as Bait

The use of the live bumble bee as trout bait is rather common in some sections. The common grasshopper, if small and bright colored, is one of the best of trout lures.

WOMAN AVOIDS OPERATION



Medicine Which Made Surgeon's Work Unnecessary.

Astoria, N. Y. — "For two years I was feeling ill and took all kinds of tonics. I was getting worse everyday. I had chills, my head would ache, I was always tired. I could not walk straight because of the pain in my back and I had pains in my stomach. I went to a doctor and he said I must go under an operation, but I did not go. I read in the paper about Lydia E. Pinkham's Vegetable Compound and told my husband about it. I said 'I know nothing will help me but I will try this.' I found myself improving from the very first bottle, and in two weeks time I was able to sit down and eat a hearty breakfast with my husband, which I had not done for two years. I am now in the best of health and did not have the operation." — Mrs. JOHN A. KONNIO, 502 Flushing Avenue, Astoria, N. Y.

Every one dreads the surgeon's knife and the operating table. Sometimes nothing else will do; but many times doctors say they are necessary when they are not. Letter after letter comes to the Pinkham Laboratory, telling how operations were advised and were not performed; or if performed, did no good. But Lydia E. Pinkham's Vegetable Compound was used and good health followed.

If you want advice write to Lydia E. Pinkham Medicine Co. (confidential), Lynn, Mass.

MACLEAN'S

—THE MAGAZINE FOR REAL CANADIANS

Every phase of present day Canadian life is reflected in the July issue of MacLean's Magazine. It is vibrant with the spirit of Canada to-day, interpreted by the Canadian writers of first rank, best fitted to treat of the topics assigned them. It is a Magazine with a universal appeal, a live interest for every member of the family. It is the Magazine you have been looking for. Consider the following list of matter and articles in the July issue, and ask your news dealer for the July MacLean's.

Robert W. Service whose virile verses places his books at the head of the best sellers, is driving an ambulance car at the front in Flanders, and his war poems, appearing exclusively in MacLean's Magazine, are saturated with the spirit and color of the trenches. "The Haggis of Private McPhee" in the July Number is a humorous yet pathetic treatment of a subject dear to the heart of every Scotchman. C. W. Jeffrey's illustrations make it more realistic.

Agnes C. Laut Well known to MacLean's readers for her amazing revelations of German machinations in the United States, and whose intimate connection with those high up in financial, business and diplomatic circles in the neighboring Republic, has given her series of articles in MacLean's prescience positively startling, contributes to the July MacLean's yet another outstanding import under the heading of "Canada's Greatest Service to the Empire."

Brigadier-General Logie A fascinating character sketch of the Hamilton lawyer, who, casting aside his gown and his briefs, is organizing and training as head of Number Two Division, a Canadian army larger than that Britain sent to Waterloo under Wellington. By Hugh S. Fayre.

Immigration after the War Some plain facts are given and deductions drawn by Fisher King. No more vital question is occupying the minds of Canadian statesmen. Every business man should read this article.

Nellie McClung raises the startling question, "Now that women have the vote in Western Canada will they want to sit in Parliament?" Mrs. McClung, herself a leader in the Western Feminist movement, answers this question in a characteristic article in the July MacLean's.

Stringer and McFarlane continue in the July MacLean's their captivating stories, "The Anatomy of Love" and "Behind the Bolted Door." Both these men are first flight fiction writers, and both Canadian born and bred, and both with continental reputations.

Then there is that ever popular department, The Review of Reviews, which gives the busy reader the cream of the world's best periodical literature.

Buy the July MacLean's. Learn at first hand just how good and how interesting this thoroughly Canadian Magazine is.

THE CAMPER

It was early morning on Lake Golden. The air slowly surrendered its chilliness under the lengthening rays of the sun. The teapot sputtered over the coals, and bacon flavors filtered gratefully to the nostrils. The Old Veteran squatted himself comfortably on a granite boulder and nodded toward the fire. "Boys," he said, "there don't look to be anything dangerous in a little bunch of coals, does there?"

"Not this side of a powder factory," chipped in the Youngster.

The Old Veteran tapped his pipe bowl significantly. "Some day we're going to have an argument about which is the best spot to trifle with fire—a powder factory or a forest, and I think the forest will come last. One advantage about the powder factory is that you know the worst right off. But in the forest, you may walk for days and have the fire of your own making overtake you."

"That doesn't sound reasonable," the Youngster broke in.

"And it won't," agreed the Veteran, "until some time you start a camp fire in a bog or on pine needles and after a week's absence come face to face with your own fire in the shape of a blackened township. There's lots of surprises in store for you, my lad. I have known camp fires to burrow into a boggy soil, although doused with many pails of water, and remain there for two weeks, travelling underground until they came in contact with the dry duff of a fine old pinery, then to dart upward and turn hundreds of acres into a roaring furnace. The only safe way is never to take chances with a camp fire, never build one except on rocks or gravel and never go away until it is dead out. I have followed that rule now for twenty years.

"You certainly make the camp fire responsible for a lot of damage."

"Can't exaggerate it, because I have seen the proofs with my own eye. I have crossed Canada with parties of geologists and civil engineers and forest engineers and seen so many thousands of acres lying charred and useless, so many rivers and streams dried up from lack of tree life, so many beautiful camping and fishing spots spoiled for all time, that I said to myself, 'Never you become responsible for this sort of crime.' And I believe I have lived up to it."

"But smoking!" said the Youngster. "Suppose that I—"

"Suppose that you threw down a lighted cigarette or a burning match alongside the trail, or emptied hot pipe ashes, I should feel like giving you a very good licking. Lighted tobacco and matches are just camp-fires in concentrated form. They all have the possibilities of another 'Porcupine fire horror,' and for a man to carelessly toss away the beginnings of a conflagration is to brand himself an amateur woodsman and an enemy to society."

By this time we had made away with the bacon and were glorying in the nectar of camp-fire tea. The Youngster, of course, had finished first, and was lending a hand at striking camp.

Up from the shore came the guide, lugging two pails of water. He emptied them on the small bed of coals and returned for a further supply. Not until the fourth pail had immersed the blackened remnants of the fire did he look contented.

"I see you take no chances," remarked the Veteran.

"I too learned my lesson," answered the guide. "If forests are not kept green, there's no hunting and fishing, and no tourists—and the guide's job disappears. This is only self-defence."

—Robson Black, Canadian Forestry Association.

CODDLING THE POLES.

Germans Making Desperate Efforts to Win Their Friendship.

The following is an extract from a private letter which was written in Warsaw and, escaping the Teuton censor, reached London:

It is the very astonishing volte face in the Prussian attitude toward us which is most to be feared and fought against. No thinking Pole believes it to be sincere or lasting. The Germans have got themselves so hated everywhere that they now see the necessity for making new friends. God forbid that my people should fall into such a trap, though, alas, a great many have already done so—that newborn bourgeoisie or commercial class, which owed its birth mainly to German gold and is now dancing to the tune called. 'Each day the subsidized press sing the wondrous benefits of German rule: 'The children will be Polish.' "The country is being rebuilt." "The Emperor has promised to send an army to Serbia if necessary to bring back the Polish exiles." And similar tragic nonsense. We, who know Germany better than she knows herself, are not deceived. Another Frederick, only a worse one, is on the throne.

The Germans could not be nicer to us for the moment. All we ask for we get, and what we don't get outright we're promised. The governor and the governor's sons kow-tow to our old families. Shooting parties have even begun, while the peasantry starves. Those stirring national dramas and ballets so long banned we can indulge in unrestrained. The German officers are even the most vigorous applauders.

FRENCH WAR VICTIMS.

They Are Conserving Every Scrap of Wood and Metal.

The idea that enormous quantities of material will be immediately in demand to rebuild the destroyed sections of France and Belgium once peace comes seems mistaken, writes a correspondent at British headquarters in France.

"We shall not be able to buy many things until we have something to sell which will bring us money to buy with," said a citizen of Ypres, the most ruined of cities, and where the wreckage is still pounded by shells. No civilian inhabitants are allowed to live in the city; but an indication of how reconstruction will begin is evident in the shanties which have been built near the front, often in the zone of shellfire. Boards, discarded oilcans beaten flat, salvaged tiles or bricks and any other kind of material that can be procured at no expense are used to make a shelter for a man and his family.

When the refugee returns to his ruined village or town in the fighting zone his first object will be a roof over his head before he sets out to reclaim acres which have grown up to weeds and are pock-marked with shell holes; or, if he is in business, he will want any kind of temporary premises on the site of his old place of business—which he will occupy because it is his and because it is there that his old customers may expect to find him.

The simple wooden houses which the army has built for "rest camps" for the soldiers when out of the trenches, will become squatter settlements. Only less amazing than the amount of material which the army will leave behind because it is not worth transporting back to England will be the use the thrifty French and Belgians will make of it. For up to the very moment of peace, whether it comes this year or five years hence, the army must have ample material in reserve for continuing the war. Lumber, wooden supports for barb wire, timbering for the trenches and dugouts all will be adapted to their necessities by impoverished people who have suffered from the loss of property and enforced idleness. Any funds they have saved will be needed for immediate capital to buy stocks of goods or farm implements and animals. It will probably be years before the permanent buildings will take the place of temporary shelters.

The restoration of such splendid public buildings as the Cloth Hall at Ypres, and the Hotel de Ville in Arras, will come only when the civic prosperity will permit, unless an indemnity or a government grant is distributed for the purpose. Even in that case the first practical use of money and labor will be to restore business to something like its normal functions.

WHERE HEROES LIE BURIED.

Burial Ground of Battlefield is Specially Consecrated.

It mustn't be thought that officers and men killed at the front are buried in nameless graves if it is at all possible to prevent it, says London Answers. Behind the firing lines of all the armies, as a matter of fact ground is specially marked off and consecrated for soldiers' graves.

In France the French Government have recently passed a law by which they have generously given as much land as may be wanted to bury our heroic dead. The lord, too, is given completely to the British Government so that our soldiers' graves will always be a permanent sign of the fact that British and French had fought side by side in the greatest war in the world's history.

There was recently appointed a special committee whose business it is to see that the graves of our fallen officers and men are properly cared for. Every grave is numbered and identified by the name and rank of the dead man. When a soldier is buried on the battlefield, he is always wrapped in his army blanket.

At present most of the graves in these military cemeteries are surmounted by plain white wooden crosses bearing the soldier's name number and regiment. In time permanent memories will be erected where our men fought and died.

COMPARISON OF TWO NAVIES.

Sea Strength of Britain and Germany at Beginning of 1916.

The New York Herald gives the following as a probably accurate table of the strength of the British and German navies at the beginning of 1916:

England—	Built.	Building.
Battleships	58	14
Battle cruisers	9	1
Cruisers	47	—
Light cruisers	65	20
Torpedo vessels	25	1
Destroyers	201	36
Torpedo boats	106	—
Submarines	69	27
Germany—	Built.	Building.
Battleships	35	6
Battle cruisers	4	3
Cruisers	9	—
Light cruisers	43	8
Torpedo vessels	—	—
Destroyers	183	12
Torpedo boats	80	—
Submarines	24	14

How many of the vessels classified as "building" have been put in commission it is, of course, impossible to calculate.

The Historical Touch.

"Well, Alfred, 'ow are the cakes?"—By Captain Bruce Bairnsfather, in London Bystander.

MERCHANTS BANK OF CANADA

Annual Report Shows Assets Approaching the Hundred Million Mark.

In presenting to the Shareholders the 53rd Annual Statement of the Merchants Bank of Canada, the General Manager expressed the policy of the Bank during the War as one of "Safety First"—maintaining a very strong position in cash and immediately available resources, ready for any emergency or development in these times of world wide financial certainty.

A study of the Bank's Annual Statement for the year ending April 29th, 1916, shows how fully this policy has been carried out. Assets which are or can be immediately converted into cash have reached a total of $40,960,486—an increase of over Seven and Three-Quarter Millions from the remarkably good showing of a year ago.

By this policy of keeping well prepared and entrenched, the Merchants Bank of Canada has favorably impressed the depositing public at home and abroad, and deposits have grown in the twelve months covered by the statement by the considerable sum of Ten Millions, reaching a total of $72,177,020.15. These deposits reflect a measure of confidence on the part of the public which has been very gratifying to the proprietary of the Bank.

Total Assets also show a very substantial increase of over Ten Million Dollars, and amount to $96,961,363.07. This does not include any mortgages, while overdue debts and real estate, other than Bank Premises, total only $341,549.47 or less than 2/5 of one per cent. of the total assets. Another year of such solid progress will bring the Merchants Bank of Canada well into the class of Hundred Million Dollar financial institutions.

Profits during the year were necessarily restricted by the policy of maintaining so high a ratio of liquid reserve or assets that could be converted immediately into cash. Current commercial loans and discounts in Canada, the main source of a Canadian Bank's profits, increased comparatively little from last year, and net profits fell off slightly to $950,713.42. This, with the balance brought forward from the previous year, enabled the Bank to meet all dividend charges, contribute generously to patriotic and Red Cross funds, transfer $150,000 to Contingent Fund, and carry forward $250,984.12.

The feeling of the Directors as expressed at the Annual Meeting, is one of quiet yet complete confidence in the future prosperity of the Dominion, and a readiness to devote the growing resources of the Merchants Bank of Canada to sound development and upbuilding.

Lucky Find.

"Ah see yo' is housecleanin'," said Mrs. Snow White.

"Yes," replied Mrs. Marsh Green, "dey is nothin' like movin' things 'round once in a while. Why, I des come errcross a pair ob slippers under de bed dat ah hadn't seen foh five years."

Not Always.

Mrs. Slummer—My poor woman, does your husband always drink like this?

Mrs. O'Grady—No, mum. Sometimes he gets out of work.

WARSHIPS AND WARSHIPS.

Definitions of Terms Used in Describing Various Types.

Each time there is a report of a naval engagement there is evident a certain amount of confusion in the use of names of fighting ships.

The name warship has ceased to mean much. It is used to apply to all classes of boats, from the superdreadnought to the submarine.

But the terms battleships, battle cruisers, armored cruisers, cruisers, torpedo boats, etc., refer to distinct generic types of warships.

Battleships form the first fighting line of all seapower. Gunfire is now recognized as the great determining factor in a naval battle. For this reason the battleship has the distinctive feature of great guns and heavy armor. British battleships of the Royal Sovereign class and the Queen Elizabeth class carry eight 15-inch guns, sixteen 6-inch guns, etc., while their armor is 13½ inches in thickness. A battleship does not need to be as fast as a cruiser for her object is to get at the enemy and not to run away. The Royal Sovereign has a speed of 22½ knots and the Queen Elizabeth 25 knots.

A battle-cruiser, though her business is to stop and fight when she can, should also be able to run away when she can't. Battle-cruisers of the Queen Mary class have a speed of 31 knots; they carry eight 13-5 guns and sixteen 4-inch guns, but their armor is only 9 inches in thickness as compared with the 13½-inch armor of the largest battleships. The Queen Mary was 670 feet long, or 50 feet longer than the Queen Elizabeth battleship; her horsepower is 78,000, as compared with the Queen Elizabeth's 25,000.

The armored cruisers have usually a belt of 6-inch armor, and from four to six 9.2 guns. Their speed is about 23 knots.

The protected cruiser has fewer 9.2 guns than the armored cruiser, and its resisting power is not great, its main feature being an armored deck extending from end to end of the ship below the water line. The protected cruisers of the Powerful class are 520 feet long and have a speed of 22 knots. They carry two 9.2 guns, sixteen 6-inch guns, and others of smaller calibre.

The cruiser, also called "second-class protected cruiser," is a ship of 5,600 tons displacement and 20 knots speed with eleven 6-inch guns.

A torpedo boat carries a supply of torpedoes and launches them against the enemy's warships.

A torpedo boat destroyer not only destroys torpedo boats by gun fire, but also battleships by torpedoes.

NOVEL NERVOUS CURE.

Being Mechanically Whipped or Spanked is Beneficial.

It is considered beneficial to be whipped or "spanked," provided it is done mechanically, says Popular Science Monthly. In the mechano therapy departments of up-to-date institutions the "whipping post," a mechanical device for therapeutic padding, is an accredited healing machine.

You are whipped by straps of heavy cloth or leather attached to two rapidly revolving posts. When you take the treatment you step backward into the flying whips and receive their blows upon your legs, back, abdomen or chest, depending upon the malady from which you are suffering. The impact of the straps is just sufficient to set the blood in free circulation. There is no smarting, stinging sensation, because the straps are broad enough to eliminate any possibility of a cutting blow. You are padded rather than lashed. The "whipping post" is valuable in many types of nervousness.

DRUNKENNESS IS GREATLY REDUCED

MUCH LESS THAN A YEAR AGO IN ENGLAND.

Great Increase in the Efficiency of Workmen as Result of Restrictions.

Remarkable figures showing how at present and why consumption stood Great Britain as a result of the regulations made by the Central Control Board are given in the second report of the board, which has just been issued.

During the five years 1909-13 there was a steady rise in the number of convictions for drunkenness. A tendency to fall became apparent in 1914 and the earlier months of 1915, but the rapid decline did not set in until the orders made by the board came into operation. In the London area the average weekly convictions before October 11, 1915, when the order came into force, were 1,011; the average weekly convictions for the first twelve weeks of this year were 525. In December, 1913, the total convictions numbered 5,701; in December, 1914, they were 5,295; and last December they were 3,105. In February of this year the figures had fallen to 2,506. Equally good results have been observed in other parts of the country. Taking four districts, the North-East Coast (including Newcastle, Liverpool, and the Mersey), the Midlands (including Birmingham), and the West Riding of Yorkshire (including Sheffield), the average convictions during the first twelve weeks of the present year were 314, as compared with an average of 597 before the respective orders were made.

Over 40 Per Cent. Reduction.

The impressive character of the figures is clearly brought out by the chart which is reproduced above. The statistics gathered by the board indicate a reduction of drunkenness of from 40 to 50 per cent. In Scotland the fall in convictions were not satisfactory until the board, on February 28, closed several houses which had openly ignored the restrictions. Since that date a perceptible improvement has been recorded, although the percentage of reduction does not, on the whole, compare favorably with that in English areas.

The evidence of figures is supplemented by official testimony from many quarters. In a report received from the Admiralty on March 28 it is stated that the restriction had considerably increased the efficiency of the transport service, and the principal officer at Southampton has commented on the increased efficiency of all the labor at the docks. The Army Council informed the board on January 29, 1916, that the orders of the board have had a beneficial effect on the discipline, training, and efficiency of soldiers, and have helped in the recovery of sick and wounded. Statements received through the Board of Trade from the larger ports of England and Wales were singularly uniform in their testimony to the advantages resulting from the regulations. There has been a diminution of drunkenness among sailors, firemen, and dock laborers, and ships have in consequence got away with less delay than before.

Not Exclusively Repressive.

The work of the board is not exclusively of a repressive kind. Among the most important of their duties is the constructive task of facilitating and encouraging, and, if necessary, themselves undertaking, the supply of food for munition and transport workers. The absence of proper facilities for obtaining wholesome nourishment leads indirectly to drinking. It is not possible to state the exact number of canteens provided, but additional provision has now been made for the daily refreshment of tens of thousands of dock and munition workers. The powers given to the board to take over and manage public houses, or without license to carry on the sale or supply of intoxicating liquor, refreshments, or tobacco, have been exercised only in three districts.

In October, 1915, the board appointed a committee of women under the chairmanship of Mrs. Creighton, to inquire into and advise the board in regard to the alleged excessive drinking among women. This committee has since recommended the adoption of more drastic restrictions as to the distribution and consumption for the sale of drink; the withdrawal of the recommendation that the wives of sailors and soldiers should not be charged for drunkenness except after a first or second offence; the appointment by a central authority of special plainclothes inspectors to visit the public houses and see that the rules against serving drunken persons, treating and drinking out side are observed; and of special inspectors, of the same standing as factory or other Government inspectors, to visit towns to keep the local police up to the mark; and the reduction of the number of licensed houses.

"Papa, George says he is very much worried about his income." "I should not think he would worry about a little think like that."

Free Map

The maps of the Porcupine and Cobalt Camps, finished in colors, are now about ready for distribution to all who are interested. These will prove invaluable to those anxious to obtain success in the mining market.

4 KING STREET EAST, TORONTO

FRENCH COURTS-MARTIAL

Have Sentenced Fifteen Men to Death for Various Offences.

The veil of secrecy is nowhere deeper than over the doings of the court-martial. In one division of the French army it is known that since the beginning of the war the court-martial has dealt with 315 cases. It has passed the death sentence on 24 men, of whom, however, only 15 were executed, the other 9 obtaining pardons or commutations.

An officer, attached to the division as a permanent court official, has given to a correspondent of the London Daily Mail some details of the workings of the tribunal. "You must remember," he said, "that armies today are made up of men of all shades and colors of belief and creed, anarchists, republicans, royalists, atheists and what not. Out of this material we have welded together an army, the like of which the world has never seen. It is not, however, the bad eggs, of whom there are a few in every regiment, who give us trouble in the matter of desertion in the face of the enemy, but rather the better sort of fellows, who cannot understand the military necessity of harsh discipline.

"Our first court-martial in a case of this kind occurred fairly early in the war. We were not long in boldness ourselves, but it was a flagrant breach, and to check its repetition it had to be dealt with according to the rules of the war. The man was duly tried and sentenced. I went to his cell and read the death sentence to him. He listened without seeming to understand what had taken place and that he was condemned to die.

"That night I instructed an officer to call for a firing squad. Our firing squads are always composed of volunteers, 12 men. Not a man volunteered for that task. We had to commandeer a squad. The prisoner was marched out at dawn, stood quietly facing the leveled rifles and died without faltering. I am sure he never realized the gravity of his offence. But war is war.

"Now it is different. The men know the value of discipline. Know that a breach may endanger the lives of many comrades, or even the safety of France, and though breaches of this kind still occur, they are not in a different spirit. Now when I call for a firing squad 50 men at once volunteer."

"Is the family notified that a man has been executed?" asked the interviewer.

"Yes and no," the officer replied. "The French code is peculiar. Notification of death is sent to the family soon after the execution as though the man died in action. Then three months later the family receives a bill for 12.55 francs (about 50c), the expenses of the execution. But otherwise there is no publicity. The grave is not marked officially, but a record is kept, so that it will not be difficult to locate later on.

"Occasionally we have to deal with the case of a man who has become sick of the trenches and thinks that the easiest way to get an honorable discharge is to wound himself, shoot off his trigger finger or the like. This is a capital offense in time of war, and is invariably so punished.

"A recent case of this kind was that of a young lieutenant who was married three days before the outbreak of the war. He was a gallant soldier, but after a few months he became homesick, and to get back to his wife was his one desire. Month passed and he could not get leave so he took matters in his own hands and drove a bullet through his left forearm. He did not mean to think that it would soon be discovered that his wound was caused by a French bullet.

"He was court-martial and sentenced to be shot. I read the death sentence, but a few hours later a pardon reached us. But the lieutenant knew his duty and fell fighting in the field without ever seeing his wife again."

Highways Saved France.

A recent correspondent of the Associated Press, writing from Paris, tells how the military highways of France have, upon more than one occasion, saved the French front, after German long-range artillery with consummate skill had cut the French railroad lines of communication, dropping with the precision of clockwork as many as 80,000 shells upon short sections of track in the van of approaching supplies and men. Yet each time the automobile caravans brought up the reinforcements of cannon, munitions, food and water.

The Housewife's Corner

Selected Recipes.

Sardine Sandwiches.—If sardines are mashed to a paste with their own oil and a taste of lemon juice, they may be made into delicious sandwiches. This is much more enjoyable because they are easier to handle than the split fish sandwiches.

Strawberry Fluff.—One cupful strawberries cut in halves, one cupful marshmallows cut in four pieces each, one cupful heavy cream whipped to stiff froth. Fold in three tablespoonfulss sugar, one-half teaspoonful vanilla with fruit and marshmallows. Chill thoroughly and serve in dry glasses.

Smothered Mutton Chops.—Put chops or steak in bottom of covered baking dish or casserole, sprinkle with salt and pepper and cover with layer of sliced potatoes. Sprinkle with flour, salt and pepper. Repeat layers of potatoes, slicing onions in through the layers if liked. Almost cover with hot water and bake one and one-quarter or one and one-half hours. Uncover the last half hour to brown top. Veal or pork may be used the same way.

Parsnip Croquettes.—Season one pint cooked and mashed parsnips with one-half teaspoonful salt, one-eighth teaspoonful pepper, one teaspoonful table sauce, two tablespoonfuls melted butter and dash of cayenne. Add two beaten eggs and enough rolled cracker crumbs to make stiff enough to shape; form into cones; let stand one-half hour, dip into beaten egg diluted with one tablespoonful water, roll in fine crumbs, and fry in deep, hot fat. Serve with tomato sauce.

Baked Spiced Ham.—Freshen two pounds of ham cut three inches thick, two hours in cold water, if salty. Drain, place in baking dish and pour over it one-half cupful grape juice, one cupful boiling water. Add two cloves and one-inch stick of cinnamon. Cover and bake gently until tender, about one and one-half hours. Remove from liquid, add to liquid two tablespoonfuls chopped raisins, and thicken with one-half tablespoonful arrowroot dissolved in a little cold water.

Fish Loaf.—One pound and a half of white fish, half cup of bread crumbs, two tablespoons butter, three-quarters cup milk, two eggs, one teaspoon chopped parsley, three-quarters teaspoon of salt, one-fourth teaspoon pepper, three drops onion and one teaspoon anchovy sauce. Boil fish, remove skin and bone and chop. Mix with bread crumbs, butter (melted), parsley, seasonings eggs well beaten and milk. Turn into buttered mold, cover and steam one hour. Decorate with shrimps and serve hot with Dutch sauce.

Casserole of Lamb.—Fry one onion in butter and drudge while frying with flour. Have ready one pint of cold, cooked lamb, diced and free from fat. Add this to the cooking onion. When well mixed and seasoned turn all into casserole. Add one tablespoonful butter to pan and two tablespoonfuls flour; brown and add enough water, lamb broth or left over gravy and water to make sauce for meat. Season with one-fourth teaspoonful thyme, one-fourth teaspoonful sweet marjoram, one-half teaspoonful celery salt, and pepper and salt to suit. Slice two good-sized carrots over meat in casserole, pour in gravy, and cook one and one-half hours. Add one can drained peas, cook fifteen minutes longer, and serve.

Potato Salad.—Cold meats and potato salad make a typically delicatessen dinner, and nothing tastes better on a very hot day. Real German potato salad is delicious, here is the recipe: Cut boiled potatoes into slender slices and mix with them two raw onions, minced, and a tablespoonful of chopped parsley. Season with salt and pepper to taste, and two tablespoonfuls of salad oil mixed with a dessert spoonful of vinegar. Toss and turn, and put into the salad bowl. Set in the ice for two hours. Just before serving stir into the salad a half cupful of mayonnaise and pour the rest f the dressing over the salad. The mayonnaise may be omitted with no difference in the quality of the dressing.

How to Do Housework More Easily.

To accumulate a lot of old rubbish, letting it lie undisturbed and lumber up the cupboards, is a thing no good housewife will approve. But the war has made us all more thrifty and taught us to make instant use of things we used to throw away—not to hoard them up, but to turn them to account as soon as possible.

Old lace curtains too ragged to use make first-rate window polishers. Cut them into squares and tack the edges round to prevent fraying.

Odd bits of old velvet polish furniture, silver and plate as well as chamois leather.

Small scraps of soap should never be thrown away. Collect them in a jar, add water and stand jar in oven until soap is melted. On washing day that jar is a welcome friend. Soapsuds are a good fertilizers for cabbage and other vegetables.

Nutshells, dried orange peel and burnt match ends are useful, mixed with small coal, for fires. Capital firelighters can be made from two thin sticks bound together in the center, crosswise, with a cork fixed on the top of each stick.

Corks also polish knives splendidly. Put the knife polish in a saucer, dampen it and dip in the cork using it as a rubber. This method never scratches the knives and soon brightens them.

Tablecloths cut down into small trayclothes sheets can become dust sheets and shabby towels make good dishcloths and household cloths generally. Old stockings and vests make good metal polishers. They can also be cut up to line homemade quilts. Old newspapers polish glass and are a good substitute (rolled up tightly) for firewood. A capital pad for stair carpets, and are of manifold uses in the kitchen.

No fruit jar that has been standing for weeks is free from germs. Before putting fruit in them they should be thoroughly sterilized by boiling in soda water.

When marking linen handkerchiefs with indelible ink, first starch the handkerchiefs and iron them smooth. Then you can mark them clearly with ease.

When making egg custard pies, always heat the milk to the boiling point before mixing it with the eggs. If this rule is followed the undercrust will always be crisp.

When you have no one to hold the yarn while you wind it, place two flat irons the proper distance apart, on the table, stretch the yarn to them and wind it conveniently.

Lean meat has nourishing and rebuilding qualities in diet, but we should not neglect fats in our foods. The best and most easily digested way to take fat is in the form of olive oil.

Be sure that the kitchen table is the proper height. If it is a little too low, or a little too high, the position in which you stand to accommodate yourself to its height will cause your back to ache.

Never put the sugar from lemon peel into cakes. It is likely to make them heavy. Save it for sweetening milk puddings or custard, to either of which it is a great improvement.

Food carelessly exposed invites germs.

It Makes a Difference.

—To a milk pudding if you let it stand between cooking and serving for an hour on a rack in a warm place and well covered with a cloth. It makes it taste creamier.

—To the shape of a boiled pudding if it stands for a minute or two before being turned out. It makes it less liable to break.

—To anything containing baking powder if it is put into the oven with lightning speed after mixing. The powder begins to work as soon as it touches the moisture, and the quicker the cooking begins the lighter the pudding or cake.

—To any cheese dish if grated stale cheese is used rather than sliced fresh, no matter how thin the slices. It is more digestible and more delicate.

—To the success of an omelet if a little fat is melted in the pan until smoking, then poured out and the pan rubbed with soft paper before putting in the mixture. It makes the omelet less likely to stick.

—To all batters if they are let stand cold at least an hour between mixing and cooking. It makes it lighter. If there is to be stiffly beaten white of egg in the mixture, though, it must not be added until the last moment before cooking.

"WAR MAP" FAVORS ALLIES.

British Official Shows Germans Have Lost Vast Territory.

Lord Newton, Under-Secretary for Foreign Affairs, has no quarrel with Chancellor von Bethmann-Hollweg for the latter's suggestion, recently made in an interview, that the war map should be used as the basis for peace.

"I am much surprised at the German Chancellor," said Baron Newton recently, "for on my war map I found two points which I should judge would be highly distasteful to the Germans.

"In the first place my war map shows that in Alsace, Turkey, Togoland, the Kameruns, Southwest Africa and Galicia, the armies of the allies are occupying 676,000 square miles of Teutonic territory, or almost six times as much as the armies of the Central powers are occupying in territory or the allies.

"In the second place my war map shows the sea and the ships upon it, of which only an exiguous quantity, I observe, are German.

"The late Rear Admiral Mahan made it plain in his books that command of the sea in war times has a permanent effect, while command of the land has an effect which manifestly is transitory."

Him—"I don't know how to tell you how I love you." Her—"Don't worry about that—I'll take it as it comes. What you want to get nervous about is how to tell papa about it."

Mrs. Julia Henshaw

It is not often that a woman is elected a Fellow of the Royal Geographical Society, but the explorations made in the Canadian Rockies in search of wild flowers by Mrs. Julia Henshaw deserved exceptional recognition. Her book "Wild Flowers of the North American Mountains," with its beautifully colored plates should become a classic, with the further advantage of being a popular classic owing to the method of arrangement. The flowers are grouped by colors, one section being devoted to White, Green and Brown flowers, another Pink and Red flowers, a third Blue to Purple flowers, and a fourth Yellow to Orange. Mrs. Henshaw, in addition to her botanical studies is one of the leading spirits in the Daughters of the Empire, and was sent last December by Sir Sam Hughes as a Captain in the Canadian Army on a special mission to England and France connected with the distribution of Christmas gifts to the troops at the Front. Our illustration shows the authoress in her mountain costume with her favorite pony at Lake Louise in the Canadian Pacific Rockies.

DIFFERENT KINDS OF FENCES.

If Proper Care Is Taken the Wire Fence Will Last Indefinitely.

There are many kinds of fences, but they may be divided roughly into four kinds; (1) stone fences; (2) live fences or hedges; (3) wooden fences; and (4) wire fences. All these fences have their good and bad points, but there is a growing tendency with up-to-date farmers to go in for wire fences.

Stone fences are of greatest use on hilly rough country where the stones are plentiful and it is difficult to drive in fence posts. Where the stones are large and heavy they do not need much repairing or attending to, but if light small stones are used the cattle or sheep very often break through.

Live fences or hedges are a characteristic feature of British and especially English farming. Nothing will beautify the landscape more than to have the fields divided by hedges, and it is these more than anything else that make the rural districts of the Old Country so attractive to American visitors. For a variety of reasons, hedges, however, have found comparatively little favor with Canadian and American farmers. The climate in America is mostly continental, that is to say, there are extremes of heat and cold, and this is not favorable for the growth of the kinds of trees and shrubs that make the best hedges. The chief fault with hedges is that they require a lot of attention to keep up, and unless they are pruned and the weeds and grass that accumulate around them are mowed constantly they become a fertile breeding place for all kinds of pests.

Where timber is cheap, wooden fences can be profitably used but the increase in the price of good lumber makes them almost prohibitive except in a few cases. The old zig-zag rail fence served its purpose in its day, but wherever finances permit it should be ripped out and a modern fence put in its place.

At the present time, when a new fence is being put up in nine cases out of ten it is a wire fence. There are many reasons for this. First of all, a wire fence is a good deal cheaper to put up than any of the other kinds. With proper care it will last a lifetime, and it is hog-proof and sheep-proof.

Although a wire fence once it is put up needs practically no attention, it should be made a rule to go around every six months or every year at some definite time and tighten up the wires and do any other little repairs necessary. If this is done regularly, a day in most cases will be all the time taken up in making the repairs, and the fence will last twice as long, and be twice as useful.—Canadian Countryman.

HOW TO OPERATE THE GASOLINE ENGINE

Told by C. W. Jakes, of the Ontario Agricultural College.

[No. 1.]

To the farmer who owns a gasoline engine, and never has had the time or opportunity to make much of a study of the troubles and trials of his willing helper, we hope to give some information, gained from practical experience, that may enable him the better to understand the afflictions of his almost human servant; for in many ways the gasoline engine has human tendencies—unless it is fed it cannot and will not work unless its health receives the careful attention of its master and ills or accidents to which gasoline engines are subject remedied, it is unable to give efficient and satisfactory service

In doing this we shall treat the matter in three short separate articles, intimately connected, because one naturally follows the other. In this one, first of the series, let us then discuss that which each operator must first become familiar with—the principles of operation. Perhaps the most important thing of all is to have a thorough knowledge and understanding of just what to do to start the engine, and why it is done. So many engine operators know what to do all right, because they have been told and shown by the expert at the time of installation, but it wasn't explained to them why such a thing was done. Therefore, when anything goes wrong they haven't the slightest idea where to start to look for the cause of the trouble, and an expensive delay is forthcoming before an expert arrives.

Gasoline, as a liquid, is very volatile, that is, in the presence of air it will easily evaporate into and mix with the air. If an open vessel containing gasoline were exposed to the air in a small room for some time, and then a match struck, an explosion of an intense heat would occur that would probably destroy the building, due to the vapor from the gasoline combining with the air and creating an exceedingly combustible mixture. Gasoline in itself is not more dangerous than coal oil; it is only when its fumes get mixed with a certain proportion of air that it becomes a powerful explosive, and this is the source of power in the gasoline engine.

Assuming that the piston is right up to the cylinder head when the fly wheel of the engine is revolved, the piston is drawn outward and acting like the piston of a pump, draws air across the surface of, or through the gasoline in the carburator. The air carries the gasoline with it partly in form of a mist into the cylinder. Gasoline is vaporized and the mixture of air and gas forms the charge which operates the engine. The return stroke compresses this mixture in the clearance chamber in the cylinder head, or that part of the cylinder farthest removed from the fly wheels. The mixture cannot escape because the valves are closed and held there by the pressure of the gas against them, and it is squeezed into a small volume. Just as the piston almost reaches the end of its inward stroke an electric spark, caused by the automatic breaking of the current from the cells is produced right in the midst of this highly compressed gas. The result is a forceful explosion, and the piston is shot outward at terrific speed, due to the rapid expansion of the gases ignited by the spark. It reaches the end of its stroke, and the impulse, transmitted by the piston rod to the crank shaft and fly wheel carries the piston back again. This time it forces the burnt gases out of the cylinder through the exhaust valve, which is mechanically opened, and the return outward stroke draws in a fresh charge of gas, the next inward stroke compresses it, ignition takes place and the action is repeated all over again.

This is called a four-stroke, or four-cycle engine because it takes four strokes of the piston to perform the complete cycle of operations necessary to produce one explosion. This type, for various reasons, seems to be preferable to the two-cycle engine for ordinary farm use.—Canadian Countryman.

The AUTOMOBILE

Care of Car Finish.

Carelessness in washing and polishing a car is responsible for a great many cars getting to look old and run down so soon.

In washing your car be sure first to use plenty of water and not much pressure. Don't rub the mud and dirt off, but wash it off with water.

Thoroughly soften it and allow it to soak soft before trying to remove it at all. Do not allow anyone to rub fingers over a surface covered with dirt as the small particles of dust will cut the finish.

You should have two sets of pails, sponges and chamois for washing. It is a good plan never to use the same sponge or chamois on the body and running gears.

Grease makes a smeary appearance on the body and should be kept off as much as possible.

Keep sponges and chamois clean and free from grit and dirt. Use a good body soap and luke warm water for the last wash for the body.

If you can find a good body polish, if good, but never use too much or put it on too heavy, be sure and rub it thoroughly and leave the body free from it; or after a while you will notice it making a coating over the body that is hard to remove.

It is a good plan to go to the man who sold you the car and have him wash it up and show you how to care for it, if convenient. The nice appearance may be kept on a car for a year or two with proper care.

Never allow mud to dry on the body if possible to prevent.—R. A. Brindley in Farm and Dairy.

Don't Travel on Deflated Tire.

A tire agent says that many motorists give as little care to their tires that the first intimation of their improper condition comes when a muffled sound or a jolt, caused by one of the wheels coming in contact with some hard object on the road, discloses the fact that the rim is touching the ground.

"The envelope is then patched, a new tube fitted and a sleeve put on for the purpose of increased strength. The driver then proceeds to the nearest garage, where a new casing is obtained, the damaged one being left for repair. Nearly always it is found that the tread is the only part of the casing that has not been totally destroyed. The beads are found to be broken or torn away. The walls of the casing are scored and scraped inside and out. The canvas is torn and frayed and has broken away from the rubber. The tire has lost its shape entirely; its several parts are disintegrated.

"The tube, replaced on the road, which was perhaps new or nearly new when the journey started, has been torn beyond all hope of repair, and scraped and scored all over, some of the incisions being almost as deep as the thickness of the rubber itself.

"All this delay, trouble and expense is the direct result of travelling on a deflated tire, whereas periodic inspection of the air pressure would have entirely prevented the damage."

THE SUNDAY SCHOOL

INTERNATIONAL LESSON

JULY 2.

Lesson I.—Paul At Thessalonica And BEREA.—Acts 17. 1-15.

Golden Text, Acts 3. 31.

Verse 1. Passed through—The original verb suggests travel along the great Roman road from the west, the Egnatia. Apollonia was about halfway to Thessalonica, thirty miles southeast of Amphipolis, which was near the mouth of the Strymon River. Thessalonica, still called Saloniki, is, of course, a very familiar place today. It seems to have been the only one of the three places to possess a synagogue. Verse 10 shows how, even after such terrible danger, Paul clung to his principle of going first to the synagogue. He must at any cost find men prepared for the gospel by loyalty to the Old Testament. Such men convinced that Jesus fulfilled prophecy, would be mature and zealous leaders for the infant church.

3. "The Messiah must suffer" was the one great doctrine which divided the Jews instantly into two camps. The royal Son of David was the national ideal, and therecognition of Isa. 53 in such a connection was very bitter to the Jews. In preaching this doctrine the disciples were only enforcing the Lord's own "must" (Luke 24. 26). Psa. 16 was mainly in mind as the proof of the resurrection. It was a true application; how could God "allow his Beloved One to see corruption?" And well might the apostles apply that first to the Beloved, and through him to all whom God loves.

4. The large following of proselytes it to be noticed everywhere. They were of necessity people who greatly hungered after a Living God, for the Jews gave them small encouragement: it was a very secondary place the proselyte had to fill. Being without the Jews' great hindrance, their racial pride, and attracted by the universality of the gospel, which stirred the Jew to "jealousy," they naturally proved good soil for the seed of the world. Chief women—Compare verse 12. In Macedonia women had a far better social position than in Greece. Compare Lydia's story.

5. Jason—A well-known name in Greek mythology from the Thessalian hero Jason (see William Morris's telling of his story). But sometimes Jews named Joshua (Jesus) used this as a Gentile substitute, and this Jason may have been a case.

6. Rulers of the city—The Greek politarch is a title almost exclusively connected with Thessalonica, several of whose inscriptions show it. Turned . . . upside down—A colloquial verb, used by Paul in Gal. 5. 12, and in vernacular documents but apparently beneath the dignity of classical Greek; it is characteristic of the New Testament freedom from artificiality. The World, as in Luke 2. 1, a term for the Roman empire; the rest of the world was hardly known.

7. Another king—These Jews are reviving the city that sent the Master to the cross (Luke 23. 2). If the empire had realized the rivalry of this "other emperor" as soon as the Jews did. Christianity might have been quencher in blood before it was more than a tiny sect. But Providence deferred the war between the two empires until the church was too numerous and too universal to be killed off.

8. Troubled—As also here (for example, John 14.1), this word is much too weak a rendering.

9. The actual accused being out of reach, they could only exact bail, presumably for their being sent away.

10. Berea—Some forty miles southwest.

11. Readiness—A strong word, suggesting eager attention.

12. The influential position of the ladies of the upper class is characteristically suggests that among the Greek population the trend of public opinion depended largely on them. As so often happens, they were more seriously disposed toward religion than the men.

14. Throughout this narrative we see the effect of the Master's command (Matt. 10. 23). To stay and face the danger would have been foolhardy: Paul could do more for the istic of Macedonia. This verse disgospel at Berea by leaving for another field and so saving his life. The sea—At a place called Dium, probably.

15. Paul's decision to remain at Athens alone for a time is referred to in I. Thess. 3. 1, but this implies that Timothy had quickly responded to Paul's request, Silas presumably staying on at Berea, unless the "we" in that passage is to be referred to Paul and Silas, instead of to Paul alone, which is perhaps more probable. Paul's craving for companionship is strongly marked throughout; there was something in his temperament, or his circumstances (of health, for instance), that made solitude peculiarly hard to bear.

LEECHES ARE "UP."

They Are Expensive to Buy Just Now, Because of the War.

The leech, the vampire of the worm tribe, is both scarce and dear.

This is due in part to the vastly increased demand for them, but more to the fact that in the pre-war days nearly all the best medical leeches came from Hamburg, and that source of supply is now, of course, entirely closed.

Turkey also used to send out occasional consignments. Smyrna produced a large jet-black leech that was highly esteemed by the medical fraternity. Naturally, now, this supply has also ceased.

The leech is a slow-growing creature. At two years of age he does not average more than an inch in length, and it takes from three to five years before he is fit for attestation, as a fully qualified medicinal bloodsucker.

True, there is the British leech, still to be found in fair abundance in and around the Norfolk broads, and in parts of Kent, Surray and Sussex. But he is practically useless from the doctor's point of view.

Pure Air Blue.

Pure air is blue, because, as Newton tells us, the molecules of the air have the thickness necessary to reflect blue rays. When the sky is not perfectly pure the atmosphere is blended with perceptible vapors, and the diffused light is mixed with a large proportion of white.

Meerschaum.

Meerschaum, out of which pipes, cigar and cigarette holders are cut, is a mineral found in irregularly rounded lumps scattered through drift material washed down from mountains. The largest deposit of it is in the plains of Eskishehr, Asia Minor.

BELL 'PHONE 30 — BRUCE 'PHONE 21

We Handle All the Good Things You See Advertised in the Big Magazines.

THIS store is headquarters. You will always find here everything you would expect to find in a similar store—and many things more.

We specialize on articles of genuine merit. Articles we have tested and tried ourselves and we can recommend and indorse.

You will find here all of the good—the best—the pick of the standard household articles advertised in magazines.

We add our own guarantee to that of the manufacturer's.

We call your especial attention to the O-Cedar Polish Mop, the greatest boon to cleaner and better housekeeping we know of.

With it you can dust, clean and polish a hardwood floor without getting down on your hands and knees. You can dust the tops of doors, the molding, the tops of high furniture without standing on chairs. You can dust and clean the stair steps and banisters in half the time it usually takes.

You can dust under the bed, and under heavy furniture without moving it, and so on throughout the house—wherever there is dusting to do. You can do it quicker, easier and better with the O-Cedar Polish Mop.

Unlike other dusting mops the O-Cedar Polish Mop can be washed when soiled, and then renewed by adding a few drops of O-Cedar Polish.

We are so confident that you will be delighted with the O-Cedar Polish Mop that we will deliver one to your home on two days' trial. If it is not satisfactory in every respect we do not expect you to keep it, and will instantly return your money. The price of the O-Cedar Polish Mop, complete, is $1.50. Let us send you one on trial.

SECOND CON ELDERSLIE

Miss Carrie McDonald is spending a couple of weeks with Paisley relatives.

Archie Dawson autoed over to Pinkerton last week to see the mill dam there. Mr Dawson intends to rebuild again this summer but is undecided as yet as to what material to use.

Hugh Campbell is laid up with an attack of measles but is on a fair way to recovery.

Miss Mary Green has been re-engaged as teacher at S S No 12 for the coming term at a salary of $600.

Mrs Jas Allen who has been confined to her room for over four months is slightly improved in health.

Mr and Mrs Blain Fortune, Mrs Vancise and Mr Ferrier autoed over to Desboro and spent Sunday afternoon with friends there.

Miss Keith has been engaged as teacher in McKay's school, 4th con, for the coming term.

The annual picnic of S S No 12 will be held in Campbell's woods on June 29th. S S No 2 will also hold their picnic on July 3rd in Alexander's woods. A good program of sports is being prepared for each of these. An invitation is extended to all to bring their baskets and enjoy an afternoon with the children.

Mr and Mrs Ferrier and children of Bervie spent Sunday with friends here.

The farmers here are busy with statute labor. The housewives are picking wild strawberries and young hopefuls are looking forward to picnics and vacation. School closes on June 29th.

Messrs J McCullough and A Lillico were a delegation from 2nd con S S last week to attend a Tp union S S meeting at Salem for the purpose of arranging plans for a union picnic of the nine rural S schools in the Tp. It was decided to hold a picnic on July 4th in Mr McDermaid's wood, 7th con.

Word has been received from Pte Norman McDonald by his parents here of his safe arrival in England. They are now in camp near London.

The 2nd Con S S held its closing session on Sunday, June 25th. The proceedings took the form of a patriotic service taking up the subject of "Heroes." A very interesting program consisted of addresses by W J Halliday, Supt of the S S, Mr J McCullough and Miss Cass; Mrs J Caldwell and Mrs R Jefkins gave Bible readings, and Misses Elizabeth Allen and Ruby McCullough recited. The music consisted of a couple of choruses by members of the S S and a solo by Miss Flora Brown. The honor roll was read, containing the names of those who have attended our S S and are now either in training or on active service at the front. They are Jas Watt, Geo Fletcher, Archie Lillico and Barnes Bowie. The S S will re-open the first Sunday in Sept.

Children Cry
FOR FLETCHER'S
CASTORIA

ELORA ROAD NORTH

Mr and Mrs Dan McLeod, of Goderich, were visitors at the home of the latter's uncle, Mr J S Campbell.

Mr Richard McGill has erected a new windmill.

Mr and Mrs E R Sayles and Mr and Mrs McCallum motored up from Port Elgin to Mr A Ewing's last Monday.

Mr L Winch lost a valuable pure bred mare last week.

The people of S S 7 and 8 Eld and Saug held their annual picnic last Thursday at Ross' Grove.

Mr Clarence Fraser has been seriously ill but recovering nicely.

Mr and Mrs H R Carter and Mr and Mrs E Cobean and family of Chesley spent Sunday at Mr Alex Ewing's.

Mr Wm Donaldson, of Chippewa Hill, is laid up at the home of his daughter, Mrs J S Campbell, having had a couple of ribs broken while driving over one day recently. His horse became frightened at an auto, and suddenly dumped the occupants out on the road, with the above painful results to Mr Donaldson.

TURNERS

Mr and Mrs J J Hillis have returned home after spending a few days with friends at Hanover.

Miss R McRae spent a few days last week with friends in Paisley.

Mr J S Schrank spent last week in the vicinity of Ingersoll attending bee demonstrations.

Mrs Hyde has returned home after spending a week with friends on the 4th of Bruce.

GLAMIS

Mrs Madden returned to Hamilton on Saturday.

Miss Jessie Graham, who has been visiting friends around here returned to Berlin on Monday.

Mrs Chas McKinnon is seriously ill at present, but we trust that she may recover from this attack and be spared to her friends for some time.

Miss Mabel Kirktown, of Enniskillen school, Sundayed at her home here.

Pardy's Sunday school held their annual picnic on Saturday out in Alexander's grove.

Mr and Mrs Colwell spent Sunday at the home of their daughter, Mrs David Robertson.

A few friends met at the home of Mr Jas Thompson and presented Private Hector McLean with a Masonic ring. He is enlisted with the 12th Ambulance Corps.

Mrs Crawford, of Detroit, is visiting at Mr Chas McKinnon's.

Mr Edgar Pyke, who is attached to the University Battery at Toronto, is spending a few days at Mr Jos Cunningham's.

Miss Nettie Gunn taught in No 4, Kincardine and Bruce, while the regular teacher was absent on account of the death of a friend.

TENTH CON BRUCE

Mr Henry Anness is spending a few weeks at his old home here.

An accident which happened last week might have had more serious results when Mr John Caldwell's team ran away. Mr Caldwell had his hand slightly hurt in the mix up.

Mr Alex McDonald is slightly under the weather, nursing a sore leg, which he had the misfortune to have jammed while unloading a load of gravel.

We are pleased to see Mrs R J Caldwell out and around again.

Mr and Mrs T S White attended the wedding of their neice in Hepworth last week.

Mr Sam Brown of Amberley was renewing aquaintances here last week.

Mr A Sinclair is having his barn remodelled.

Rev Mr Barker preached his farewell sermon to a large congregation in North Bruce Baptist church on Sabbath evening. The Rev gentleman will be much missed as he has made a host of friends for himself in his field of labor.

DAILY ABSORBS WEEKLY

Fine Time to Get Two Good Papers for This District

After more than forty four years of service to its readers, the old farm and fireside paper—the Weekly Mail and Empire—ceased publication on May 30, and its many thousand readers have been transferred for the remainder of their weekly subscription term to the list of subscribers to the Daily Edition.

The passing of the big metropolitan weekly is largely due to the result of the increasing operation of the Rural Mail Delivery in Canada, and especially Ontario, which has rendered the daily paper an imperative necessity to rural residents, who depend entirely upon the city daily for all the latest news and market quotations.

The Daily Mail and Empire, containing as it does all the latest information of vital moment, and an Agricultural Section in each Saturday edition, and your own local paper which gives you all the news of your home and local market prices, offers combination of two papers that should appeal to everyone within the limits of the circulation of this paper. We have made arrangements by which we can offer the Daily Mail and Empire, and our own paper, the two together, for 12 months for $4.50, or with the Saturday Mail and Empire for 12 months for $3.50.

This is a proposition that should powerfully appeal to all in this community who are not already taking either paper. We are also authorized to receive subscriptions for the Daily Mail and Empire at the regular rate of $3.00 per year, and pro rata for shorter periods, and the Saturday Mail and Empire at $1.00 per year.

Leave or send orders to THE ADVOCATE.

Car Turned Turtle

While Sandy George was returning from the Masonic dedication services at Port Elgin on Thursday afternoon last, with Messrs Peter Bremner, John Douglass and Rev D A Walker in his car, he struck a steep hill about four miles north of Paisley, and in coursing down the incline all went merry as a marriage bell until he ran foul a big heap of gravel piled at the foot of the hill, and which caused the car to slew and turn turtle on the road burying the four occupants under the auto. Peter Bremner and John Douglass scrambled out uncrushed, while Sandy George issued from the wreck with his forehead slightly cut from the broken glass of the wind shield. Rev Walker, who had sunk a tooth through his tongue by the jar, and was bleeding profusely at the mouth, was the last man up and was thought to be seriously hurt, but when the extent of his injuries was finally determined, it was discovered that the entire quartette had not only escaped failing into the hands of the undertaker, but had come through with casualties too trifling to mention to a doctor. The car, which was damaged to the extent of $150.00, was the heaviest sufferer by the mishap.—Herald and Times

PERFECT HEALTH IS EVERY WOMAN'S BIRTHRIGHT.

A Prescription That From Girlhood to Old Age Has Been a Blessing to Womankind.

When a girl becomes a woman, when a woman becomes a mother, when a woman passes through middle life, are the three periods of life when health and strength are most needed to withstand the pain and distress often caused by severe organic disturbances.

At these critical times women are best fortified by the use of Dr. Pierce's Favorite Prescription, an old remedy of proved worth that keeps the entire womanly system in excellent condition.

Mothers, if your daughters are weak, lack ambition, are troubled with headaches, lassitude and are pale and sickly, Dr. Pierce's Favorite Prescription is just what they need to surely bring the bloom of health to their cheeks and make them strong and healthy.

For all ailing women Dr. Pierce's Favorite Prescription is just the right medicine. During the last fifty years it has banished from the lives of tens of thousands of women pain, misery and distress. It makes weak women strong, sick women well.

If you are a sufferer, if your daughter, mother, sister, need help, get Dr. Pierce's Favorite Prescription in liquid or tablet form from any medicine dealer to-day. Then address Dr. Pierce, Invalids' Hotel, Buffalo, N. Y., and get confidential medical advice entirely free.

Every woman should be careful that the liver is active and the poisons are not allowed to clog the system—get rid of these poisons by taking Dr. Pierce's Pellets, which regulate and invigorate stomach, liver and bowels. Keep the body clean inside as well as outside!

How to preserve health and beauty is told in Dr. Pierce's Common Sense Medical Adviser. It is free. Send Doctor Pierce, Buffalo, N. Y., fifty cents or stamps to cover wrapping and mailing only.

Roadster $935
f. o. b. Toronto

Five-Passenger Touring

The Most Popular Overland

There is already an enormous demand for this big four cylinder Overland.

With certain improvements, it is the same car of which 55,000 Overlands were sold last season for $1050.

The price is $85 less.

Standardization of product and the purchase of raw materials at before-the-war prices, made this reduction in price possible.

It will not be lower, for materials are rising in price.

So order your Overland now, to make sure of getting it.

- Enbloc 35 horsepower motor
- Electric starting and lighting system
- Electric control buttons on steering column
- Four inch tires
- Demountable rims, with one extra
- 106-inch wheelbase
- Deep divan upholstery
- One man top; top cover

Guaranteed Clothes!

You get a complete and absolute guarantee when you buy made-to-measure clothes here—the guarantee means what it says—you're the judge.

You'll find that we don't ask you why the clothes are unsatisfactory or how—if you say they're not right, we don't argue about the matter.

That sort of a guarantee, added to the very evident advantage of wearing custom-tailored clothes, makes them all the wiser choices.

I. S. CRUICKSHANK

Heavy Hay Crop

Farmers in this locality have their haying operations under way now. Alfalfa is about all in the barns in fine shape, the first few dry days of summer making it possible to get this bumper crop cut and under cover. Other clover and hay will not be disposed of so easily, as the stand is mostly all exceptionally rank and close at the bottom, which will make it more difficult to cure. Any old machine will not do for the hay cutting this year. Breakage delays will be more expensive than new machines, and the old timers are being cast aside generally. Tedders and loaders are also in great demand, but can't be had from the manufacturers. Unless all signs fail this season, the hay press will be busy next winter putting up a big surplus crop in Bruce Co.

—The contract for a new cement bridge at lot 21, con 14, Bruce, was let to McGillivray Bros, at $418. Three other contractors tendered at $530, $532 and $750.

Orangemen to Palmerston for the 12th

Orange lodges from this section will go to Palmerston for to-day's walk. Southampton had expected to entertain the celebrants, but could not secure a special train from the railway company.

Moved Up Town

Mr C B Irwin has moved his tailor shop from the Flood block to the Fisher woollen mill building, where very convenient show room and work rooms have been fitted up for him by Mr Dewar.

New Methodist Pastor

On the date of our last issue Rev. R. A. Facey, B.A., and family bade good-bye to their parishioners and friends, and left for their new field at Waterdown. Next day Rev. A. J. Crighton and Mrs. Crighton arrived in town from Port Rowan, and by this time have become acquainted with a large number of the residents of our community.

CARD OF THANKS

To all the friends whose sympathy and services were so kindly tendered in our time of bereavement, we desire to extend our sincere thanks.

GEORGE LUTTRELL AND FAMILY.

THE

Key to Yesterday

By CHARLES NEVILLE BUCK

CHAPTER XX.—(Cont'd.)

Steele was restless and, taking up his hat, he strolled out along the quay and, turning at last in to the Boulevard St. Michel, stretching off in a broad vista of cafe-lined sidewalks. The life of the "Boule Mich" held no attraction for him. In his earlier days, he had known it from the river to the Boulevard Montparnasse. He knew its tributary streets, its lodgings, its schools and the life which the spirit of the modern is so rapidly revolutionizing from Bohemia's shabby capital to a conventionalized district None of these things held for him the piquant challenge of novelty.

As he passed a certain cafe, which he had once known as the informal club of the Marston cult, he realized that here the hilarity was more pronounced than elsewhere. The boulevard itself was for squares a thread, stringing cafes like beads in a necklace. Each had its crowd of revelers; its boisterous throng of frowsy, velvet-jacketed, long-haired students; its laughing models; its inevitable brooding and despondent absinthurs sitting apart in isolated melancholy. Yet, here at th "Chat Noir," the chorus was noisier. Although the evening was chill, the sidewalk tables were by no means deserted. The Parisian proves his patriotitism by his adherence to the out-door table, even if if he must turn up his collar, and shiver as he sips his wine.

Listlessly, Steele turned into the place. It was so crowded this evening that for a time it looked as though he would have difficulty in finding a seat. At last, a waiter led him to a corner where, dropping to the seat along the wall, he ordered his wine, and sat gloomily looking on.

The place was unchanged. There were still the habitues gunrreling over their warring tenets of the brush; men drawn to the center of painting as moths are drawn to a candle; men only in the general quality of their unkempt grotesquerie.

There was music of a sort; a plaintive chord long-drawn from the violin occasionally made its sweet wail heard above the babel and through the reeking smoke of the room. Evidently, it was some occasion beyond the ordinary, and Steele, leaning over to the student nearest him, inquired in French:

"Is there some celebration?"

The stranger was a short man, with hair that fell low on his neck and greased his collar. He had a double-pointed beard and deep-set black eyes, which he kept fixed on his absinthe as it dripped drop by drop from the nickeled device attached to his frappe glass. At the question, he looked up, astonished.

"But is it possible monsieur does not know? We are all brothers here —brothers in the worship of the beautiful! Does not monsieur know?"

Steele did not know, and he told the stranger so without persiflage.

"It is that the great Marston has returned!" proclaimed the student, in a loud voice. "It is that the master has come back to us—to Paris!"

The sound of his voice had brought others about the table. "Does monsieur know that the Stone Face" demanded a pearly pretty model, raising her glass and flashing from her dark eyes a challenging glances of ridicule.

Steele did not object to the good-humored baiting, but he looked about him, and was thankful that the girl on her way to Nice could not look in on this enthusiasm over the painter's home-coming; could not see to what Marston was returning; what character of divotees were pledging the promotion of the first disciple to the place of th worshiped master.

Some half-drunken student, his hand upon the shoulder of a model, lifted a tilting glass and shouted thickly: "Vive l'art! Vive Marston!" The crowd took up the shout, and there was much clinking of glass.

Steele, with a feeling of deep disgust, rose to go. The other quais of th Seine were better after all. But, as he reached for his hat, he felt a hand on his shoulder, and, turning, recognized, with a glow of welcome, the face of M. Herve. Like himself, M. Herve seemed out of his element, or would have seemed so had he also not had, like Steele, that adaptability which makes some men fit into the picture wherever they may find themselves. The two shook hands, and dropped back on the cushions of the wall seat.

"I have heard the story," the Frenchman assured Steele. "Monsieur may spare himself the pain of repeating it. It is a miracle!"

Steele was looking into his glass.

"It is a most unhappy miracle," he replied.

"But, mon dieu!" M. Herve looked across the table at the Kentuckian's gloom with his outstretched fingers. "It makes one think, mon ami—it makes one think!"

His vis-a-vis only nodded, and Herve went on:

"It brings home to one the indestructibility of the true genius—the unquenchable fire of it! Destiny plays a strange game. She has here taken a man, and juggled with his life; battered his identity to unrecognizable fragments; set a seal on his past. Yet, his genius she could not efface. That burned through to the light—sounded on insistently through the confusion of wreck, even as that violin sounds through this hell of noises and disorder—the great unsilenced chord! The man thinks he copies another. Not so—he is merely groping for his himself. Never have I thought so deeply as since I have heard this story."

For a time, Steele did not reply. To him, the personnl element drowned the purely academic interest of the psychological phase in this tragedy.

Suddenly, a new element of surprise struck him, and he leaned across the table his voice full of questioning.

"But you," he demanded, "you had studied under Marston. You knew him, and yet, when you saw Saxon, you had no recognition."

M. Herve nodded his head with grave assent.

"That was my first incredulous thought when I heard of this miracle," he admitted; "yet, only for a moment. After all, that was inevitable. They were different. Now, hearden, ill, depleted, I fancy he may once more look the man I knew—that man whose hair was a mane, and whose marbid timidity gave to his eyes a haunted and uncertain fire. When I saw Saxon, it is true I saw a man wounded and unconscious; his face covered with blood and the dirt of the street, yet he was, even so, the man of splendid physique—the new man remade by the immensity of your Western prairies—having acquired all that the man I had known lacked. He was transformed. In fact, his Destiny who kind—Sh gave it not only to his body, but to his brush. He was before a demi-god of the palette. Now, he is the god."

"Do you chance to know," asked Steele suddenly, "how his hand was pierced?"

"Have you not heard that story?" the Frenchman asked. "I am regrettably responsible for that. We sought to make him build the physical man. I persuaded him to fence, though he did it badly and without enthusiasm One evening, we were toying with sharpened foils. Partly by his carelessness and partly by my own, the blade went through his palm. For a long period, he could not paint,"

Frederick Marston was not at once removed from the lodgings in the Rue St. Jacques. Absolute rest was what he most required. When he awoke again, unless he awoke refreshed by sufficient rest, Dr. Cornish held out no hope. The strain upon enfeebled body and brain had been great, and for days he remained delirious or unconscious. Dr. Cornish was like adamant in his determination that he should be left undisturbed for a week or more.

Meanwhile, the episode had unexpected results. The physician who had come to Paris fleeing from a government he had failed to overturn, who had taken an emergency case because there was no one else at hand, found himself suddenly heralded by the Paris press as "that distinguished specialist, Dr. Cornish, who is effecting a miraculous recovery for the greatest of painters."

During these days, Steele was constantly at the lodgings, and with him, sharing his anxiety, was M. Herve. There were many callers to inquire—painters and students of the neighborhood, and the greater celebrities from the more distinguished ateliers.

But no one was more constantly in attendance than Alfred St. John. He divided his time between the bedside of his daughter and the lodgings where Marston lay. The talk that filled the Latin Quarter, and furiously excited the studio on the floor below, was studiously kept from the girl confined to her couch upstairs.

One day while St. John was in the Rue St. Jacques, pacing the small cour with Steele and Herve, Jean Hautecoeur came in hurriedly. His manner was that of anxious embarrassment, and for a moment he paused, seeking words.

St. John's face turned white with a divination of his tidings.

"Does she need me?" he asked, almost breathlessly.

Hautecoeur nodded, and St. John turned toward the door. Steele went with him, and, as they climbed the steep stairs the old man leaned heavily on his support.

The Kentuckian waited in St. John's room most of that night. In the next apartment were the girl, her father and the physician. A little before dawn, the old man came out. His step was almost tottering, and he seemed to have aged a decade since he entered the door of the sick-room.

"My daughter is dead," he said very simply, as his guest paused at the threshold. "I am leaving Paris. My people except for me have borne a good name. I wanted to ask you to save that name from exposure. I wanted to bury with my daughter everything that might shadow her memory. For myself, nothing matters."

Steele took the hand the Englishman held tremblingly outstretched.

"Is there anything else I can do?" he asked.

St. John shook his head.

"That will be quite all," he answered.

Such things as had to be done, however, Steele did, and two days later, when Alfred St. John took the train for Calais and the Channel, it was with assurances that, while they could not at this time cheer him, at least fortified him against all fear of need.

It was a week later that Cornish sent for the Kentuckian, who was waiting in the court.

"I think you can see him now," said the physician briefly, "and I think you will see a man who has no gaps in his memory."

Steele went with some misgiving to the sickroom. He found Marston looking at him with eyes as clear and lucid as his own. As he came up, the other extended a hand with a trembling gesture of extreme weakness. Steele clasped it in silence.

For a time, neither spoke.

While Steele waited, the other's face became drawn. He was evidently struggling with himself in desperate distress. There was something to be said which Marston found it bitterly difficult to say. At last, he spoke slowly, forcing his words and holding his features in maskline rigidity of control.

"I remember it all now, George." He hesitated as his friend nodded; then, with a drawing of his brows and a tremendous effort, he added huskily:

"And I must go to my wife."

Steele hesitated before answering.

"You can't do that, Bob," he said, gently. "I was near her as long as could be. I think she is entirely happy now."

(To be continued.)

A little girl, being lost, was taken to the police-station, and the officers in charge tried unsuccessfully to find out her name. "What name does your mother call your father?" said one. "Why," replied the child innocently, "she don't call him any names; she likes him!"

Thorough mixing is what makes cake delicate and tender

Lantic Sugar

makes the best cake because it creams quickly and thoroughly with the butter which is the hardest part of the mixing. Its purity and extra "*fine*" granulation make it dissolve at once.

Count Plunkett, Head of Ill-fated Irish Family.

Count Plunkett is a well-known Irishman, he and his family having figured prominently in the late Irish Rebellion. Joseph Plunkett, son of the Count, was executed in Dublin recently for his share in the proclamation of Irish independence. The Count's two other sons, George and John, were sentenced to ten and five years, respectively, in prison, for their part in the plot, and it is reported that the Count himself is now in prison. The Count's title is a Papal one, having been conferred on him as an appreciation by the Church. He and his family are well educated, cultured, and refined, and very popular throughout Ireland.

Feeding the Hog.

While almost any man can make substantial profits in feeding hogs at present prices, an intelligent consideration of cost and management will tend to greatly increase them. Every stage in the hog's development should be carefully studied, the object being to get maximum results at minimum cost.

Great care is particularly necessary at weaning time to get the pigs safely over this crisis of their lives and well started without any serious setback. Very often the profits are sacrificed from a hatch of pigs because of lack of skill at this time. A stunted animal of any kind is always unprofitable and this is doubly true of a pig. The feeding period in his life is too short to recover the loss due to a setback at weaning.

A common error which must be avoided is that of feeding a strong grain ration to compensate for the loss of the mother's milk. If properly managed the pigs will be eating so freely at the trough as nearly to wean themselves. About the only change to be made in the ration is to give them a sufficient quantity of skim milk and it is better to do this before the removal of the sow, as the loss of the dam's milk, small though it may have become in quantity, is change enough at one time. A good many farmers make a small trough in the pen, protected from the mother, in which the young pigs are fed. If this is done there should be no setback at all when the pigs are weaned.

Build Frame, Not Fat.

The very young pigs require a ration that is easily digested and that is rich in protein, that is to say in flesh and blood forming material. The mistake must not be made, however, of over-feeding. Before the removal of the sow just as much feed should be given as she and the litter will clean up at each feeding; when the sow is taken away the pigs should receive just what they will eat with relish. If food lies in the trough the weanlings, missing their dam, are tempted to overtax their digestive system and the portion remaining in the trough is apt to ferment and become foul. In either case digestive troubles will inevitably follow and these, if not fatal to the pig, are disastrous to the owner's chance of profit. The ideal method of feeding would be to feed at regular intervals as much as the pigs will clean up in a few minutes after feeding. While it is not often possible to make our practice conform fully to this ideal; it should be kept in mind that the nearer we can approach to it the greater will be our success.

A mixture of middlings and chopped oats has given very good results: This is rich in ash and protein for the nourishment of the growing bone and muscles thus enabling the pig to build a strong frame rather than to lay on fat. It is also palatable and easily digested. Skim milk should always be provided where possible. If it can't be secured, some product such as tankage, which can be obtained from the large packing houses in Toronto should be given in the proportion of one part of tankage to eight or nine parts of meal. For pigs under twelve weeks, the oat chop should be passed over a coarse screen to remove the hulls. The very best results will be obtained if a quantity of bran is added, equal to that of the oat hulls removed. The bran is more palatable and more easily digested than the oat hulls and it lightens up the ration, preventing the meal from lying in too close and solid a mass in the stomach.

Green Feed Half the Ration.

As the pig grows older, roots, clover, rape or some other kind of green food, either in the form of pasture or soilage crop should be gradually introduced, until they constitute about half of the ration by the time the pig is three months old. In whatever form the green food is given it has been proven that it enables gains to be made much more cheaply. In Ontario the practice has been to pasture the hogs. Owing to present labor conditions this practice no doubt will be rather extensively followed this year. Experiments conducted at the Ontario Agricultural College have proven, however, that much cheaper gains can be made when the green crop is fed as soilage, cut and fed in the pen. In every case the hogs should have access to earth where they may take plenty of exercise. This will bring them through in a vigorous and healthy condition and there will be no trouble with paralysis or with pigs going "off their feed."

In the experiments with soilage, aforementioned, it was found that while green food was fed in the pen it only took 395 pounds of meal to produce 100 pounds of gain, whereas when hogs were turned on pasture it took 535 pounds. The meal ration in each case consisted of two parts ground barley to one part middlings, by weight. The inside pigs were fed all-the green food they would eat, receiving tares until August 6th, and rape after that date. The outside hogs were pastured on these crops. After the hogs were killed it was found that there was no difference in the quality of bacon produced.

HAS BUILT SEA TERROR.

Startling Innovations on New British War Craft.

While some of the newspapers in England are making a great display over the New York reports of a German submarine service between Hamburg and New York, the general attitude is one of skepticism on the assumption that Germany's shipbuilding yards are more likely to be employed in the construction of vessels of an offensive type instead of "mail carriers."

Naturally what is being done is kept a profound secret. Strict precautions are also taken in Great Britain to prevent news of British naval developments from reaching enemy ears.

That three developments particularly in the matter of construction, have been extraordinary is the general belief. The following story will indicate surprises by some of the things accomplished.

In British waters there now floats a certain ship which embodies many novel features of extreme importance. So carefully were these secrets guarded while she was being built that the vessel, while on the stocks and during the period of her equipment, was known by all working upon her as H.M.S. Hush. Then came her launching, when she was christened H.M.S. Rampageous. (This, by the way, is not her real name in the navy list—the censor might object to the publication of her real name.) Now, after she has been the cynosure of all British naval eyes for some time, her novel characteristics are found so startling that she is commonly referred to by the navy men as H.M.S. Outrageous.

Live and Learn.

The aesthetic housebeing, whose nostrils had been offended by the odors arising from a torn-up street went out to remonstrate with the workmen who were digging under his dining room window.

"I shall complain to the authorities," he said. "I have never been used to such smells."

"Never mind, governor," said the overseer. "You'll have plenty of time to get used to them before we have finished."

TOO LITTLE BLOOD MEANS MUCH MISERY

That is What Makes People Pale, Weak and Languid.

The one source of most of the misery that affects men and women and growing children is poverty of the blood. If you consult a doctor he says you are anaemic, which really means bloodless. That is what makes people drag along, always tired, never real hungry, often unable to digest their food, breathless after the slightest exertion, and too often on the verge of complete breakdown.

More weak, anaemic people have been made strong, energetic and cheerful by taking Dr. Williams Pink Pills than by any other means. These pills actually make new, rich blood which reaches every part of the body, strengthens the nerves and brings new health and strength. The following is proof of Dr. Williams Pink Pills to restore health. Mr. Geo. Turner, New Haven, N.S., says: "No doubt due to constant hard work I got in a badly run down condition. It took very little exertion to tire me, and my appetite was far from being good. Often I had headaches, and when going up stairs, or after any slight exertion my heart would palpitate violently, and I grew considerably alarmed about my condition. I decided to take Dr. Williams Pink Pills and after using a few boxes I felt much better. I continued using the pills for some weeks longer, and they completely cured me. I can warmly recommend this medicine to men who are weak or run down."

You can get these pills through any medicine dealer or by mail, post paid, at 50 cents a box or six boxes for $2.50 from The Dr. Williams Medicine Co., Brockville, Ont.

THE TIPPING HABIT.

Custom Dates to 1785 and Was Criticized Even at That Period.

If the efforts that are now being made by the London Hoteldres's' Association for the abolition of tipping meet with success, there will be much jubilation among the many long-suffering victims of the system, and no doubt an equal amount of regret among those who have profited by its continuance, says The Dundee Advertiser. The habit of giving gratuities would appear to be a very old one, for as far back as 1785 it prevailed. At that date we find a worthy man bitterly complaining of the tips expected by all the sundry when putting up a horse at an inn. Over and above the ordinary bill he must give a shilling to the waiter, to the chambermaid sixpence, to the ostler sixpence and sixpence to the bootjacks, making two shillings and sixpence in all. The next morning at breakfast it was necessary to give sixpence between the waiter and the ostler. That was for one night's stay only. But if the traveler merely put up for refreshment, besides paying a boy to mind the horses, the ostler again made threepence; at tea, waiter and ostler shared sixpence. Thus the old-time traveler gave away two shillings and sixpence a day in tips, which, added to the two shillings and sixpence overnight, made a total of five shillings a day.

Tommy Set Right.

Corporal (to soldier reporting sick)—What's the matter with you?

Tommy Atkins—Pain in my 'abdomen.

WHEN SOLDIERS MARRY.

Prussian Officers Must Get the Kaiser's Permission.

There are no rules at present in force in the British army to prevent a soldier marrying. Before the war, of course, a soldier, to have his wife officially recognized, had to obtain his commanding officer's consent.

In the Continental armies the authorities are usually much stricter over the marriage question, both as regards officers and men. Every Prussian officer, for example, can only marry after he has received permission from the Kaiser.

To obtain that permission he has to fill in papers giving full particulars of his intended bride and all about her family. He must also have the consent of his commanding officer and show that he has a private income of his own if he is below a certain rank.

Until within the last few years no French officer could marry unless the lady had an income of at least £50 a year. Though that has been done away with, every officer in the French army must get the consent of the Minister for War, and produce satisfactory evidence of the moral character and life of his future wife.

A Russian officer is not allowed to marry under the age of 23 except by express permission of the Czar. Like officers in other Continental armies, he has to obtain the consent of his commanding officer. Great Britain and America, indeed, are practically the only two countries who allow officers to marry without the permission of the authorities.

CAN KILL WITH TONGUE.

Lion Capable of Destroying Man Merely by Licking Him.

The tongues of some animals are very dangerous weapons. A lion could speedily kill a man by merely licking him with his tongue. The tongues of all the members of the cat family are covered with curious recurving spines, formed of tough cartilage. In the common domesite cat these spines are very small, but are sufficiently well developed to give the tongue a feeling of roughness.

In the fiercest animals, such as the lion or tiger, these spines are frequently found projecting up for an eighth of an inch or more, with very sharp points or edges. While the mouth is relaxed the tongue is soft and smooth, but when the animal is excited the spines become rigid.

A PROGRESSIVE SOCIETY.

Canadian Order of Foresters Are Prospering.

A report of the annual meeting of the Canadian Order of Foresters will be found in this issue. The reports of the several officers of the Order show the same steady progress during 1915 which it has experienced since its inception in 1879. The Insurance Fund increased during the year by $165,100.32, the largest sum since the Order's inception. After the payment of 592 death claims, amounting to $592,179.88, this fund showed $5,205,868.52 on hand at end of the year. The amount on hand at the present time is $5,388,754.58. The yearly revenue from investments now amounts to nearly half the total amount paid in death claims. The sick and funeral benefit fund shows a larger net increase than in any year in the Order's history. Arrangements have been made for carrying enlisted members with inconvenience to the general fund. The death rate for 1915 was only 6.50, but if the war claims were deducted the rate would have been 6.20. Altogether the Order is to be congratulated on its strong position in every department.

What Are You Going To DoD ?

Your country is fighting a deadly war,
But she's going to see it through!
Though the bullets kill and the sword thrusts mar
The flower of her race from home and afar
With those of the Belgian, French and the Czar—
And what are you going ot do?

She's fighting till death for the cause that's right—
'Tis a fight that her foes will rue!—
She's small, but they'll feel the force of her might;
The loss of her sons she'll make them requite,
The dust of defeat and dishonor they'll bite—
And how will you help her through?

There's many lads flocking to answer her call—
Their loyalty's tested and true!
It's India's, Africa's, Australia's brawl,
With Canadians and Britons they'll rise or they'll fall,
And they've willing to give up their best and their all—
And what are you going to do?

—Norman Montague Plummer.

DAMAGE TO SHADE TREES.

Municipality Penalized by Court for Injuring Trees on Highway.

A case of much interest to the property owners of Ontario was recently decided at Omemee, Ont., relating to the rights of property owners in the trees on th highway adjoining their premises. The tree in question was in front of the residence of Mrs. Edward, mother of Mr. Jas. Edward, divisional freight agent of the G.T.R. at Ottawa. A neighbor complained to the town council that the tree had grown so large as to injury the draught of his chimney. The Council without investigation ordered one of its employees to trim the tree. Mrs. Edward sued the municipality for damages. The case was heard by Judge McMillan who awarded the plaintiff $15 and costs, by the terms of the Municipal Act, Section 4877. The judge contended that ten days notice should have been given to the plaintiff.

Another instructive case came before the Ottawa Police Magistrate recently. A teamster damaged a city shade tree by wilfully backing his wagon against it. It was one of the first cases of the sort to be heard in Ottawa. The Magistrate decided that an example should be made and he sentenced the driver to pay a fine of $5 and 02 costs or one week in jail.

These decisions are interesting to those who are suffering from damage done to trees by corporation employees, linemen and others.

Just One More Direct Message

NEW BRUNSWICK WOMAN SAYS USE DODD'S KIDNEY PILLS.

Mrs. Patrick Williams Tells How Her Headache and Weakness Vanished When She Used the Great Canadian Kidney Remedy, Dodd's Kidney Pills.

St. Susime, Kent Co., N.B., June 26th (Special.)—"I feel it my duty to tell the public the great relief from headache and weakness I found in Dodd's Kidney Pills."

This was the message Mrs. Patrick Williams of this place sends to suffering women all over Canada. Like many other women she dislikes talking about her troubles, but she feels she would not be doing right to let others suffer when she had learned from her own experience how great is the relief and how easy is the cure to be found in Dodd's Kidney Pills.

Nine-tenths of the weakness and suffering women bear so bravely comes from sick kidneys. Sick or disordered kidneys fail in their duty of straining the impurities out of the blood. This means that these impurities, these seeds of disease, are carried to all parts of the body. The natural cure is Dodd's Kidney Pills. They always cure sick kidneys.

PRUNING OF TREES.

Useful Suggestions for this Necessary Treatment.

Always use a pole saw and pole shears on the tips of long branches, and use the pole hook in removing dead branches and other brittle trees where it would be too dangerous to reach them otherwise.

Do not "head back" or cut off the top of a tree except where the tree is old and failing, and then under special instructions.

Be as sparing and as judicious in pruning as possible, and do not raise the branches so high as to make the tree look like a telegraph pole.

Commence pruning the tree from the top and finish at the bottom.

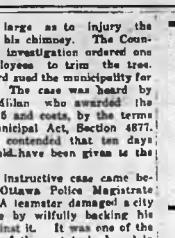
Make every cut as close and parallel to the trunk as possible.

To make the cut perfectly smooth the saw must be well set and sharp.

Leave no stubs, dead and dying wood, or fungus-covered branches behind you.

Do not fail to cover every wound with coal tar, not allowing it needlessly to run down the trunk.

Do not remove several large branches on one tree at a time. They must be removed gradually, the work extending over several seasons.



Prevent tearing the bark off the trunk in removing large limbs by first making an "undercut."

Make the cuts on a slant. Some trees, like the elm, sycamore, linden and willow will stand the process of heading back more than others, and the poplar is a tree that must be cut back every few years to keep its crown from becoming too tall and unsafe.

When shortening a branch, leave a few twigs at the end to draw the sap to the freshly cut wound and thus enable the growing layer under the bark to heal it over.

In trimming small branches or shoots, the cut must be made just above a bud.

When several branches come out from the trunk in a whorl, they should not all be cut away at the same time lest the tree be girdled. This arrangement of branches occurs most frequently in the coniferous trees.—American Forestry.

HEROES OF THE TRENCHES.

Daring Exploits Which Won the D.S.O. and D.C.M.

A number of additional D.S.O.'s and D.C.M.'s have been conferred in England and the following are among the brave deeds recorded:

Temp. 2nd Lieut. Holmes, North-umberland Fusiliers—He got behind an enemy machine gun, put it out of action with a bomb, and accounted for three of the gun team with his revolver. He also, with great coolness, met an enemy counter-attack and bombed them back.

Second Lieut. Kennedy-Cochrane-Patrick, Rifle Brigade—He climbed and attacked an enemy machine at 14,000 feet, and, although he failed in his first and second attacks, he went for it again a third time, shot both pilot and observer and brought it down. He followed it down and landed alongside.

Major Scott, Australiana—He led a small column to reconnoitre a distant enemy post, attacked it, killed several of the enemy, and brought in 38 prisoners, including the officer in command. His plans were so well laid that he effected this with the loss of only one man and one horse.

Lieut. James Shute, Royal Warwicke—He led a raiding party into the enemy's trenches in broad daylight, and after accounting for several of the enemy, skilfully withdrew with only one slight casualty.

Gay Times at Banff.

Sports are now at their height at Banff. A regatta was held on July 1st on Bow River in which canoes, row boats and launches participated. An informal dance will be held in the ball room of the Banff Springs Hotel on Wednesday and Saturday evenings during the season. A golf tournament has just been held for which a silver cup was presented by the Banff Springs Hotel, prizes also included gold, silver and bronze medals. The competition was very keen, about seventy players taking part.

He Wanted Peace.

Two soldiers were conversing. One asked the other what made him enlist.

"Why, I had no wife and children—no one but myself to think of; and, besides, I likes war. But how come you to join the army?"

"Well, you see, I had a wife, and I joined the army because I likes peace."

HOW OTHER NATIONS DRINK.

Measures Taken by Great Britain and Europe Since the War.

Germany forbids the sale of spirits between 9 p.m. and 9 a.m., and prohibits any sale to soldiers in uniform in Berlin or in the province of Brandenburg. Even wine and beer may not be sold to soldiers at railroad stations or in the immediate vicinity. In the field, some commanders permit, some forbid the liquor ration. Great Britain forbids treating, and limits the hours of sale in certain areas. Convictions for drunkenness in these areas fell off 42 per cent. in England and Wales, and 30 per cent. in Great Britain as a whole in the four weeks after the order was established. Australian colonies have limited the hours of sale. Canada in the near future will be largely under provincial prohibition. France prohibits the sale of absinthe, limits the number of selling places, forbids the sale of drink to soldiers in the war zone. They are allowed to have only what is issued in the ration. Russia prohibits the sale of vodka, and local option measures may close wine and beer shops. A great increase in prosperity, despite the war, has followed prohibition. Italy has limited the number of selling places, and Austria the hours of sale. Denmark and Norway have placed restrictions or prohibition upon the use of grain and potatoes in making spirits.

NO MEDICINE AS GOOD FOR LITTLE ONES

Once a mother has used Baby's Own Tablets for her little ones she will use nothing else. The first few doses make her realize there is nothing so equal them in making baby well and keeping him well. Concerning them Mrs. C. E. Stilwell, Winthrope, Sask., writes:—"I have used Baby's Own Tablets for the past ten years and have found them so good for my little ones that I always keep a box in the house." The Tablets are sold by medicine dealers or by mail at 25 cents a box from the Dr. Williams Medicine Co., Brockville, Ont.

Coals to Newcastle.

Mother was measuring a dose of cold for her little son, who looked up and said:

"What am I taking this for?"

"An sunstitte," she replied.

"An appetite," he scornfully repeated. "I can't begin to hold now one-half I want to eat."

Keep Minard's Liniment in the house

The Next Best Thing.

A hospital nurse was asking a volunteer on his practical knowledge of first aid work.

"Now, what would you do in case a man collapsed?" she asked.

"Give him some brandy, miss," replied the man.

"But suppose you had no brandy?"

"Sure, then," he answered cheerfully, "I'd promise him some, miss."

A Narrow Escape.

"Did you see my rambler last night?" inquired the parsimonious Mrs. Newrich of her poorer neighbor.

"No I didn't," said the neighbor exultingly, "but I certainly thought he would if he ate another bite."

Minard's Liniment Co., Limited.

Dear Sirs,—This fall I got thrown on a fence and hurt my chest very bad, so I could not work and it hurt me to breathe. I tried all kinds of Liniments and they did me no good. One bottle of MINARD'S LINIMENT, warmed on flannels and applied on my breast, cured me completely.

C. H. COSSABOOM.
Rossway, Digby Co., N.S.

A Stinger.

An Irishman one day went into a market and was perceived by the stall-keeper, who was attending to another customer, to be talking earnestly to the fish. Thinking to catch him, he said, "Well, Pat, what are you asking the fish about?" "Sure," replied the Irishman, "I inquired the latest news from the sea." "Well," said the fish merchant, "what did they say?" "Why, they didn't know," replied Pat, "cause they hadn't been there for the last fortnight."

Minard's Liniment Lumberman's Friend

Vitality Lower During Raids.

At an inquest in England on a woman who died from illness brought on by the news of a Zeppelin raid, a physician declared that when the raids were in progress the vitality of people was lowered and they caught severe colds. "They have a sense of impending disaster," he said, "knowing that other people are suffering and not knowing what will happen to themselves."

Ask for Minard's and take no other

Making a million dollars looks comparatively easy to the man who has been trying to get a crying baby to sleep.

NO ALUM

73 Adelaide Street West, Toronto.

The Paisley Advocate

PAISLEY, JULY 12th, 1916

—The Grits had a great Hay—Makin day in North Perth on Monday, their candidate, Mr F. Wellington Hay, winning the bye-election for the Legislature by a majority of nearly 600 over his opponent, Mr John A Makins. The riding has heretofore been a Conservative stronghold. In the last general election Mr Jas. Torrance was elected by a majority of 1117, but he resigned recently to take a position as a custom officer.

—The issue of standard hotel licenses at one dollar each will be the chief item of business of the Ontario License Board as reconstituted under the Ontario Temperance Act. These licenses permit hotels to sell cigars, cigarettes, tobacco, soft drinks and ice cream, and conduct cafes and restaurants. It may not be generally understood that standard licensed hotels will be the only hotels under the new law with such privileges, and so far as other hotels are concerned, will have monopoly of this business. Others who attempt to sell such goods will be liable to a fine of $10 and costs. It is not anticipated that there will be much trouble about the cancellation of leases on hotel property when the "dry" law comes into effect on September 16. Most hotels are leased under a contract providing that in the event of the license being withheld the lease may be terminated forthwith. The clause in the new Act will afford relief to any cases where long term leases have been entered into without such a clause in the contract. Few applications for relief have been received as yet, but letters to the officials want explanations such as show they intend as a rule to try out the new law before seeking relief from their lease.

To Protect Municipalities

Bulletin— Warden Martin suggested at the county council the appointment of a special committee to keep tab on legislation affecting municipalities with view of safeguarding their interests. Reeve Bennett of Barrie agreed and added another suggestion, namely, that the Union of Municipalities have agents at the Legislature to watch the interests of the municipalities and sound the alarm in case of danger. Something of the kind is absolutely necessary. At every session legislation is put through that ties knots in the municipalities and deprives them of authority though loading them with financial responsibilities. The district medical health officers is a case in point. In this there are the officials without any apparent duties while the municipalities through the county councils are forced to pay the salaries. Another instance is the Hydro-Electric business. In this the municipalities are tied up so tightly that they practically have nothing to do but pay the price. Other large interests do not leave their interests to the tender mercies of the legislative bodies. Instead they are on guard and the municipalities might well profit by the experience of others. The sooner this is done the sooner will the municipalities be saved from much unjust legislation.

BORN

CLAYTON—At Paisley, on July 12th to Mr and Mrs Geo Clayton, a son.

MCARTHUR—At Paisley, on July 7th, to Mr. and Mrs. Angus McArthur, twins —boy and girl.

MARRIED

STANLEY—LENNY—At the Church of the Ascension, Paisley, on July 5th, by Rev. L. W. Diehl, Mr. Herbert Stanley, of Dunblane, to Miss Rose Lenny, of Peterboro.

WALKER — HEARN — At the Baptist Manse, Wiarton, on June 29th, by Rev R. J McEwen, Mr Arthur Edwin Walker, to Mary, daughter of Mr Wm. Hearn, all of Elderslie.

UNDERWOOD—KING—At St. Stephen's church, Arran Lake, on June 28th, by Rev. J. S. Johnson, Mr. John B. Underwood to Olive Irene, daughter of Mr. and Mrs. A. C. King.

LEGGE—JACQUES—At the home of the bride's father, on June 21st, by Rev H. Bandy, Mr. Harold B Legge, of Dobbinton, to Frances Emily, daughter of Mr. and Mrs. Wm. Jacques, lot 18, con. 9, Arran.

SALMON—SHIER—At the home of the bride's father, on June 28th, by Rev A. J. Langford, Pte. Chas. A. Salmon, D Co., 160th Bruce Battalion (son of Mr. and Mrs. Albert Salmon, of Queen Hill) to Miss D. Ella, daughter of Mr. Amos Shier, of Tiverton.

DIED

LUTTRELL—In Elderslie, on July 6th, Margery Stoddart, beloved wife of Geo. Luttrell, age 55 years and 8 days.

BRIGHTY—At 68 Alcalde St. Galt, on June 29th, Marie, daughter of the late Thos and Mrs Brighty, formerly of Paisley.

COTTRILL—In Greenock, on July 6th, Kathleen, infant daughter of Mr and Mrs Chas Cottrill, aged 17 months and 7 days.

LOCAL AND DISTRICT NEWS

Fined for Assault

Charles Calhoun, the defendant in a charge of assaulting Samuel Kingston, was found guilty by Judge Klein, and assessed $150 for the offence. Both are Elderslie men. The case was tried in Walkerton.

Orangemen at Church

On Sunday morning the members of the local Orange Lodge attended Knox church in a body. A special and appropriate sermon was preached by Rev. Mr. Little from the text "And where the Lord is there is liberty."

Successful Normalites

The following ex pupils of Paisley Continuation School were granted certificates at the close of the Normal School term: Interim Second Class—Edna M Burns, Rose M Bryce, Gertrude Megraw, Alex E Moffat. Wm A McBride. Limited Third Class—Nettie Grant, Mary Webb.

North Bruce Conservatives

The annual meeting of North Bruce Conservative Association was held at Tara when the following officers were re elected: C. E. Stark, President; C. Hill, Vice-President; Jas. A McDonald, Sec'y; Jr Laird, Treas. Addresses were delivered by Mr. Clydesdale, the party organizer, of Toronto, Col. Clark, M.P., and H. A. Vandusen.

Paisley Runners Win Relay Race and Silver Trophy

Wallace Diehl, Harold Collins, L. Cargill and D. Cottrill, students at Paisley Continuation School, competed in the relay race at Port Elgin on Dominion Day, defeating teams from Port Elgin and Chesley high schools. The cup, which is on view in Shoemaker's jewellery window, had been held by Chesley for three years previous.

Andy Culham Alive and Well

A letter written by Andy Culham on June 18th to his uncle, Mr J S Campbell, of Flora road north, shows that there was no ground for the rumor that he had been either killed or wounded previous to that date. He was then still on the transport service, and feeling fine. A number of other Bruce men had just arrived at the front to go into the trenches, one of whom was Pte Elmer Gregg, son of Mr and Mrs Amsey Gregg, of Pinkerton.

Another Battalion for Bruce?

That this county is expected to raise a second rural battalion for overseas service is the advice received by the President of the Bruce County War Auxiliary, and a meeting is to be held in Walkerton on July 20 to discuss the matter. Can it be raised? Is the first question that occurs. Possibly it can be done. With the well populated southern townships properly in line it might be a comparatively light undertaking.

Pte. Alex. Blue Dangerously Ill in France

Mr Alex Blue received official intimation on July 4th that his son was dangerously ill in an hospital. Pte Blue has been at the front since last November and has been engaged in a number of scraps with the enemy lately. No particulars as to his illness have yet been received, but there is a unanimous hope that he may fully recover. By his interesting letters from the front he has become known to every reader of THE ADVOCATE.

Local Board of Health

The Board met 5th July. All present. Minutes of last meeting read and adopted. Motion Messrs Gage and Teeple—That where as the Health Act, 1912, forbids the disposal of raw sewage by having it enter streams of water, the secretary is hereby instructed to notify all those who began to dispose of sewage in that way since 1912 that they are liable to a penalty for so doing.—Carried. The Health Inspector is instructed to institute prosecution against all parties who have not observed the regulation regarding removal of manure.

Preparedness League

At a meeting called by Reeve Ballachey on Thursday evening last, a local branch of the Bruce Preparedness League was formed, with the following officers: President, and Vice-President of Co League, J H Steele; Sec'y-Treas., Geo J. Carter. Committee—A Galbraith, R B Grant, W R Barnett, H McKerracher, J Shoemaker, Geo Welsford. After a conference with Judge Klein, the County President, on Monday, it was decided to hold a demonstration or patriotic field day in Paisley on Aug 4th, in commemoration of the declaration of the rulers of our Empire to make war against that nation which threatened the civil freedom of the world.

Rural Red Cross Realize a Good Purse

On Thursday evening, June 29th, the beautiful home of Mr Ed Waring, lot 20, con 12, Bruce, was the scene of a splendid garden party held under the auspices of the Red Cross Society of S S No 14. The crowd was large, and all thoroughly enjoyed the whole proceedings, including the tasty and bountiful menu provided by the ladies for tea. Special features of the entertainment were the music by Piper McLeish, the Port Elgin brass band, and the instrumental trios by Miss McKenzie and Misses McLean and Parker. Others who contributed to the programme were Rev Mr Sawers, Arch McLean, R R Sayles, T J Smith, R P O Smith, Miss Pollerton, the Port Elgin boys' quartette, and Miss Olive Sutherland. A handsome chair had been offered for sale by ticket, and the drawing took place at the garden party. Mr Wm Howe was the holder of the lucky number. All concerned are to be commended for the successful effort made in behalf of the Red Cross funds.

Are Bruce Soldiers Lucky or Unlucky?

The historical fact is being recalled that when Bruce men had been called out for soldier service in the past—and they always responded to the call with patriotic readiness—the clash of arms was over before there was any need of their bullets and bayonets. In 1866 our lads were sent to Goderich to repel the threatened Fenian invasion, but no enemy appeared on that front. Then in 1885 the whole 32nd Bruce Regiment was mobilized in two weeks and in camp at Southampton ready to proceed to take part in quelling the Riel rebellion in the west, but the fighting was over before they got away. Will history now repeat itself again, and bring peace by the time the 160th Bruce Overseas Battalion has completed training and is fit to take to the trenches? If so, it will be a good thing for Bruce, as well as the rest of the world. The London Advertiser says: What's in a superstition? The 160th (Bruce) Battalion, now at Grosvenor camp, opened the doors of its recruiting offices on Dec 24, 1915, the shortest day in the year. It arrived in London on June 21, the longest day of the year. Whether this augurs good or evil, it is supplying something to worry about" for the superstitiously inclined. Both factions have their arguments. The Battalion filled up almost the soonest of any Battalion organized in Canada, and now is considerable over-strength. Time and again it has been complimented on its drilling on manoeuvres, and it has struck favorable camping ground. On the other, it is pointed on that the members have been quarantined for measles for some time. At any rate, there is a standing reward, an amount not stated, for any person who can decide the question to the satisfaction of all concerned.

Death of Mrs. Geo. Luttrell

On Thursday morning last Mrs Geo Luttrell passed away after an illness extending over several weeks, diabetes being the cause of death. The deceased had been ill with lagrippe during the winter, and had not since been real strong. About a month ago she went to make a visit at the home of her father, Mr Robt Stoddart, Elderslie, in the hope that the change would be beneficial. No improvement following, Dr Middleton of Owen Sound was called in for special examination and consultation with the attending physician, when it was found that her condition was so serious that little hope could be entertained for her recovery. Mrs Luttrell was thereafter removed to her own home on the 11th of Bruce. The deceased was 55 years of age. She had been married 13 years, and leaves, besides her sorrowing husband, a family of four children to mourn her loss. She was a very kind, warm-hearted person, well liked by her friends and acquaintances. The funeral took place from her father's residence, 4th Elderslie, on Saturday afternoon, and, although this is a busy time with the farmers, was largely attended. The services were conducted by Rev J. W Diehl, of the Church of the Ascension. Interment was made in the Paisley cemetery.

Johnston—Snowdon

On Wednesday evening, June 28th, the home of Mr Wm Snowdon, Bruce Tp., was the scene of a very pretty wedding, when his eldest daughter, Annie, was united in marriage to Mr Chester Johnston, of Welwyn, Sask., the ceremony being performed by Rev Mr McNab. The bride, who was given away by her father, was attired in a dress of white silk embroidered net over ivory Duchesse satin, her veil being caught up with orange blossoms. Little Mary Walsh, cousin of the bride, made a charming flower girl in a dress of white embroidered net, with touches of pink. The contracting parties took their places under an arch of evergreens and a large white bell, to the strains of Lohengrin's Wedding March played by Miss Emma Snowdon. The groom's gift to the bride was a wrist watch; to the flower girl a gold locket and chain, and to the organist a pearl brooch. Immediately after the ceremony the guests, numbering about thirty, sat down to a sumptuous repast. In the evening a reception was held after which the happy couple left for an extended trip to Ottawa, Niagara Falls and other points before leaving for Welwyn, Sask., followed by the best wishes of their many friends.

Wounds are Healing

Lawrence Stanley, of the First Canadian Pioneers, who was wounded in the neck and back by shrapnel on June 14th, has been in a London hospital, from where he wrote on June 25th to his mother as follows: "This is Sunday, and visiting day. My bed is almost near the door, and it amuses me to note the different faces of visiting people and more so the patients they come to see—I mean their faces, with the expression of eagerness to see someone whom they know. A man doesn't realize the comfort and enjoyment it is to him to have some one come to see him in the hospital, after he has been in Belgium and France, where all speak a foreign language or badly broken English. And once he is wounded he is rushed out to a new world, one would think, where all speak English and all seem to be friends with smiling faces and a hearty handshake. I cannot say how this appeals to other wounded soldiers, but this is my own version. There are a few Canadians in this ward, and some have not been home to see them yet. I am not so unfortunate. Being in West London three months last winter I managed to gain some friends, and some of them have written to say they would try to see me to-day. I am waiting for them, and will finish my letter after they have departed and tell you how their visit affected me. Well, they did come, and it sure is fine to see someone you know. I understand the unit has been stopped to France for a month, so I will not receive your letters for some time yet. I am feeling somewhat better. The wounds in my back are healing fast, but my back is so sore from being hit with a sand bag. No small thing, I tell you." In a letter previous to his being hit Lawrence wrote to a friend in Edmonton: "I guess you would like to know what we are doing. We are pioneers if you take it as it means. We are the first in the front. We get out into no man's land quite often and it sure has some hair raising experiences connected with it all. Some people suppose we are grave diggers, but we are not. We only buried three men since we came out and that was from my own platoon, but our work consists of trench building and general enforcing positions. No doubt you have read of the big Canadian battle at St. Eloi. She sure was some battle. I was not in it but we could see and hear it and there was something doing all the time. It is hell on earth no doubt when a bunch of guns start and bark out. Some war, I guess. Fritz gets mad sometimes and lets loose, but our guns start to get busy and he shuts up for a while, then he lets loose again and we send iron rations over to Fritz to devour. Fritz has some aeroplanes but we go one better, and it is a great sight to see a fight in the air and to see one or other come tumbling to the ground."

—Castor oil costs considerable these days. But who wouldn't willingly go to the expense of providing a liberal dose for the sugar and gasoline market manipulators provided it would have the usual effects upon the prices of those necessary commodities.

—"Advertising is the educationote the public as to what you are, where you are, and what you have to offer in the way of skill, talent and commodity. The only man who should not advertise is the man who has nothing to offer the world in the way of commodity or service."—Elbert Hubbard.

Clerk's Notice of First Posting of Voters' List

Voters' List of 1916, Municipality of the Township of Elderslie, County of Bruce

NOTICE is hereby given that I have transmitted or delivered to the persons mentioned in sections 4 and 5 of the Voters' List Act, the copies required by said sections to be so delivered or transmitted of the list made municipality at elections for members to the Legislative Assembly and at municipal elections, and that the said list was first posted up in my office on the 3rd day of July, 1916, and remains there for inspection. Electors are called upon to examine the list and if any omissions or other errors are perceived therein to take immediate proceedings to have the same corrected according to law.

Dated this 3rd day of July, A.D. 1916.

ROBT. PEARCE, Clerk of Elderslie

These Spex have overcome the misty vision that creeps on with the advance of years, and now I am the most pleased man I know."

A pleased patient is the best advertisement.

A STOPPED WATCH

—one that will not go AT ALL—does not cause as much bother as one that runs now fast, now slow, in an erratic fashion.

The first you don't pretend to depend upon—the other is a constant source of annoyance.

Most people can afford a watch, but no one can afford an uncertain fast and slow one.

And when our Repair Department is at close at hand there is really no excuse for carrying anything but an accurate time-piece, no matter what the first cost was.

Consult us about any watch troubles that may arise.

I. SHOEMAKER

Jeweler and Optician

"The Family Piano" can be played by hand or with the feet. It brings a world of music to your home and provides a common source of enjoyment for both husband and wife, brother and sister as friends who drop in. Insert the perforated roll and you can play the Plaola-Piano with your feet as well as any musician can play it by hand. The price is no higher than for the plain piano which only those educated in music can play, and it includes freight, bench and 12 rolls of music.

PRESENTATION TO SOLDIER

On Wednesday, June 28th, the Elora road friends and neighbors assembled at the home of Mr and Mrs S Winch to spend a social time with their son Leslie, who had been home for a few days' furlough after closing of school at Bluevale prior to going to London to train with the 161st Huron Co Batt. An interesting programme was placed in the hands of Mr W Pearce, who acted as chairman. The following address was read by Mr A Miller and the presentation made by Miss Edna Sparrow:

To Pte Leslie S Winch:

DEAR LESLIE—Having learned that you had enlisted with the long roll of heroes who are standing in defence of our empire, we your friends have assembled here to spend a few social hours with you before you take your departure from us in defence of our Canadian homes and by our presence express our good will towards you. We feel honored that we are represented by another Elora road boy in the great fight which our country is struggling against. We deeply regret that you are leaving us, yet we admire the courage that enabled you to make the sacrifice. We feel certain you will perform the dangerous tasks of a soldier with unflinching courage and manliness We therefore ask you to accept this wrist watch and fountain pen as a slight token of honor in which you are held by us, and we sincerely hope that the severance of your happy relations may be for a short time, and when the conflict is over and the victory won, that the Giver who guides us may protect you to return to your home where a hearty welcome will await you. Signed on behalf of your friends and neighbors.

STEWART MCNEILL
NEIL MCARTHUR
ISAAC BEECH
F PEARCE

Pte Winch made a suitable response in which he thanked the donors for their gifts. Then he told his chief reason for enlisting and answering the king's call. Seeing women temporarily doing other men's tasks which were more tedious than school teaching, he deemed it his duty to enlist and leave the vacancy to be filled by a lady teacher. The programme consisted of piano duets by the Misses Winch, recitations by Miss E Sparrow and Miss Collins, patriotic selections by Pte John McArthur, of the 147th Batt, selections on the pipes by Piper Harold McLeod, of the 134th Batt. The S S children rendered patriotic selections with Miss Winch as accompanist. A most interesting part of the programme was the reading of an address presented to Pte Winch by the pupils of Bluevale school. On being called to speak Mr S Winch in well chosen words expressed the thanks of himself and Mrs Winch for the respect shown to their son. Lunch was then served, the crowd being agreeably surprised by each being served with an overflowing dish of ice cream provided by the host and hostess.

By the Wingham Times we note that Pte Winch was presented with a suede leather money belt by the pupils of his school at Bluevale at the close of the term. The Times correspondent says: "Pte Winch has been very popular with the children, although the management of one of the largest schools in the inspectorate required the exercise of strict discipline, and the training of an extra large entrance class, the opening of school gardening and the many improvements to the grounds which demanded his oversight, made him an unusually busy teacher. A considerable number of adults joined the children in giving him a send-off at closing of school."

ELDERSLIE COUNCIL

Tp Hall, July 3rd, 1916.

Council met on above date. Members all present. Minutes of last meeting read and adopted. A communication was received from the County Clerk, intimating that the amount required for County purposes was: General county rate and municipal equivalent $6300.81, war tax $1896 —total $8196.81.

Lewis—Thompson—That the following accounts be paid and that orders be issued for same.—Carried: W T Cruickshanks, performing R R and arrears a labor $24; H Montgomery, building culvert, lot 30, con 9, $1; R C Pearce, 6 months' salary as clerk, $85; D Graham, half year's salary as caretaker of hall, $5; T Collins, 30 yds gravel per J McBeath, pathmaster, $1; A Watson, 33 yds gravel, per T G Brown, pathmaster, $1.30; P Oliver, 68 yds gravel, per J B McBride, p m, $6.80; P Reilly, 41 yds gravel, per W J Hyde, p m, $4.10; T Collins, 38 yds per J Thompson, p m, $4.80; T Collins, 55 yds, per J T Richardson, p m, $5.50; A Watson, 51 yds per B Majury, $5.10; Thos Duff, 133 yds per T Duff, $13.50; C Henry, 85 yds per A Graham, $8.40; T Dinsmore, 78½ s per Jos Dingeon, $7.80; Rd Bone, 57 yds per H J Daley, $5.70; Geo Addison, 75 yds per W B Patterson, $7.50; Geo Addison, 92 yds per J D Allen, $9.20; T Duff, 65 yds per W Fenton, $6.50; W J Fortune, 65 yds per W J Fortune, $6.50; Geo Addison, 56 yds per P Catto, $5.60; Augus Taylor, filling washout 5 sideroad, $5; A Graham, building culvert and filling washout, 20 s r, con 13, $3; J B McBride, performing R R and arrears statute labor, $42; Wm McDonald, part payment printing contract, $50; R Christie, cedar for municipality, $290.08; Geo Daniel, repairing culvert, con 12, $1.50; W Pearce, building culvert, Elora Road, $6; T F Pearce, operating grader, $13; J Thompson, building culvert, lot 1, con 6, and filling washout 5 sideroad, $69.70; H McKenzie, printing placards, $3; J T Richardson, services as sanitary inspector, $109.80; L S McClure, repairing culvert, 15 r r, $3; S K Evart, operating road grader, $50.

Fraser—Allen—That this Board do now adjourn to meet again the first Monday in August at 1 o'clock p m, for general business, and that school boards be requested to have their requisitions in the hands of the clerk before that date.—Carried.

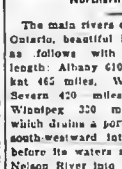
R C PEARCE, Tp Clerk.

Children Cry
FOR FLETCHER'S
CASTORIA

—John Miller has resigned the position of jailer at Owen Sound, after being in charge of the Grey County institution for 34 years. He has the proud distinction of holding the position of jailer longer than any other man in Canada, and leaves a remarkably good record behind him. During his long career there were 8,300 prisoners passed through his hands.

—THE ADVOCATE office has a splendid stock of wedding stationery and calling cards on hand, also the most beautiful styles of type, so we are able to turn out the finest lines of wedding invitations, announcements, cards, etc. We can do work fit to invite the best of people to a wedding, so why pay two or three times as much to city printers or engravers.

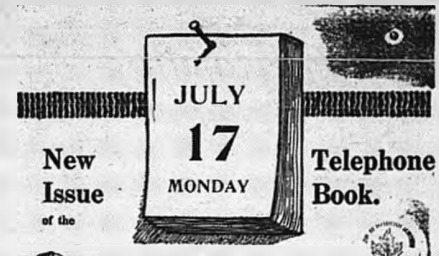
PATRICIA'S RIVERS



Wonderful Distances and Areas of Northern District

The main rivers of Patricia district, Ontario, beautiful large streams, are as follows with their respective length: Albany 610 miles, Attawapiskat 465 miles, Wenisk 400 miles, Severn 420 miles, and English or Winnipeg 320 miles, the latter of which drains a portion of the district south-westward into Lake Winnipeg before its waters are carried by the Nelson River into Hudson Bay. The district naturally divides itself into two portions, namely a littoral portion, which adjoins Hudson Bay and extends 100 miles or more inland from it, with a total area of 60,000 square miles, and an interior upland portion including the higher land already mentioned, with a total area of 90,000 square miles or nearly 60,000,000 acres.

I OWE MY HEALTH



To Lydia E. Pinkham's Vegetable Compound.

Washington Park, Ill.—"I am the mother of four children and have suffered with female trouble, backache, nervous spells and the blues. My children's loud talking and romping would make me so nervous I could just tear everything to pieces and I would ache all over and feel so sick that I would not want anyone to talk to me at times. Lydia E. Pinkham's Vegetable Compound and Liver Pills restored me to health and I want to thank you for the good they have done me. I have had quite a bit of trouble and worry but it does not affect my youthful looks. My friends say 'Why do you look so young and well?' I owe it all to the Lydia E. Pinkham remedies."—Mrs. ROBT. STOPIEL, Moore Avenue, Washington Park, Illinois.

We wish every woman who suffers from female troubles, nervousness, backache or the blues could see the letters written by women made well by Lydia E. Pinkham's Vegetable Compound.

If you have any symptom about which you would like to know write to the Lydia E. Pinkham Medicine Co., Lynn, Mass., for helpful advice given free of charge.

MACLEAN'S

—THE MAGAZINE FOR REAL CANADIANS

Every phase of present-day Canadian life is reflected in the July issue of MacLean's Magazine. It is vibrant with the spirit of Canada to-day, interpreted by the Canadian writers of first rank, best fitted to treat of the topics assigned them. It is a Magazine with a universal appeal, a live interest for every member of the family. It is the Magazine you have been looking for.

Consider the following list of writers and articles in the July issue, and ask your news dealer for the July MacLean's.

Robert W. Service whose virile verses places his books at the head of the best sellers, is driving an ambulance car at the front in Flanders, and his war poems, appearing exclusively in MacLean's Magazine, are saturated with the spirit and color of the trenches. "The Haggis of Private McPhee" in the July Number is a humorous yet pathetic treatment of a subject dear to the heart of every Scotchman. C. W. Jeffreys's illustrations make it more realistic.

Agnes C. Laut Well known to MacLean's readers for her amazing revelations of German machinations in the United States, and whose intimate connection with those high up in financial, business and diplomatic circles in the neighboring Republic, has given her series of articles in MacLean's prescience positively startling, contributes to the July MacLean's yet another of outstanding import under the heading of "Canada's Greatest Service to the Empire."

Brigadier-General Logie A fascinating character sketch of the Hamilton lawyer, who, casting aside his gown and his briefs, is organizing and training as head of Number Two Division, a Canadian army larger than that Britain sent to Waterloo under Wellington. By Hugh S. Eayrs.

Immigration after the War Some plain facts are given and deductions drawn by Fisher King. No more vital question is occupying the minds of Canadian statesmen. Every business man should read this article.

Nellie McClung raises the startling question, "Now that women have the vote in Western Canada will they want to sit in Parliament?" Mrs. McClung, herself a leader in the Western Feminist movement, answers this question in a characteristic article in the July MacLean's.

Stringer and McFarlane continue in the July MacLean's their captivating stories, "The Anatomy of Love" and "Behind the Bolted Door." Both these men are first flight fiction writers, and both Canadian born and bred, and both with continental reputations.

Then there is that ever popular department, The Review of Reviews, which gives the busy reader the cream of the world's best periodical literature.

Buy the July MacLean's. Learn at first hand just how good and how interesting this thoroughly Canadian Magazine is.

Sr IV—Eleanor Teasdale. Jr IV—Emily Teasdale. Sr III—Ivan Grant, Innis Sparrow, John Wolfe, Clifford Dadgeon, Albert Shrigley. Sr II—Annie Teasdale, George Iversen, Mary McKelvey, Florence Lewis. Jr II—Evelyn George, Wallace Teasdale, Edward Wolfe. Jr I—Tena Lewis, Tena Walpole, Clifford McKelvey, George Sparrow. Primer—Viola Sparrow, and Roy Palmer (equal) Florence Teasdale, Gordon Patterson, Bert Walpole.

ELLA M LEWIS, Teacher

SAW "SAFETY FIRST" FILM

Railway Officials Viewed Silent Drama to Stimulate Movement

A realistic moving picture film in the interests of the Safety First Movement was displayed in a specially fitted car at Montreal before Vice-President Hurry and a number of C.P.R. officials.

The film was produced by Mr. Marcus A. Dow, general safety agent, New York Central Lines, and tells the story of a railroad mab, Jack Foster, whose carelessness endangered the happiness of his wife and home until his friend, Jim Stevens, a booster for the Safety First, convinces him by demonstrating awful examples that it is worse to gamble for life than to gamble in any other way. One man loses his leg, and other accidents are realistically portrayed in an exhibition at the Safety Rally to which Jim Stevens takes Jack Foster—such as the shopman who loses an eye through not wearing goggles, the carpenter losing a finger while working at a buzz saw without the guard, the brakeman being run over while running between moving cars, the engineman being killed while boarding the footboard of an engine in motion. Particularly impressive is the picture of a collision due to slowness in flagging.

In order to promote the Safety First Movement in Canada, Mr. Hurry secured a copy of the film, to be offered to moving picture houses at divisional and other important railroad points along the line of the Canadian Pacific Railway.

During July and August for school teachers, high school students and others, continues until Aug. 25th, when fall term opens.

ELLIOTT Business College

Yonge and Charles Sts., Toronto

Invites you to use the holidays to good advantage. It will pay. The demand for bookkeepers, stenographers, typists, commercial teachers, &c., has been during the last nine months more than six times the supply. Write for catalogue.

W. J. ELLIOTT, Principal.

The Housewife's Corner

Strawberry Recipes.

Strawberry Sandwiches.—These are delightful for afternoon teas. Fine French bread or tender baking powder biscuit serves as the binding for large sweet berries sliced and sprinkled with sugar. Sometimes a spoonful of whipped cream is added to the berries.

Strawberry Salad.—One quart straw berries, 3 tablespoonfuls olive oil, dash of salt, 2 tablespoonfuls honey, 1½ tablespoonfuls lemon juice, lettuce. Wash and hull berries; cut in halves, lengthwise. Make a dressing by beating the honey, oil, lemon juice and salt together until frothy; pour over the berries and let stand thirty minutes in a cold place. Drain arrange on lettuce leaves and serve at once.

Strawberry Roll.—Make a rich biscuit crust, then roll out the dough to about a quarter of an inch in thickness. Spread thickly with berries, dredge lightly with flour and a little sugar; roll up, moistening the edges to keep them together, and tie in a cheese cloth. Lay on a plate and set in a steamer. Steam two and a half hours for a medium-sized roll, then serve with sweetened cream or hard sauce.

Strawberry Shortcake for Five.—A large cupful of flour, two teaspoons of baking powder, a teaspoonful of lard and one of butter. Mix with cold milk, mold into two large biscuits and bake in quick oven. Split through center and butter and pour over same one box of strawberries which have been washed with one and one-half cupfuls sugar. Serve with whipped cream or ice cream.

Strawberry Sunshine Preserves.—Select nice red, firm berries; wash and drain. To every quart of berries have ready a syrup made of two cups of sugar and one-half cup of water. When syrup has boiled five minutes add berries and boil exactly ten minutes, no longer, and then skim out berries, placing them on a platter. Boil the juice twenty minutes, removing the scum. Then pour the juice over the berries and place in the sunshine. Cover platter or dish with a piece of glass. One day usually suffices to reduce to proper consistency—which should be a jelly-like state. Reheat and then seal, or place in jelly glasses and cover with parraffin. This makes a very delicious preserve.

Inexpensive Cakes.

Currant Cake.—One pound of household flour, one-half margarine, one-half pound of sugar, one-half pound of currants, half a pint of milk, one teaspoonful of carbonate of soda. Mix all the dry ingredients together. Place the margarine in a basin a little way from the fire until it gets soft, beat it up with a fork until it is like cream, mix a good teaspoonful of carbonate of soda in two teaspoonfuls of milk, set aside until you have mixed with a knife the flour etc., with margarine and milk, then pour in the milk and soda; beat well until thoroughly mixed, place in a greased tin, leaving plenty of room to rise, bake slowly for half an hour, then in a hotter oven for one hour.

Date Cake.—One pound of household flour, one-half pound of dates, six ounces of margarine, a tablespoonful of vinegar, milk (less than a quarter of a pint), one-quarter pound of sugar mixed spice, carbonate of soda. Rub all the dry ingredients well together, melt the carbonate of soda in the milk, and add to the mixture, then add the vinegar, beat all well together and bake for one and a half hours in a moderate oven.

Date and Currant Cake.—One pound of flour, one-half pound currants, one-of flour, one-half pound currants, one-of granulated sugar, six ounces of margarine, one teaspoonful of carbonate of soda, one large teaspoonful of marmalade milk as required. Beat the butter and sugar together, add the flour, then the other ingredients. Dissolve the soda in the milk and add to the above. Mix all to a stiffish batter. Bake two hours in a fairly hot oven. Keep two days.

Ginger Cake.—Three-quarters pound of flour, three-quarters pound of syrup one-quarter pound of lard, two teaspoonful of spice, shiitle candied peel, one teaspoonful of ground ginger, one teaspoonful of carbonate of soda, a little milk. Mix all dry ingredients together, then add enough warm milk to make a stiff dough. Bake one and a quarter hours in a moderate oven.

Currant Cake.—One pound of flour, one-half pound of currants, six ounces of sugar, six ounces of margarine, two ounces of mixed peel, one teaspoonful of carbonate of soda, one teaspoonful of powdered sugar, one teaspoonful of mixed spice, one cup of milk. Melt the margarine in the milk, but do not let it boil; add to the dry ingredients which should be well mixed. Bake three hours in a moderate oven.

Household Hints.

If potato peelings are dried, they will make a quick fire.

You can get more juice from a lemon that is heated than from a cold lemon.

Whatever fruit is in season should be made the most of, especially for desserts.

The bone should be left in the roast, it will keep the juice in and add flavor and sweetness.

The Monson buds of rhubarb are said to make good greens if stewed like spinach.

Use cold milk to soak the bread or cake in for pudding; the pudding will be more light.

To hurry the cooking of anything in a double boiler, add salt to the water in the outer boiler.

Any cooking that is done in vessels that are not thoroughly clean is poisonous to the system.

If muslins are ironed wet, they will be smooth; if ironed dry, they will have a rough appearance.

A good sweet sandwich is made of banana cream spread between thin slices of sponge finger cake.

Never allow a baby to use a nursing bottle with a tube attached to it—the tube can never be cleaned.

Grapes are much more delicious if they are allowed to lie in ice water at least five minutes before serving.

When humbug steak seems dry put two or three tablespoonfuls of fresh cream and a few breadcrumbs in with it.

Remove fruit stains by pouring boiling water over the stained surface, having it fall from a distance of three feet.

When warming a steamed pudding put it in a colander and stand it in the steamer. This will make pudding or cake delightfully light.

Patent leather shoes should be wiped off with a cloth when they are removed and then a little olive oil should be rubbed into them.

Sifted wood ashes will clean tin, agate or cockery ware. Dampen a cloth and apply the wood ashes by rubbing it on the stained places.

Time is saved by cutting the dough for baking biscuits with a knife. The biscuits will be in pretty squares, and there will be no waste.

THE SUNDAY SCHOOL

INTERNATIONAL LESSON.

JULY 9

Lesson II.—The Thessalonian Christians. 1 Thess. 1; 2. 17-20; 4. 13-18. Golden Text, 1 Thess. 4. 14.

Verse 1. Silvanus—The Roman name of Silas, just as Paul was of Saul. In God—Paul's "mystical in." "In him we live and move and are," even as human begins much more does a church, as such, only live by that vital air. Grace and peace—Both describe God's blessing: the first emphasizes its spontaneous and unmerited character, the second its results

2. Making mention—The phrase (compare Philem. 4) is a standing epistolary formula found in pagan letters from Egypt. Paul galvanizes it into life, as if we were to make "Yours faithfully" mean something!

3. Work emphasizes the results achieved, labor the toil and weariness it cost, patience for, much better, endurance) the refusal to yield to weariness or opposition or discouragement. Faith then produces, love makes labor light, and hope "endures to the end," "as seeing him who is invisible." For the three see 1 Cor. 13. 13; for the first two, 1 Cor. 15, 58, and for "hope set on Christ," 1 John 3.3. It is "by hope we are saved" (Rom 8. 24; read).

4. Election—The same Greek noun comes in Acts 9. 15. God chooses each of us for a special task which no one can accomplish. He calls us to it (Rom. 8. 30), and when we have answered the call—which we are free to refuse—the divine "choice" becomes apparent.

6. Imitators—Hence Thomas a Kempis takes the title of his classic. The example of Christ is the theme of many sayings; here and in 1 Cor. 11. 1 (see also 1 Cor. 1. 16) we have the thought that this example must be first learned from its reflection in the Christian. What a responsibility? Affliction—Acts 17. 6 shows how the earliest leaders of the church at Thessalonica had a stern trial at the very outset of their Christian life. That they stood it without flinching and found that "Holy Spirit" gave them joy therein was the secret of the splendid start the church had which receives glowing testimony here.

7. Achaia—The Roman province (compare Acts 18. 12), including the whole of peninsular Greece south of Macedonia. Corinth was the most important city, though Athens was still its intellectual center.

Gone forth—Compare Rom. 10. 18, where the same word is used. Speak anything—About the coming of the gospel to Thessalonica.

9. Idol—The root of the word is the idea of a phantasm—as a ghost, or an unreality. Hence, here and in such places as 1 John 5. 21 the contrast is with the real or true God, and often as here, with the living God; the sublime scene of Elijah on Carmel is vivid comment.

10. Wait—Service and waiting are thus the two sides of Christian life. The Master's own parable inspires the great idea (Luke 12. 36ff.). It is the active "waiting" of the farmer (James 5. 7), who plows and sows and then can only wait for the harvest, which he ranges hurry. "They also serve who only stand and wait." From heaven—In view of Mark 14. 62 and Acts 1. 11 we must bring in the symbolism of the sky, which of course supplies us with our picture-word for the unseen world. Raised—The resurrection guaranteed the advent "with the clouds," since the cross was expressly the consequence of his claim to fulfill the prophecy in Daniel. The human name Jesus is very significant in this context. It calls up the title on the cross; and by its very meaning ("Jehovah is Deliverance") it reminds us of his supreme function. Delivereth—The word of the Lord's Prayer. The wrath—As in Luke 3. 7. The word is continually used for the wrath, it being needless to say where. Compare especially Rom. 12. 19; "give place unto the wrath." It is well to recall the obvious consideration that "wrath" is a human word, which must mean something very different when we apply it to God. Such words as angry and jealous, applied to God, are perpetually a cause of stumbling to men who forget this obvious caution.

4. 15. Would not—"We won't have you ignorant" gives the peremptory character of the phrase better. Fall asleep—From time to time, to the great distress of Christians, who thought this would deprive their friends of the joys of the Advent, which was long expected to be immediate, even by Paul himself (note on verse 1771). The figure of "Sleep and his brother Death" (Shelley) is as old as Homer. The "hopelessness" of contemporary Gentile thought is best illustrated by the great Roman lyrist poet Catullus, who two generations earlier says "Stars may set and rise again; for us, when once our short day has set, there is only sleeping through one eternal night." No hope of [final] salvation" (chapter 5, phrase of the Book of Wisdom; "the hope of [final] salvation" (chapter 5. 8) is to be his "helmet," preserving his intellectual life from pessimism. 1 Cor. 15. 58 tells why this hope is so vital an to practical.

14. Fallen asleep through Jesus (margin)—The verb here probably retains its original passive sense, and we read "put to sleep." In vernacular Greek the active is used for "folding" sheep, and the thought of the Good Shepherd "folding" his flock one by one is not far away, even if the figure is not directly present. We talk of the "Angel of death"; this verse tells us that the Divine Messenger is none other than He who died and is alive for evermore. Bring with him—In the retinue of "spirits of just men made perfect" who attend the Lord's Parousia.

15. By the word of the Lord—Directly suggesting that the Master's own xpress statement lies behind this declaration. This letter was written long before our Gospels were composed, and in all the Epistles we may be sure there are many words of Jesus quoted which we cannot identify as such. We that are alive—since a true perspective of the future, determining the relative distance of assured events, is impossible to man as man (Acts 1. 7)—was impossible even to the Lord in his incarnate life (Mark 13. 32); it is not strange that even the apostles foreshortened the interval separating them from the end, and felt sure it would come in their day. Yet he said it would not come till his gospel had been proclaimed to all the nations, not the world in far bigger than they knew! Most assuredly "the end is not yet," though foolish cranks will go on proclaiming that they do know the times and seasons which the Father set within his own authority." Left—The word has a tinge of wistfulness, even so early Paul could have almost envied those who were "with Christ, which is very far better" even than being "in Christ." But it was not time yet for the sentinel to be relieved, and Paul would not cherish the wish even years after, when he wrote to the Philippians from prison. Prevent—So that the dead in Christ suffer no disadvantage, but the contrary.

16. It is impossible to note that the Advent follows the waiting time that the dead spend in "Hades," the "unseen world," which includes "Paradise" (Luke 23. 43ff) for "Abraham's bosom" (Luke 16. 23). This is the next "abiding place" (John 14. 2) in our journey, and "thereon" lies beyond the Advent. Shout—The noun, used here only, is derived from the verb command. Hence the paraphrase (see above) in George Rawnsley's Communion hymn, Archangel—Only elsewhere in Jude 9. We need not speculate on these symbolic accompaniments. Trump—As 1 Cor. 15, 52, coming from Matt. 24. 31. First—The picture presents Christ's family as rather the dead reclothed with bodies—the "spiritual body"—and the living "changed" into the same likeness (1 Cor. 15. 50ff.), since our present body "cannot inherit the kingdom of God."

17. In the clouds—As he was at his ascension, the symbolism of which determines the whole picture.

18. Comfort—In the supremest meaning here, though the more inclusive encourage (hence often exhort) would serve equally well.

Riches have wings but it is foolish to sit in a rocking chair waiting for them to fly your way.

HOW TO OPERATE THE GASOLINE ENGINE

Told by C. W. Jakes, the Ontario Agricultural College.

[No. 2.]

Now that we have a knowledge of the working principle of the engine, we are in a better position to discuss troubles in starting, and for that purpose we'll imagine we are trying to start an ordinary four-stroke engine.

First, let us thoroughly oil the machine and be sure that the cylinder is getting plenty of oil. Lack of oil in the cylinder is usually shown by over-heating and a subsequent tightening of the piston. But this point will be dealt with under the discussion of operating troubles. A too liberal supply of oil on all working parts is much better than not enough, but the supply to the cylinder requires special carefulness.

Now, see that the water tank or hopper is full, or nearly so, of water. In cold weather the hopper should always be drained, as freezing will cause cracking of the cylinder walls and a serious loss is entailed.

Next, open the gasoline valve, and if the engine has no carburetor—most small engines have not—close the air valve. This makes the mixture a little richer for starting, but it should be opened as soon as the engine has made one or two explosions. If not opened, the engine will smother and stop as it must have air mixed with the gasoline.

Now close the switch and turn over the flywheel quickly. A few smart turns should start it going; if it does not start there is something wrong, and we must make an investigation. In looking for the cause of trouble there are three main points to consider: (1) The supply of gasoline; (2) the working of the valves; (3) the ignition or firing device

What of the Gasoline Supply.

First we'll examine the gasoline supply system. It may be that the supply pipe leading from the gasoline tank to the cylinder has become plugged with dirt, or if it has a pump for forcing the gasoline into the carburetor it may be broken. In order to ascertain whether the engine is getting gas or not stand close to the exhaust pipe and have some one crank the engine. If gasoline is coming over, it can be distinctly smelt after one or two revolutions of the flywheel. A frequent cause of trouble is the fact that the gasoline tank is empty and the operator is not aware of the fact or dirt of some kind or another has gotten into the air valve and clogged it, so examine that.

The bowl of the carburetor—If the engine has one—may have become filled with sediment, preventing the free flow of gasoline. To prevent the accumulation, some engines have at the base of the bowl a cock which should be opened frequently to drain it. The carburetor or air inlet may have become choked with dust and dirt. To prevent this the source from which the engine draws its air should be pure and free from dust. If the engine be set in the feed room or in the workshop where the air is full of floating dust particles, the air inlet should be connected by a pipe to the outside atmosphere.

If after examining the feeding apparatus we find that the engine is getting gasoline in sufficient quantity for normal operation we'll now take a look at the valves. Here is a frequent source of trouble to the average operator of a gasoline engine—leaky valves. In order to find out whether the valves are leaking or not, have someone turn the flywheels slowly against compression, and keep your ear close to the cylinder head. If the valves are leaking, the compression will be weak, and a hissing sound as of escaping air will be distinctly audible. This leaking is caused from two sources: either an accumulation of carbon—the residue left when gasoline or oils are burned, between the valve head and the seat, thus preventing a close fit and allowing an escape of gas, or from a worn and pitted surface which has the same effect. The engine with leaking valves might be likened to a gun with a hole bored into the firing chamber. When the gun is fired, part of the force would escape through the hole instead of being exerted against the bullet to force it out in order that the engine may give satisfaction and develop its full capacity the valves must fit tightly on their seats.

Accompanying diagrams explain the importance of having the valve seats free from any deposits.

Suppose in our examination we find that the exhaust valve is leaking—it is usually this one that gives the most trouble as the inlet valve is not subject quite as much to the deposition of carbon and to pitting, then the valve must be reground. With the average farm engine on intermittent duty, the valves should be ground once a year. We say that a valve is pitted when the head or seat, as the case may be shows the presence of small holes or pits due to the action of the burned gases which are of an acid nature and eat holes in the metal.

To grind the valve, remove the lock nuts and spring from the valve stem and then the cap from the valve pallet, or better still, remove the entire cylinder head for greater ease in working, and the facility thus obtained of doing a much better job will repay for the extra trouble of removing the head. Now scrape off all deposits of carbon on the seat with a knife and apply valve grinding compound, or if it be impossible to buy this in a hardware store, make a paste of fine emery flour and lubricating oil. Apply by raising the valve head from its seat, and place some of the paste around the seat. Let the head drop down into place, and then revolve by twirling the stem between the palms of the hands. Do not use much pressure, but lift the head frequently and remove dirt balls that will accumulate. When the head turns without friction, examine frequently and discontinue the motion when a bright, smooth ring appears all around the head and seat. This shows that the head is now fitting snugly on its seat; wash all the parts with gasoline, wipe dry and re-assemble. In replacing the cylinder heads or valve cages, be sure that the packing is in proper positions and that the nuts are tightened evenly in order to prevent a leak or probably a blow out.

Still More Needed in Grinding.

While grinding, the valve head should not be turned completely round and round, but rather backwards and forwards in a semi-circle, that is turned to the right, then to the left, alternating the movements. After repeating these movements for some time, occasionally lift the valve pallet from its seat, turn part way round an let it drop back into its seat and repeat the grinding operations as before. This insures even grinding all round. When the valve turns without any apparent grinding friction take it out, wipe it clean, examine the seat, apply more of the oil and emery mixture or compound and put it through another course of grinding. This process may have to be repeated a number of times.

When a good bearing seat has been secured, wipe the valve pallet and stem, as well as the valve coat and sleeve, in which the stem works, entirely free from emery, oil and grit. Return the pallet to its seat, close up the valve and adjust the spring and lock nuts to the stem ready for service.

Where it is not possible to remove the cylinder head or valve-cage, containing the valve, provision for grinding has usually been provided by the manufacturer in the shape of a removable cap, above the valve. The following diagram may aid in showing how the grinding process may be accomplished in a case like that:

A handful of waste or cloth is put in the valve port or entrance into the cylinder, to prevent any emery falling into the cylinder; this is very important because emery dust in the cylinder would cause the walls to be roughened and abraded. Then the valve seat is coated with the grinding compound and the blade of a screw-driver is inserted in the slot in the top of the valve head, and the handle worked backwards and forwards by friction with the palms of the hands, as illustrated.

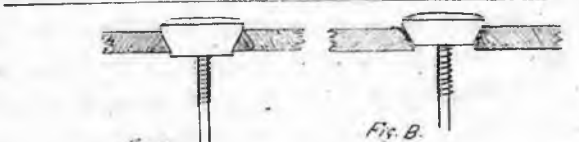
Now that we have the valves working properly, if the compression still is weak and a hissing sound is heard at the end towards the flywheels, we arrive at the conclusion that the piston rings are worn, and allows the gas to escape past them. If such be the case, frequently changing the position of the rings will effect a cure, that is, placing the first ring in the second and third place, the second in the first and third place, etc. If this does not prove satisfactory, a new set must be obtained.

Ignition Must be Faulty.

If the engine still refuses to go, the fault must lie in the ignition. Perhaps we may have forgotten to close the switch. I have seen men crank away at an engine for two or three minutes and then when looking to see what was wrong, discover that they had forgotten to close the switch. The current is generally taken from the primary battery consisting of about five cells depending on the size of the engine The total output of the battery is the sum of the number of amperes given by each cell, and the total voltage of the battery is total number of volts given by each cell. Generally speaking, a current of eight amperes at a voltage of four is required for make-and-break ignition. For jump-spark systems over 10 amperes is required at about a voltage of four.

It is very important that all wiring connections be kept tight and clean, as a loose or dirty connection means a loss of energy and a shortening of life of the cells. It may be that the cells are run down and that new ones will have to be purchased. In order to tell whether a cell has played out or not, every engine operator should have a small pocket ammeter, costing 75 cents, and tests his cells from time to time. A good dry cell when new will show about one and one-half volts, sometimes a little more, and a current strength of from twenty to thirty amperes.

With the battery in good condition,



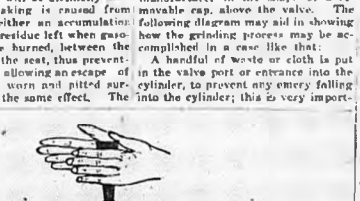


Fig A shows the valve head resting on a seat that is perfectly smooth and free from carbon deposits. Result—no escape of gas and no loss of power. Fig. B shows the valve head resting on the seat that contains some deposits of carbon and has a pitted surface. Result—an escape of gas and a loss of power.

This diagram shows how the valve is ground to eliminate pits.

the fuel supply, the valves and the ignition working properly, the engine, unless something is broken, will start. In cold weather the gasoline does not vaporize so readily as in warm, and in order to facilitate starting operations, warm water should first be placed in the water-jacket, changing to cold when the engine has gotten nicely started.—Canadian Countryman.

How the Bayonet Was Originated.

The bayonet, which was thought to be obsolete three years ago, has come back into great favor with the authorities, due to its unquestionable utility in hand-to-hand fighting. The first bayonets ever to be used were brought forth in a mountain fight in Bayonne when the Basques, the wild mountaineers, tied scythe blades and sickles to the ends of their muskets when charging the Spanish enemy. So efficient were these weapons in the fight that followed that reports of a new and terrible arm spread all over Europe. The French appropriated the weapon and the name and the other nations followed in rapid order.

Fly in the Ointment.

Mrs. Higgins was an incurable grumbler. She grumbled at everything and everyone. But at last a day arrived when she had found something about which she could make no complaint; the old lady's crop of potatoes was certainly the finest for miles around.

"Ah, for once you must be well pleased," he said, with a beaming smile, as he met her in the village street. "Everyone's saying how splendid your potatoes are this year."

The old lady glared at him as she answered:

"They're not so poor. But where's the bad ones for the pigs?"

India's Rice Crop.

India's rice crop of this year is estimated at 76,702,000 acres, slightly in excess of the acreage of the year before. The total yield is expected to be 21 per cent. greater than last year. Estimates for both area and yield are the greatest on record.

Paid to Smoke.

Manager—"I caught that fellow smoking on the job out there and fired him. I gave him his four days' pay and told him to clear out."

Owner—"Good heavens, that fellow was only looking for a job."

Going Out Again to the Firing Line

Scene in a Big London Railway Station.

She emerged from the booking office as if they had been hurrying, and the elder woman looked round for the station clock.

"Oh, plenty of time," she said. "Another eight minutes yet."

The girl who was with her made no response. You guessed they were mother and daughter. The mother was a hearty woman nearing sixty, with a ruddy, good, strong-featured face and a managing, reliable manner. She was not poorly dressed, but serviceably, as one dresses who has to count her money more than once before she spends it. Her hands were roughened with work; she wore a sensible plaid shawl, for there was snow on the railway lines and on the fields beyond, and capping all the houses round about. The daughter was a slight girl of some seventeen, pale, anxious, pre-occupied, seeming rather as she were hurt and suffering, and shrank from being noticed.

"Look here, now, Annie," said the mother, speaking firmly and swiftly, "if you can't leave off crying, run back home at once, like a good girl. Don't upset him. I want him to go feeling cheerful and comfortable about us."

"I'm not crying," the girl protested feebly.

"You are. You know you are. And I won't have him upset. Don't be unkind to him—just run off at once. He'll be here in a minute."

"But—but he'll think it so funny——" The girl struggled with her words.

"No, he won't. I'll explain. I'll make it right. It's much kinder to him. And you've said good-bye once, when I was hoping you wouldn't come. Run home now, there's a dear, and leave it to me."

* * * * * * *

She put a hand on the girl's arm to urge her towards the door, and, after a momentary hesitation, she moved with quickening steps and disappeared into the booking office. She was running her hardest over the level crossing a hundred yards further up the line, as a bronzed young soldier in khaki came from the booking office and joined the old lady on the platform.

"Well," she greeted him breezily, "everything all right? Got your ticket?"

"Yes. That's all right." He was buttoning something into a breast pocket that was over-full. A tall, personable fellow, he carried a rifle, had a prodigious kit strapped on his back, and a water bottle and divers tightly packed small parcels hanging from his waist-belt. "They'd take me for Santa Claus, only it isn't Christmas," he grinned, surveying his burdens; then, abruptly, "Where's Annie?"

"Oh, she's all right," said the mother easily. "I had to send her back. Silly thing! We forgot and left the gas-ring alight, and I don't want the house burnt down. Hope we haven't forgot anything else." She fingered the tight parcels critically. "Be sure you put these oilskins socks on over your other ones when you go into them damp trenches. And mind you wear the thick new vests." She shook a warning finger at him. "You want me out there to look after you, you're so terrible careless!"

They both laughed.

"Annie and me are hard at it knitting you some more, and if you don't wear them I shall be very angry with you."

"I'll wear 'em, you bet," he said, "but don't make too many of 'em. You've got enough to do. Wish I could get you a bigger allowance—I don't like you taking in that blessed washing."

"Nonsense. I'm glad to be doing something."

"If you can't let the rooms," he went on, "I'd sooner you sold some of the things and went into some lodgings."

"I shan't do nothing of the sort," she insisted. "I'm going to have the home waiting there ready for you when you come back, don't you fear. I'll manage."

He grumbled vaguely.

"Now, I tell you you're not to fidget about me and Annie," she reproved him. "We're as right as could be, and there's no need. I'm not worriting. Your father went all through the Boer war and came back safe, didn't he? Very well, then, and so will you. I only wish he was still alive—he'd be out there with you. I know that. I sometimes get a feeling how angry he must be now because he can't go."

"Ah, he was a good plucked one, he was," said the soldier.

"When I get your medals to hang alongside his I shall be as proud as a dog with two tails."

* * * * * * *

They both laughed again, but his laugh was not so cheery, as hers. He was restless, uneasy, as if the strain of parting was telling on him, but she was as unconcerned and as practical as if he had been merely going up to an office in town and would be home again, as usual, in the evening. When the gates of the level crossing swung open, and we could hear the train approaching, one felt there was even a touch of relief in his "Here it comes," but she only said, briskly, with no change of tone:

"Mind you send me a postcard directly you get out there, and write when you can."

"That's all right," he said.

Then, as the train fussed noisily in, they kissed each other, and she put her hands on his broad shoulders to pull him down and kiss him a second time, just in a good, motherly fashion, and without a flicker of emotion on her comfortable face.

"Annie'll be too late," he observed, leaning from the carriage window.

"Yes, silly thing. Never mind. She said good-bye once. I'll say it again for you, and she can write."

He took off his cap and waved it as the train carried him off, and hung out waving it as long as he was within sight. "Good-bye," she shouted, and "Good luck!" and stood sturdily in the middle of the platform gazing after him. She did not take out a handkerchief; she waved, and kept waving, one of her rough hands, but when the train had gone so far that she could have been no more than an outline to the other's eye, her lips were quivering and tears streaming unheeded down her cheeks, and I turned away.

TO DODGE THE LIGHTNING.

A Metal Bed Is the Safest Place During a Storm.

The fear of being struck by lightning is both a very real and a very sensible fear says the Philadelphia Inquirer.

But lighting can be avoided like all other evils. It will strike in certain places and it will not strike in other places. There are reasons for its behavior in both cases, for nature never operates by chance.

A steam engine or a railroad coach is as safe as any place in the world as far as lightning is concerned. No one has ever been struck by lightning while he was aboard a train.

The business part of a city likewise is never struck by lightning. Neither are tall skyscrapers ever hit. It is a matter of record that insurance companies never have any losses from lightning striking any building with metallic sides and framework of iron and steel.

A steel battleship is also safe from the bolt from the clouds, as is a steel windmill tower. This is because every one of these objects is its own lightning rod and needs no further protection than that they can give themselves.

There is another list of things which lightning will surely strike. It will strike a country house or a house in the outskirts of a town. It likes to hit a barn, church, school-house, tree, stone or animal, especially if it is near a wire fence.

As for a house the safest place in a lightning storm is your iron or brass bed. It is very dangerous to stand near the bed because you are taller than the bed. The reason why you are safe when lying on it is that the bed head and foot extend above your head. The current will not leave the bed to pass through your body. The walls and the floor of the room may be ripped to pieces, but you will be safe as long as you lie still in your bed.

Feather beds offer no protection whatever from lightning unless they lie on a metal bed. If the bed is of wood and the spring are steel the wood of the bed may be split to pieces, but you will nevertheless remain unharmed.

During the day the safest place in a house is in the centre of a room, provided there is no stove near.

Contrary to popular opinion it makes no difference whether doors or windows are open or closed. Lightning can get in under any circumstances if it wants to.

"DEAD" SOLDIER REVIVED.

Surgeon Massages Man's Heart and Restores Its Action.

A wonderful case of restoring the dead to life has just come to light in the case of Lance-Corporal Mayes of Queen's Westminster, who had part of his right arm blow off by a shell in the fighting at Ypres says a London correspondent.

The injury was so bad that after the first aid dressings the limb had to be amputated. He came to England and was in a hospital in the Midlands for some time. A short time ago he recovered sufficiently to leave the hospital and came to London apparently quite well. But for some reason infection again appeared in the amputated arm and a further operation was deemed necessary to stop the danger of poisoning.

Corporal Mayes was put under an anaesthetic, but the heart collapsed and ceased to beat. The case seemed to be hopeless and the waiting relatives in a few minutes would have been informed of his death. But Dr. Lionel E. C. Norbury, the distinguished surgeon who handled the case, was not beaten. He made an incision in the side of the patient and inserting his hand and lifting the diaphragm, reached the heart and gently massaged the organ with his fingers. The heart responded to the action and began to beat again. The patient had been restored to life when all other means would have failed.

Never judge a man by his relatives instead of by his companions. Relatives are thrust upon him, but companions are usually selected by himself.

"Meat Takes Another Jump"—a familiar headline in your daily newspaper. But why worry about the cost of something you don't need? The most expensive foods are generally the least nutritious. In Summer health and strength come from a meatless diet. Two **Shredded Wheat Biscuits**, heated in the oven, covered with berries or other fruits and served with milk or cream, make a complete, satisfying, nourishing meal at a cost of five or six cents. All the meat of the whole wheat.

Made in Canada

THE BLIND MAN LEADS THE BLIND

SIR ARTHUR PEARSON IS DOING GREAT WORK.

Blind English Publisher Devoting His Life to Helping Sightless Soldiers.

I have seen them by the dozens, in London and in Paris, led by their friends or groping their own way about uncertainly—blinded victims of the war. I have seen them by the dozens and they are in London by hundreds, writes Mr. Edward Marshall.

In the tea room of the Piccadilly Hotel, London, which is the afternoon gathering place for officers, some of them alone, more of them with women friends and relatives, half a dozen groups are nearly always centred about some blinded youth.

Out at St. Dunstan's Home for Blinded Soldiers there is one really happy blind man, whose happiness may be said to have grown out of the great conflict.

Sir C. Arthur Pearson, world famous publisher, recently knighted, was blinded, as was America's great newspaper publisher, Joseph Pulitzer, by overwork. The fact that he is blind, however, only has been a vast gain fortune for the men who have come home sightless from the fighting.

He is a tall man, not over 45 or 46 as full of energy as he ever was, but with an expression upon his delicately chiselled face which is very different from that it wore when I knew him years ago and he was in the thick of great newspaper competition.

Fighting the Handicap.

He sits at a desk in what once was the drawing room of the great mansion, which he has changed into St. Dunstan's Home, and actively supervises the whole management of the great enterprise, devoting his odd moments to researching the literature of the world—through eyes other than his own, of course—for new ideas which may help him to help his fellow unfortunates.

It was impossible for me to mention the old gaiety to him, but he spoke of them himself apparently without regret, and then plunged at once into a discussion of the work which he is doing and the work he hopes to do for the blinded victims of this war.

"I have heard blindness called the greatest tragedy of the war," said he with that smile which was not in the least pathetic, really, but which continually seemed so to me, because of the memories of other days that crowded in my mind. "That is an exaggeration.

"Blindness is a great misfortune, but it isn't death and it isn't that thing which is worse than death. It's just a handicap." He smiled. "And you know the greatest joy of all is that which comes from getting on in spite of handicaps.

"Great advances have been made in the instruction of the blind. In the old days, and not in days so very remote at that, it was said that a blind man must given three years in which to learn a trade and become self-supporting. At St. Dunstan's we are turning out adepts in productive work in from ten to fifteen weeks.

"We can develop a fairly efficient blind typist in three months, and in six months make him very expert.

They Won't Lack Work.

"Many industries are open to the blind. Basket and mat making have their advantages, and there is cobbling. I myself am lost in wonder when I learn how expert some of our best pupils become at making, and at mending footgear.

"These blind cobblers we are turning out will have as much work as they can do without making any draft on public sympathy, although that will doubtless and should help. But they will be good workmen.

"When they have become expert we set them up in shops with signs saying: 'This shop is run by a blind soldier from St. Dunstan's.' They won't lack work.

"The accuracy of these blind workers is not less than wonderful, even to me, who have to train myself to many new endeavors.

"The important problem which we all are facing is what shall we do with the blind after we have trained them." A blind man capable of making two pounds a week easily might starve to death for lack of employment because of inability to go in search of it.

"The National Institute for the Blind, of which I am president, is to take up this work for them."

JUTLAND HAS A LONG HISTORY

SCENE OF THE RECENT GREAT NAVAL BATTLE

Germany Took Part of the Peninsula in Famous Seven Days' War.

Jutland, or, as the Danes call it, Jylland, which the recent naval battle has brought into such prominence, is well described as the continental portion of the kingdom of Denmark. Fifty years ago, before the famous Seven Days' War, which ultimately resulted in the loss of Schleswig-Holstein to Germany, the whole peninsula belonged to Denmark; but since then the southern portion has been German territory. The Cimbric peninsula of the ancient geographers, Jutland extends northward from Lubeck on one shore, and from the mouth of the Elbe on the other, for a distance of some 270 miles, ultimately tapering off to the promontory of the Skaw, which reaches out toward Sweden, between the Skagerrak and the Cattegat.

Mists Are Frequent.

Strictly speaking, of course, the northern portion of the peninsula is an island, unless the bridge thrown across the Liim fiord at Aalborg can be accounted a true connecting link. At Aalborg the fiord is narrow enough, but before it reaches the old cathedral city of northern Denmark, with its busy port and markets, the Liim fiord passes through many phases. From the point where the sweeping line of sand dunes is broken through by the North Sea at Thyborn, the fiord, as it spreads itself east, widens out into great lagoons, laps the shores of many islands, little and big, and creeps round many peninsulas. It narrows into a channel at Glyngore, then widens out into a great lake stretching fifty miles north and south, narrows again at Logstor, which is once more beyond, and so on to Aalborg, and through a narrow channel some thirty miles to the steel blue waters of the Cattegat. Thus is the water-way complete between sea and sea. It is of little value, however, as a through passage for shipping. In many places it is less than twelve feet deep, and, on the western side, the seaward banks of the lagoons are frequently broken away, and what channels there are through them are constantly shifting. The western coast of Jutland has but little that is hospitable to offer. Low and sandy and windswept, shallow waters are the rule everywhere, and the mists spoken of in the accounts of the recent great naval battle fought off its coasts are familiar enough to the dwellers on this hungry land which looks up on to the North Sea, as the Romans might have put it.

The Jutlanders.

The history of Jutland is, of course, the history of Denmark. It, no doubt, supplied its quota to the hordes of Northmen which, from 800 A.D. onwards, caused the name of the Dane to be a terror throughout northern Europe for nearly seven centuries. There were Jutlanders, no doubt, amongst the men who built the wicker bridge across the Liffey at Dublin, and who called the place Dublin, or Blackpool, and amongst those who caused Fingal to be called the county of Fionn Gall or the White Strangers. There would be Jutlanders, too, amongst the Danes around Canute, and so on through the greatness and obscurity of Danish history.

HISTORY OF SUGAR.

The Cane Was Apparently Used First In India.

Sugar, which we are being asked to economize, bears something of its history in its name, which is believed to derive, through various modifications the French sucre, Spanish azucar, and Arabic sukkar—from the Sanskirt, Sharkara. It was in India, apparently, that cane sugar in the dry, granulated state was first prepared. The date of the introduction of sugar to England is uncertain, but large quantities of Egyptian sugar were imported via Venice in the Middle Ages. In very early times the use of sugar appears to have been unknown. The sweet sap of the Indian reed seems to have been first cultivated in the country extending from Cochin-China to Bengal. Thence it was imported to Europe under the name of saccharum, and used in medicine. It was in the seventh century that the art of sugar-boiling was carried to China from India, but Egyptians taught the fortune, over £100,000, to her coachChinese sugar refining.

CANADIAN ORDER OF FORESTERS

37th Annual Meeting of the High Court—Over Five Hundred Delegates Present.

The 37th Annual Meeting of the Canadian Order of Foresters convened on Tuesday afternoon, the 20th of June, in the Masonic Hall, in the City of London, Ont., at 2 p.m. Delegates are in attendance from all parts of the Dominion, every province being represented.

The following officers of High Court were present at the opening session: J. A. Stewart, High Chief Ranger, Perth, Ont., in the chair; J. A. A. Brodeur, High Vice-Chief Ranger, Montreal, Que.; Robert Elliott, High Secretary, Brantford, Ont.; Dr. H. M. Stanley, Chairman of the Medical Board, Brantford, Ont.; W. G. Strong, Superintendent of Organization, Brantford, Ont.; W. L. Roberts, First High Auditor, Brantford, Ont.; J. F. Hong, Second High Auditor, Toronto, Ont.; W. A. Hollinrake, High Court Solicitor, Brantford, Ont., and A. R. Galpin, London, Ont.; F. H. Davidson, Winnipeg, Man.; A. R. Coffin, Truro, N.S.; A. E. Wright, Toronto, Ont.; Dr. E. W. Moles, Norwich, Ont., members of the executive committee.

In addition to the above, D. Creighton, Dist. H.C.R., Brandon, Man.; John Murray, Past Dist. H.C.R. Hamiota, Man., and D. E. McKinnon, District High Secretary, Winnipeg, Man., representatives from the District High Court for Manitoba, were present.

The annual reports of the different officers of this Order are of a very satisfactory nature, showing that the steady progress which has been its experience since its inception in 1879, was continued in the year 1915.

This order confines its business entirely to the Dominion of Canada, and notwithstanding the tremendous handicap imposed on the work of the society, as a result of the war, the year just closed shows splendid progress.

The increase in the Insurance Fund during the year amounted to $465,509.31. This is the largest sum added to the fund in any one year in the history of the Order. The standing of this Fund at the end of the year, after the payment of 692 Death Claims, amounting to $582,179.98 showed funds on hand of $2,295,868.32, the amount at the present time being $5,388,754.68. The yearly revenue derived from the investments of the Order now constitute a very substantial amount of the annual income. Interest earned on investments of Insurance funds during 1915 amounted to $251,435.61, and paid 42.45 per cent. of the total Death Claims on the Order.

In respect to the matter of investments, it is interesting to know that the Order confines the investment of its fund to Government Bonds and Municipal and School Debentures in the Provinces of Canada. During the last two years, with an exceptional market in such direction from the investors' point of view, the Executive Committee has been able to take very extensive advantage of the situation. The Order purchased $300,000.00 of War Bonds issued by the Dominion Government in the Fall of 1915.

The Sick and Funeral Benefit Fund shows a larger net increase than that experienced in any previous year in the history of the Order, the increase for the year being $53,308.81. Interest earned on investments of Sick and Funeral Benefit Funds (these investments being of a similar nature to those made with Insurance funds) amounted to $22,746.91, and after the payment of 7,472 Sick and Funeral Benefit Claims amounting to $194,921.95, the amount standing at the credit of this fund was $458,933.58; the fund at the present time standing at $462,639.95.

The General Fund is also in a satisfactory condition. Many special charges, connected with the war and the arrangement for carrying enlisted members hereafter referred to, have been arranged without any inconvenience to this fund.

In respect to membership, substantial progress was also made; the membership at the end of the year 1915 standing at 91,046.

Besides the ordinary benefits from its life insurance and sick and funeral benefit departments, special provision is made for assistance to those of its members suffering from tubercular trouble of any kind. A special grant is made extending over a period of six months, with a view to assisting to defray the cost of treatment in any of a number of sanitaria in Canada making a specialty of such cases, and the membership is urged to take advantage of such treatment in the incipient stages of the malady.

It is gratifying to note, after a perusal of the reports of all the officers, the far-reaching benefits that are being derived by the membership in the various directions in which this society endeavours to be of assistance to the individuals composing same. Since 1879, about eleven millions of dollars have been paid out in benefits by this society, and, in fact, the whole record of the Order is well worth the perusal of those who perhaps have been skeptical regarding the permanency and stability of fraternal insurance societies. These reports furnish evidence of careful management in the conduct of the Order's affairs, and reflect credit on its administration.

A point of general interest, as indicating proper selection of risks, is the death rate. This for 1915 was 6.60 in the thousand, but if we deduct the war claims paid, it would have been 6.20, and the average death rate since the incention of the Order, over a period of nearly 37 years is 6.31 per thousand.

In looking into the report of the superintendent on organization, we find he has been able to report the institution of thirty-four (34) new Courts, demonstrating that the Order continues to establish agencies as new fields for the prosecution of its business open up. Particular attention is evidently being paid to establishment of Subordinate Courts only in such places as offer a reasonable prospect of permanency.

The treatment that this Order has accorded to those of its members who have enlisted for overseas service has been most liberal. The insurance of members who were in the order prior to the 1st of August, 1914, and who have enlisted for overseas service, is kept in force without any increase in rates. In addition to this, for the first six months of the war, all insurance and sick and funeral benefit assessments of such members were paid out of the General Fund of High Court. On the 1st of February, 1916, this policy was slightly changed, and, at the present time, where a member enlists for overseas service he pays his insurance assessments at the ordinary rates, so long as he remains in Canada. Immediately he leaves Canada for overseas, he is relieved of all insurance premiums or assessments, providing he was in Order prior to the declaration of war. At the present time there are about 2,000 members of the Canadian Order of Foresters actually overseas. This represents an insurance of $2,000,000, which is being carried by the members in Canada for the benefit of those who are serving the Empire, and neither the members themselves nor their beneficiaries, pay one cent for this protection. So far, notice has been received of the death in active service of more than 100 members. This means more than $100,000 of war insurance paid by the Order.

As usual on such occasions a very considerable amount of business awaits the attention of the delegates, and it is expected that the session will probably occupy their attention till the 24th instant.

WHY OF ABBREVIATIONS.

"Oz" in Viz. and Oz. Originally Was Merely an Ancient Sign.

Viz., oz., cwt., dwt., £, s. d.

Do you know why we write these everyday signs and what their origins are? asked London Answers. Viz, is derived from the first two letters of the Latin word "videlicet," meaning "namely." The z is a corruption of an ancient sign something like a 7 that in the middle ages was always placed at the end of an abbreviated word to mark its incompletion.

In course of time this sign became z.

The same applies to oz., our abbreviation for ounce.

The letters lb., standing for pounds in weight, are the first and third letters of the Latin word "libra."—Cwt. (hundredweight) and dwt. (pennyweight) are also abbreviations of Latin words. The c in the Latin numeral for a hundred; the d the initial letter of denarius (penny), and the wt. is short for the word weight.

The £ s. d. are the first letters of the Latin words "libræ," "solidi" and "denarii," meaning pounds, shillings and pence.

Too many men want to run the country instead of attending to their own knitting.

After the Accident

BOY: "Great Scott! Mister, what ball are ye usin'?"—Judge, New York.

PIGEONS EMPLOYED AS SPIES.

Many Are Used by the French and German Armies.

All the nations at present fighting use carrier pigeons, not only for carrying messages, but also for taking photographs. In the equipment of all the German and French army corps are to be found a number of wicker panniers containing pigeons, special men being told off to look after the birds.

The messages which these birds carry are written on fine tissue paper, which is generally rolled round the leg and fastened there by means of a piece of silk or small rubber band.

To show how useful the French and German authorities regard these pigeons, it has only to be stated that in France no fewer than 15,000 are reserved for Government use, and 8000, according to official statistics, in Germany.

British authorities, too, realize their usefulness—and danger—and have made it illegal for any German or other alien to possess carrier pigeons during the war, for undoubtedly many messages from spies, especially during the early days of the war, were sent to Germany by this means. These messages of from 200 to 500 words can easily be carried from the East coast to parts of Germany in a day.

During the siege of Paris in 1870, when 360th birds were sent out of the doomed city, one bird succeeded in carrying to the outside world an one trip no fewer than 40,000 messages.

This extraordinary feat was accomplished by means of microphotography, the messages being first printed in ordinary type and then photographed. The photographs were reduced many hundred times on to films of collodion, each of which, about two inches square, contained 40,000 words. Sixteen of these films rolled up in a quill weighed only one-twenty-fifth part of an ounce.

The big apples would not stay on the top of the measure if there were no little ones below to hold them up.

We Handle All the Good Things You See Advertised in the Big Magazines.

THIS store is headquarters. You will always find here everything you would expect to find in a similar store—and many things more.

We specialize on articles of genuine merit. Articles we have tested and tried ourselves and we can recommend and indorse.

You will find here all of the good—the best—the pick—of the standard household articles advertised in magazines.

We add our own guarantee to that of the manufacturer's.

We call your especial attention to the O-Cedar Polish Mop, the greatest boon to cleaner and better housekeeping we know of.

With it you can dust, clean and polish a hardwood floor without getting down on your hands and knees. You can dust the tops of doors, the molding, the tops of high furniture without standing on chairs. You can dust and clean the stair steps and banisters in half the time it usually takes.

You can dust under the rug, and under heavy furniture without moving it, and so on throughout the house—wherever there is dusting to do. You can do it quicker, easier and better with the O-Cedar Polish Mop.

Unlike other dusting mops the O-Cedar Polish Mop can be washed when soiled, and then renewed by adding a few drops of O-Cedar Polish.

We are so confident that you will be delighted with the O-Cedar Polish Mop that we will deliver one to your home on two days' trial. If it is not satisfactory in every respect we do not expect you to keep it, and will instantly return your money. The price of the O-Cedar Polish Mop, complete, is $1.50. Let us send you one on trial.

GLAMIS

Mr Peacock and family motored from Meaford and spent a few days with Mrs Peacock's parents, Mr and Mrs Neil McFarlane.

Mr John McFarlane, of Welland, was up for a few days to visit his parents.

Messrs Allan and Peter McKinnon, from the west, came home to see their mother who is seriously ill. Allan returned on Monday but Peter remained behind.

Mr Douglas McKay, who left Glamis three years ago just a boy, gave his friends a call last week. Douglas wears the khaki now, having enlisted with the 160th Bruce Batt, where his brother Wilfred is lieutenant.

Mrs Reith and daughter Louise have returned from Toronto.

Mr and Mrs Rolston and family, of Owen Sound, also Mr and Mrs Jackson, of Markdale, spent a few days with the latter's daughter, Mrs R J Nesbitt.

Mrs Kirktown and son Alex, also Messrs John and Alex McKinnet were called down to Holland on account of the death of their mother, Mrs McKinnet.

Mr Geo Ferris, of Ripley, and Miss Fowler were visitors with Mrs Woodstock.

Mr and Mrs DeMille and family were in Brantford attending camp meetings. Mr Jos Purdy took the services a week ago Sunday.

Miss B Flaws, of Rapid City, Man, and Miss McArthur, of Brussels, spent a few days at J C McIntyre's.

Miss Minnie McNally, of Lauzer, Mich, and Miss Nora, of Owen Sound, are home for the holidays.

Mrs Francis and two daughters, of Toronto, spent two weeks at Mr Angus Campbell's and Mr Murdoch McKay's.

Mrs Robert McFadyen, of Forgotio, spent a few days with friends here.

Miss Katie Urquhart, of Tiverton, spent a few days with her friend, Miss Flossie McLennan.

Mr and Mrs Finlayson, of Port Elgin, called around on Tuesday.

Mr Finlay McKinnon, of Portage la Prairie, made his friends on the 10th a short visit last week.

Mrs Jas McLennan has gone to Port Huron and Detroit where she will visit friends.

Mr and Mrs McKeeman, Clyde and Miss Lizzie Campbell motored to Beamsville on Friday last.

The annual union Sunday school picnic from here and from the Congregational S S on the 10th of Kincardine was held at the lake on Tuesday, July 4th. It was an ideal day and all had a good time.

Misses Vera and Verna Harrison, who gave the musical part of the programme in the Baptist church on the 30th, spent a few days at the home of their grandparents, Mr and Mrs J C McIntyre, before leaving for their home in Calgary.

Mr and Mrs Jevous, of Toronto, are visiting the former's sister, Mrs Reith, at the manse.

Mrs Gunn has gone to the other side to visit friends.

Miss Annie Currie is spending a few days with friends in Kincardine.

Mrs Mathewson and daughters, from Calumet, Mich, are visiting at Mr Gunn's and Mr Neil McKay's.

Mr Barker, of Port Elgin, spent Monday night in Glamis on his way to Toronto to train for overseas.

A number of friends of Pte Hector McLean, of Winnipeg, a former Glamis boy who was here bidding goodbye to his relatives and friends before going overseas, met at the home of Mr and Mrs Jas Thompson, 2nd Bruce, where a pleasant evening was spent. The following address was read by Mr Grant McGregor, the presentation being made by Miss Susie Thompson.

To Pte Hector McLean.

Dear Hector, We have assembled here to-night to spend a few social hours with you as our appreciation of you before your leaving for overseas service.

It is with mingled feelings of pride and regret that we learned about three ago of your enlistment.

Your task will not be an easy one, but when you are so called upon to endure the hardships and sufferings incidents to military campaign, we believe you will measure up to whatever occasion may arise and do your duty nobly and well. During the years it has been our privilege to know you we have seen ample proof of your honest and upright character and feel sure you will acquit yourself in a way that is honorable in your soldier life.

We hope when the conflict is over, the victory is won, that the kind Father that guides us, may permit you to return in health to your many friends.

We therefore ask you to accept this ring which shall be to you a remembrance of your friends and acquaintances around Glamis.

Signed on behalf of your many friends.

RICHARD McGREGOR,
JAMES THOMPSON,
JOHN CURRIE

Pte McLean, who was taken by surprise, replied briefly, expressing his feeling of gratitude and appreciation for the gift and good wishes of his many friends.

After lunch all joined hands in singing "Auld Lang Syne."

EDEN GROVE

Mr Alex McLean of Paisley was the guest of Mrs Tennant this week.

Mr Smith of Chesley spent the week end at the home of Mr and Mrs Wm Fair

June has passed and our young maidens are about all still with us.

Miss Mattie Desmond, graduate nurse, Toronto, enjoyed the holiday at her home here.

Messrs Wm Todd and Richard Bailey have accepted positions on the G T R at Palmerston,

Sergt Gordon Connell, London, was a welcome guest at the home of Mr and Mrs H Pearson last week.

The teacher, pupils and friends of our Public School held their annual picnic in the school grounds where a most enjoyable time was spent in games, etc.

Miss Gertude O'Reilly, graduate nurse of Guelph, spent a pleasant week end at her home here.

School has closed and the kids are now enjoying themselves picking potato bugs, etc.

Miss Blanch Powell, teacher, has gone to her home in Tara for the vacation.

Mrs D Gregg visited Paisley friends.

This is certainly a cheap place to have a girl. No ice cream in summer and no oyster stews in winter.

Mr and Mrs Burns, Mr Root and Miss Curran, of Palmerston, were guests of Mr and Mrs Rosseau at the Simcoe House over the holiday.

Mr Olive Seiler is at present working at Lovat.

Mr and Mrs Campbell of Leamington are spending their vacation at the home of Mrs Emery.

No, Malinda, it wasn't the hogs that were making all the noise. It was the buyers. You could tell them, as they had straw hats on.

Mr Stevens and Miss Crawford, of Paris, were week end visitors at the home of Mr and Mrs Todd.

The garden party given under the auspices of the Methodist Church was a decided success. Mr Blue's beautiful lawn was nicely decorated for the occasion. The ladies providing the supper excelled themselves. Each selection on the program was well rendered and heartily enjoyed by the large gathering.

Mr and Mrs Ross of Wingham renewed old aquaintances in town Sunday.

Mr Sam Salasky spent the holiday with Hanover friends.

Jim Scott met with the misfortune of having his hand caught in a machine last week, requiring several stitches to close up the wound.

Hope this hot weather is over by the 16th Sept.

Mr Wm Fair of Palmerston Sunday at home.

Mr Thos Desmond, jr, has accepted a position at Chesley.

Rev Mr Almack, the Methodist minister, preached his inaugural sermon to his new congregation here Sunday morning, which was attentively listened to by a large and appreciative audience.

Mr George Child of Kincardine spent the holiday at his home.

Quite a number of our local sports took in Port Elgin on Dominion Day and had a good time.

Rev Mr Litt of Kitchener, presiding Elder of the Evangelical Church, called on Mr Reynolds Monday.

Messrs Percy Fair and Harold Scott of Palmerston enjoyed a week's holiday at their home here.

Ptes George and Wm. Bluhm and A McCaw from London spent the week end at their homes.

Road work at the order of the day.

The straw hats and calico are having their outing at present.

Children Cry
FOR FLETCHER'S
CASTORIA

WILLOW CREEK

Mr and Mrs Norman Bean and two children from Listowel, also Dr and Mrs Bean of Chesley and his father, visited at F Schnittker's on July 1st and 2nd.

We sometimes hear of a car putting a horse in the ditch. Here we have a case of a horse putting a car in the ditch.

The U B Sunday School had a fine day for their picnic, and a pleasant time was enjoyed.

The Evangelical S S had a large crowd at their picnic. The day was spent in playing games and paddling in the water.

Mr Hugh Hunter had a very successful barn raising on Friday last. Two brothers were captains —William and Fred Schnittker. The latter led the winning side.

The Evangelical church was filled for the Sunday school service on Sunday last, when a special programme was rendered by the scholars. The church was nicely decorated with flowers for the occasion.

SECOND CON ELDERSLIE

Jas. Vancine is visiting friends at Manitoulin Island.

Pte. Jack Walks, who has been taking the signallers' course at London, spent a few days last week at his home here.

Miss Green is spending a month with Toronto friends, and also attended the summer school there.

Mrs Tully spent last week visiting friends on this line.

Misses Campbell, Mrs A Young, Misses Jessie and Florence, spent a part of last week visiting in London. Miss Campbell remained in the city.

Miss Vina Jackson is home from Hamilton on a visit.

A number from this concession attended the picnic held in McDermid's woods last week, and enjoyed a pleasant afternoon.

J B Allen visited friends in Saugeen last week and took in the sports at Port Elgin on the 1st.

Mrs W J Allen and family, Mrs Vanclse and Master Allen attended a silver wedding party of Rev and Mrs F Brown at Keady on Friday last.

Miss Jessie Lillico, of Toronto, visited friends here recently.

Hugh Watt has the contract of rebuilding the bridge at 25th sideroad.

Blakeway Bros are working on the bridge at Mrs D Allen's, and Tommie Patterson does not need to sing "Padlle My Own Canoe" any longer, as his bridge is finished.

Wm Ward, of Owen Sound, was calling on friends here last week.

Haying operations have commenced, and farmers are pleased with the good heavy crop.

Miss Mabel Lillico is home from Regina for vacation.

Arch Dawson had a two-days gravel bee this week, preparatory to re-building his dam with cement.

Mrs Wright, of Waskada, Man., is down on a two months' visit with her friends and relatives in this community.

Mrs W J Allen and Miss Edna spent Saturday with friends in Owen Sound.

Mr J Bell and Miss Mary Bell, Bruce Tp, called on friends here last week.

Sam Patterson has joined the I O L and intends to march at Tara on the 12th.

Misses Catherine and Elizabeth Allen are spending a few days with Stayner friends.

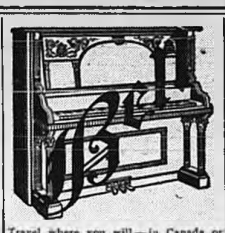
CANTIRE

Haying is now in full swing. The weather is at present all that can be desired, and the crop is a beautiful one. The great lack is sufficient help.

The home of Mr Neil Reid has been quarantined for measles. It appears that nearly all the Entrance candidates who wrote at Chesley have contracted the same malady.

Dr and Mrs Bell and little daughter, of Milan, Mich., paid a visit to the home of the Dr.'s mother and brothers here. They returned on Monday.

Miss Keith, who has taught for the past three years at Dunkeld, has been engaged by the trustees of S S No 1 to succeed Miss Oswald, who resigned at end of term



Masons are putting up the brickwork of Mrs W A Blue's new house. When completed this will add another fine residence to Big Range St.

This community was saddened on Friday last on learning that another of its old and respected pioneers, in the person of Mr Sol McDonald, had received the call to come up higher, death being due to a paralytic stroke. Mr McDonald, who was 75 years of age, was born near Napanee, Ont. When a young man he came west and worked for some years near Belmore, Huron Co. Fifty years ago he came to Elderslie, purchasing lot 18, con 4, where he has since resided. About this time he was married to Katherine Boyd, who survives him. The subject of our sketch was a man of powerful frame, and by dint of hard labor the stumps and knolls on his farm are made to disappear, and in their place one sees a fine farm well built on. In later years he was able to join field to field, and purchased lot 24, con 5, now owned by his son John. Mr McDonald was a good neighbor, a sociable man who was possessed of a fund of wit, with whom it was always a pleasure to have a chat. In religion he was a Presbyterian, and in politics a Liberal. The funeral on Monday was largely attended, the service conducted by Rev Mr Hills of Chesley. Interment was made in St. Andrews cemetery. Besides the sorrowing wife, he is survived by a family of seven—Mrs W J Reany, of Saugeen; Mrs Jas Doherty, of Weyburn, Sask.; Mrs John Black, Angus and Alexander, in Chesley; John, at lot 23, and Hugh, on the homestead.

The sympathy of the community is extended to those bereaved by the death of Mrs Geo Luttrell. She was a tender wife and devoted mother. Having lived among us previous to her marriage she was well and favorably known here.

THAT ELDERSLIE PICNIC

A monster Sunday School picnic was held in John McDermid's bush on Tuesday afternoon. Nine Sunday Schools took part in the picnic and there were fully 800 people present. A short programme was run off consisting of speeches by the chairman (Rev Mr Howatt), Reeve Chas. Calder McKechnie of Walkerton, and Revs W. H Langton, Neil son of Paisley and Barker of Port Elgin. The tea was food enough to fill a man and plenty tea and lemonade to wash it down. A programme of races created considerable enthusiasm. The spot is an ideal one in the edge of a second growth maple bush on an elevation from which can be discerned the steeple of the Lutheran church on the 9th con Sullivan. The weather man had also ordered an ideal day. The oldest man at the gathering was John McDermid on whose property the picnic was held. Elderslie's grand old man will be 86 next January. Next in order are Wm Harris age 83, Ex-Reeve Geo Thompson 80 and Donald Darroch 81. It looks as though the union picnic was such a great success that it will be continued. The first picnic in Elderslie was held on July 1st, 1867.—Enterprise.

Travel where you will—in Canada or abroad—you will find that

BELL PIANOS AND ORGANS

are leaders in the realm of music.

MOUNT HOPE

Everyone who can leave the haying will be in Tara for the Glorious Twelfth.

Misses Vina Peacock, Lydia Underwood and Jennie George attended the summer school at Wiarton.

A great deal of sympathy has been expressed for Mr and Mrs T R Monkman in the loss they have sustained by the death of their soldier son, Norman, who was killed on the battlefields of France early in June. On Sunday, July 2nd, a fitting and impressive memorial service was held in the church here, which was conducted by Rev Ockley, the pastor.

Mount Hope garden party on Tuesday evening, July 4th, at Mr Calvin Welsh's was a great success, as it invariably has been in other years. One of the attractions was a baseball match between Dunblane and Paisley. The rural fellows had the game about cinched up to the last innings, the score then being 4—1 in their favor. At that stage the town chaps developed a batting streak and tallied a whole quartette of runs, winning by 5 to 4. Proceeds of garden party amounted to about $225.

Mr and Mrs Milton Wark have been up from Windsor visiting their friends and renewing acquaintance ships.

Miss Lillie Monkman has gone to visit her brother Lorne at Ovens Alberta.

GRESHAM

Mrs M Rae, of Vancouver, B C, who has been spending a year at her old home here and visiting her numerous friends and relatives, left last week on her way home. She intends visiting in Toronto, Winnipeg and other points. Before leaving here her many friends held a picnic at the lake, given in her honor, which was largely attended. We all wish her a safe return to her home at Vancouver.

Our teacher, Miss Nixon, has resigned, much to the regret of parents and pupils. We understand Miss Gertie Megraw has been engaged as the new teacher.

Hay and strawberry harvesting are the main industries here at present.

Mr L McLean Young and sister Jessie visited in Glamis last week.

Mr and Mrs O'Russell, of Kincardine Tp, visited at Mr Geo Fullerton's last week.

Mr Wm Thornburn, B A, L L D, of Winnipeg, visited his mother on the 10th con and other members of the family. Mr Thornburn was a delegate to the Bar Association held at Toronto.

Mrs Jas R Aitchison, of Clifford, is holidaying at the home of her sister, Mrs A Wood.

Mr John Houston, of Winnipeg, called on friends here last week, accompanied by Mrs McKay, of Lovat.

CASTORIA

Guaranteed Clothes!

You get a complete and absolute guarantee when you buy made-to-measure clothes here—the guarantee means what it says—you're the judge.

You'll find that we don't ask you why the clothes are unsatisfactory or how—if you say they're not right, we don't argue about the matter.

That sort of a guarantee, added to the very evident advantage of wearing custom-tailored clothes, makes them all the wiser choices.

I. S. CRUICKSHANK

Champion Fife and Drum Band

Joe and George Heath of Paisley were awarded first prize for the music they put on for the fife and drum competition at Palmerston on 12th July. Joe produced the sweet notes on the fife, while George made timely hits on the drumhead. Over fifty lodges were in line for the walk, and the crowd was estimated at nearly 10,000 people. About 55 Orangemen went from Paisley.

Soldiers on Harvest Leave

Nearly all the Paisley recruits for the 160th arrived here on Monday evening to help in the haying and harvest. About 350 of the men left London by special train that day and over 300 had gone before, so that the Battalion is very slim at present. As our farmers are overwhelmed with the volume of work this season, the khaki boys are doubly welcome home, as their strong arms will lighten the field labor for those who are staying at home.

—We have a big assortment of ladies' wash shirts, middies and other hot weather wearables. Ballachey, Laidlaw & Co.

—FOR SALE—The McGill properties in town, house and business place. Apply to J M Hopper, executor, or D Forrester, Barrister.

—Misses Thompson have their dress-making rooms at their home on Ross St, where they will be pleased to meet their old customers also any new ones. Bruce phone.

—No trouble to drop in to our new store in the old woolen mills and examine our stock of new goods at right prices. Fit and workmanship guaranteed. G B Irwin, tailor.

—Five Roses, Rainbow, Purity, Cream of the West, and Stock's high-grade flours, also Bran and Shorts, Blatchford's Sugar and Flax, Caldwell's Molasses Meal, and full line of Poultry Foods and Tonics. Always in the market for coarse grains. E. G. ECKEL.

—Homeseekers' excursions, all rail, every Tuesday, and via boat Owen Sound every Wednesday up to end of October, to all points in Canadian north-west. For tickets, maps and all information call at the old reliable C.P.R. agency, McFarlane's old stand, Paisley.

—We now have in use in our dairy a Champion Cooler, with which we cool all milk to 40 degrees before bottling. This kills all animal heat quickly and aerates all milk thus improving the flavor and keeping quantities. We deliver twice a day during the summer. J. Milne, Paisley Dairy.

Women's Patriotic League

The regular monthly meeting of the Women's Patriotic League will be held in Putnam's hall on Friday afternoon at 3 o'clock.

Enlisted in the Cycle Corps

James Brown, son of Mr and Mrs Geo Brown, 8th Bruce, and a student at Paisley Continuation School, went to Niagara a few days ago, and enrolled with the overseas cycle corps.

Successful Entrance Class

The fourteen entrance pupils of Paisley school who have been in the class for the term all passed the recent examination. Nothing more satisfactory or gratifying could well be looked for. The class was under the tuition of Miss Fisher until February, and since that Mr Newton had them in charge. As only about 35 per cent of the candidates in Toronto city schools were successful, it is somewhat remarkable that a 100 per cent score should be made by a village school.

—Miss Blanche Gibson is home from London for vacation.

—Mr and Mrs W H Davison are away on a visit to friends in Michigan.

—Miss McBeath, of Woodstock, is visiting friends in Paisley and Elderslie.

—Mrs. Aspland, of Goldfields, Nevada, is visiting her mother, Mrs. McNiven.

—Miss Wm Buscillen, of St Catherines, was visiting her parents, Mr and Mrs W Teeple.

—Edna and Wilfred Thompson, of Lockerby, were visiting friends at Arran Lake over Sunday.

—Mr and Mrs Kedean, of Detroit, are visiting the latter's brother, Mr J H Glover, at the Balmoral.

—Artilleryman W. Johnston was over from Pettawawa for Sunday visiting his parents, con. A, Elderslie.

—Miss Bessie Barrie is home from Toronto for two weeks before leaving on a two months' visit to the west.

—Mrs. McCallum, of St. Thomas, with her son and daughter, are visitors at the home of her sister, Mrs. S. Ferguson.

—Mr. and Mrs. Henry Stevenson of Detroit, were visitors at the home of his sister, Mrs. Jas. Brown, Goldie St., over Sunday.

—Mr Robt Colmer, of 6th Bruce, who met with an accident about a month ago, is able to be around again with the aid of a crutch.

—Prof. Simpson, of Toronto University, accompanied by Mrs Simpson and son, are spending holidays at Mr J J Bradley's, Elderslie.

—Mr and Mrs Sidney Crighton and child, Mrs Wm Crighton and child, of Toronto, are visitors at the Methodist parsonage.

—Mrs E J McIntyre, Mrs Hearn and son of Toronto, Mrs Fellows and Miss Carelli, of Winnipeg, are guests of Mrs H B Putnam.

—Mrs. J. R. Craig is home from Toronto where she was in the hospital for some time, having undergone an operation for an internal trouble.

—Mr and Mrs Alex Wallace, of Swift Current, Sask., Mrs A Swanston, of Walkerton, and Mrs J Armstrong, of Brampton, motored up to W G Ritchie's on Monday.

—William Stanley is down from Edmonton on a visit to his parents at the Central. He came down on a trip to Buffalo with the Shriners and newsboys of Edmonton.

—The McGarry House, Lucknow, has been closed up after being for more than sixty years a place of accommodation for the public. That town, one time served by six hotels, now has but one.

—Mrs. N. McGillivray, Mr. Dan McGillivray, Miss Beth McGillivray, of 12th Bruce, and Mr. J. Logie, of Paisley, motored over to Durham on Monday to attend the funeral of the late Donald McFadyen.

—R J Nelson, V.S., of Greenock, Wm Grant and J W Grant, of Ebenezer, are three more who have recently purchased motor cars. Among the farmers the family automobile will soon be as much used as the three-seated democrat was between thirty and forty years ago.

—Pte. Norman McArthur, of Edmonton, a nephew of Mrs. Arch Campbell, of Sangeen, is among the Canadian soldiers killed in France. Pte McArthur was a third year student in arts at the University, and went overseas in the second University Corps in May, 1915. He was in the trenches in France with the Princess Patricias since Sept., 1915. He was the second son of the late Duncan McArthur, of Edmonton, who formerly lived on the townline Sangeen and Bruce.

As we mentioned in a recent issue, local magistrates dismissed a complaint against J. H. Glover for having the pool room blinds down, but ruled that he should pay the costs. There being a difference of opinion among the magistrates—J. C. Gibson, S. Ballachey and T. H. George—as to the legality of this point, it was referred to Co. Attorney Dixon, who advised that the costs could not be assessed upon defendant where the charge is dismissed, so the costs in this case must be paid by the prosecution.

—A recent recruit for the 77th Field Battery at Regina is Councillor T. M. Bryce, of Estevan, Sask., a son of Mr. and Mrs. Arch. Bryce, of Sangeen. By the local paper's reference to his enlistment we note that councillor Bryce has devoted his time and energies to the town's municipal problems, and become a most valued and influential member of the council. He is also referred to as a probable independent candidate for the Legislature at the next election, the electors of the different political stripes being inclined to eschew partyism and elect a capable, independent thinking man like T. M. Bryce, with a view to having him fill the position of provincial treasurer. This bright young man from Bruce is evidently slated for high public service.

INSECTICIDES!

Church's Bug Finish, Bug Death, Paris Green, Arsenate of Lead, Hellebore, Insect Powder, Hess' Instant Louse Killer, Hess Dip and Disinfectant for flies, Eureka Fly Killer, Zenoleum, pheno, Chloro.

PAISLEY

Builder, Contractor and Cement Worker

Brick or cement buildings erected, brick work, cement work and plastering contracts taken.

Cement Supplies Furnished

Building Blocks, Window and Door Sills, Culvert Tile, Well Curbing, Lawn Rollers, Lawn Vases, Verandah Columns, Balusters and other fancy Cement Products.

Building Material

Cement, Lime, Lath, Shingles, Glazed Sewer Pipe and Flue Lining, Mortar Color, etc.

Store Closes at 6 p.m., Except Wednesdays and Saturdays

Specials for the House

Blinds

Best quality hand oiled opaque Blinds, with different width lace insertions. Colors—white, cream, green. Regular 75c, for..... 49c

Curtain Scrims

Extra fine quality Curtain Scrim, white, ecru and Arab shades, with neat colored border. Regular 30c and 40c, for ..... 12½c and 17c

Curtains

50 pair fine Nottingham Lace Curtains, 2¾ yds. long and 40 in. wide, neat patterns. Regular $1.75 for 98c

New Ripple Crepe

27 in. wide, in floral effects, also plain colorings. This is a line for which there has been so much enquiry. Reg. 20c & 25c for.. 12½c

Quilts

Extra large double-bed size, fine white quilts, neat designs, regular $2.50, for $1.65

Oilcloth

Extra good heavy quality, 8 ft., 4 in. and 4 ft., 4 in. wide, regular 50c yd., for 32c

Seersucker Crepe

In stripe and plain, very dainty patterns, floral and stripes, very suitable for serviceable morning dresses. Reg. 25c and 35c for 25c

36 in. White Poplin

22c. per Yard

3 pcs. White Poplin, full 36 in. wide, good medium weight, suitable for skirts, children's middies, dresses, etc. Worth 30c. Special 22c

Saturday we expect to have Canadian Raspberries (Black and Red). These will be lowest possible price. Watermelons, Bananas and Oranges.

L. C. SPOFFORD

Highest Prices for Produce :: Both 'Phones

—Mr. Herb McDonald was in town renewing acquaintances with old school mates last week, and is visiting at the home of his aunt, Mrs. Wm. Rose, 8th Bruce. He has been taking a college course preparing for osteopathic practice in Illinois. Some time ago he enlisted with the A.M.C. at Brandon Camp, but had an attack of blood poisoning, following which he was not able to resume army work, and was given his discharge.

Reports of Casualties

We shall esteem it a favor if next-of-kin of soldiers at the front, who previously resided in Paisley or district will notify The Advocate first hand in the event of their names being officially recorded among the casualties, as some conflicting statements have been circulated concerning former residents who have answered their country's call. If possible, state nature of casualty.

Municipal Haying

The town is getting a hair-cut or hay-cut. A mowing machine is making a round of the streets clipping off the luxuriant growth of weeds and grass that was making our village look like a fuzzy-wuzzy wild place. The improvement is quite noticeable where the clippers have been applied. Now that the council has come up to the times in this respect, it will be up to the property owners to make the street fronts more accessible for the machines in future seasons. All knolls or hollows should be levelled up or down, old fences or rubbish piles removed, so that a clean sweep can be made on next cut.

Honorary Chaplain of 160th

The 160th Battalion has a chaplain, but Rev. Dr. R. Johnston, of Montreal, an old Bruce boy, has been honored by being appointed honorary chaplain of the Bruce Battalion, with the rank of lieutenant-colonel.

Walkerton Man Killed in Action

Reginald McCarter, of Walkerton, was fatally wounded while on the firing line in France on June 27th. He enlisted with the 34th Battalion, and had only been in France a few weeks. He was a son of Mr and Mrs A. McCarter, and was 21 years of age. His only brother is in the 160th.

The Picnic to Southampton

We omitted last week to mention the Sunday school picnic and excursion to Southampton on July 6th. The special train carried 550 passengers from here, also a number from Turner's and Port Elgin. It was hand picked weather for the occasion, and everybody enjoyed the outing.

Letters From the Front

The Advocate is always anxious to publish interesting items contained in letters from the front by local people, and all letters placed in our care for this purpose will be taken due care of and returned to the owners. We do not publish these letters complete, but make mention of interesting extracts which are contained in nearly every letter from the firing line. This matter makes interesting and appreciative reading.

The Housewife's Corner

Dainty Dishes.

Beetroot Salad.—Slices of cold hard-boiled eggs, beetroot and cold potatoes form the mixture. Season with salt and pepper and add a sauce made of whipped cream to which one tablespoonful of vinegar has been whipped in gradually. Garnish with parsley.

Strawberry Sherbet.—Here is a cooling drink for summer and it is quickly prepared. Use a tablespoonful of good cider vinegar, sugar to taste, and a handful of crushed strawberries. Have a glassful of water and a little cracked ice at hand. Pour the strawberry mixture into this. The vinegar gives the drink a delightful tang.

Strawberry Parfait.—Crush one quart strawberries through sieve, cook one cupful sugar, one-half cupful water until in soft-ball stage. Whip three egg whites stiff. Pour hot syrup over berry pulp and cook thick. Then pour gradually over egg whites, whipping constantly. Cool. Then fold in one pint whipped cream, and freeze same as ice cream.

Rice Jelly.—Boil a pound of rice in three and a half pints of water. When ready beat through a sieve and it then should be, when cold, a solid clear jelly. It may be warmed up with milk or cream, but a nice way is to mix milk or cream while the jelly is hot, then when nearly cool fill small molds large enough for each person. Sugar and sliced lemons may be served with the dish.

Fig Pudding.—A quarter of a pound of flour and a quarter of a pound of breadcrumbs mixed together, a quarter of a pound of suet chopped very fine, a quarter of a pound of moist sugar, six ounces of figs cut into small pieces, and a teaspoonful of baking powder. Mix these ingredients very thoroughly with a little milk and two well-beaten eggs; if no eggs are at hand a little more milk will be required. Put the mixture into a greased mold, tie it over and give it three hours' boiling.

Grape Conserve.—One pound sugar, one pound grapes, one cup walnut meats, one cup raisins. Juice of two oranges. Wash the grapes and remove the pulp. Put the pulp in a preserving kettle and cook for a few minutes, and then remove the seeds by putting them through a sieve. Put the skins through a coarse meat grinder, mix with the pulp and sugar, add raisins thoroughly washed and halved. Cook until nearly thick and then add chopped nuts. When the fruit jells pour into sterilized glasses and seal.

Cucumbers in Winter.—Buy as many cucumbers as desired now, peel and slice as for immediate use. Soak in salted water over night. Drain and put in glass jars same as those used for preserving fruit, covering with cold vinegar. Stir with a fork, filling even with the edge, and screw the lid on tight. Use two rubbers instead of one to keep them airtight. These will keep perfectly, retain their shape and color and be just as delicious as the fresh ones. If they taste too much of vinegar when they are used in the winter, drain the liquid off and let the cucumbers remain overnight in water.

Orange Marmalade.—Take four large oranges and one large lemon; wash the fruit and wipe dry; then cut into very thin slices, discarding the ends and the seeds from the lemon and the seeds from the oranges. Put the fruit in a large, porcelain-lined saucepan and add eight cups of water. Keep in a cool place for twenty-four hours. Then boil gently until the peel is very tender. Measure the fruit, add one cup of sugar to each cup of fruit, less one. (That is, if there are six cups of fruit, add five cups of sugar.) Boil briskly for twenty-five minutes, remove from stove, fill in glasses and when cold cover with paraffin and seal. This marmalade is especially made from oranges in the spring, though it can be made at any other time of the year. It is quite inexpensive. The quantity given here will make six or seven glasses. It will jell beautifully and is as pretty as it is appetizing.

Strawberry Preserves.—This very novel recipe for strawberry preserves is invaluable. I have never seen it in print. All my friends are delighted with it. It's so easy, and so sure. When finished the berries are a translucent rich red and are almost as large as before they were cooked. The flavor is incomparable. Put two and one-half quarts of sugar in a kettle with one pint of water and boil until sugar is well melted. Then add two heaping quarts of strawberries and boil from seventeen to twenty minutes. Don't stir, just shake the kettle, and skim. When done remove from fire, pour into pans and shake occasionally till cold. It cooks better in small vessels. The shaking is the secret of success. It causes the berries to absorb the syrup and remain plump and whole. Can when when cold. Cover with paraffin. The preserves may be put in small jars or glasses. Never cook more than two quarts at once. Once tried, always a favorite recipe.

Select Good Food.

At all times we should be careful to select good, fresh food, unless we want our household to be in danger of ptomaine poisoning; but in hot weather we must redouble our vigilance.

It is most important that fish should be fresh and you will know that it is if the eyes are prominent and full and the pupils dark. This, however, is not an infallible test, as the eyes become gray and shrunken long before the fish is unfit for food.

The gills should be red, not gray, white or greenish, and the scales should be firm and bright and not easily rubbed off. Beware of the fish that is soft and flabby to the touch and comes easily away from the bone, for most certainly it is not as fresh as it might be.

Another test is to hold the fish between the finger and the thumb and press it gently. If the flesh parts easily it is not sound.

Choosing chickens is another task that requires care. The eyes of a fresh chicken should be bright and prominent, and the feet limp, moist, and pliable. The flesh should be firm and plump and the skin clean and white.

When the chicken is decomposing, the flesh becomes dark and greenish, the feet hard, stiff and dry, and the eyes sunken and dull.

Healthy wild ducks have black feet. Any duck with soft pliant legs and feet, bright prominent eyes, and fairly firm flesh is in good condition. Stale ducks have dry feet, dull, sunken eyes, flabby flesh, discolored necks, and a greenish tint over the abdomen.

Meat wants a great deal of choosing. Good meat should be firm to the touch, and should show distinctly the branching veins. Beef or mutton should be a deep rose color, and the fat a rich cream. If the fat is hard and skinny, it shows that the animal was old and tough.

The best veal is of a pale color, and its kidney is enclosed in firm white fat.

The rind of good pork is smooth and thin, light in color, and firm to the touch. When it is cut through, or warm water poured over it, there should not be any disagreeable odor.

When purchasing vegetables, be sure that they are fresh. Pass over any showing signs of decay or rot. Pea-pods should be crisp, and beans should not have a faded look or be limp when broken.

Helpful Hints.

An envelope with the corner cut off is handy to fill your salt and pepper boxes.

Rubbing shoes and boots well with castor oil keeps them from cracking, making them soft and pliable.

Figs are delicious baked several hours, with lemon juice and lemon rind to give added flavor.

Ten cents worth of skim milk has more nourishment in it than the same money's worth of steak.

Three of the cheapest foods we have are hominy, corn meal and rice and there are many ways of using them.

Allow one level teaspoonful of salt to flavor a quart of soup, sauce or water in which vegetables are to be cooked.

The best time to clean the meat grinder is immediately after it is used. The particles of meat do not dry, and will wash off easily.

If a metal spoon is left in the saucepan, the contents will not boil quickly, because the spoon carries off a great deal of heat.

Glassware should always be washed in a wooden bowl, as there will be far less chance of its getting broken.

Needlework should be ironed on the wrong side in a piece of flannel, and should then be kept long enough under the iron to thoroughly dry it.

If you are in the habit of lending books it pays to keep name of books, name of person who has it and date of loan. Then cross out the name when the book is returned.

Another A. S. S. One.

A schoolmaster once wrote his initials, "A. S.," on the flyleaf of one of his books. One of the boys, who got hold of the book, added a second S; but the master discovered the addition, and, knowing who had made it, handed the book back to the boy with the words, "I wish you would not write your name in my book."

Won't Give Them an Opening.

"I don't ask people how they are any more."

"Why not?"

"I've decided it is better to take it for granted that they are well than to give them a chance to spend half an hour of my time telling me about their ailments."

Qualified to Judge.

Belle—Do you think women should have the ballot?

Jack—Oh, sometimes I do and sometimes I don't. They are so vacillating, you know!

Wise Girl.

Maud—Would you object to a husband who smoked in the house?

Marie—Most decidedly! But I shall keep quiet about it until I get one.

THE SUNDAY SCHOOL

INTERNATIONAL LESSON

JULY 16.

Lesson III.—Paul At Athens—Acts 17. 16-34. Golden Text—Acts 17. 28.

Verse 22. Areopagus—The "Hill of Ares" is west of the Acropolis and north of the market place, from which Paul would be taken by a flight of steps cut in the rock. The ancient and dignified court which took its name from its meeting there is believed to have invited traveling men of letters to lecture before them, with a view to engaging them for regular lectures. This may have been the purpose with which they asked Paul to speak. Very religious—Though this word is capable also of meaning "superstitious," the choice of the other meaning is dictated to us by the simple consideration that Paul was a man of tact, incapable of starting with a rough word. That the word was ambiguous, and true in the other sense, is probably irrelevant.

23. Inscription—The existence of such altars in Athens was attributed to the counsel of the sixth century sage Epimenides of Crete (see verse 28), who when a pestilence occurred that they could not trace, advised a sacrifice "to the proper deity," leaving the name open. What therefore—Of course Paul was adapting their words to a new purpose: he never meant to add one more god to their crowded Pantheon! In ignorance—see verse 30. Paul is going to tell them the little oversight admitted in that inscription is nothing less than that of the one true God.

24. As a Jew, he naturally drops into Old Testament language (Exod. 20. 11; Isa. 42. 5), but the assertion could be matched almost verbally from the inscription of the Athenians' great antagonist, the Zoroastrian king of Persia, Darius; and Greeks like Euripides had declared that God could not be confined in temple walls. Made with hands—That God's true temple must be "made without hands" was a declaration of Jesus (see Mark 14. 58) which is guaranteed as a true report in this respect by the echoes in the Acts and Epistles.

25. Neither to be served—Compare Psa. 50. 9ff. Needed—An acceptance of Epicurean doctrine to match the approval of a Stoic poet (see verse 28). In one of his finest passages, Lucretius declares that Deity is "mighty in its own resources, needing us not at all."

26. Of one—Greek as well as Hebrew story recognized the common parentage of mankind. Seasons—The ages of their rise and fall, and their entrance on the lands they were to make their own.

27. Providence in history was to be the great prompter in the search after God. It was the clearness with which Israel's instinct grasped this lesson that qualified him to be God's missionary to the world.

28. A recent discovery tells us there are two quotations here: "A grave have they made for thee, O Zeus, highest and greatest, even the Cretans, always liars [etc., as Titus 1. 12]. But thou are not dead, for to eternity thou livest and standest; for in thee we live and move and have our being." The verse in Titus is attributed to Epimenides, who now appears to have referred to the Cretan legend of the burial of Zeus in Crete. Certain—Namely, Epimenides for the earlier words, the Cilician Aratus (B.C. 270) and the Stoic Cleanthes (third century) for the latter. That there was a tinge of pantheism in both the quotations, according to their author's thought, does not prevent Paul's using them for a higher purpose.

29. Paul is enforcing the second commandment, which had a supreme justification in the Athenian degradation of that which is divine (margin) into nothing more than physically beautiful men and women.

30. Overlooked—"Suffered all the nations to walk in their own ways" (Acts 14. 16). The words do not pretend to give a full account of what God will do with those who are "ignorant" through no fault of their own. They simply preparatory to the declaration that God's plan of salvation is now complete, and it is his will that men should all hear of it and accept it. Repent—The word does not concentrate, like the English, on mere sorrow for the past; a wholly new attitude of mind is the point.

31. Appointed a day—"To fix a day" was the ordinary Latin term for announcing a legal inquiry; but Paul was doubtless thinking rather of the "day of Jehovah," so prominent in the prophets. Judge the inhabited earth in righteousness (margin)—Quoted from Psa. 9. 8. In a man—So literally: in is a regular Greek idiom for the judge before whom a case is tried, that Paul was more probably using his own "mystical in"—whether in redemption or in judgment, "God is in Christ." Ordained—The word Paul uses in Rom. 1. 4 rendered declared. 3.22 Paul had no chance to develop his argument, of which he had only delivered the opening: "a resurrection of dead men" was a sheer absurdity, and it was useless to waste more time listening to this Oriental fanatic. Those who were too polite to scoff promised to renew the boredom on a more convenient day—presumably Feb. 30?

32. Thus—Luke's restraint here is wonderful, only surpassed by the yet more tragic verse of Luke 4. 30. What Paul thought when he could get no further hearing we shall read in the lesson for July 30.

34. Dionysius—So there were some "wise after the flesh" (1 Cor. 1. 26) who accepted the heavenly wisdom! Damaris. Read the glorious stanzas in Myers' Saint Paul. The very presence of a woman in this meeting, in a town where respectable women were shut up and debarred all public life, suggests her previous character:

"Then I preached Christ; and when
she heard the story,—
O, is such triumph possible to men?
Hardly, my King, had I beheld thy
glory,
Hardly had I known thine excellence till then."

Fortunes in Ships.

Romantic stories are related, at Cardiff, Wales, of the huge fortunes amassed by shipowners and coal-owners during the war. One shipowning firm is reported to have made profits amounting to $15,000,000. Many other firms have also made vast sums. Instances are also told of young clerks who, earning about $15 a week at the beginning of the war, saw their opportunity and invested in the purchase of old steamers. As a result of their enterprise they have become comparatively wealthy men.

"This is an odd way girls have of getting into society." "How is it odd?" "Why, they get in they first have to come out."

A man advertises for "competent persons to undertake the sale of a new medicine," and adds that "it will be profitable to the undertaker."

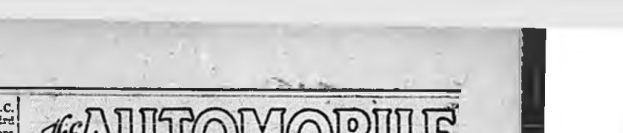
HOW TO OPERATE THE GASOLINE ENGINE

Told by C. W. Jakes, of the Ontario Agricultural College.

[No. 3.]

The operating troubles of the gasoline engine are not so numerous as the starting troubles for if the latter are eliminated, then there is not much danger from the former. However, there are a few that are of common occurrence and they will be dealt with now. Sometimes while running, the engine will miss fire, that is, the trip rod will trip the sparker but there will be no explosion. This indicates either a weak battery, loose connections, or a dirty spark plug. With an engine that is being used daily the spark plug should be removed once a month, the deposit of carbon on the plug cleaned off with gasoline, and the contact points smoothed with sandpaper or a fine file. An accumulation of carbon on the points causes the intensity of the spark to be lost and occasions miss-firing. It is not uncommon to have the electric current short-circuited, that is, some point of the wires becoming bared of insulation, and touching some metal part of the engine, cause the current to be led off into the ground instead of reaching the spark plug. To prevent this the wiring should be examined.

From various causes the engine may become over-heated. This may be due to the fact that sufficient oil is not reaching the cylinder. The average size farm engine with gravity feed should get from 8 to 10 or 12 drops of oil per minute on its cylinder. Overheating may also be due to an accumulation of scale on the water jacket of the cylinder, caused by the deposition of lime from the water used in cooling. This scale prevents the water from cooling the cylinder and should be scraped off occasionally.



When to Regulate the Feed.

Sometimes after the engine has made a few explosions it will seem to smother and then stop. This is due usually to an overdose of gasoline, quantities of dense black smoke from the exhaust indicating the presence of too much fuel. A normal mixture of gasoline and air is indicated by a thin blue, and almost invisible smoke from the exhaust. White, dense smoke indicates that the cylinder is getting too much oil. Sharp, hard explosions accompanied by frequent explosions in the inlet pipe indicate that the engine is not getting enough gasoline.

Occasionally the engine seems to run all right when working without a load, but when the clutch is thrown in, it balks, slows down, and finally stops. This, especially in old engines, is due to the fact that the power of the explosions, instead of being utilized to do work, is lost through the worn piston rings, bearings and connections, or wasted in overcoming friction in the shaft or bearings that are not in alignment.

The best way to overcome gasoline engine troubles, is to prevent them, by giving the engine the care before the trouble occurs. It requires but a small percentage of the time then, that is necessary to correct the trouble after it has occurred. In other words, old as the hills, yet as true as gospel, "an ounce of prevention is worth a pound of cure."—C. W. Jakes in Canadian Countryman.

The AUTOMOBILE

Driving Hints for the Motorist.

"How does safety first appeal to motorists?" If only from a selfish point of view the motorist must be interested in this. For were he in collision with a pedestrian, he is likely to be charged with the entire blame, writes Mr. George Stroudbridge.

Some "safety first" hints for the novice may prove more than an ounce of prevention. In driving motor car vehicles both hands, as well as both feet, and the eyes and ears are in constant use, and must be in alert service. Some drivers learn safe manipulation of a car much more easily than others do. But the principal thing to avoid when learning to drive is to keep from learning bad habits. The right way is always the easiest.

More accidents are avoided through skilful steering than by any other means of control at the command of the operator, and a driver who is clever at the steering wheel has, therefore, a great advantage. As long as the car is in motion the operator must be steering. This is the one control that must be constantly handled. The operations of steering consist of watchfulness in the direction in which the motor vehicle is proceeding, and constant, skilful handling of the steering mechanism.

Modern motor vehicles are equipped with what is termed "a balanced steering gear." Such a steering gear operates freely, and as a general rule one just has all that is necessary to control it. The properly trained driver should use his left hand as much as possible for this purpose. The proper resting place for the right hand is on the wheel, where it is ready to assist the left when necessary. But both hands should never leave the steering wheel at the same time. Never allow the arms to become crossed or cramped with turning, and where both hands are used for a quick turn, handle the wheel in the same way as you would draw yourself up a rope—by a hand-over-hand motion.

Never look down at the gear shift or pedals, as this is an especially bad habit and one that is likely to cause trouble. My advice to the beginner is to thoroughly master steering, as nothing will so quickly get him into trouble or disclose his inexperience as not being able to properly handle the wheel.

Another important point well to consider for safety's sake is to occasionally pull up on the hand brake when stopping, instead of always using the foot brake. For this keeps the motorist familiar with the location of this control, so that when necessity for its use arises it is instinctively found.

Remember another thing. The left foot has but one duty; it must rest on the clutch pedal. If the driver finds this uncomfortable, some sort of a heel rest can be arranged, so that the foot can rest on the pedal at all times with perfect comfort. Declutching is one-half the operation of stopping, and a fraction of a second in stopping is often important.

THE COST OF WAR IS MOUNTING UP

NO ANALOGY IN HISTORY OF PAST TIMES

Another Year of It Will Make the Total Expenses Reach $100,000,000,000.

One hundred billion dollars will be the cost of the war if it lasts another year, according to Mr. Jean Finot, who makes an interesting comparative study of this subject in an article in the Paris Revue.

"If this war lasts three years," he says, "the losses will reach a total unheard of in the past. They will amount to one hundred or one hundred and twenty billion dollars. The losses occasioned by the present conflict have no analogy in the history of past times.

"According to the calculations of economists and statisticians armed conflicts from Napoleon I. to our day, all added together, have not caused one-half the sums absorbed by the present war. The Napoleonic wars, properly so called, which are considered the most sanguinary in the history of past times, cost only about $15,000,000,000. They lasted twenty years.

"The Crimean War cost the countries taking part in it about eleven or twelve billions. The civil war in America did not cost more than $7,000,000,000 or $7,600,000,000. The war between Prussia and Austria in 1866 necessitated an expense of only about $500,000,000.

"According to the estimates of Mr. Matheu-Bodet, Minister of Finance in 1874, the war of 1870 cost France the total sum of $2,499,000,000. In this figure are included the losses to the State, to the departments, the communes and individuals. The cost of caring for German troops after the conclusion of peace and before the complete evacuation, amounting to $18,600,000, is also included.

"An English statistician puts the direct expenses of all belligerents from Napoleon I. to the war of 1914 $36,000,000,000 to $40,000,000,000.

"Considering only the allied armies in the present war, it may be noted that the number of combatants on our side now amounts to about 14,000,000. If we admit an average daily expense of $4 a day for each soldier, including ammunition, we will have a total expense of $1,680,000,000 a month, or about $20,000,000,000 a year.

Constant Increase

For France alone the budget amounts to $6,193,200,000 yearly, according to Mr. Almond, who recently made a report to the French Senate showing the following credits since August 1, 1914:—

Last five months of 1914	$1,317,586,850
Year 1915	4,483,319,702
First half of 1916	3,096,506,870
Total since war began	$8,897,713,422

He calls special attention to the constant increase in expenses:—

Year 1915	$3,083,400,000 $4,483,319,702
First quarter 1916	1,082,400,000 1,535,506,870
Sec. quarter 1916	1,153,000,000 1,561,000,000

At this rate the total expenses for the year would be about $6,200,000,000, of which the army absorbs 73 per cent., and the debt, also constantly increasing, more than 7 per cent. Civil and other Government expenses are about 19 per cent., and the rest, something under 1 per cent., goes to buy food for the destitute refugee population.

Added to the above are the sums paid to allied nations—Belgium, Serbia and others—which raise the expenses to $18,600,000 a day, $560,000,000 a month, or $6,700,000,000 a year.

England's Expenses

At the same time England's expenses have risen from $17,000,000 a day to $22,000,000, and are soon expected to reach $25,000,000 daily, or $9,125,000,000 a year. A British estimate of the exclusively war expenses of the allies gives the following up to June 30, 1917:—

Great Britain	$16,250,000,000
France	14,175,000,000
Russia	14,000,000,000
Italy	4,200,000,000
Belgium	2,700,000,000
Serbia	700,000,000
Montenegro	650,000,000
Portugal	50,000,000
Total	$51,725,000,000

Cost to Teutons

On the other side, Germany's expenses, which to date are about $10,000,000,000, it is estimated will be at least $13,000,000,000 by the same time; Austria's about $10,000,000,000; Turkey's $600,000,000 and Bulgaria's $520,000,000, or $34,120,000 for the Teutonic allies.

Then there is Japan, who issued an internal loan of $20,000,000 at the beginning of the war, and whose expenses in the capture of Kiao-chau and the German Pacific archipelagoes and their occupation were about 100,000,000. San Marino, too, has spent several hundred thousand dollars erecting anti-aircraft defences against Austrian aeroplanes. The Allies will thus have spent about $52,000,000,000, and the Teutons $34,000,000,000 at the end of three years' war.

These sums give a total of about $86,000,000,000, somewhat less than the estimate of Mr. Finot, but agreeing with the calculation that the cost of the present war is more than double all the wars of the nineteenth century, from those of Napoleon I., plus all the wars of the first dozen years of the present century.

Germans Eat Whale Meat.

Whale meat has proved so popular among the inhabitants of the Solingen district in Prussia that the district authorities have taken over the greater part of the trade in this smoked food product, which may be sold on "meatless" days, and are disposing of it in large quantities, reports the German press. The retail price is about 70 cents a pound.

The Intelligent Cat

Two gardeners were swearing vengence on cats.

"It appears to me," one said, "that they seem to pick out your choicest plants to scratch out of the ground."

"There's a big tomcat," the other said, "that fetches my plants out and then sits and actually defies me."

"Why don't you hurl a brick at him?" asked the first speaker.

"That's what makes me mad," was the reply. "I can't. He gets on top of my greenhouse to defy me."

A Fator.

Would-be Slacker (to recruiting sergeant)—But, sir, I have bad eyesight and can't see any distance.

"Don't worry about that, my man, we will put you in the very front trench where you will have a good view."

HIS REDEMPTION

"Yes, I'm your grandfather, lass. A poor specimen, maybe, but seeing that neither you nor me have any other relations in the wide world, I thought I'd tramp along to Northampton and find you. Don't be afraid, I've not come to beg for money, although I'm little better than a tramp. I can earn my own living yet in one of the boot factories."

Molly Breed stared at the ragged, unkempt old man who had thus projected himself into her life. She had understood that her mother's father was still alive somewhere, but she had never supposed that he would find her out. Now that he had appeared he was scarcely a reputable-looking object. But Molly was not critical; she gripped her kinsman's hand warmly.

"You're the biggest surprise I ever had!" she admitted. "I thought everybody belonging to me was dead, and somehow it makes me feel a choking in the throat to think that you're my mother's father. Anyhow, come along in and make yourself at home!"

The tramp shuffled into the room, gladly put down his hat, and greedily ate the meal which the girl's landlady brought for him.

For a time they talked, awkwardly at first, and then with growing candor, of the father and mother of whom the orphaned girl knew so little. At last the tramp shambled to his feet and seized his battered hat again.

"Well, I'm going," he said. "You won't want me about respectable lodgings like these. I'm on'y a tramp, y'know."

"You're not a tramp any longer," Molly cried, a sudden determination waking in her mind. "You're my granddad, and you're going to live here with me. Or, perhaps, if things go well, and you're able to get work, we'll set up housekeeping together, just like kinsfolk should."

Old David's eyes sparkled. He dropped his hat, returned to the chair, and made a feeble attempt at combing his straggling, silvered hair. And two sparkling points of light, that might have been tears, were in the old man's eyes.

"Molly, lass," he said huskily, "I've tramped all the way from London hoping that when I found this granddaughter of mine she wouldn't be too proud to own me. But I didn't want to push myself on to you, and I'd be ready to go on the tramp again if you wanted to shoulder me off. If you let me live with you I'll get work, and I'll bring you no sort o' disgrace."

With a look of command over his feelings that surprised her, he was crying childishly in his delight. The girl's hand reached out and touched his shoulder.

"Granddad," she said, "a girl who's been so much alone as I have been is only too glad to make the most of her relations when she does find them. We'll just settle down together, and if it's only for my dear mother's sake, I'll take care of you until——" She stopped abruptly.

Old David brushed the tears from his eyes, and a quivering smile touched his lips.

"Until you get married—eh?" he responded. "Well, I might have known there'd be some lad who's fond of a girl like you."

Molly flushed.

"Until I get married you're home's with me," she concluded, smiling brightly." "There, it's a bargain!" and her lips pressed upon the old man's withered cheeks.

* * * * * *

A month later, Molly Breed and her grandfather were sharing a tiny house at the south side of the town. The old man had obtained some jobbing work to be done at home from one of the leather-factories; the girl was earning good money in the bottoming department of the machine-made boot trade. Work was plentiful, for the war, while it threw its grim shadows abroad bestowed occasional favors, and one of them was flung to those connected with the production of serviceable boots. The army needed all the good boots it could get.

Every other night came a big, honest-featured young leather-worker, Bert Eddy, whose engagement-ring Molly had now worn for nearly twelve months. The old man watched the progress of the courtship with quiet dismay. This little home was an unexpected haven of his old age, and he knew from Molly herself that her marriage would close its doors to him.

"That's only fair, seeing that I'm nothing but an old tramp of a grandfather," mused the old man. And his gnarled fingers clenched as he added beneath his breath: "Something worse than a tramp, too! I wonder what Molly would think if she knew that the granddad she's harboring has spent a big part of his life in penal servitude?"

He drew his breath sharply at the thought, and returned to his work.

Then the unexpected happened. A new-comer to Northampton attracted Molly's admiration. He was a tall, good-looking man about six years her senior, and there was something about him which fascinated the pretty machinist.

Daily, although he had never seen the new-comer, the old man knew that something was awry with the courtship of Molly and Bert Eddy. Presently she stopped calling altogether, and admitted that she had quarrelled with the lad, because a new under-manager at the factory had been paying her attentions.

"He's coming round to-night to see me," said the girl. "Make him welcome, granddad, just for my sake, won't you?"

"Of course I will," he agreed, but with a doubtful note in his quavering voice. "Your love-making is none of my business, lass, and if this new lad pleases you better—why, you must have him, I suppose."

"He's not the sort of person you'd call a 'lad,'" corrected the girl, laughing. "He's a gentleman, you know. He tells me he had a commission in the South African War, and is very learned."

"They're wanting old Army men just now," mused old David. Molly did not reply.

Punctual to his time, the "gentleman" called that night. And at his first sight of him the old man's face whitened and his hands quivered in a kind of helpless passion.

"Why, granddad, what's the matter?" cried Molly, with something of anger in her voice. "Why don't you shake hands with Mr. Tamlin?"

"I've no call to shake hands with him," was David's surly response. He was scarcely able to control his voice, which had risen to a childish treble. "But maybe," he went on, "I can have a word or two with Mr. Tamlin before he goes.

But Molly flushed angrily and turned away.

"Take no notice of him, Philip," she said almost scornfully. "He's a bit queer sometimes."

"I'm a bit queer, am I?" muttered the old man, when he found himself alone. "Well, I'm not the only queer fellow in this house to-night. And I'm going to settle with Tamlin before he makes a fool of the kindest-hearted lass in Northampton."

An hour later Tamlin said the old man found themselves alone, for Tamlin had himself asked Molly to give him a few minutes in private with her granddad. The two men faced each other defiantly.

"Philip Tamlin," quavered old David, "the last time I saw you was when I left Dartmoor. You were number two hundred and eighty then."

"And you were number sixty-five," snapped Tamlin. "I suppose Molly doesn't know what a beauty her old granddad is?"

"I've lived honest and respectable ever since my one big mistake," the old man answered. "And since I finished my time and came to Northampton to find my granddaughter I've lived respectable and honest. But you—why, even the very convicts at Dartmoor knew you for the most violent, godless, and foulest-tongued of men. You shan't have Molly, rascal and convict that you are!"

"A case of the pot calling the kettle black, isn't it?" laughed Tamlin. "Come, man, you've got to be reasonable. There's only the workhouse or the gaol waiting for you if you let Molly know where you lived most of your life. And I threaten you, here and now, that if you let her know that I was at Dartmoor she shall know from my own lips that her granddad was there with me."

The old man shuddered at the words. Either his little haven of comfort was to be snatched away from him, or his granddaughter must innocently marry a man whom he knew to be the biggest blackguard at large!

"Come, be reasonable," urged Tamlin. "You keep quiet about my past and I'll keep quiet about yours. Moreover, I'll see you have a home of some sort for the rest of your days. But try to stand between Molly and me, try and expose me to her and she shall know that dear old David, her sainted grandfather, spent twenty years in Dartmoor prison! Come, what do you say to that, old man?"

David's head dropped to the support of his quivering hands. The little world of love and hope which he had tried to build was crumbling and falling about his head. The dearly-won respectability was snatched from him. Either he must let this rascal marry the granddaughter who had befriended him, or she must know that both men had been imprisoned felons!

"Let me think! Give me a moment to think!" he begged. But before Tamlin could answer Molly had returned to the room.

"Why, what ever's the matter?" she cried, looking sharply from her lover to David. "What——"

David staggered to his feet, gripping the edge of the table for his support. His eyes looked bloodshot, and his shrivelled face was twitching with agony.

"Molly," he breathed, "you must never marry this man. I know him. I know him for one of the vilest characters in all England! And he's a liar. You mustn't marry him!"

Molly stood speechless, staring from Tamlin's face, flushed with passion and conscious guilt, to the silver-haired, tottering old man whose arms were upraised whilst he denounced in the same words himself and the intruder.

"Molly," he said brokenly, "that man and myself were convicts together in Dartmoor!"

Then it seemed to him that the world grew suddenly dizzy and that the room was whirling about him. He felt that he was falling—falling—

* * * * * *

It was no mere attack of faintness which had struck down the old man. The Northampton people referred to it as a "stroke," and old David was in hospital for weeks afterwards.

Twice every week, as often as she was allowed, Molly came to him. She told him but little of her love affairs, yet he saw at once that the brand-new engagement-ring which Tamlin had given to her had disappeared from her finger. Then, to his tremendous delight, he saw that the discarded ring of Bert Eddy had replaced it. Then he heard that Molly and Bert were to be married almost at once, and at last she came to the bedside with a plain gold band upon her finger.

"You've not given me up just because I was a convict?" he said to her one day, and she shook her head slowly.

"You saved me, granddad—you saved me," was her only answer.

Somehow it seemed to David that the girl was keeping something from him. Of course, he knew by her own words to him months before that after her marriage with Bert he would need to find other quarters. And "other quarters" meant the workhouse, for he was now beyond any sort of employment.

But when at last he left the hospital he was astonished to find both Bert Eddy and Molly waiting for him with a smart little governess car.

"It's good of you, but I could have walked there myself," muttered the old man, smiling grimly as he thought of the drear life at the workhouse which he had known more than once before. "This isn't the sort of journey that people want to hurry along; but, anyhow, we'll drive there."

But the car was driving beyond the workhouse, and presently stopped outside a neat little cottage overgrown with creeper, and decked already with pert fragrant flowers which seemed to nod a welcome to the little party as they walked sowly through the gateway.

"Where's this? Where have you brought me?" quavered David, looking rather helplessly into Molly's smiling face.

Molly put her arm protectingly about him, steadying him as he shambled along the path.

"It's our home, granddad," she explained proudly. Then, in a whisper: "It's our home—and yours!"—London Answers.

DOUGLAS FIR

Attains Its Largest Size in Southern British Columbia.

The province of British Columbia has presented to the Kew Botanic Gardens a giant flagstaff of Douglas fir, to replace the old 159-foot staff, which lasted fifty years. The new pole is 215 feet long and weighs 18 tons. It was shaped and creosoted in Vancouve, conveyed by steamer to London, and floated up the Thames to Kew. Poles of Douglas fir are highly valued for ship's masts and flagstaffs because of their straightness, durability, strength and resilience. The timber is also largely used for telegraph and electric-railway poles and bridge and trestle timbers. The Forest Service regards Douglas fir as perhaps the most important of American woods. Estimates of the available supply range from 300,000,000,000 to 350,000,000,000 feet, board measure. The tree is most abundant, and attains its largest size not far above sea level in Southern British Columbia and in the region between the coast of Washington and Oregon and the western foothills of the Cascade mountains. There the trees, crowded close together, rise to a height of 300 feet; indeed, lumbermen report trees 350 feet high, with trunks 11 feet in doameter, free of branches for 200 feet, and with hardly any perceptible taper up to that height. Douglas fir usually grows rapidly. It produces many cones and the seeds germinate freely. According to Sargent, the seedlings spring up as thick as grass where the forest has been cleared by fire. In the struggle for existence the weakest are crowded out, until finally there arises a crowd of pole-like stems destitute of branches and foliage except at the top. Germany has planted large experimental forests of Douglas fir, which, the experts say, is likely to replace the larch in Europe as a timber tree.

TRITE SAYINGS.

Prosperity has been the undoing of many a man.

Some men never get ahead because they are always behind.

Put yourself in the other man's place before you condemn him.

Some men lay everything that goes wrong on their wives.

A wise parent doesn't discuss other people's failings before the children.

It's a hard matter to deceive the world. You are sized up for just what you are.

Don't stir up a quarrel over trifles. Friends are too valuable to be thus easily lost.

The youth who knows more than his father will learn a lot if he lives to be an old man.

If you are the possessor of an automobile, take your less fortunate neighbor for an occasional spin.

If you don't want your boy to learn to smoke, set him a good example by not using tobacco yourself.

A ne'er-do-well, in a short time, can run through a fortune that took his parents a lifetime to acumulate.

Don't place all the blame on the other fellow's boy. Maybe your son isn't so perfect as you think he is.

If a fraction of the money that is put in costly monuments was used to make the living more comfortable, it would be a wise move.

No matter if the other fellow hasn't done the square thing, don't try to get even; it never pays. Just go ahead and do what is right.

LONDON'S NEW BATTLE TROPHIES

Imposing array of captured German guns on review at the Horse Guards' Parade.

VIVID STORY OF A FRENCH CHATELAINE

HOW THE GERMANS DESTROYED A BEAUTIFUL HOME.

Mme. Huard Tells of Their Destruction of Her French Chateau.

From the pen of Frances Wilson Huard, the American-born wife of Charles Huard, a noted French artist, and at present official painter of the war to the Sixth Army of France, has come one of the most intimate and vivid stories of the war. Mme Huard saw little of the war, hardly any actual fighting, but she has the gift of telling in simple words what she did see and of suggesting unseen horrors that surrounded her. When war broke out she was left alone in her fine chateau some sixty miles northeast of Paris. She was attended by only two or three servants. Almost before she had time to escape the great German invasion swept toward her. At last she abandoned her chateau, only a few hours before the German advance guard reached it, and escaped in a cart with a few personal belongings. The sound of the guns was never out of her ears as she fled, and it remained with her when the tide turned and she returned to her chateau. Her description of the scene that met her eyes is one of the finest passages in the book, "My Home in the Field of Honor," and portions of it are well worth quoting.

Von Kluck's Work.

Some account of the German treatment of her chateau appeared in the press more than a year ago, and readers will remember the incident of the American woman fondly trying to protect her desk containing nothing but some packages of love letters by spreading an American flag over it. Speaking of her home when she entered it after it had been in the possession of the Germans for a few days, she says: "How can one describe it? . . . Above all, I would have it understood that the chateau was first occupied by General von Kluck and his staff. The names engraved on the doors of my bedrooms in big, red letters bear testimony—as well as some soiled underlinen and a gymnastuch marked v.K.—and numerous papers stamped with the Imperial seal. These latter are all orders or reports belonging to the Third Army Corps, and were left behind in the precipitation of the flight." It is pleasant to think that Mme Huard has her trophies of that occupation as part payment for the wholesale looting of her home that was conducted by the Germans

The Work of Beasts.

She continues: "As I now am able to see the matter in a cooler frame of mind, I realize that not only was efficiency carried out in warfare, but in looting—for it seems that everything that we possessed was systematically classified as good, bad or indifferent—the former and the latter being carefully packed into huge army supply carts, which for five long days stood backed up against our doorstep, leaving only when completely laden with spoils. Then what remained was thrown into corners and wilfully soiled and smeared in the most disgusting and nauseating manner. A proof of the above-mentioned efficiency can be given in a description of my husband's studio, where I found all the frames standing empty—the canvases having been carefully cut from them with a razor and rolled for convenience sake. Useless to mention that tapestries, silver, blanket and household as well as personal linen were considered trophies of war. That to me is far more comprehensible than the fact that our chateau being installed with all modern sanitary conveniences, these were purposely ignored, and corridors and corners, satin window curtains and even beds were used for the most ignoble purposes."

Sickening Traces of Drunkenness.

"Everywhere," she writes, "were sickening traces of sudden drunkenness. On the table beside each bed (most of them now bereft of their mattresses) stood champagne bottles and half-emptied glasses. The straw-strewn drawing-room much resembled a cheap beer garden after a Saturday night's riot, and the unfortunate upright piano was not only decked with empty champagne bottles but also contained some two hundred or three hundred pots of jam poured down inside, plava and all, probably just for a joke. Oh, Kultur! I think that and the fact that most of my ducks and small animals had been killed and left to lie and rot, were the things that most angered me, and very time the guns boomed I prayed ardently for revenge."

How France Feels.

Mme. Huard four; her little rosewood desk mercilessly jabbed with bayonets and the contents strewed from one end of the village to the other; while the Stars and Stripes had been unspeakably defiled. The story she tells could be duplicated as far as facts are concerned, by the owners of a thousand chateaux in France, and the still uglier stories of lust and cruelty are a matter of official record. How anyone can read them and imagine that France would now or at any future time consent to any peace that was in the nature of a draw it is difficult to imagine. And should France insist that when the German hordes are driven across their own frontiers; they shall be made to feel some of the horrors they have inflicted upon her non-combatant citizens we need not wonder.

HAS WAR TROPHY MUSEUM

Paris Newspaper Shows Souvenirs Sent From Front.

One of the best collections of war trophies to be seen in Paris is displayed in the reception room of the Echo de Paris, at the corner of the Place de l'Opera. Most of the articles have been contributed by members of the newspaper's staff with the army or by poilus desirous of showing their gratitude for comforts and food hampers sent them by that journal.

There is a fine lot of Officers' helmets, saw bayonets, rifles and shell baskets. One curious exhibit is a playing card, the five of clubs, picked up among the cinders of an enemy bivouac fire. Bavarian pioneer picks and spades, complete sets of officers and privates' uniforms (with the mud and war stains carefully removed), and all sorts of shell fragments, cartridges and bullets make up a very interesting show.

When Mr. Asquith, Lord Kitchener Mr. Lloyd George and other British Ministers were staying at the Hotel de Crillon during the international conference in Paris they admired the fine collection of German weapons and uniforms on view in the hall of the hotel. It is made up entirely of objects picked up by the 125 employees of the hotel who joined the French forces in August, 1914. Among the exhibits are a battered military bicycle, a pair of airman's fur-lined top boots and a couple of Uhlan lances, one of which has evidently seen a considerable amount of service. Other picturesque items are wine bottles and fragments of the Zeppelins brought down at Badonviller in 1914 and at Revigny early this year.

Mechanical Prayers

Mechanical devices for repeating prayers are familiar in the East, but they are outdone, in saving labor, by the "prayer flags" of Thibet. These, as described by J. C. White, in the National Geographic Magazine, are suspended on long lines, sometimes reaching across a river. As long as they are moving in the breeze they are supposed to be recording prayers for the benefit of those who put them up.

ACROSS THE BORDER

WHAT IS GOING ON OVER IN THE STATES.

Home is Best.

Willie Jones was playing with the Robinson children next door. When luncheon time came Mrs. Robinson asked him if he wouldn't like to stay.

"No, thank you," said Willie, "I think I'd better go home. My mother will be expecting me."

"Suppose I telephone over and ask her if you may stay," suggested his hostess.

"Please don't do that, Mrs. Robinson," said the boy earnestly. "We've got cocoanut pie for dessert to-day and your cook told me you've only got prunes."

Not Qualified.

"I want to be excused," said the worried-looking juryman, addressing the judge. "I owe a man $5 that I borrowed, and as he is leaving town for some years I want to catch him before he gets on the train, and pay him the money."

"You are excused," replied the Judge, in icy tones. "I don't want anybody on the jury who can lie like that."

An Old Trait.

Uncle Eben—I just had a letter from my English cousin. He was in the trenches. He says one day his company was ordered to charge, and the first thing he knew he ran into lot of barbed wire, several mines and a hundred German batteries.

Aunt Nancy—Just like George—never looks where he's going.

The Paisley Advocate

PAISLEY, JULY 10th, 1915

—The conservation of human life and health is becoming more widely recognized as a state duty. Last October the Michigan State Board of Health began a "tuberculosis survey" of the state. In six months the agents of the board visited thirteen of the eighty-three counties and examined more than five thousand persons. Wherever they found signs of tuberculosis, nurses followed them to give help and instructions. The work is proving so acceptable that the board finds itself unable to keep up with the demands made upon it by those who wish to be examined.

—The liquor party adopted the "We'll show you" attitude towards the Hearst government in the recent bye-election. They had been swearing vengeance ever since the premier suddenly decided to give us a war prohibition measure, and they acted very vindictively in the Perth election. There is no doubt the Liberal candidate got the support of the anti-prohibitionists at the polls in that riding. But it wasn't because they loved Rowell's policy more, but that they might influence the other fellows more—most probably with the object of demonstrating to Hon Mr Hearst and his followers that they are a power at election time. It was a pure and simple "come back" blow of retaliation, using the Liberal candidate as a cudgel for the occasion. If Mr Hearst will only be good enough to lend the support of his cabinet to calling off prohibition again after the war, they will all be loyal supporters of his regime. Mr Rowell is such an uncompromising advocate of total prohibition that there is no possible chance of his forming an alliance with the liquor interests. It's not a bad thing to see the both political parties advancing temperance legislation. It's the liquorite's next move. Watch for it.

—Infantile paralysis is another germ disease that has broken out in New York and threatens to spread in Canada, having gained a foothold in Montreal and one town in Ontario. The Provincial Board of Health has issued a circular in which infantile paralysis is described as a communicable disease chiefly of children between the age of two and fourteen years. Older children and adults may also be affected by the disease. The cause is unknown. It is known, however, that the agent causing the disease is present in the secretions of the nose and mouth and in the intestinal tract from being swallowed. It is believed that it is spread from one child to another by means of the secretions of the nose and mouth by direct contact, but may be carried by flies. Wherever the disease appears, children should be kept away from the neighborhood, and not allowed to mingle in any way. Many of the children attacked die from the disease, and many who do not become paralyzed for life. The disease centres primarily in the spinal column, but the effects are noticed in the feet and legs principally, and sometimes in the arms. In the more violent attacks death will result sometimes inside of twenty-four hours. Health Commissioner Emerson, of New York, advises: If a child has fever, or has indigestion even of a mild type, if his joints are lame, if he seems weak, send for a doctor and isolate the child until a diagnosis has been made.

—Germany has won the world by stimulating that war, and escaping more than its share of it. The moral consequences upon the youth of that country is now attracting the attention of watchful editors. The opening days of the war aroused in the young a nothing less than the Patriotism, a noble enthusiasm and the spirit of self sacrifice. But the prolonged struggle has made them weary of well doing, and the bad influences of the close of war are said to be showing themselves on every hand. There is said to be a growing lack of obedience on the part of the younger children, while older boys begin to smoke, drink, gamble and loaf around street corners, and often do things worse than that. This is attributed to the war spirit, which awakens in these otherwise harmless boys, wild desires that often assume ugly shapes. Nobody is there to watch them, and the fact that they have taken the place of grown up men in office and factory has fostered in these urchins an overweening opinion of themselves. The schools are disorganized, the majority of teachers being in the trenches. Discipline is gone, and often the schoolhouses serve as barracks. Sad as the confession must be, says a German writer, in many cases the mother herself has become unfit to exercise restraining influence upon her children. The war spirit that was calculated to elevate that nation and do harm only to the enemies of Germany, is destroying the virtue of the national and private life of the German people.

—Back in 1847 a young fellow named Donald Smith was sent to take charge of an isolated fur-trading post in the interior of desolate Labrador. It was a terrible place; blizzard-swept in winter, tormented by midges and mosquitoes through the short hot summer—the sort of place where a modern novelist's hero turns to brandy and ends with suicide. Smith was there 20 years. He read books, learned the country, built up an experimental farm that excited the admiration of the Smithsonian Institute, saved money, and started the career that ended two years ago in the Westminster Abbey. Donald Smith became Lord Strathcona and Mount Royal and his place in history is secure as one of the great builders of our modern North America. It all began in the unlikeliest place imaginable, that lost fur store in the wilds of Labrador, and Smith tell us the secret in his own words: "People speak of the solitude of Labrador. It wasn't solitude for me. I knew everybody there, from the oldest white trader and fisherman to the youngest Indian hunters and Eskimo, and even their dogs. I knew every turn in the coast line and bend in the river and every natural object had an interest for me. As for ennui, I can honestly say I did not know the meaning of the term. Time never hung heavily on my hands. I was always busy, and when I had no actual definite task I was planning. Men of that sort are the makers of the world. — Collier's Weekly.

ENTRANCE RESULTS

Following are the entrance to high school results:

Pass marks 350, honors 467.

Those candidates are arranged according to standing.

Pass candidates are in alphabetical order.

Doubtful cases have been carefully considered by the board of examination.

Appeals which may be lodged with the chairman of the board, Mr A E Nelson, B A, should not be made without first consulting the secretary, Mr W F Bawl, B A. Candidates dissatisfied with their appeals to the entrance board may make a further appeal to the Department of Education, upon the payment of $2, which amount will be returned to the candidate in case his appeal is sustained.

There will be published early in October a supplementary list of candidates who have passed their examination upon the teacher's and inspector's report, under by-law service.

PAISLEY

Honors—Daisy Foster, Fred Slater, Mabel Hall, Anabel Blue, Dora Bell, Sena Campbell, Reta Cornock, Blanche Collins, Jessie Fullerton, Frank Fullerton, Irene Gage, Margaret Knox, Arthur Kincaid, Annie Kincaid, Ivan Little, Mary Laidlaw, Grace McIlvaine, Arthur McDonald, Ruth McDonald, Dora Sherlock, Viola Tinkerton, Edith Potter, Wilfred Sharp), Harold Tequesent.

PORT ELGIN

Honors—Caroline Shierholtz, Amelia Nernier, Winifred Barber, Margaret Steeb, Clarice Carroll, Pearl Begg, Dora Thiele.

Pass—Anna Bell, Nellie Bottrell, Norma Campbell, George Casey, Barbara Daugherty, Bernice Huttemann, Hazel Jones, Kathleen McBride, Margaret McKeang, Ruth McIvor, Elsie Muir, Doris Osborne, Edna Reich, Leonard Rudolph, Bessie Rannes), Sadie Schell, Hazel Strachan, Wesley Smith, Ray Wenbuhn.

TIVERTON

Honors—Catherine Orr, Elmer Conroy, Pass—Hugh Buchanan, Arch Campbell, Sadie Carleton, Hazel Cameron, Annie Conroy, Jack Cameron, Mary Fletcher, Isabel MacNab, Jessie McLean, Marjorie McLaren, Jack MacColl, D L McMeeking, Hazle Montgomery, Irene Norman, Jean Stroud, Martha Steinberg.

The highest standing was obtained by the following candidates arranged in order of merit:

Caroline Shierholtz, Port Elgin, 553 out of 650.

Carrick Douglass, Lucknow, 544 out of 650.

Vera Hadley, Lucknow, 538 out of 650.

Annie McKay, Ripley, 531 out of 650.

CHESLEY

In order of merit:

Margaret Bethel (hon), John Hetherington (hon), Gertrude Smith (hon), Reta Strachan, Dora Watkins, Emily McLean, Marguerite MacMillan, Jessie Lockhart, Jessie Fraser, Gemma Bergemann, Howard Hay, Sara Kelleher, Kruger Sanders, Hans Blohm, Clayton Hoodless, Irene Stevens, Bert Krug, Sylvester Metzger, Vera M Frienell, Grant Leacke, Blanche Gilliard, Edward Strachan, Rena Lochead, Dallas Pritsley, Elsie Bierworth), Erwin Monk, Ross Rose, Madeleine Rae, Cora Maxwell, Ida Mantle), Pebbie Lang.

CARGILL

In order of merit.

Carl Elder (hon), Lila Hesterick (hon), Alma Pegelo, Gordon Lamberton, Frank Mullin, Frank Meagher, Oliver Seiler, (Hilda Kraut, William Zinkeler), Florence Crawford, Charles Martin, Clare Donnelly.

—The Advocate office has a splendid stock of wedding stationery and calling cards on hand, also the most beautiful styles of type, so we are able to turn out the finest lines of wedding invitations, announcements, cards, etc. We can do work fit to invite the best of people to a wedding, so why pay two or three times as much to city printers or engravers?

HEALTHIEST ONE IN THE FAMILY

No Sign Of Dropsy And Kidney Trouble Since Taking "FRUIT-A-TIVES"

HATTIE WARREN

Port Robinson, Ont., July 8th, 1915.

"We have used "Fruit-a-tives" in our home for over three years and have always found them a good medicine. *One little girl, Hattie, was troubled with Kidney Disease.* The Doctor said she was threatened with Dropsy. Her limbs and body were all swollen and we began to think she could not live. Finally, we decided to try "Fruit-a-tives". *She began to show improvement after she had given her a few bottles.* In a short time, the swelling had all gone down and her health began to look more natural. Now she is the *healthiest one in the family* and has no signs of the old ailment. We can not say too much for "Fruit-a-tives" and would never be without them".

WILLIAM WARREN.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid on receipt of price by Fruit-a-tives Limited, Ottawa.

LOCAL AND DISTRICT NEWS

Saugeen Boy Killed in Action

Christopher Greer, a former Saugeen Tp. boy, who enlisted in the west, was the regarded in Saturday's papers as killed in action. He was a nephew of Mr. Geo. Greer, of 12th Bruce.

Smokestack Fell

The water works smokestack got a pretty serious tip over on Saturday night, and on Sunday afternoon the whole thing toppled over. Without doing any damage to the building. The lower part has been set up again so that steam may be kept on in the boiler.

At the Bowling Tournaments

A rink composed of Messrs J B Fleming, W Rae, Dr Allen and I Shoemaker (skip) went to the Wiarton tournament last week. They played through to the semi-finals in the competition, winning five out of eight games. With Orr Wiarton, in J B Fleming's place, the same rink went this week to Mount Forest, and came back safe, but without the trophies.

Summer Time Is Fly Time

Summer time is fly time. Enough house flies can enter the country with the apparels of one first aeroplane, and in the course of two days there are thousands of them. Extermination entirely may be secured only by the practice of constant and unremitting vigilance. Two principles are fundamental to successful fly extermination. First, there is needed the co-operation of every member of the community in which the house fly interferes with human comfort and human health, and that is practically the whole human life. To avoid the fly nuisance the first essential is to destroy the breeding places of flies. Food that is to be saved should be kept covered. Garbage should be kept covered up all summer long. Thirty-quarts can not cover a case of typhoid, and costs less money than a funeral. The house itself should be protected by having doors and windows screened. And always, after all these precautions have been taken, a fly makes its appearance, "swat it."

Pte Alex. Blue was Wounded in the Chest

Two letters received by Mr Alex Blue on Monday set at rest any doubts as to what happened to his son at the front. It will be remembered that a telegraphic advice received on July 4th stated that Pte Blue was dangerously ill, but no information which could be given as to the nature of the disease. A few days later his name appeared among the list of casualties as wounded. In the letters it is learned that Alex received a serious wound in the chest, from which he is recovering as well as can be expected. The letters are as follows:

Dear Mr Blue,—

Your son Alex came into this field hospital, wounded in the chest. I am glad to say he is going on as well as can be expected, but he is very ill and very badly ill. I can promise you he will receive every care here from doctors and nurses, and we shall not forget to pray for him. Alec sends his love and says "Don't worry." God bless you in your anxiety.

Yours sincerely,
A F Pinnick, (Chaplain)
17th C.S., B.E.F., France.

Dear Mr Blue,—

I am pleased to be able to tell you that your son, Pte Blue (Scot), has improved, and to-day has been sent to a base hospital. His wound was a chest wound, which is always dangerous, but I hope now he will continue to improve, and that you will soon have a favorable report of him from the hospital to which he has been sent. I do not know his new address, or I would send it to you.

Yours truly,
Sister M Hopkins,
Sister in charge, No 17 C.C.S.

12 Men's Grey Raincoats

A heavier coat than the fawn, but similar in style. Price..... $4.50 net

We also have a full line of higher-priced Coats, in both men's and women's and invite your inspection.

The abnormal rains in many parts of Canada have so interfered with farm work that it is now too late to plant many of the usual crops. Much land will go idle, or, if planted with usual crops will give poor results. This means farmers will have less money to spend with their local merchants for supplies of all kinds; manufacturers will have fewer orders, banks will have smaller deposits, there will be less money and rates for investment in municipal bonds and other securities.

But live Ministers of Agriculture at Ottawa could have retrieved much of the situation. For the lessened farm revenues this year they will be directly to blame. At our agricultural colleges, and experimental farms, we have a lot of public servants. No men in Canada give better results for the money we pay them. As a result of experiments, they know exactly what it is most profitable to plant at this late date, and what is not. For example, it is too late for wheat, barley, or oats, but experiments show that peas, beans and other crops may be put in. The troubles very few farmers know this. The Ministers of Agriculture have not told them, or, if they have, they have used Fourteenth Century Bell Ringing methods. This is, calling meetings which few attend or sending out bulletins which fewer read, because neither are timely. All the farmers can be reached by the methods pursued by modern merchants and manufacturers. They talk to the people they want to reach in the papers closely read by them. There are now with while farmers anywhere in Canada who are not readers of their local town, or village, newspaper. To tell them in the columns of these papers, what experiments of our best farmers showed, at times like this, would cost but little and lead to millions of dollars' worth of increased production. The farmers are yearning for this very information.

We are told to economize to meet the tremendous burdens, which war is imposing on us, but if we curtail our purchases there will be that much less employment for the workers in our shops and factories. The business like method is to increase production that we may have more money. As Directors General of Agriculture some of our ministers are a joke. We spend millions finding what to do, then neglect to tell people—for whom the work is done, who ought to know, who want to learn—anything about it.

This is a subject the press and business men should agitate. It means more money. A million spent in intelligent talks to the small daily and country weekly press, telling the farmers the money making things to do—that the experts and successful farmers have discovered—how to do them, would produce tens of millions for distribution among all classes in Canada.—Financial Post.

have overcome the misty vision that creeps on with the advance of years, and now I am the most pleased man I know."

A pleased patron is the best advertisement.

We give free tests and guarantee satisfaction.

A STOPPED WATCH

One that will not go AT ALL—does not cause as much bother as one that runs now fast, now slow, in an erratic fashion.

The first you don't pretend to depend upon—the other a constant source of annoyance.

Most people can afford a watch, but no one can afford an uncertain test and slow one.

And when our Repair Department is so close at hand there is really no excuse for carrying anything but an accurate time-piece, no matter what the first cost was.

Consult us about any watch troubles that may arise.

Jeweler and Optician

Clerk's Notice of First Posting of Voters' List

Voters' List of 1916, Municipality of the Township of Ridgeville, County of Bruce.

Notice is hereby given that I have transmitted to each and all of the Voters' List Act, the copies required by said sections to be delivered or transmitted of the list, made pursuant to said act of all persons appearing by the last revised assessment roll of the said municipality to be entitled to vote in the said municipality at elections for members to the Legislative Assembly and municipal elections, and that the said list was first posted up at my office on the 3rd day of July, A.D. 1916, remains there for inspection. Electors are called upon to examine the list, and if any omissions or other errors are discovered therein to take immediate proceedings to have the same corrected according to law.

Dated this 3rd day of July, A.D. 1916.

H. F. FRANCIS, Clerk of Ridgeville.

The War News

A California subscriber to The Advocate in remitting subscription this week, says he hopes that we may have good news to print about the war. The writer is a good Britisher at heart, we know, although a long time away from Canada, and we have no doubt is voicing the more favorable reports than appear in many of the U. S. newspapers. The Advocate does not attempt to give the war news, as only a daily can do that satisfactorily. We can hardly refrain, however, from occupying a few columns of space with accounts of the past week's operations on all the fighting fronts, confident the most cheering news of the campaign for the Allies. The Germans are now overmatched, ultimate crushing defeat is certain for them, and it's only a matter of how long it will be before they are brought to the quitting point.

EXCESSIVE MEDICAL CHARGES

An instance is reported of a doctor making a charge of $250 00 for extracting a button from the throat of a child. The operation occupied about fifteen minutes, and, of course, required special skill and a special instrument. It is admitted that the operation, which the parents, of course, could not perform, saved the life of the child. The father refuses to pay the amount asked, and says he will allow the case go to court.

This raises the question of what is a reasonable charge to make for skilful surgical medical services. Is the doctor justified in charging "all the traffic will bear?" In such a case as that stated above, no doubt the parents would willingly give $250.00 to save the life of their child, even should it take the last dollar they possessed, but few will agree that the charge made for service in saving life or relieving pain should be based on the willingness or the ability of the patient or his people to pay. It will not do for the doctor to say: "I saved your life and you ought to be willing to pay handsomely for it," or, "I saved your baby's life, would you rather let it diet has pay $200 or $500?" Of course, doctors do not often put it that way, but in the case of the child and button, that hold-up disposition is evident.

How about the one who plunges into the water and saves a victim from drowning, or rushes into a burning house and rescues a sleeper? Such rarely asks or expects reward, though they truly save life as the doctor extracted the button.

As a matter of fact, the doctor who by his skill with the knife, or other instrument, or his knowledge of diseases and medicine, who claims to save life, claims too much for himself. He is not the inventor of the instruments he uses, nor the originator of the special knowledge which he applies. These are products of advancing human knowledge and have been given to him by society. To society he is wastly indebted and he owes a service to society. If he allowed to specialize along one line it is because others devote themselves to other lines.

It is difficult to see how a proper rule can be laid down to regulate charges for highly specialized services, but that the conscienceless practitioner should be able to extort all that the unfortunate victim of disease or accident is willing to pay in a time of crisis nobody will agree.

A doctor in a mining camp once refused to give aid to a man who was bleeding to death, because he could not get his pay in advance, according to his business rule. He was straightway set upon, beaten and driven out of the camp by the friends of the wounded man. Most people will agree that he "got what was coming to him."—Lucknow Sentinel.

A THOUGHTFUL GIFT

Send THE ADVOCATE to the absent member of the family or to the distant friend. It is as good as a letter from home and is a weekly visitor. You can better imagine how the home paper is appreciated when you are absent yourself and a copy is forwarded to you.

BELGIAN FARM LIFE

Belgium, or the corner of it ravaged by war, is a busy and marvellously interesting spot to the farm lover, according to a Canadian, who writes home as follows: I made the acquaintance of one of the Flemish farmers who was described as wealthy. The farm was his own property. He kept five cows, one horse, and a good many pigs. The house and all the buildings were small, neat, and built close to one another, while 40 vergees (about one acre and a half), were kept under cultivation. Two cool greenhouses, each 130 feet long, were stocked from top to bottom with cauliflower plants, early peas, celery plants, etc., all in pots; while out doors the well-manured beds were already prepared to receive, as soon as the great frosts would be over, the young plants of early vegetables, cauliflowers, carrots, peas, lettuce, and all sorts of greens and sweet herbs, of which the Belgians make their delicious soups. From these outdoor beds the early crops are usually taken in the first days of May, although the climate is colder than the climate of Kent. Perhaps there is a little more sunshine.

The farmer's wife, a bright, intelligent woman who spoke good French, laughed when I suggested something to her about "the dead season" on the farm. Her husband, herself, her old mother, a young laborer, and the girl servant had plenty of work all the year round, and in summer they had to take on additional help. Five people having plenty to do on a farm of less than one acre and a half, summer and winter alike, explains how they manage to get from this small area the staple food for themselves, their four or five cows, as many pigs, and the horse. In reality they buy only bran and beetroot refuse from the sugar factories to feed their live stock. I was told that the cows yielded a daily average of at least 100 litres (18 quarts) of milk. They are milked three times a day, and the early morning's milk is taken to Ghent by the farmer's wife herself in the horse cart. She has in the town a number of regular customers for milk, butter and vegetables. The second and third milkings go to make butter, while the skimmed milk feeds the calves and the pigs. Every year they sell pigs. "Our pigs are well fed," the farmer's wife said, "and they always weigh at least 200 kilos" (440 lbs.). The vegetables bring in about $300 a year."

One of the Lawyers!

The Insolvent: "Tell me, is it a crime to be poor?"

The Lawyer: "Not in this province, sir. The charge for my opinion on the subject is five dollars. Pay my clerk and go out quietly."

WOMAN HAD NERVOUS TROUBLE

Lydia E. Pinkham's Vegetable Compound Helped Her.

West Danby, N. Y.—"I have had nervous trouble all my life until I took Lydia E. Pinkham's Vegetable Compound for nerves and for female troubles and it straightened me out in good shape. I work nearly all the time, as we live on a farm and I have four girls. I do all my sewing and other work with their help, so it shows that I stand it real well. I took the Compound when my ten year old daughter came and it helped me a lot. I have also had my oldest girl take it and it did her lots of good. I keep it in the house all the time and recommend it."—Mrs. DEWITT SINCERBAUGH, West Danby, N. Y.

Sleeplessness, nervousness, irritability, backache, headaches, dragging sensations, all point to female derangements which may be overcome by Lydia E. Pinkham's Vegetable Compound.

This famous remedy, the medicinal ingredients of which are derived from native roots and herbs, has for forty years proved to be a most valuable tonic and invigorator of the female organism. Women everywhere bear willing testimony to the wonderful virtue of Lydia E. Pinkham's Vegetable Compound.

MACLEAN'S

—THE MAGAZINE FOR REAL CANADIANS

Every phase of present-day Canadian life is reflected in the July issue of MacLean's Magazine. It is vibrant with the spirit of Canada to-day, interpreted by the Canadian writers of first rank, best fitted to treat of the topics assigned them. It is a Magazine with a universal appeal, a live interest for every member of the family. It is the Magazine you have been looking for. Consider the following list of writers and articles in the July issue, and ask your news dealer for the July MacLean's.

Robert W. Service whose virile verses places his books at the head of the best sellers, is driving an ambulance car at the front in Flanders, and his war poems, appearing exclusively in MacLean's Magazine, are saturated with the spirit and color of the trenches. "The Haggis of Private McPhee" in the July Number is a humorous yet pathetic treatment of a subject dear to the heart of every Scotchman. C. W. Jeffrey's illustrations make it more realistic.

Agnes C. Laut Well known to MacLean's readers for her amazing revelations of German machinations in the United States, and whose intimate connection with those high up in financial, business and diplomatic circles in the neighboring Republic, has given her series of articles in MacLean's prescience positively startling, contributes to the July MacLean's yet another of outstanding import under the heading of "Canada's Greatest Service to the Empire."

Brigadier-General Logie A fascinating character sketch of the Hamilton lawyer, who, casting aside his gown and his briefs, is organizing and training as head of Number Two Division, a Canadian army larger than that Britain sent to Waterloo under Wellington. By Hugh S. Hayes.

Immigration after the War Some plain facts are given and deductions drawn by Fisher King. No more vital question is occupying the minds of Canadian statesmen. Every business man should read this article.

Nellie McClung raises the startling question. "Now that women have the vote in Western Canada will they want to sit in Parliament?" Mrs. McClung, herself a leader in the Western Feminist movement, answers this question in a characteristic article in the July MacLean's.

Stringer and McFarlane continue in the July MacLean's their captivating stories, "The Anatomy of Love" and "Behind the Bolted Door." Both these men are first flight fiction writers, and both Canadian born and bred, and both with continental reputations.

Then there is that ever popular department, The Review of Reviews, which gives the busy reader the cream of the world's best periodical literature.

Buy the July MacLean's. Learn at first hand just how good and how interesting this thoroughly Canadian Magazine is.

THE Key to Yesterday

By CHARLES NEVILLE BUCK

CHAPTER XX.—(Cont'd.)

The man in the bed looked up. His eyes read the eyes of the other. If there was in his pulse a leaping sense of release, he gave it no expression.

"Dead?" he whispered.

Steele nodded.

For a time, Marston gazed up at the ceiling with a fixed stare. Then, his face clouded with black self-reproach.

"If I could blot out that injury from memory! God knows I meant it as kindness."

"There is time enough to forget," said Steele.

It was some days later that Marston went with Steele to the Hotel Voltaire. There was much to be explained and done. He learned for the first time the details of the expedition that Steele had made to South America, and then to Europe; of the matter of the pictures and St. John's connection with them, and of the mystifying circumstances of the name registered at the Elysee Palace Hotel. That incident they never fathomed.

St. John had buried his daughter in the Cimetiere Montmartre. After the first mention of the matter on his recovery to consciousness, Marston had not again alluded to his former wife, until he was able to go to the spot, and place a small tribute on her grave. Standing there, somewhat awestruck, his face became deeply grave, and, looking up at his friend, he spoke with deep agitation:

"There is one part of my life that was a tremendous mistake. I fought it out with regard for a misconceived duty and kindness, and I only inflicted pain. I want you to know, and I tell you here at a spot that is to me very solemn, that I never abandoned her. When I left for America, it was at her command. It was with the avowal that I should remain subject to her recall as long as we both lived. I should have kept my word. It's not a thing that I can talk of again. You know all that has happened since, but for once I must tell you."

Steele felt that nothing he could say would make the recital easier, and he merely inclined his head.

"I shall hate her removed to England, if St. John wishes it," Marston said. "God knows I'd like to have the account show some offsetting of the debit."

As they left the gates for the omnibus, Marston added:

"If St. John will continue to act as my agent, he can manage it from the other side of the Channel. I shall not be often in Paris."

Later, he turned suddenly to the Kentuckian with a half-smile.

"We swindled St. John," he exclaimed. "We bought back the pictures at Saxon prices." His voice became unusually soft. "And Frederick Marston can never paint another so good as the portrait. We must set that right. Do you know—" the man laughed sheepishly—"it's rather disconcerting to find that one has spent seven years in self-worship?"

Steele smiled with relief at the change of subject.

"Is that the sensation of being deified?" he demanded. "Does one simply feel that Olympus is drawn down to sea level?"

Shortly after, Marston sent a brief note to Duska.

"I shall say little," he wrote. "I can't be sure you will give me a hearing, but also I can not go on until I have begged it. I can not bear that any report shall reach you until I have myself reported. My only comfort is that I concealed nothing that I had the knowledge to tell you. There is now no blank in my life, and yet it is all blank, and must remain blank unless I can come to you. I am free to speak, and, if you give it to me, no one else can deny me the right to speak. All that I said on that night when a certain garden was bathed in the moon is more true now than then, and now I speak with full knowledge. Can you forgive everything?"

And the girl reading the letter let it drop in her lap, and looked out through her window across the dazzling whiteness of the Promenade des Anglais to the purple Mediterranean. Once more, her eyes lighted from deep cobalt to violet.

"But there was nothing to forgive," she softly told the sea.

CHAPTER XXI.

When, a month later, Frederick Marston went to the hotel on the Promenade des Anglais at Nice, it was a much improved and rejuvenated man as compared with the wasted creature who had opened the closed door of the "academy" in the Quartier Latin, and had dropped the key on the floor. Although still a trifle gaunt, he was much the same person who, almost a year before, had clung to the pickets at Churchill Downs, and halted in his view of a two-year-old filinish. Just as the raw air of the north had given place to the wooing softness of the Riviera, and the wet blankets of haze over the gardens of the Tuileries to the golden sunlight of the flower-decked south, so he had come again out of winter into spring, and the final result of his life's equation was the man that had been Saxon, untouched by the old Marston.

Duska's stay at Nice had been begun in apathy. About her were all the influences of beauty and roses and soft breezes, but it was not until she had read this first letter from Marston that these things meant anything to her. Then, suddenly, she had awakened to a sense of its delight. She knew that he would not come at once, and she felt that this was best. She wanted him to come back to her when he could come as the man she had been in her life, and, since she knew he was coming, she could wait. Her eyes had become as brightly blue as the Mediterraneanmt mirroring the sky, and her cheeks had again taken on their kinship to the roses of the Riviera. Once more, she was one with the nature of this favored spot, a country that some magical realist seems to have torn bodily from the enchanted Isles of Imagination, and transplanted in the world of Fact.

Now, he became eager to see everything, and it so happened that, when Marston, who had not notified her of the day of his arrival, reached her hotel, it was to find that she and her aunt had motored over to Monte Carlo, by the upper Corniche Road, that show-drive of the world which climbs along the heights with the sea below and the sky, it would seem, not far above.

The man turned out again to the Promenade des Anglais. The sun was shining on its whiteness, and it seemed that the city was a huge structure of solid marble set between the sea and the color-spotted slopes of the villa-clad hills.

Marston was highly buoyant as he made his way to the garage where he could secure a car to give chase. He even paused with boyish and delighted interest to gaze into the glittering shop windows of the Promenade and the Avenue Felix Faure, where were temptingly displayed profound booklets guaranteeing the purchaser a sure system for conquering the chances of roulette "on a capital of 10, playing red or black, manque or passe, pair or impair, and compiled by one with four years of experience!"

He had soon negotiated for a car, and had gained the friendship of a chauffeur, who grinned happily and with contentment when he learned that monsieur's object was speed. Ahead of him stretched nine miles of perfect macadam, with enough beauty to fill the eye and heart with joy for every mile, and at the end of the journey—unless he could happily overtake her sooner—was Duska.

The car sped up between the villas, up to the white ribbon of road where the slope, lying at anchor in the purpled water beneath, were white toys no longer than pencils, where towns were only patches of roof tiles, and mountainsides were rumpled blankets of green and color; where the roadhouses were delights of picturesque rusticity and flower-covered walls.

Thanks to a punctured tire, Marston found a large dust-coated car standing at the roadside when he had covered only half of the journey. It was drawn up near a road-house that sat back of a rough stone wall and was abandoned save for the chauffeur, who labored over his task of repair. But Marston stopped and ran up the stone stairs to the small terrace, where, between rose bushes that crowded the time-stained facade of modest extravagance, were set two or three small tables under a trellis; and at one of the tables, he recognized Mrs. Horton.

Mrs. Horton rose with a little gasp of delight to welcome him, and recognized how his eyes were ranging in search for an even more important personage while he greeted her. Off beyond the road, with its low guarding wall of stone, the mountainside fell away precipitously to the sea, stretching out below in a limitless expanse of the bluest blue that our eyes can endure. The slopes were thickly wooded.

"We blew out a tire," explained Mrs. Horton "and Duska is exploring somewhere over the wall there. I was content to sit here and wait—but you are younger," she added with a smile. "I won't keep you here."

From inside the tavern came the tinkle of guitars, from everywhere in the clear crystalline air hung the perfume of roses. Marston, with quick apologies, hastened across the road, vaulted the wall, and began his search. It was a brief one, for, turning into a clearing, he saw her below him on a ledge. She stood as straight and slim and gracefully erect as the lancelike young trees.

He made his way swiftly down the slope, and she had not turned nor heard his approach. He went straight to her, and took her in his arms.

The girl wheeled with a little cry of recognition and delight; then, after a moment, she held him off at arms' length and looked at him. Her eyes were deep, and needed no words. About them was all the world and all the beauty of it.

Finally, she laughed with the old, happy laugh.

"Once," she said very slowly, "you quoted poetry to me—a verse about the young queen's crowning. Do you remember?"

He nodded.

"But that doesn't apply now," he assured her. "You are going to crown me with an undeserved and unspeakable crown."

"Quite it to me now," she commanded, with reinstated autocracy.

For a moment, the man looked into her face as the sun struck down on its delicate color, under the softness of hat and filmy automobile veil; then, clasping her lovely close, he whispered the lines:

"Beautiful, bold and browned,
Bright-eyed out of the battle,
The young queen rode to be crowned."

"Do you remember some other lines in the same verse?" she questioned, in a voice that made his throbbing pulse bound faster; but, before he could answer, she went on:

"Then the young queen answered swift,
"We hold it crown of our crowning,
to take our crown for a gift."

They turned together, and started up the slope.

The End.

The Neutral Newsmonger.

Who cheers us when we're in the blue
With reassuring German news
Of starving Berliners in queues?
The Neutral.

And then, soon after, tells us they
Are feeding nicely all the day
Just in the old familiar way?
The Neutral.

Who sees the Kaiser in Berlin
Dejected, haggard, old as sin,
And shaking in his hoary skin?
The Neutral.

Then says he's quite a Sunny Jim,
That buoyant health and youthful vim
Are sticking out all over him?
The Neutral.

Who tells us tales of Krupp's new guns
Much larger than the other ones,
And endless trains chockful of Huns?
The Neutral.

And then, when our last hope has fled,
Declares the Huns are either dead
Or hopelessly dispirited?
The Neutral.

In short, who seems to be a blend
Of Balaam's Ass, the bore's godsend,
And Mrs. Gamp's elusive friend?
The Neutral.

—Punch.

"The All-Purpose Sugar"

PRACTICAL FARMING

The Farm Home Grounds.

During 1915, an agricultural survey was conducted by the Commission of Conservation on 400 farms in Ontario. In answer to the question "Are the grounds around the house neat?" it was found that 61 per cent. of the replies were in the negative. In travelling over Canada one cannot but be impressed by the general untidiness and the absence of plan or system in the planting and care of the farm home grounds.

Clean-up and Arbor Day campaigns, conducted each spring in many of our towns and cities, should be extended to rural communities. The first question the farmer asks is: "What will it cost?" feeling that he cannot afford it. It will cost a little time in planning and work in planting, but these will be well repaid by the added attraction and consequently increased value of the farm. In many parts of Canada trees and shrubs for planting can often be secured from the wild. Nothing is better for home planting than the common trees from the surrounding woodland; no shrubs purchased from an agent are superior to those native to the district, and no purchased vines can surpass some of those growing wild, such as the Virginia creeper, bitter sweet or the wild grape. Many of the choicest wild flowers, when transplanted to the flower border, often flourish more than in the wild. Yet in spite of the ease with which these attractions may be obtained, many farm home grounds are unplanted, untidy and unattractive. All that is needed to make them really beautiful is a little planting and care.

The morning glories, used to beautify the cabin, were planted by the housewife. In fact, it is usually the woman who takes the interest; that is too busy with the crops to bother with such things.—F.C.N. in Conservation.

Try Alfalfa Again.

Although it is now generally admitted that alfalfa is the one best feeding crop for live stock, and despite the fact that it has been proved suitable to nearly every district in Ontario, many farmers refuse to give the plant a trial on their farm, while others give up trying to grow it after making a very feeble effort for success.

Those who wish to excuse themselves for neglecting to grow this alfalfa say that it intererferes with their rotation, is hard to break up if once established, and is not suited for pasturing; while those who give up trying to grow the crop say that their land is unsuited for it.

The first reason given for not sowing alfalfa is perhaps the best, but it is not a very good reason at that. Alfalfa is known to improve with the length of time that it occupies a field, but even if the third or fourth year are sacrificed to maintaining a rotation the whole benefit of the crop is not lost; and what cuttings are made in the first few years of its life are equal, if not superior, in value to cuttings of any other crop in the same period.

As for the trouble of breaking up a field of alfalfa, this only occurrs in very old fields; and the fault found by the plowman—that the roots run his plow out—is often due to the occurrence of an odd plant of alfalfa that comes as a surprise after the plow has been running through light or poor sod for some time.

The third reason for objection to alfalfa cannot be very well maintained by many who make it, because the crop is so valuable as hay, and is capable of producing so many cuttings in a season that other ground than the alfalfa field may well be given over to pasture and the alfalfa crop used for soiling if the Summer feed is insufficient.

The Contented Cow.

There is a firm, whose business it is to supply milk to city consumers, who make a specialty of advertising that their milk is drawn from contented cows. There is a lot in this for the farmer to consider. Milk production bears close relationship to nervous condition. An excited cow will not readily "let down" her milk, as everybody knows. Excitement is an intimation that she may require her energies for self-preservation, and the milk making process adjourns its activities to allow her to meet the apprehended emergency.

Annoyance in any form produces some degree of worry, irritability, and consequently excitement. Keep the cows contented, and functional activity in milk secretion will be the more generous.

Hence it is that dogs, unusual odors, vitiated air, sudden chills or draughts of air, irregular feeding or watering, noise, roughness in handling, all help to decrease the milk yield. Keep the animal quiet and contented, in well ventilated but quiet quarters, feed regularly, and act in a kindly and gentle manner when about the cattle.

The War on Smut.

The prevalence of smut in the Ontario grain crop last season induced many farmers to treat their seed before sowing this spring. One druggist in a small town told a representative of this paper before seeding started that he had sold 200 pounds of formalin and expected to sell 75 pounds more before the season was over. This is significant, especially where his sales of this material amounted to very little in 1915. There are farmers in the Province who have treated their seed for the past ten or fifteen years annually, and without fail, and the results have well repaid them for their trouble. We have also known of farmers who have never treated for smut, and their grain has become so badly infested and their threshings so dirty that the neighbors refuse to assist them at threshing time. Fruit growers are obliged to spray in order to produce a marketable commodity, and the time may come when farmers generally will be obliged to treat their seed grain in order to prevent severe loss. Anyway, it is a precaution that costs little except labor and trouble, and, not knowing what the season will be like, it will probably pay to make it an annual practice just as is the seeding itself.—Farmer's Advocate.

Harrow or Roller?

There is often a considerable difference of opinion as to whether a field of grain should be harrowed or rolled in the spring, and if it is to be both harrowed and rolled, whether the rolling or the harrowing should be performed first. The proper method of procedure is really determined by the state of the soil. If the soil is lying very light and open on the surface, then the rolling is the best, for it will consolidate the soil round the plants; but in nearly every case the rolling should be followed by a light harrowing with a chain harrow or a set of very light seed harrows, so that the top half inch or so shall be again broken up. When the soil is inclined to be solid, then rolling is generally a mistake, and should not be undertaken unless it is necessary to smooth the surface somewhat or press in the stones in anticipation of harvest. Rolling is very seldom really required unless the land is quite light on the surface.

Little Potato Disease.

The Little Potato disease causes little potatoes as big as a pea or a little larger to form on the potato stems, and no potatoes form on the roots. The reason is that this disease closes up the pores in the stem so the starch made in the leaves cannot go back to the roots to form potatoes. Potatoes affected with this disease have small spots on the surface made up of germ masses, that look like a little soil stuck on the surface. The difference comes out when one tries to remove the spots. They do not come off while soil will. This disease is also called Russet Scab and Rhizoctonia. It is best not to use affected potatoes for seed. If they must be used first treat for two hours in a solution of 4 ounces corrosive sublimate to 30 gallons of water. (Corrosive sublimate is now four dollars a pound.)—D. G. M., North Dakota Experiment Station.

It's in our Recipe Book—with a lot of other recipes for making good Pies.

But—you're going to tell you right here how always to have the crust fine and flaky—and how to have the under crust beautiful, even when using fresh fruit.

Just one part

BENSON'S CORN STARCH

Use instead of all wheat flour. Try it, and prove it.

Get a package of BENSON'S at your grocer's, and write to our Montreal Office for copy of our new 32-page book, "Desserts and Candies" that tells how.

THE CANADA STARCH CO. LIMITED
MONTREAL, CARDINAL, STRATFORD. 218 PORT WILLIAM.

THE PRINCE OF WALES.

Is Unaggressive, But Will Not Stand for Nonsense.

When the Prince of Wales got short leave to go to Buckingham Palace to say "good-bye" to his parents and brothers and sister before going to the front, Prince John asked him: "What are you going to do when you get there, David?" (David being the name by which he is called at home).

"David" rubbed his chin and smiled. "I think I'll grow a beard for one thing," he answered.

Figuratively speaking, the Prince of Wales has "grown a beard" since the war began—that is to say, he has ceased to be a boy and has become a man. The change is very apparent to all who come in contact with him. Always inclined to seriousness, he has taken his share in the war very seriously indeed. His staff work has included carrying despatches, acting as interpreter, superintending the making of trenches, and duty as assistant transport officer, and he has been in imminent danger of death scores of times.

There is nothing aggressive about the personality of "P. W.," but he has a quiet way of standing no nonsense.

One day at the front he was on duty watching transport wagons being filled. Packages were being thrown up to the man in the wagon, whose duty it was to count them out loudly, pausing as each fresh 25 packages were reached. The man in the wagon, "tried it on" with the Prince, to save himself trouble he started calling out "25" when he should have been saying "20." But it did not work.

"Twenty-five already?" said the Prince blandly. "I make it 20. One of us is wrong. Just unload the whole wagon and begin from the beginning again."

The world can get along without you but that's no reason for not trying to be one that the world doesn't want to get along without.

When a mother begins to tell her children how smart their father is, they look at her as reproachfully as if they thought she was losing her mind.

Doctor Tells How To Strengthen Eyesight 50 per cent In One Week's Time In Many Instances

A Free Prescription You Can Have Filled and Use at Home.

Philadelphia, Pa. Do you wear glasses? Are you a victim of eye strain or other eye weaknesses? If so, you will be glad to know that according to Dr. Lucas there is real hope for you. Many whose eyes were failing say they have had their eyes restored through the principle of this wonderful free prescription. One man says after trying it: "I was almost blind, could not see to read at all. Now I can read everything without any glasses and my eyes do not water nor smart. At night they would pain dreadfully; now they feel fine all the time. It was like a miracle to me." A lady who used it says: "The atmosphere seemed hazy with or without glasses, but after using this prescription for fifteen days everything seems clear. I can even read the print without glasses." It is believed that thousands who need glasses can now discard them as a reasonable time and sometimes more will be able to strengthen their eyes so as to be spared the trouble and expense of ever getting glasses. Eye troubles of many describe may be wonderfully benefited by following the simple rules. Here is the prescription: Go to any active drug store and get a bottle of Bon-Opto tablets. Drop one Bon-Opto tablet in a fourth of a glass of water and allow to dissolve. With this liquid bathe the eyes two to four times daily. You should notice your eyes clear up perceptibly right from the start and inflammation will quickly disappear. If your eyes are bothering you, even a little, take steps to save them before it is too late. Many hopelessly blind might have been saved if they had cared for their eyes in time.

Note: Another prescription that is said to help many cases of weak eyes is as follows: Obtain from your druggist a bottle of Optona and use as directed. Many who have used this say that it relieves the strain and quickly brings the eyes to a condition of clear vision. Optona is said to be especially beneficial in cases where the trouble is caused by eye strain, as it relieves the tired nerves and draws the excess fluid from the eyeball.

It is sold in Toronto by Valmas Drug Co.

A WOMAN'S HEALTH NEEDS CONSTANT CARE

When the Blood Becomes Poor Disease Speedily Follows

Every woman's health is peculiarly dependent upon the condition of her blood. How many women suffer with headache, pain in the back, poor appetite, weak digestion, a constant feeling of weariness, palpitation of the heart, shortness of breath, pallor and nervousness. Of course all these symptoms may not be present—the more there are the worse the condition of the blood, and the more necessity that you should begin to enrich it without delay. Dr. Williams Pink Pills are beyond doubt the greatest blood-building tonic offered to the public today. Every dose helps to make new, rich red blood, which goes to every part of the body and brings new health and strength to weak, despondent people. Dr. Williams Pink Pills are valuable to all women, but they are particularly useful to girls of school age who become pale, languid and nervous. Thin blood during the growing years of a girl's life usually means a flat-chested hollow-cheeked womanhood. There can be neither health nor beauty without red blood, which gives brightness to the eyes and color to the cheeks and lips. Dr. Williams' Pink Pills do all this, as is proved in thousands of cases. Mrs. Wm. Rowe, Carlaw Ave., Toronto, says:—"I have received so much benefit from Dr. Williams' Pink Pills that I feel it my duty to recommend them to others. I was about completely prostrated with anaemia. I had no appetite, was terribly weak and subject to fainting spells. I suffered greatly from dizziness, and the various other symptoms that accompany a bloodless condition. Remedy after remedy was tried, but to no avail until a friend advised me to try Dr. Williams' Pink Pills. Before completing the second box, I was again enjoying splendid health, and have since remained in that happy condition."

You can get Dr. Williams' Pink Pills through any medicine dealer or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams Medicine Co., Brockville, Ont.

FELL FROM ZEPPELIN.

German Tumbled Right Into an English Conservatory.

Curious things happen in war time, but there has been nothing more startling than that which happened to a certain family which lives in a town on the east coast of England.

Some weeks ago Zeppelins flew over this port, which was nothing unusual. The members of this certain household were partaking of a late evening meal, seated around the table in the dining-room. They heard bombs exploding and the fire of anti-aircraft guns. Suddenly there was a tremendous crash at the back of the house. Evidently something had dropped into the conservatory. It was assumed that it was a bmb. For a few minutes the people remained where they were, fearing a further explosion. Then they investigated.

In the conservatory, most of the glass of which was broken, they found a dead German air-sailor. He had evidently accidently fallen from a Zeppelin or perhaps he was knocked out by a well-placed British shell. He had fallen from a tremendous height, probably no less than 7,000 feet, and he was naturally badly mutilated.

Like a Train Schedule.

"Nora," said the mistress to the new servant, "we always want our meals promptly on the hours."

"Yes, mum. An' if I miss th' first hour shall I wait for the next?"

For
Pure Goodness
and delicious, snappy flavour no other food-drink equals

POSTUM

Made of wheat and a bit of wholesome molasses, it has rich color, aroma and taste, yet contains no harmful elements.

This hot table drink is ideal for children and particularly satisfying to all with whom tea or coffee disagrees.

Postum comes in two forms: The original Postum Cereal requires boiling; Instant Postum is made in the cup instantly, by adding boiling water.

For a good time at table and better health all 'round, Postum tells its own story.

"There's a Reason"

Sold by Grocers everywhere.

Canadian Postum Cereal Co., Ltd., Windsor, Ont.

HIGH PRICES CAUSED BY WAR

COST OF FOOD IN GERMANY IS UP 85 PER CENT.

Increase in England, Due to the War, 49 Per Cent. and in Italy, 29.

Prof. Einaudi, one of Italy's most prominent economists, explains in the Corriere della Sera of Milan the failure of Germany's much admired organization intended to avert the shortage of food, as illustrated in what he calls the "tragicomic story of potatoes." "If preparation in peace time and organization in war time had been so economically efficacious in Germany," Prof. Einaudi says, "then that country would have become a close market sufficient unto itself and prices of foodstuffs should have been cheaper there than elsewhere.

"Instead, according to official statistics published by the Statistische Korrespondenz, the average increase in prices between July, 1914, and February, 1916, exceeds 85 per cent. Thus the price of rye bread increased 42 per cent., that of corn bread 14, rye flour 46, butter 106, lard 224, and milk 36. The consumption of the above articles has been limited to quantities fixed by the authorities. Beans and lentils have respectively increased 187 and 133 per cent., and are no longer procurable. Sugar increased 28 per cent., coffee 48, eggs 185, beef 117, mutton 106 and pork 72.

"Prices in England, according to the Labor Gazette, have on the whole increased by 49 per cent. The highest increases in prices are those of wheat bread, 52 per cent., flour, 60, and sugar 128. The rise in prices in England, however, is easily supported, owing to the low prices prevailing in ordinary times.

"As regards Italy prices have risen on the whole by about 29.78 per cent., despite unfavorable exchange, high freights, high price of coal and other drawbacks. Bread has only increased 23 per cent., flour 54, milk 13, beef 50, lard 15, and oil 20.

Increases Due to War.

"Thus, in conclusion, the average increase of prices in the three countries is as follows: 85.6 per cent. in Germany, 49 in England and 29.78 in Italy. The German genius for organization has not led to brilliant results after all.

"Where German organization has completely failed is in the case of potatoes, despite the fact that the Germans are still bragging that the price of potatoes has not increased since the war. And yet it is sufficient to relate the story of German potatoes briefly and chronologically as follows:

"November, 1914—Complaints about the scarcity and high prices of potatoes compels the Government to fix the maximum prices in all the empire for growers.

"Winter, 1914-15—Potatoes disappear from the markets. The Socialists blame speculators, agrarians blame unfavorable weather and transport difficulties, the people suspect the potatoes are being devoured by pigs.

"January-February, 1915 — The slaughter of pigs is ordered and as a result the prices of pork rise by 70 per cent. Yet potatoes are still scarce in the western industrial cities and Berlin. Potatoes are sold by the municipalities in small quantities. Prof. Ballod announces that the potato crop was only 43,000,000 tons, instead of 52,000,000 as in former years.

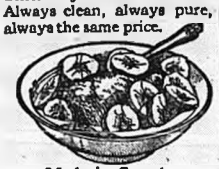
"March-April, 1915—The Government decrees that potatoes should be censused and enforces distribution.

"May-June — Sensational developments. The agrarians, realizing that the prices of potatoes will not increase and fearing that the stocks they hoarded will deteriorate, dump them on the market. The newspapers urge the consumption of potatoes, especially as prices are low and it is announced that the crop yielded 55,000,000 tons.

"July, 1915—The inhabitants of Berlin whose houses are close to the railroad stations complain to the Hygiene Office about the pestilential odor from stacks of potatoes allowed to rot in the station yards.

Potatoes Sold at Loss.

"August, 1915—Accounts of the Government's administration of potatoes are published and reveal that the Government purchased 24,000,000 hundred weights of potatoes, sold only about 4,000,000 to the municipalities and was forced to get rid of the remaining 20,000,000 by selling them at a loss to distilleries.



"September, 1915—Potatoes again scarce. At Marburg farmers refuse to sell, but decide to wait for spring.

"October, 1915—Farmers who have more than ten acres of land under potato cultivation are ordered to keep 20 per cent. of their crops at the disposal of the Government.

"Winter, 1915-16, and spring, 1915—Impossibility to get potatoes at the prices fixed by the Government and impossibility on the part of the Government to compel the farmers to sell the potatoes they are hoarding."

Prof. Einaudi concludes his tragicomic story of German potatoes by merely pointing out that even the most wise and all powerful German bureaucracy failed to change the habits of man and to avert the inevitable mistakes that every bureaucracy in the past has been in the habit of committing.

For Summer Camp or Bungalow—the ready-cooked, ready-to-eat food—that keeps in any climate, that supplies the greatest nutriment in smallest bulk, is **Shredded Wheat Biscuit**, the ideal Summer food, because it supplies everything the human body needs in a form that is easily and quickly digested. Combines deliciously with fresh fruits. Always clean, always pure, always the same price.

Made in Canada

GERMANS ADMIRE BRITISH FINANCE

THE SOCIALISTS URGE A TAX ON CAPITAL.

British System Is Praised As Less Burdensome Than Teuten Method.

Dr. Helfferich, the German financial secretary, some time ago laid stress on the advantages of German finance as compared with British methods, but some critics, even in Germany, have since realized that it is a short-sighted policy to raise taxation merely to maintain a balance in the civilian budget, while the colossal expenditure of the war remains to be covered entirely by loans, writes a London correspondent.

In fact Vorwaerts goes so far as to express preference, by implication, for the Brit h system of finance and taxation. The at journal says: "If the English State has to pay almost 6 per cent. interest for its loans, it must not be forgotten that it recovers a considerable percentage in the shape of taxes. Thus, in war no less than in peace, the English system of State economy remains an example which no other country has yet been able to emulate."

It is a significant fact that the name of the war profits tax law of Germany has been altered to that of the war tax law, in order to express the fact that it is not properly a tax on profits.

Urge Tax on Capital

Since the outbreak of the war violent struggle has been in progress in the Reichstag between the Government and the Social Democratic and Labor parties. The latter have urged that the capital and industry of the empire should be made to bear a far heavier share in the way of direct taxation, while the Government parties have favored indirect taxes, maintaining that further direct taxation is out of the question.

In urging that the tax on war profits should be raised the Socialists maintain that undue consideration is shown for the interests of the propertied agrarian classes. All indirect taxation, the Socialists maintain, bears too heavily on the working classes. It is argued, with not a little shrewdness, that if Germany cannot stand further taxation on property, then the Government may as well declare the empire to be bankrupt, as all idea of any adequate war indemnity must be abandoned.

In financial matters Austria and Hungary have been following the example of Germany. In the fourth Austrian war loan there was a departure from the policy adopted in the cases of the three earlier emissions. The latest issue was in two forms, a long and a short period loan.

The Austrian Loan.

As in Germany, the pawning methods have been adopted freely in Austria. In the Neue Freie Presse the borrowing facilities have been fully explained. It states that "1,000 kronen of the forty year bonds cost 925 kronen. Any person wishing to subscribe this amount can borrow 750 kronen on the bonds which are to be issued to him, so that he need only find 175 kronen in cash, and does not even require to pledge older securities."

The fourth Hungarian war loan was issued in the form of a perpetual short period loan, as with the second and third loans, but the Government has aimed at securing the bulk of the small subscriptions to the perpetual loan.

The Austrian war profits tax is expected to yield 300,000,000 to 50,000,000 kronen in three years. However, the President of the Association of Austrian Industrialists, writing in the Neue Freie Presse, expressed the opinion that the actual results of the tax, especially as regards the profits of industrial undertakings, would provide a "big disappointment" for the Government.

HEALTHY BABIES SLEEP WELL AT NIGHT

A well child sleeps well and during its waking hours is never cross, but always happy and laughing. It is only the sickly child that is cross and peevish. Mothers, if your children do not sleep well; if they are cross and cry a great deal, give them Baby's Own Tablets and they will soon be well and happy again. Concerning the Tablets Mrs. Chas. Diotte, North Temiscaming, Que., writes:—"My baby was greatly troubled with constipation and cried night and day. I began giving her Baby's Own Tablets and now she is fat and healthy and sleeps well at night." The Tablets are sold by medicine dealers or by mail at 25 cents a box, from The Dr. Williams Medicine Co., Brockville, Ont.

Dog Tax to Yield $4,560,000.

French Minister of Finance Ribot expects to add $4,560,000 to the nation's income by his new tax on dogs. There are 900,000 dogs kept for pleasure in France and 2,700,000 watch-dogs. The former must pay $2 each and the latter $1.

Minard's Liniment Lumberman's Friend

Its Present Color.

"Say," said the landlord to the tenant who was two months shy with his rent, "when am I to see the color of your money?"

"Can't say," replied the party of the second part. "The color just now is an invisible green."

Minard's Liniment Co., Limited.

Gents,—I cured a valuable hunting dog of mange with MINARD'S LINIMENT, after several veterinaries had treated him without doing him any permanent good.

Yours, &c.,
WILFRID GAGNE.
Prop. of Grand Central Hotel
Drummondville, Aug. 3, '04

Had Enough.

"Having satisfied you, sir," went on the book agent, "that you are in constant need of our superb dictionary permit me to show you also its greatly enlarged appendix, which no family should be without."

"Nothing doing!" gasped the prospective victim. "It's cost me $500 to have one of those things cut out and I want no more."

Minard's Liniment used by Physicians.

Not Too Busy.

Nervous Employer—"Thomas, I wish you wouldn't whistle at your work."

Office Boy—"I ain't working, sir; I'm only just whistling."

Handsome Prizes Will Be Given

The Management of the Toronto Fat Stock Show announce their intention of holding a show at the Union Stock Yards, Toronto, December 8th and 9th, 1916. We understand the prize list will contain many new classes, and offer handsome prizes to breeders and feeders of cattle, sheep and hogs.

Unconscious Joker.

What the case was about no one seemed to know exactly. The lawyers themselves were pretty well mixed up.

Then an important witness entered the box and was presently asked to tell the court the total of his gross income.

He refused; the counsel appealed to the judge.

"You must answer the question," said the judge sternly.

The witness fidgeter about and then burst out with:

"But—but, your honor, I have no gross income. I'm a fisherman, and it's all net."

Money also helps the man who tries to help himself.

EXHIBIT OF WOOL.

Canadian National Exhibition Will Feature It.

Through the wool display of the Dominion Live Stock Branch, Ottawa, which will be presented at the Canadian National Exhibition, farmers will be given a splendid opportunity for obtaining a thorough knowledge of the sheep and wool industry of Canada. The exhibit has been prepared by T. Reg. Arkell, chief of the Sheep and Goat Division of the Branch, who will be in charge with Mr. James A. Telfer as demonstrator. The object of the exhibit will be to explain the various classifications and grades, and to show how wool may be handled in such a way as to secure the best advantages to both the producer and buyer. In order to command the highest market prices, wools should be presented in a carefully folded and parked condition and should contain as little foreign matter as possible. Actual demonstrations in grading and sorting will be given daily by wool experts. One of the most interesting and instructive features will be samples of wool in both the greasy and scoured condition, showing the injurious effects of using insoluble paints, which are difficult to remove, rather than the standard dipping fluids for marking purposes. Samples of wool that have been tied with binder twine will show how the sisal fibre becomes incorporated into the wool with the consequent defect in the finished product. The injurious effects of shearing wool while damp or permitting it to become damp while in storage, will be shown, together with the damage caused by the incorporation of straw and chaff into the fleece.

FOR TRANSFUSION OF BLOOD

Argentine Surgeon Practising in France Finds New Method.

This month's number of La Revue, Paris, describes a new method for transfusion of blood, an operation often necessary under conditions which do not always allow certain precautions to be taken.

The method is due to Prof. Luis Agote, an Argentine surgeon, and successful experiments have been made before the rector of the Sorbonne, the dean of the faculty of medicine, and several professors and doctors.

Blood is taken from the bend of the elbow of any subject willing to lend his aid and collected in a receptacle which contains a solution of neutral citrate of soda, prepared in the proportion of one gram of salt for 100 grammes of blood. This mixture prevents the blood from coagulating without destroying its vital properties, and as the citrate employed is inoffensive to the organism it can be injected into the forearm without danger, thus obviating the chief drawbacks to the transfusion as generally practiced.

The receptacle for the blood drawn is in graduated glass with double tubing and has a large enough opening to allow the blood to fall directly into it. The end is pointed to allow the tube for injection to collect the maximum of blood without allowing air to enter. From three to five grams of solution are placed in it, being a sufficient quantity for 200 grams of blood.

"TELEPHONE" CURES THIRST.

French Soldier Confesses and Penalty It Cut in Two.

A court-martial at the front. The presiding officer, speaking with a distinctly kindly intonation, to the accused:

"Now, now, admit that you telephoned."

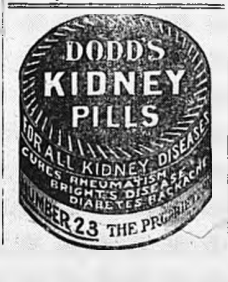
"No, my Colonel, I did not telephone."

"If you confess, you will only have half the penalty."

"Well, then, yes, my Colonel, I did telephone."

All the court laughed and a nominal sentence was pronounced.

The civilian should not imagine that the use of a telephone is a crime in the French army. To "telephone," in army slang is to bore a little hole in a full barrel of wine, to fit a rubber tube thereto and apply the mouth to the other end.



If a man owes you money he is always ready to laugh at your weak criticisms.

Keep Minard's Liniment in the house

Fur From Black Apes.

The black apes of Guinea have long silky hair, and their fur is used for muffs and capes. During the last few years one million and seventy-five thousand skins have been shipped to Paris.

He who gets rich quick is apt to go broke in a hurry.

ROYAL YEAST
MAKES PERFECT BREAD

A Bald Fact

An Irishman going through a street in London was accosted by an old beggar woman with the usual "Spare a copper, sir."

Pat, on placing a coin in her hand, was greeted with the remark: "May every hair in your head be a candle to light your soul to glory."

Pat, who happened to be the possessor of a very bald head, took off his hat, exclaimed: "Well, ma'am, I'm afraid when that time comes it won't be much of a torchlight procession.

BELL 'PHONE 30 — BRUCE 'PHONE 11

We Handle All the Good Things You See Advertised in the Big Magazines.

THIS store is headquarters. You will always find here everything you would expect to find in a similar store—and many things more.

We specialize on articles of genuine merit. Articles we have tested and tried ourselves and we can recommend and indorse.

You will find here all of the good—the best—the pick—of the standard household articles advertised in magazines.

We add our own guarantee to that of the manufacturer's.

We call your especial attention to the O-Cedar Polish Mop, the greatest boon to cleaner and better housekeeping we know of.

With it you can dust, clean and polish a hardwood floor without getting down on your hands and knees. You can dust the tops of doors, the moldings, the tops of high furniture without standing on chairs. You can dust and clean the stair steps and banisters in half the time it usually takes.

You can dust under the bed, and under heavy furniture without moving it, and so on throughout the house—wherever there is dusting to do. You can do it quicker, easier and better with the O-Cedar Polish Mop.

Unlike other dusting mops the O-Cedar Polish Mop can be washed when soiled, and then renewed by adding a few drops of O-Cedar Polish.

We are so confident that you will be delighted with the O-Cedar Polish Mop that we will deliver one to your home on two days' trial. If it is not satisfactory in every respect we do not expect you to keep it, and will instantly return your money. The price of the O-Cedar Polish Mop, complete, is $1.10. Let us send you one on trial.

PINKERTON

Mr and Mrs Geo Chick returned from Muskoka on Monday.

A number from here attended the garden party at Glamis on Monday night.

The garden party which was held on the manse grounds here was a huge success. A first-class supper was provided by the ladies, and the programme was very well rendered. About $100 was realized.

Miss Cummins, of Molesworth, is visiting her cousin, Miss Grace Elliott.

Mrs Neal and daughter and Miss Foute, of Tennesee, returned to their home on Monday.

Mr Simpson, of Harriston, visited friends in this vicinity last week.

Mr Jas Gale is spending a few holidays at his home here.

The Pinkerton Red Cross have made all these articles within the last three months, and shipped them last week: 60 pairs socks (knit), 36 pairs of summer socks (bought from factory), 5 quilts, 25 pairs pyjamas, 4 old sheets, 2 old tablecloths, 4 old cloths, 408 handkerchiefs, 36 surgical shirts, 5 pillows. The society is very grateful to the ladies of Bradley Sunday School for their kind donation of $50, and are also very grateful to all the workers for their generous co-operation towards this worthy cause.

Children Cry
FOR FLETCHER'S
CASTORIA

GLAMIS

Miss Minnie Howson is spending some time at Dr Black's in Clifford.

Rev Mr Neilson, of Paisley, took the service in the Baptist church on Sunday afternoon, Mr McCauley supplying in his place at Willis croft.

Mr and Mrs Chas Moore, of Toronto and Mr and Mrs Bowen, of Port Elgin, motored over on Tuesday of last week and spent the day at J C McIntyre's.

Quite a number from here attended the garden party at Pinkerton on Monday of last week.

Mr Peter McDougald, of Brandon, Man, spent Monday at J C McIntyre's.

Pte Clyde McKeeman left on Wednesday of last week for London.

Mr Harry Stevenson and wife, of Detroit, are spending some time at the home of the former's parents, Mr and Mrs Steve Stevensen.

Misses Jessie Oliver and Lena Wittig are visiting at Mr McKeeman's.

The Free Methodists have had their church roofed and papered.

Rev Mr Robinson, of Tiverton, took the anniversary services in the Presbyterian church on Sunday. A big crowd attended the garden party on Monday night. Mr Wilson kept the audience laughing with his humorous selections. Mr Ryan's singing was very much appreciated, as was also Mr Fitzsimmons' bagpipe music.

Miss Sarah McKinnet, of Markdale, is visiting her sister, Mrs Kirktown.

Mr and Mrs McKeeman, Miss Lizzie Campbell and Clyde McKeeman have returned from their trip to Beamsville, Niagara and Buffalo.

Mr Albert Pickard, of Wiarton, is spending a few days with friends.

Quite a number of our young soldiers have returned from London to help harvest the crops.

Mr John Deelan had a barn raising on Thursday.

The Free Methodists of this place are holding camp meetings in Wm Gilchrist's bush on the 2nd. An evangelist, Rev L Ecker, of Lyndenville, N Y, is the leader at these meetings.

Miss Emma Kirktown is home from Port Arthur for holidays.

Miss Reta McKinnon is spending part of the vacation in Toronto.

ELORA ROAD NORTH

Mrs Marshall Patterson, of Toronto, is visiting at the home of her father, Mr Wm Beech.

Mr Jas Sparrow, of Owen Sound, is spending holidays at his home.

Messrs John Brown and Harry McTavish have each purchased hay loaders to handle their heavy hay crop.

We are pleased to hear that Mrs David Bryce, who has been ill, is recovering.

Miss Dorothy Spong, of Ellengowan, spent last week at Mr John McDougall's.

Mr Thos Irwin has joined the ranks of the motorists.

BORN

OVEREND—In Brant, on July 17th, to Mr and Mrs Wesley Overend, a daughter.

MARRIED

LEGGE—STRONG—At the residence of the bride's father, on June 28th, by Rev. H. G. Bandy, Mr. Sinclair Legge, 12th con. Elderslie, to Alice S., daughter of Mr. Thos. Strong, 2nd con Arran.

UNDERWOOD

Lieut John McLean, son of Mr Hugh McLean, of this village, was one of the first Canadians to get into the trenches in France. He has been at the front almost ever since. A letter was received from him recently, so that he is still able to his bit against our enemy.

A meeting of the commissioners of the Bruce Municipal Telephone System was held here a few days ago, Messrs. McNaughton, McLean and Hunter being present. They have engaged a new man, Mr Norman Jones of Berlin, to look after the system. He comes highly recommended, and subscribers will be pleased to have the line once more running in good shape. To make it possible to answer all trouble and repair calls quickly, the commissioners have provided Mr. Jones with an auto. This is getting up to the minute, isn't it?

The Presbyterian garden party has been changed from Aug 10th to Aug 4th, because of the Centre Bruce one coming on Aug 10th.

Mr Gillies McKay, of Orono, is home on vacation.

Mrs C R Johnson was down to Bruce Beach last week enjoying the cool lake breezes.

The soldiers of the 160th from here are home on a month's furlough to help with the haying. Pies Will Dobson and Earl Begg were unable to come, however, on account of being on the sick list.

Mrs A MacNab with Miss Isabel and Master Allan are down at Bruce Beach at present.

Mr Marshall Orford and family, of Tiverton, spent Sunday at Mrs Orford's.

BRANT TP. COUNCIL

The Municipal Council of the Township of Brant met at the Tp Hall on Monday, July 10th. Members all present. Minutes of last meeting read and declared correct.

Weir—Johnston—That the treasurer's half yearly report as read be adopted—Carried.

Johnston—Gregg—That the reeve and treasurer be authorized to sign a note on behalf of this corporation to borrow the sum of $2000 for current expenses and that the clerk prepare a by law confirming the same.—Carried.

Gregg—Weir—That a grant of $291 be given to the Richardson family, Cargill, cheque to be issued to C W Keeling.—Carried.

Gregg—Johnston—That the reeve and clerk issue orders on the treasurer for all accounts passed at this meeting of council.—Carried.

Johnston—Gregg—That this council do now adjourn to meet on Monday, the 7th day of August, for the purpose of levying the township rates and for general business.—Carried.

M. A. McCALLUM, Clerk.

SAUGEEN COUNCIL

Saugeen Council met July 8th, members all present except Mr Chappel.

The clerk was instructed to look into the question of road allowance in front of Mr Tatham's property.

On motion of Greathead and Atkinson, a grant of $10 was made to the Dunblane and Turners Patriotic League.

The following accounts were ordered paid: James Wallace, 58 yds of gravel at 65c, culvert, $5, 2 days' work $2.75, $45.45; Wm Gowanlock, 130½ hrs grading at 80c, $104.40, 5 hrs grading at 40c $2, less use of grader $22.25 (charge Arran ½ of 4 hrs at $1.05) $84.15; Josiah Bell, supporting McRae bridge, etc. $5; D Gowanlock, drawing plank and covering Gowanlock bridge $7; John Scott, 6 yds gravel and clay, $3; J D Cottrill, 2,500 ft beech at 14c $35; S Buschlen, sharpening grader knife $1.25; Alex Lamont, sheep killed by dogs, $14; The Times printing account to date, $44.25; F W Elliott, 3 mos salary at clerk and treas. $50.50, postage $3.50—$56; Mr Wallace, grant to Dunblane Patriotic League, $10; council meeting No 6, $10.05.

The Reeve and councillor Atkinson were instructed to examine McEwing's bill and make necessary repairs.

D A Campbell was appointed collector of taxes for this year.

On motion of Webster and Atkinson the council decided to have the Con. 1 and 2 drain cleaned out and the Reeve and mower and seconder were appointed a committee to look after the matter.

Council adjourned to meet Aug 12th, when the rates for the year will be levied.

F W ELLIOTT, Clerk.

INDIAN'S GRATITUDE

D'd Not Forget a Kindness and Repaid Walkerton Man After 20 Years

One of the nicest stories we have heard in a long time is about an Indian belonging to the 160th Batt. It happened in Walkerton while the Battalion was quartered here. George Seigfrid, who works at the Knechtel factory, noticed an Indian soldier eyeing him very intently on Durham St one day. Finally the Indian came up and spoke to him. "I know you," he said. Mr Seigfrid was sorry he could not return the compliment. "Didn't you do some teaming up north of Port Elgin about twenty years ago?" "I did." "Do you remember meeting a little Indian boy at the side of the road one cold morning?" "I believe I do." The Indian recalled the fact that Mr Seigfrid had given him a ride on the wagon that morning. And when he had learned that the little fellow was poor and hungry and that his mother had a hard time to support him, he had taken pity on him, and although he was just living on day wages, handed the little fellow a dollar bill. Mr Seigfrid had long since forgotten the incident, but the Indian had not. He asked Mr Seigfrid where he lived and announced that he would call at his place that evening. He was true to his word, and he brought along with him a cheque for a full month's wages as a soldier. He insisted on presenting the cheque to Mr Seigfrid and his wife in return for the kindness he had received from Mr Seigfrid when a poor little Indian boy twenty years ago. It is said an Indian never forgets a kindness. Here is a case where a white man can learn from his red brother.—Telescope.

Free Publicity

There is one sentence which every editor of a newspaper is very familiar with and which appeals to him with every issue of his paper that is:—"We trust that you will find it of sufficient interest to give it space." In most cases editors do find the articles would be interesting to the readers of the paper. They are both entertaining and instructive showing that a capable person has prepared them. But the request usually comes from some society, organization or branch of work that considers the subject in hand of sufficient importance to pay capable men to further its interests. Then the newspapers are asked to give the necessary publicity to make the work effective. The only thing a newspaper has to sell is publicity and it cannot afford to give away this commodity to every worthy organization any more than the merchant or the farmer can afford to give their merchandise to whoever might ask.

To Ease Her Mind

The nurse was writing a letter for a wounded soldier.

"There's something I'd like to put in, miss," said the soldier hesitatingly.

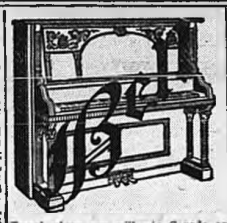
"Well, what is it?"

"You won't mind, now? Just put, 'The nurses in this hospital are all rather elderly persons.'"

"That isn't quite true," said the youthful nurse.

"It isn't, miss; but it'll ease my missus' mind wonderful. She's always been a bit on the jealous side."

Study the Trouts



In a good trout stream it will pay the angler to conceal himself and watch the antics of trout in a pool to see what they are leaping to, especially during late June when the moths and water flies are hatching. Imitate then, the colors of the fly to which they are feeding.

Michael Angelo began his career by burying in the earth a statue which he carved, and thus turning it into a valuable "antique."

BACKACHE, LUMBAGO AND RHEUMATIC TROUBLES.

Dear Mr. Editor—I wish to state that I suffered greatly from backache, lumbago and rheumatic troubles. I used "Anuric," the latest discovery of Doctor Pierce for backache and kidney troubles, and I can cheerfully recommend the "Anuric Tablets" to anyone suffering from any of these maladies.

Yours truly,
J. F. GARNER.

NOTE: It is now asserted with confidence that these painful effects due to uric acid in the system are entirely eradicated. A new remedy, called "Anuric," has been discovered by Dr. Pierce, and is the cause of drainage outward of the uric acid with which it comes in contact within the body. It will ward off backache, headache, and the darting pains and aches of articular or muscular rheumatism—of those diseases which are caused by too much uric acid, such as gout, asthma, sciatica, renal calculi. "Anuric" prolongs life because old people usually suffer from hardening and thickening of the walls of the arteries, due to the excess of uric acid in the blood and tissues.

Dr. Pierce, who is director and chief physician at the Invalids' Hotel and Surgical Institute, Buffalo, N. Y., has been testing this wonderful medicine for the relief of over-worked and weakened kidneys. The relief obtained by sufferers has been so satisfactory that he determined to place "Anuric" with the principal druggists in town where people could get this ready-to-use medicine. "Anuric" is not harmful or poisonous, but aids nature in throwing off those poisons within the body which cause so much suffering, pain and misery. Scientists assert this remedy is 17 times more potent than Lithia. Send 10 cents for large trial package.

"Anuric" is building up a reputation as good as Dr. Pierce's other well-known medicines which have been proved reliable during nearly fifty years, such as Doctor Pierce's Favorite Prescription for the ills of women, Doctor Pierce's Pleasant Pellets, the liver regulator, and Doctor Pierce's Golden Medical Discovery for red blood.

Teacher Wanted

FOR S.S. No 1 Saugeen, Arran & Elderslie (Hepworth). Duties to commence Sept 1st, 1916. State salary and qualifications. Applications received up to July 22nd. JOHN SCOTT, Sec'y-Treas., R R No 1, Port Elgin.

Guaranteed Clothes!

You get a complete and absolute guarantee when you buy made-to-measure clothes here—the guarantee means what it says—you're the judge.

You'll find that we don't ask you why the clothes are unsatisfactory or how—if you say they're not right, we don't argue about the matter.

That sort of a guarantee, added to the very evident advantage of wearing custom-tailored clothes, makes them all the wiser choices.

I. S. CRUICKSHANK

Beat Him To It

An official of the board of health in a town not from Boston, says the Post of the Hub City, notified a citizen of the town that his license to keep a cow on his premises had expired. In reply to this letter, the official received the following communication:—

"Monsieur Bord of Helt;—

I just get your notis that my license to keep my cow has expire I wish to enform you, M'sieur Bord of Helt, that my cow, she beat you to it—she expire I'ree week ago. Much oblige. Yours with respeck, Pete —.

Big Crops in The West Again

Reports agree that in all provinces of the Canadian West there will will be another full crop for 1916, unless frost comes before the harvest is through.

—Grand Concert, Town Hall, Paisley, Aug 4th, under auspices of Women's Patriotic League.

—Don't go home. Stay for the concert, Friday evening, Aug 4th. Proceeds for patriotic purposes.

—Mr Neil Cameron, of St. John, New Brunswick, was here visiting his mother and sisters over Sunday

—Mr H Boettger is having his residence on Queen St north veneered with brick and otherwise improved.

—Mrs. E. H. Webb and child, of Detroit, are visiting her parents, Mr and Mrs H G Clark, of Greenock.

—Misses Bessie and Mary Dryden are down from Duluth on a visit to their mother and friends here.

—Pte Pin Hepburn, of the 201st Batt., and Pte Jas Hepburn, of the 123rd, were home from Camp Borden for a few days.

—Messrs. Geo. and Chas. McElroy, of Ottawa, visited over Sunday at the home of their aunt, Mrs. Jos. Sholdice, 4th Elderslie.

—Quite a number of our citizens are holidaying at Southampton beach. This weather is booming the summer resort business.

—Miss Munn, from Wroxton Sask., is down on a visit to her parents on Goldie St. Mr and Mrs. Longfield, of Toronto, are also up for holidays.

—Two clubs of bowlers went to Cargill on Wednesday afternoon and played the locals there. The home townsfolk were up two shots on the total scoring.

—Corp. Wilmer Sparrow, who was home from London for a few days, has been appointed an instructor in musketry, and will likely be so employed with other new battalions until the 160th goes overseas.

—The ladies of the Patriotic League are depending altogether on the generosity of the ladies in town and surrounding country for cream, butter, fruit, pastry, etc, for Aug 4th. Any information will be cheerfully given by members of the committee, or Mrs D McArthur, Sec-treas.

—The hot weather continues from day to day, without a break. We have had only one dash of rain since about June 26th. This has made superfine haying time, but threatens to burn up what promised to be one of the most delectable crops of the new century, an abundant yield of raspberries.

—Mr and Mrs H. C McCallum of Winnipeg, have been visiting the former's mother, Mrs Roberts, Paisley, for a few days. Mr McCallum is now on a business trip to Montreal, while Mrs McCallum and children are visiting at the home of her mother, Mrs Hugh E. McLean, 10th Bruce.

—Mrs McCulloch, a cousin of Messrs Wm and Thos Sparrow, died at her home in Royalton, Minn, a few days ago. The deceased spent several years of her life in Paisley, prior to her marriage, and was well known to many here. Her maiden name was Mary Sparrow, and she was a daughter of the late Thos Sparrow, who was a resident of Paisley before he went west. Mrs McCulloch was 75 years of age.

Cow Broke Her Neck

A 10th concession of Carrick farmer allows his cattle to pasture on the highway, herded by his little daughter. The other day while the little girl was getting a drink of water the cattle wandered into a neighbor's lane, and it is stated that the neighbor set his dog on the cattle. In their flight one of the cows caught her horns in the wire fence, giving her such a sudden jerk that the animal's neck was broken. The loser now seeks redress, as the cow was valued at $80.

INSECTICIDES!

Church's Bug Finish, Bug Death, Paris Green, Arsenate of Lead, Hellebore, Insect Powder, Hess' Instant Louse Killer, Hess Dip and Disinfectant for flies, Eureka Fly Killer, Zenoleum, pheno, Chloro.

—It is to be hoped that the ladies who have been so generous in the past in supplying refreshments for patriotic purposes will help the League out on Aug 4th, as the proceeds go to Red Cross work.

THE EARL'S SECRET

Or, a Martyr to Circumstances.

CHAPTER I.

It is sunset; a dusky red is spreading out from the horizon and throwing a duskier reflection upon the sullen sea and its more sullen shore. A weird, awful shore is is, encumbered with huge rocks and strangely hewn stone.

A grim, shuddering waste, made grimmer and more terrible by strange, stray specks of humanity, that, seen in the failing sunlight seemed rather distorted creations of fancy than actual human beings; from stone to stone they pace stepping with a peculiar, halting, laborious gait, and looking sullenly earthward as if their eyes were chained to the hateful, barren shore and the looking upward of death.

Look closer and gain fresh cause for wonderment. There is a strange likeness in these dim figures. They move alike, their gaze is directed sullenly downward alike, they are dressed alike, and, dingy, gray garment, half shirt, half tunic, relieved in all cases by a patch of crimson across the arm, upon which is stamped, in letters of black relief, a number. Their feet are shod with thick, heavy, iron-soled boots; a coarse, hideous cap is upon their heads, and the hair beneath it is cut almost to the skin.

The faces—ah, no! who could describe those faces? Who can speak of those crime-stamped brows, those passion-distorted lips, and those despairing eyes?

Listen! There is no sound but the sudden crash, crash of the falling stone that the coarse-grained hands are pushing, and the bent, gray-clad shoulders are heaving, from the quarries. Another sound still heard only at intervals when the stone is silent, and that is the tramp, tramp of the sentries, who, like the figures of Death and Eternity in the old Roman temple, forever, day and night, march to and fro on the battlements, forever, night and day, keeping watch and ward on the terrible, gray-clad figures that despairingly toil upon the barren plain below.

It is the convict station at Portland, and the figures are the shadows of some of England's vilest criminals.

The sun sinks lower, the warders, stationed at measured intervals between the various gangs, yawn with weary impatience and long for the sound of the prison bell. When that rings, which it will do within half an hour, the gangs will have finished their work for the day, and the march for the gloomy prison upon the heights will commence.

The warders yawn impatiently, but the silent, gray-clad figures feel no impatience. They have nothing to long, for, nothing to hope for.

One and all toiling on this particular plain toil on till death, and that has been longed for so long that it seems so far off as to be hopeless.

Death comes to men free and happy, but them it seems to avoid; it leaves them to their most awful punishment of life.

The quarter has chimed, the warders have grown more impatient, perhaps less vigilant, or does this tall, thin figure with No. 108 stamped upon his arm only fancy so? For he has broken the rule which says that no man shall separate himself from his particular gang, and is crouching behind a bowlder. Is he resting? His hazel, hunted eyes flash from the nearest warder to the sentinels upon the battlements. His hand grasps the chain at his leg to deaden its rattle as he glides along. His eyes drop from the sentinel and travel swiftly but keenly along the grim rank of the next gang. They rest upon one gray-clad figure numbered ninety-nine. His breath comes faster, he crouches until his breast touches the ground, and, though his lips are too tightly pressed for speech, his eyes seem to speak in the intensity of their gaze.

Perhaps No. 99 feels their gaze, for as he stoops with the gang to heave the hard, cruel stone he lifts his small, villainous eyes and sees the dark, piercing ones fixed so earnestly upon him. A start, imperceptible, thrills though him, and, as he raises his shoulder, he contrives to lift one hand as a signal that he has seen and understands.

No. 108 seems satisfied, he drops his eyes with a sigh, and waits with sullen impatience.

The stone is upheaved. The gang moves round and pauses to gain breath

A few of the miserable figures drop upon the stones.

No. 99 flings himself sullenly upon the stone behind which crouches No. 108, and so effectually conceals the piercing eyes from the warders' cat-like vigilance.

"Jem," says a low, hoarse voice from below the stone. "Can you hear me? Don't turn your head and speak low."

"I hear," replies No. 99, with a hoarse voice.

"Jem, there's a chance; don't start or I'll kill you. There's a chance, but wants working. I've been waiting to speak to you for six weeks. Warder No. 24 drinks like a fish. He'll be drunk to-night—to-night at seven. I've the stuff in the corridor. Our cells are opposite. He carries the keys in his breast pocket. At half past seven to-night, Jem, he or I will be a dead man. You know me and my stroke. If I can get a clear blow with the iron jug and witout noise we are free. Once in the corridor with his keys, we can gain this cursed cliff. Don't speak—he's looking this way! The tide comes in at ten; we must swim for it—go this minute, or we are lost."

A warder leaps along the stones; No. 99 rises as if rested; No. 108 crawls like a serpent back to his proper gang.

Crash, Crash, the last stone is lifted for to-night; the bell chimes the hour, the gangs form with listless, weary sullenness into lines, sentwarders, well armed, order them sternly to march. Another dreary, hopeless day of toil is done.

The sun has sunk, the red glow has left the sky, darkness has fallen upon the surging sea and barren shore.

The tramp of the sentinels can just be heard above the rattle of the falling beach. It is too dark to see them, but two figures are crawling under the beetling cliffs, they crawl hand in hand, fearful of losing each other for a moment. Not a word is spoken, their movements makes no sound. Five ten, twenty minutes pass, and then they stop and drew long, husky gasps of relief.

"Jem," says one, "where are we?"

No. 99 shakes his head and peers into the darkness.

"Under the cliff," returns the other. "Right under the guardhouse, I think; if so, far enough."

"Quite far enough, captain," is the hoarse reply. "And now we are here, what' the next move?"

The other remains silent for a moment, while he fumbles at his leg, then touches his breast and face.

"What's the matter, guv-nor, are you hurt?"

"A little," is the reply, "I'm bleeding like an ox."

No. 99 emits a grim, gutturnal laugh.

"There's enough of that with both on us," he says. "It's like our luck as the beast should turn. I thought you'd struck him straight, too, guv'nor?"

"So did I," is the curt retort. "No matter; we are here and that's luck enough."

"But we can't stop here."

"We must till the tide's up, and it's coming now, half an hour and the fishing yawls will be in front of us."

His companion shudders.

"The fishing yawls!" he repeats. "D'ye mean we're to swim for them, guv'nor, through this, in the pitch dark? Why, it's death!"

"Or freedom! Death! Jem my man, you're worse than an idiot. What's the name you'll give to what we've left behind us? If that's life, we take death, Jem, and be thankful for it."

As he speaks, with a bitterness beyond description, he stoops and fumbles at his leg again. The sharp ears of his companion catch the grating of steel on iron.

"What's that, guv'nor?"

"A file," was the reply.

"Where did you get it from?" asks the other, with undisguised astonishment.

"I made it, Jem," replied his companion, quietly.

"What with?"

"An old piece of iron and my brains. It's a good one; try it for yourself."

As he speaks, he shakes the horrible link of iron from his foot and passes the instrument to the other.

No. 99 takes it, with a muttered oath.

"You're a wonderful man, captain, a wonderful man. There aint' nothing as you can't do—or won't do if we gets clear of this frightful torment. I'll be sworn, the game's all planned out a'ready."

"It is," replies the other, with quiet coolness.

The grating of the file stops for a moment.

"I thought so! S'help me, if I didn't. Might a humble pal, as has always stood by you, captain, ask what the move is? It u'd pass the time away and keep the shivers off. There's a curse in the very air o' this place that cramps a man's heart and a'most chokes him. Tell us the plot, captain. I'm yourn, and you know it."

The captain looks into the darkness before him in silence for a moment; then, speaking in the whisper above which their voices had never for a moment been raised, he says:

"I'll tell you, Jem, as we swim together, as you say. We must, taking all things into consideration, and so—Jem, give me your hand."

The man he called Jem feels about in the darkness until his hard-grimed hand is clasped in the softer one of his companion, and waits silently.

"I'm going to take your oath," says the captain, coolly. "Swear that you'll follow me faithfully—as, to give you your due, you always have done—right to the end of what is to come. Swear it, Jem, and I'll open up the game. You'll keep your oath, I know, because I'll swear at the same time that this hand of mine shall wring your neck if you break it. You swear?"

"I swear, captain!" replies Jem hoarsely. "I've never played you false yet, captain. Would it pay me to do it now, after this little bout? Would it pay me, I asks yer?"

"No, now nor ever. Come closer; these cursed cliffs seem to me to have ears. Keep a look out all round. I'm watching for the lights of the fishing yawls."

"All right, captain," replies the other, eagerly. "Go on, if it's only for talking's sake," and he shivers under the strain of long-sustained fear and excitement.

"You're right, Jem, I have a game on the board already. It wouldn't be me if I hadn't. It's a good game, too, and worth playing. Better than the last, which landed us here—but so richly, either. Did I ever tell you where I came from? No? Well, it isn't likely, when I come to think of it. I am one of the communicative sort. What do you say to India—to Madras? I am a captain, Jem, by something more than courtesy. Captain Murpoint's a good enough name and title and they're my real ones. They'll do again, too."

For a moment he relapses into silence, his eyes scanning the sea before. Then he takes up the thread again in a tone rather of soliloquy than communication; but his companion, though apparently forgotten, listens eagerly.

(To be continued.

MUNITION MAKERS SUFFER

Handling of Explosives Gives Rise to Diseases.

The high pressure under which the production of munitions has had to be performed in Great Britain has brought with it destructive maladies. These are particularly noticeable in connection with the manufacture of high explosives. Thus in handling trinitrotoluol after a prolonged period one becomes drowsy, suffers from frontal headache, loss of appetite and may even become afflicted with a distinctive eczema. Unless the operative takes a rest in time jaundice may supervene, with decided danger of life. In a few instances death has been directly traced to the handling of the explosive.

Tetryl throws off a slight dust, which, unless timely precautions are taken, leads to troublesome eczema. Another medium inimical to health is the varnish with which the wings and bodies of aeroplanes are treated. Tetra-chlorethane enters largely into the preparation of this varnish, and this throws off a noxious vapor which produces drowsiness and loss of appetite, and if work is persisted in ultimately jaundice, liver complications and coma. In this case an alternative varnish has been discovered which is free from the evil constituents; but it has not come into general use for the simple reason that there are insufficient supplies of the necessary ingredients to meet demands.

DUKE'S GARDENERS.

Three Employed on the Eaton Estate Exempted.

Three married men employed on the Duke of Westminister's Eaton gardens have been exempted conditionally at Chester. It was stated that the duke wanted every available man liberated from the gardens and only the necessary labor retained. Of the original staff of 60, 30 had left for service. Their places were kept open and wages paid, less the army pay, making a yearly liability to the duke of £4,340. The head gardener said he had unsuccessfully tried to secure other labor. Eaton gardens were opened to the public for six months each year, and during the past 20 years admissions for viewing the gardens and hall had resulted in £10,00 for charities. The duke had lent the hall as a military hospital, and the demand for vegetables was heavier than ever. Lady Arthur Grosvenor, hospital nurses, and others helped in lighter work. They had a valuable collection of bulbs, which were a national asset.

Loyalty to the Hebrides.

The outlying islands in the west of Scotland have given their best for the service of the country since the outbreak of war, and there are few men left to carry on the ordinary occupations. In the remote island of Lewis, the roll of honor was considered worthy of being submitted to the King, who has expressed his appreciation in a telegram from Windsor. Out of a population of 28,000 close on 4,500 are with the colors, and in many villages on the island not a man eligible for military service remains.

Agreed to—"I am doing my best to get ahead," asserted Chollie. "Well, you certainly need one," assented Dollie.

You will like its Fine Granulation

Buy your sugar in these neat 2 or 5-lb. cartons, which you can place directly on your pantry shelves.

Just cut off the corner and pour out the sugar as you need it.

Lantic Sugar

comes also in 10 and 20-lb bags for housewives who like to buy in larger quantities

"The All-Purpose Sugar"

PRACTICAL FARMING

A Cement Walk to the Barn.

On the majority of farms no provision is made for a dry walk from house to barn, although the distance, whether it be long or short, must be traversed many times a day. On sandy soil it is possible to make and keep a fairly satisfactory earth walk, but in the clay districts the walk cuts up every spring and fall and is sloppy after every rain. No one particularly desires to tramp through mud when going to work or coming to meals and yet thousands of families living on the farm must do that very thing. Blocks of wood or old boards are sometimes thrown down to walk on but at best they are only a temporary arrangement and soon break up or get displaced. A permanent concrete walk is within reach of most farmers. The gravel can be hauled in the winter when the teams are not busy and experts are not required to lay the walk. Any handy man could mix the gravel and put it down in a short time.

On a farm recently visited there was a three-foot concrete walk from house to barn and in the estimation of the writer it added many dollars to the value of the farm. One could go to the milk-house or barn in comfort, even in the wettest season. The walk also aided in keeping dirt from being carried into the house on the men's boots. The walk was about five inches thick. The bottom four inches was made of one part cement to eight parts good gravel and the top inch was one part cement to three parts sand. It was blocked off in three-foot squares, except where the wagons crossed and there it was in six inch squares. There is always a danger of frost heaving a concrete walk, but this can be largely overcome by good drainage. In building a walk, a trench is dug about four inches wider than is desired, and four inches deep. Two by four scantlings are then staked in place and raised one inch from the bottom, to hold the concrete until it sets, then they should be removed. The cement and gravel should be thoroughly mixed before being placed in the trench. An iron or wooden block may be used to pack the concrete.—A thin iron may be put across the walk every three feet to divide it into blocks. This can be removed when the concrete has set. Frequently heavy iron is used to cut the blocks after they have partially set. Either method is practicable. The expense of a walk for the average farm is not great. When the distance is one hundred yards, about eleven cubic yards of gravel, three cubic yards of sand and fifteen and one-half barrels of cement would be sufficient to put in a permanent walk. If the farm teams are used for hauling the gravel and sand, $1.50 per yard should be a fair price for that material laid down at the farm. The price of cement varies, but at $1.60 per barrel the total cost for cement, gravel and sand would not exceed $45. It would only cost a few dollars to mix the concrete and lay the walk. The cost would be considerably reduced if no account was taken of teaming. Many buildings are less than 300 yards apart, while others are a greater distance. The cost would be lessened or increased accordingly. Even if it does cost fifty or sixty dollars to put down a permanent walk that will keep the feet dry and clean when going to and from the barn, those who have so invested their cash claim it was money well spent. A permanent walk may be a trifling thing, but it greatly improves the appearance of the farm home.—Farmer's Advocate.

When Building Barns.

Floors and Gutters.—Place layer of concrete 4 to 5 inches thick on well-drained cinders or gravel, and have the sub-base 6 inches thick.

All stall floors should have a slope of one-quarter inch to the foot. Feeding floors 1 inch to 50 feet.

Gutters should be 8 inches deep next to cow, 4 inches deep on the alley side and 16 inches to 18 inches wide. Finish all floors with a wooden trowel so that concrete will be left rough and there will be little danger of animals slipping on it.

Cow Stalls.—Have dairy cow stalls 3 feet 6 inches wide, 4 feet 8 inches in length from edge of manger to gutter. Single horse stalls should be 5 feet wide and double length for; horse stalls is 7 feet from edge of manger to end of stall. Manger for cow and horse stall should be 2 feet 6 inches to 3 feet wide. Box stalls for hospital or maternity are best 10 feet by 10 feet or 12 feet by 12 feet. Feed alleys should be at least three feet wide, wider if possible.

Silos.—Build to feed 30 pounds a day to each head. Make the height two and one-half to three times the diameter. Build small diameter and high rather than wide and low. Provide feed for at least 180 days.

A silo 12 x 30 feet will hold 67 tons and feed 16 to 20 cows 180 days.

A silo 14 x 30 feet will hold 114 tons and feed 35 to 40 cows 180 days.

A silo 14 x 42 feet will hold 148 tons and feed 45 to 50 cows 180 days.

A silo 16 x 48 feet will hold 236 tons and feed 60 to 70 cows 180 days.

Better Bodied Butter

The people who buy the highest grades of butter are people who are familiar with the quality of food. They appreciate butter that will resist warm temperature and will hold its shape because it has a good body. The wants of the consumer should be closely studied by the producer, and when they desire butter of a particular texture, color or salt, the producer should immediately fall in with the suggestion as though he were an individual trying to increase his trade by catering to their demands.

The sooner that the small creameries which are receiving good raw material awaken to this fact the better it will be for them. If we are going to accept this excessive overrun as one of the good qualities in butter-making, and let it be recognized next to flavor, we should then change the system of scoring, and instead of having the texture or body follow flavor, we should have overrun follow flavor, then to texture, color and package. This, to me, would be ridiculous, for the simple reason that the consumer does not want any more water and salt in the butter than is necessary and he wants a good body. He is the final judge and must be pleased.—Extract from address by P. H. Kieffer.

Salting Hay.

As a rule when hay has been well saved there is not much advantage in salting hay, but if for any reason it is a little damp or has been much damaged by rain before being stacked or mowed away it is usually an advantage to add salt to it. The salt has three functions: it checks heating, prevents the growth of molds and fungi, and makes bad hay more palatable.

A certain amount of heating in the hay after it is mowed away is desirable as it is considered to make the hay more relished by the stock, but if it is improperly cured—the heating will be excessive and may result, indeed, in spontaneous combustion. As a rule from 10 to 20 pounds of salt is used to every ton of hay. If the hay is a little damp when stored away or if it has been injured by rain salting is well worth considering. The prospects are that a lot of the hay making will be done this year in anything but suitable weather.

Grain for Hogs on Pasture

The pig is a pork-producing machine, and like other machinery, is most profitable when run at full capacity. A pig's stomach is so small that it will not digest enough alfalfa alone to make a profitable growth. Pigs cannot produce the best gain when on pasture alone or when on pasture supplemented by only a small amount of grain. Tests show clearly that two and one-half to three pounds of grain daily per 100 pounds of live weight of the pigs produced not only the greatest gain but the greatest profit. The higher the price of grain, the smaller the profit in favor of the heavier ration.

Matrimonial Ideas

"Why do you object to my marrying your daughter?"

"Because you can't support her in the style to which she has been accustomed all her life."

"How do you know I can't? I can start her on bread and milk, same as you did."

The Housewife's Corner

Leftover Luncheons.

"It isn't worth while getting anything in just for my lunch," says the housekeeper who's alone all day, and so she takes the proverbial cup of tea or coffee and any odd "left-overs" that happen to be in the pantry. It's an unappetizing meal and a hurried one, and, therefore, nearly as bad as no meal at all. It is a foolish habit likely to lead to headaches, weariness and frazzled nerves, and quite unnecessary, even in these days of "high cost of living," for there is no need to buy anything fresh. The left-overs can be transformed with very little trouble into something savory and tempting.

Take that tablespoonful of cold cereal, for instance. It wouldn't be particularly inviting as a luncheon dish in its left-over state, but it could be kneaded with enough flour to make a pliable paste, shaped into two thin small cakes, and fried to a golden brown, or baked on a griddle. Served on a very hot plate, with a little butter and maple or golden syrup, they would be delicious.

Scallop shells are a boon to the lunch-for-one person. The tiniest scrap of cold fish—even a dessertspoonful—can be mixed with a couple of tablespoonfuls of nicely seasoned white sauce and baked in a buttered shell. If the top is dotted with tiny bits of margarine or sprinkled with grated cheese, so much the better.

Odds and ends of cold vegetables, such as potatoes, cauliflower, spinach or carrots, can be mixed with sauce in the same way, seasoned with a sprinkling of cheese and baked to a golden brown. Half a baked potato can be transformed into a tasty individual dish. It may not be very substantial, but, being hot and savory, it will probably make the person enjoying it eat plenty of bread and butter, or be ready for a satisfying second course of bread or biscuits and cheese.

Cold peas, beans or potatoes make a splendid basis for a cupful of hot cream soup. Mash the vegetable, season to taste, add enough fresh milk to make the amount required and boil for a minute or so. A teaspoonful of cream will add nutrition.

A slice of cold lamb should be cut up very small and cooked for seven or eight minutes in half a cupful of white sauce (made rather thick), seasoned to taste, and served on hot toast.

Cold meat may be served up very temptingly in jelly. Cut it into neat cubes, pour over enough gelatine to cover well and leave till set. Turn it out, cut into squares and mix with a couple of young lettuce leaves, finely shredded, or any other salad, and sprinkle with some mayonnaise sauce or cream salad dressing. To make the jelly, dissolve about half a sheet of gelatine in a gill of nicely seasoned stock or water.

In a thousand ways the odds and ends can be so resuscitated that they will stimulate the appetite and make the lonely "anach" a pleasant meal.

How To Wash Woollen Goods.

To wash woollen goods successfully the water should be soft and warm, not hot, and of uniform temperature throughout the operation. Only the milder soaps should be used and these not applied directly to the fabric. If much dirt is present, a volatile alkali such as ammonium carbonate may be added to the wash water.

The scrubbing to which fabric is subjected should be gentle, and the wringing through loosely set wringers.

Once washed, the goods should not be allowed to lie about wet, but should be immediately hung up to dry preferably out of doors, if the air is dry and the temperature above freezing.

The reason for this careful treatment is found in the peculiar nature of the wool fibre. Its outer or epidermal layer is made up of minute serrations which are arranged in some such manner as the scales on a fish. Now these scales are softened and opened up by hot water and by such alkalis as are found in the harsher soaps. In this softened condition the pressure due to hard scrubbing is sufficient to cause the serrated edges of the fibres to interlock or felt. Felted fibres are usually hard and brittle. This is because the alkali which has helped in felturing process has removed from the cells certain fatty substances which serve to make the fibre soft and pliable.

Fabrics which have become hard and felt have not only lost their attractiveness, but also most of their usefulness as a protection from the cold. This latter quality is due to the "air blanket" which forms in the spaces between the fibres, for quiet air is, as we know, a very poor conductor of heat and cold. When the fibres have become felted these air spaces are lost and consequently the fabric is no longer able to materially aid the body to retain its heat.

Useful Hints.

Always use ice water when mixing pleerust.

When broiling chickens, lay them skin side up.

Carrots and peas put together and seasoned are a very good summer dish.

All bacon is improved by having boiling water poured over it before frying.

A delicious and economical dessert is stewed figs and boiled rice served together.

Tea jelly can be made in the same way as coffee jelly, and it is a pleasant change.

A teaspoonful of vinegar put into home-made candy will prevent it from being sticky.

Preserve cherries and blanched almonds are a delightful addition to the fruit salad.

Use fresh green grape leaves to place on top of pickles in crocks instead of a cloth.

Milk bottles should be filled with cold water the instant the milk is taken out then they wash easily.

If you use a brick for an iron stand, your iron will remain hot longer than with the ordinary iron stand.

Grapefruit seeds will grow and make a pretty ornament for the breakfast table in winter.

Put a tablespoonful of ammonia into a quart of water, and wash your brushes in it. Never put soap on a hairbrush.

A little powdered alum rubbed on gilt braid or lace, after it has been brushed well will restore the brightness. Alum should be left on for a few hours, then brushed off.

Often the yoke of an egg will remove stains from wash goods. The egg should be applied before putting into the wash.

Left-over macaroni can be recooked by putting in a dish with cream sauce and a little minced green and red peppers, and baked with bread crumbs and cheese sprinkled over the top.

SHORTAGE OF DOCTORS.

Medical Corps Has Taken 11000 and Wants 4,000 More.

The British Government is calling for more doctors for the army. Surgeon-General Sir Alfred Keogh has appealed to the medical profession to "mobilize" voluntarily, other wise, it is suggested recourse will have to be had to medical conscription. A London codespondent of the Associated Press says many of the doctors in private practice at home object to mobilizing, even voluntarily. Many members of the British Medical Association maintain that the army has already all the doctors it requires, if it would only learn how to employ them to the best advantage. Some of them even suggest that the War Office should learn how to do it from the enemy. One authority says:

"Already the Royal Army Medical Corps has taken 11,000 doctors from private practice and they are asking for another 4,000, making in all 15,000. This 15,000 medical officers in the permanent service gives a total of 16,500 to attend to an army of about 4,000,000. The Germans, for an army of 10,000,000, have 14,000 medical officers.

"The position at home is serious, as there are only 30,000 medical men and women in practice. With 15,000 taken away, no more than 15,000 are left to attend to a population of 41,000,000 men, women and children. How grave the position is may be suggested by recalling that more than 500,000 industrial casualties occur in this country every year, which is hugely heavier than the casualties at the British front in a year of the present war."

It is maintained that the whole problem could be solved without withdrawing any more doctors by a reorganization of the Royal Army Medical Corps. Among the reforms they urge are: Substitution of the army for the division as the medical unit, no doctors being thus kept idle because their division is not in action. Adoption of a new system of hospitals at the front and abolition of field ambulances. It is estimated that the latter change alone would save 1,500 doctors in an army of 1,000,000 men. Release of doctors for home work when there is no work for them to do at the base hospitals. Under modern conditions it is always known when an attack is imminent, and the staff would have 24 hours to return to their base.

Kaiser Pensions Seven Generals.

A despatch from Rotterdam says: According to The Berliner Tageblatt, the Kaiser has decided to pension seven Prussian Generals. Five of the Generals, namely, von Bredow, von Wienskowsky, Glokke, Cramer, and von Beuer, will leave the army, while Generals von Kleist and Krahmer will be given garrison commands. No reasons for the dismissals of the Generals have been made public.

THE STORM IS ON

—Baltimore American.

CHILDREN ARE ITS VICTIMS

INFANTILE PARALYSIS STILL A DREAD MYSTERY.

Almost Invariably Leaves Some Terrible Mark After It and Recoveries Are Rare.

It is earnestly to be hoped that the epidemic of infantile paralysis which is raging in New York and has spread to several other states will not reach this country. There are a few cases in Montreal, but otherwise Canada appears to be clear of it, and there is no reason to believe that the Montreal outbreak is to be traced to the cases in the United States. There have been no real epidemics of poliomyelitis in Canada, though there were several in Toronto and vicinity a few years ago, and in scores of homes there are children who will never run or walk again as a result of this visitation. There is no more dreadful disease known to medical science, and perhaps the most terrible thing about it is the fact that it usually selects children as its victims, although no age is exempt from it. Complete recoveries are extremely rare. Almost invariably infantile paralysis leaves some dreadful mark behind it, and so far medical science has been unable either to provide a cure or even to understand the nature of the deadly organism.

Too Small for Microscope.

That it is indeed an organism, a germ, was learned only a few years ago, the discovery being made almost simultaneously in the United States and France, where epidemics had drawn some of the best medical experts in the two countries to study the disease. Dr. Simon Flexner, of the Rockefeller Institute, who is a noted authority on the disease, says that it is extremely doubtful if the virus has been seen. Certainly the germ is exceedingly minute. The closest observers have been able only to observe under the most powerful microscope little points, circular or slightly oval in form, and these, possibly, though not certainly, represent the parasite. Another feature of the virus is its resistance to external agencies. It withstands glycerination for months, and drying over caustic potash for weeks without any marked reduction of potency.

More Robust Than Rabies.

In these respects it is even more robust than the virus of rabies. Moreover, it shows no diminution in virulence after having passed through several bodies. Experiments made with monkeys showed that the germs after having passed through 25 separate series of monkeys, were more powerful if anything than before. It is this fact that drove investigators to the conclusion that the virus is a living organism, but, as stated, it is so minute that it cannot be said with certainty that the germ has ever been seen. It passes with great readiness and little or no loss in potency through the densest and finest porcelain filters, when in aqueous suspension, and on this, as on other accounts, is extremely difficult to deal with in laboratory experiments.

Enters Through Nose.

Dr. Flexner says:

"The infectious agent enters the body chiefly, if not exclusively, through the mucous membranes of the nose and throat. The virus exists in the secretions of the nose and throat and in the intestines. Hence the mode of spread may be by kissing, coughing and sneezing, which carry the secretions of the nose and throat from one person who may be infected to other persons. Since the disease attacks by preference young children and infants whose nasal and mouth secretions are wiped away by mother or nurse, the fingers of these persons readily become contaminated. The care of other children by persons with contaminated fingers may therefore lead to the conveying of the infectious micro-organism indirectly from the sick to the healthy. This danger also exists in connection with vendors of food which is eaten uncooked. The existence of cases of infantile paralysis in the homes of vendors of food is therefore a perpetual source of danger. Dissemination can be made by means of house flies."

How Death Is Produced.

The chief terror of the disease lies in its appalling power to produce deformities. When death does occur it is not the result, as in many infections, of a process of poisoning that robs the patient of strength and consciousness before its imminence, but is caused solely by paralysis of the respiratory function, sometimes with merciful suddenness, but often with painful slowness, without in any degree obscuring the consciousness of the suffocating victim until just before the end is reached. No more terrible tragedy can be witnessed. For some years experiments have been made with a view of producing a curative or preventive serum, and some progress has been made with a drug called hexamethylenamin, or urotropin, which possesses a degree of antiseptic action. This drug, however, must be very carefully administered because it is more or less dangerous to many of the vital organs of the body. No doubt the present epidemic will result in still greater efforts being made to fully understand the virus of infantile paralysis and to develop a serum that will rob it of much of its deadly powers.

FROZEN FISH REVIVED.

Problem of Shipping Them for Long Distance Solved.

The feat of freezing live fish and reviving them several weeks or months later has been achieved by the Swiss scientist, M. Pictet.

The scientist put twenty-eight live fish in a box that contained water rich in oxygen, in which several pieces of ice floated. The temperature of the water was then reduced slowly until it froze.

At the end of about two months the cake was gradually thawed, and the fish, it is said, were found alive. In such an experiment, the scientist reports, it is essential that the water be gradually frozen, and that it shall have contained pieces of ice for from fifteen to eighteen hours before the whole mass is frozen.

The process of thawing must also be slow. Through this process it is believed that Siberian sturgeon and Alaskan salmon can be exported alive to distant markets.

RUBBISH HEAPS.

Many Serious Fires Traceable to Such Accumulations.

More fires originate in rubbish heaps than from any other source. To permit rubbish to remain in the building not only invites a fire to visit your home or place of business, and render your family temporarily homeless, or cripple your business at a time when you can least afford it, but also endangers the lives of your family or employees. In addition to destroying an average of $23,000,000 in property value in Canada each year, fire caused the death of 141 persons.

The home is built to protect our loved ones, and we want to do everything to insure absolute protection to those who live in it.

That rubbish heap in the attic, storeroom or basement is a menace to your household, because there is always a possibility of fire starting in it, and it may start when least expected.

Consider what might happen, and then, without delay, eliminate the menace of the rubbish heap.

THE SUNDAY SCHOOL

INTERNATIONAL LESSON JULY 30.

Lesson V.—The Word of the Cross—1 Cor. 1. 1 to 2. 5. Golden Text—Gal. 6. 14.

Verse 18. Them that are perishing . . . . . us who are being saved (margin)—The text is a most unfortunate mistranslation, ignoring the significant Greek tenses altogether. The New Testament represents perdition" and "salvation" as future, fully attained only when probation is over. Except twice, where salvation is described as ideally complete by God's grace, Christians are always "being saved."—traveling on the narrow way that leads to life.

19. Paul uses Isa. 29. 14 as expressing and endorsing the thought.

20. Scribe—The Jewish Scripture scholar. Disputer of this age (margin)—Not world as below. Paul appeals from the fashionable philosophy of the day to the wisdom of the future which will know.

21. In the wisdom of God—It is providentially ordained that knowledge based only on conceit and arrogance must always fail to gain any true apprehension of God. The law has been illustrated in the history of the church as well as the world: Jewish theology and Greek rhetorical speculation failed, and everything since that has worked in the same spirit. The Foolishness of the thing preached (margin)—With daring irony, Paul appropriates the term used by the Superior Person. "They may laugh who win," and as Paul knows the gospel is God's plan, he can afford to repeat with proud satire what clever men choose to say about it. To-day the church historian would give a great deal if he could get hold of those primitive criticisms, but they survive only in the quotations of Christian writers.

22. Signs—As they did of the Master. He gave them one, but those who ask in such a spirit "will not be persuaded though one rise from the dead.'

23. A Messiah crucified (margin)—And therefore accursed (Gal. 3. 13). Stumbling block—The Greek word (which we have borrowed as scandal) more probably means a snare or trap. Their own obstinate prejudices were the bait, and they made God's own means of salvation into a means of destruction, like a wild animal pulling down on him the heavy stone of the trap. Compare 1 Pet. 2. 8. Foolishness—We can easily imagine how a cultured Greek would scoff at the idea of being saved by a Galilaean carpenter who was not even alive, but dead on a malefactor's cross of shame.

24. Called—Since God's call has two necessary elements, God's invitation and man's acceptance, the former being universal, but the latter limited, the term is naturally used of those in whom the call becomes effective.

26. Not many—Yet there were some from all these classes, and every one of them counted for a great deal in their influence with others. In the first century, as in the twentieth, Christianity was mostly a middle class movement, in this respect agreeing with every other great movement upward in human history. But then, as now, it also laid hold of the lowest. So in India to-day a few Brahmans and a great many outcastes recruit the church—till the flood comes!

27. Even so in Benares we have degraded outcastes whom Christ has educated, and proud Brahmans who cannot read.

28. Base—The opposite of noble (verse 26). of birth. And the things that are not—For the Creator still makes his world ex nihilo. The commentaries, forgetting that this is not classical Greek, often render "counted as nothing, cyphers"; but this would repeat only the word despised; literally, made nothing of. Bring to nought—Literally, make idle, a favorite word of Paul's (for example, I cor. 13. 8; 15. 26).

29. No flesh—"All flesh" in this phrase is a common Old Testament term for the whole human family.

30. Both righteousness, etc. (margin)—These three are elements in the comprehensive wisdom which was impersonated in the Saviour.

31. Quotal from Jer. 9. 24f., the passage so magnificently used in Wesley's great little hymn.

"Let not the wise his wisdom boast,
The mighty glory in his might."

2. 1. And I—He has been enforcing his point from their case, now he turns to his own. Excellency—Not like a visiting sophist with a big reputation for eloquence and philosophy. Testimony (text) and mystery (margin), two very similar words, are about equally balanced in the MSS. The latter is perhaps better. It was for the Greeks a religious rite which it was unutterable sacrilege to reveal to any but initiates. So with the gospel—only initiates. So with the gospel—only initiation was open to all.

2. The "determination" was colored by Paul's distress at his failure in Athens. He had not expressed the cross there, but they had laughed him down just when he was getting to it, as is obvious from his last words there. The spiritual blindness of the philosophers had more than ever disgusted Paul with more human wisdom. He, the learned and cultured rabbi would be a man of one idea. And him—Not as the wonderful Teacher and Worker of miracles, the winsome Example, the supreme Flower of humanity, but as crucified. The cross must come first in every theology that is going to save men.

KITCHENER AND HAMPSHIRE

Family Came From the County of Same Name as Ship.

Lord Kitchener of Hampshire descent, says a writer in the Hampshire Chronicle, although the family have been settled in Suffolk for some generations namely, at the little village of Lakenheath, close to Ely, and just a few miles from where the three counties of Norfolk, suffolk, and Cambridge meet. Lord Kitchener showed a tenderness for the village. He spent hundreds of pounds for the repair of the ancient church and churchyard where his forefathers lie. In their own homely form the inscriptions on the gravestones there tell their own tale. The iscription on one reads thus: "Here lyeth the body of Thomas Kitchener, who migrated from Binsted, Alton, Hampshire, in the year A. D. 1693, as agent to ye Honble. Sir. Nicholas Stuart, Bart., dep. this life April ye 5th, 1781, aged 05 years." This Thomas Kitchener, who thus left Binsted as a young man of 27 years, may be considered to all intents and purposes the founder of the Kitchener family. There is also the grave of his son Robert, who lived to sustain the family honor for 60 years, and was gathered to his fathers.

There are two remarkable coincidences with regard to Lord Kitchener. The family sprang from Hampshire and Lord Kitchener was drowned in H.M.S. Hampshire. The other was that Lord Kitchener was born in June and was drowned in June.

HEROIC MAJOR DECORATED.

Surrounded By Germans on Dead Man Hill, Fights Way Back.

The battle of Verdun has been prolific of heroic deeds. One of the most drastic episodes of the fighting round Dead Man Hill occurred to the west of that position, where a French regiment was face to face with a Pomeranian brigade. During the hottest, moment a major commanding the Third Battalion of a French regiment disappeared.

Suddenly they heard a well known voice shouting, "Bravoo, boys! Give them beans!" and the major came into view, his uniform in shreds, his face covered with blood and his left arm hanging limp. He had been cut off with a handful of men, and at their head fought his way through the enemy ranks until he was sent to the ground with a terrible blow from a rifle butt, which smashed his left shoulder. Dragging himself on his hands, and knees for a mile, he had eventually rejoined his men, and his first thought was to lead them once more into action. The French were successful in driving the Germans back, but the gallant major received a second dangerous wound. So excruciating was the pain he suffered while being operated on that to avoid groaning he sang the "Marseillaise" at the top of his voice. A few minutes later the general commanding his unit arrived at the hospital, and taking the Cross of the Legion of Honor from his own uniform pinned it on the breast of the brave officer.

LIVES WERE BLIGHTED.

Then Old Love Missive was Found and Sweethearts United.

The French have a classic case of mail delay. A timid man, who could not summon up courage to propose in person to the woman he loved, wrote to her confessing his devotion and telling her if she shared his affection to answer, but if she did not reply he would know his suit was hopeless.

Thirty-five or more years later, in tearing down the Paris post-office many letters were discovered behind some wainscoting, and among them one to this man. It was not until months later that he was found in a distant part of the city. The man, when he read the letter, was grief-stricken. It was from the love of his youth and carried word to him that she loved him and had loved him always. Some hint of the tragedy got to the Government officials. A search was made for the girl who wrote the long-lost letter. She was traced without much difficulty. She never had married and she still cherished the memory of the love of her youth.

Through the efforts of the Government the two old people whose lives had been blighted by neglect on the part of Government service were brought together. They were married.

Predicts 20,000,000 in London.

Arthur Crow, a leading economist, predicts the city of London will have 20,000,000 population in 1975, or two generations hence. The city, to give adequate housing for this number, should have a radius of eighteen miles, he added, and a great scheme for main roads must be worked out soon.

The Paisley Advocate

PAISLEY, JULY 26th, 1916

—In Germany at present there seems to be very little danger of "getting out of the fat and into the fire." The supply of fat is rather low to provide the initial danger.

—New Zealand, with woman suffrage, has a high birth rate, and the lowest infant death rate in the world. This appears to be a fair argument in favor of giving Canadian women the franchise. Woman suffrage means feminine intelligence, observes the Toronto World.

—The importance of caring for the teeth is being proven by the experience of soldiers in this war. Dentists who have been at the base hospitals say that wounded soldiers whose teeth are sound recover in half the time required by those whose teeth are decayed. When the condition of teeth has such an effect upon the health of grown ups what will proper care of them do for children. Even the education of many is retarded by a bad mouthful of food grinders.

—Every once in a while there obtrudes the idea that an officer of army or navy is really superior in every way to the privates who happen to serve under or with him. The commissioned officer, according to popular custom, should be better fed, better clothed and better housed than the men, although the men bear the brunt of battle with equal bravery and meet the same dangers. There are special hospitals for officers, although the men's wounds are no less painful or dangerous. Even enemy officers are given special food, care and housing as prisoners. Wouldn't it be possible to have paper bullets made for hitting the officers? Lead is good enough for the men, of course, but the officers might receive special consideration in this respect, too!

—It is stated that sometimes as much as 20,000,000 acres in Canada are sown to flax which is grown for seed only, and the straw goes to waste. The fibre of this straw would make excellent linen, but owing to the cost of labor in this country it is not practicable to produce linen here at market prices. Now it is pointed out that the mountains of flax straw that have heretofore been worthless could be used for making hundreds of thousands of tons of good grades of paper. Experiments on a small scale have proven this, and it is possible that the extensive manufacture of paper from flax may be entered upon in the near future. This is one of the possible ways of increasing the wealth of Canada that is being discovered by industrial research.

Slowly but surely it is being generally understood that the auto has not come to us an unmixed evil, stripping the country of its accumulated capital, dissipating its earnings through the exhaust valve and joy-riding its people to wantonness and ruin. The auto has its saving grace; we were long in seeing it, but as time passes we will have daily increasing reason to appreciate it at its true value. The auto is the answer of an ever protecting Providence to two problems that have vexed this generation almost to the point of despair: how the farmer may keep his sons on the farm and how the mail order agent may be kept off the farm. The farmer himself has seen the answer to the first problem quickly and has gone straightway and bought a car. Nothing in all the realm of modern invention has done more than the auto to relieve farm life of its loneliness and monotony. It has brought the isolated farm home in close and ready touch with the town and city, and, in conjunction with the telephone, has made social intercourse as free as the heart could crave. To the second problem it is a direct and satisfactory solution. The rise and phenomenal development of the mail order trade has not been the result of any disinclination of the farmer or his family to trade with the country merchant, but has rather been a poor makeshift to evade the tedium of long drives to town, often under unpleasant weather conditions. Though seized upon readily and became almost a national craze, mail order shopping has never been more than a makeshift. There is, no doubt, a great convenience in being able to turn over the leaves of a catalogue and figure out a list of the week's needs, but it lacks human feature. There is a joy to the womanly heart in the sight and touch and freedom of choice and change of mind in dealing over the counter that no gaily illustrated catalogue can ever offer. And now to make her happiness complete the auto has come. In less time than it takes to study the index of the bulky catalogue a woman may ride to town and make her purchases after the manner dear to her.

But the transformation is not yet complete. The country merchant must make good his chance for trade revival by price concessions and by efficient advertisement of his wares. Once let it be known that he has the selection of goods at fair prices and the trade will come to him and stay with him. This, and a generous municipal policy in respect to road making, will bring back to the rural community a prosperity and happiness such as it never enjoyed before.—Ex.

Meeting of County Preparedness League

Recruiting to be Discussed at Paisley Meeting

The county was fairly well represented at the meeting held at Walkerton on Thursday last. The gathering was called by the President, Judge Klein, as Col McCrimmon had asked to have a meeting of representative citizens of the county so that he or Col Williams might discuss the matter of recruiting with them.

Judge Klein presided, and in opening said that he had made inquiries, but neither of the men who had asked for the meeting had come to town. There was general disappointment, and some very pointed remarks were made by several present as to the calling of the meeting by Col McCrimmon, and not attending himself, nor yet being courteous enough to send a message as to the non appearance of either himself or Col Williams.

Some discussion arose as to future recruiting in Bruce county, but the gentlemen assembled were not disposed to make any definite move until responsible persons, who really knew the situation from the Government standpoint had presented some convincing proof as to the need for further action in Bruce county.

Dr Bichol of Chesley pointed out the lack of leadership in the Dominion regarding the recruiting question, while Mr Steele of Paisley produced some statistics as to the standing of Bruce county, showing that at present it stood in a high position.

A draft of a resolution was read by President Judge Klein as to the position of the League on further recruiting, but on suggestion of E R Sayles and W D Cargill it was laid over to the big meeting at Paisley on August 4th. Mr Brown of Chesley and Wm Hunter of Kincardine thought there was much misunderstanding and misinformation existing in military matters, and that the League would have to be shown in a business like and consistent manner the actual needs of the day. The gathering generally agreed with this view, and the recruiting question was passed over, but not until a resolution of disappointment was passed and ordered to be sent to Col McCrimmon.

Mayor Lippert moved and Wm. Hunter second d that Messrs. H. M. Lay, W. D. Cargill, Dr. Bielin and E. R. Sayles draft a resolution expressing disappointment, and the following paragraphs passed the meeting:

Moved by D. Phelan, seconded by D A. McDonald.

"That this meeting of representative men of the county of Bruce, assembled at the request of Col. McCrimmon, and at the call of the President of the Bruce Preparedness League, to hear Col. McCrimmon, or Col. Williams on the question of recruiting, are deeply disposed that this gathering representing the county were unable to be enlightened on this matter, owing to the non-appearance of either of these gentlemen.

"That this gathering desires to point out that Bruce County has contributed as requested in men and money, and while still willing to do more, where need is shown, it awaits more responsible leadership in this great matter of Empire service."

The resolution was unanimously carried Ex-warden Shoemaker, of Paisley, reported that Paisley would be ready for the big meeting on August 4th, the second anniversary of the declaration of war. He asked that every section of the county be represented that day at Paisley.

The objects of the league were further discussed and enlarged upon. It was pointed out that already some returned wounded soldiers had come back to the county, but because of lack of organization no work was found for these men. Every municipality is urged to see that it has its organization perfected at once. The Bruce Preparedness League is designed for the purpose of uniting the county for service to the Empire, in supplying men and money, but also helping men when they return, and also in endeavoring to establish high ideals of citizenship, and developing the county commercially and industrially.'

Although the day was hot, and the first part of the meeting somewhat disappointing when discussion arose as to the further objects of the league, some interesting remarks and suggestions were heard from Warden McNab, O. E. Klein, Reeve Ballachey, J. A. Johnston, Mayor Miller, Ex-Mayor Patterson, I. H. Steele.

The gathering adjourned to meet at Paisley August 4th, when Bruce county, through the League, will pledge itself to further Empire service, and addresses will be heard on future work of the League. The League assembles at 1 p.m., and at 2 p.m. the program provided by Paisley will begin.

Letters of regret were read from Reeve Douglas of Hepworth, also congratulatory letters were heard from Premier Hearst and N. W. Rowell.

Pint of Whiskey to be Maximum

The Ontario License Board has distributed to all dentists, physicians, druggists and veterinary surgeons in the Province of Ontario a blue book, which will govern their conduct in the matter of requisitions for liquor. Hitherto a doctor could phone up a drug store and tell the attendants to give a patient a certain amount of liquor. Sometimes the druggist was deceived by this method, and the License Board is bound that such practices must cease. The blue book contains a form which must be filled out by the physician and signed by the person to whom the liquor is delivered, saying plainly how much liquor is required and what the disease is. Only six ounces may be prescribed for internal use, but a pint may be obtained if the patient is to be bathed. The prescription may be filled only once, and must be kyled for purposes of record. The blue book also contains sections of the Ontario Temperance Act for the convenience of the physicians and druggists of the province defining their powers and duties and the penalties for infractions of the law.

TWO LONG YEARS HE SUFFERED

"Fruit-a-tives" Made Him Feel — As if Walking On Air

OBELISK, ONT., Nov. 28th. 1914.

"For over two years, I was troubled with *Constipation, Drowsiness, Lack of Appetite and Headaches*. One day I saw your sign which read "Fruit-a-tives make you feel like walking on air." This appealed to me, so I decided to try a box. In a very short time, I began to feel better, and *now I feel fine*. I have a good appetite, relish everything I eat, and the Headaches are gone entirely. I recommend this *pleasant fruit medicine* to all my friends".

DAN McLEAN.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

LOCAL AND DISTRICT NEWS

Has Arm Broken

Miss Aggie Hay, of Greenock, had her arm broken one day recently, as she jumped out of a wagon to avoid danger when one of the horses, a young animal, became unruly and threatened to run away.

Killed by Falling from Load of Hay

William Thompson, a brother of Mr Geo. Thompson, ex-reeve of Kincardine, met with a fatal accident on Wednesday of last week. The deceased lived in Chesley, but had gone out to lot 35, con 8, Elderslie, to help his half brother, Caleb Steinhoff, with haying. He was thrown off a load by the horses giving a sudden start, and his neck was broken by the fall, causing instant death. He was 28 years of age, and is survived by four brothers and one sister. Since giving up farming the deceased had lived with his half sister at Chesley.

Another High Percentage

In the Form II, or Lower School examinations there were seven out of twelve students from the Paisley Continuation School who passed and another passed in all but arithmetic. This exam was particularly difficult one, as may be judged from the fact that of 65 candidates from Owen Sound Collegiate only 11 were successful. Score another for Paisley Continuation School. Sometimes parents are prone to think that perhaps their children would be advanced more rapidly if they were sent to larger institution than the one in their home community, but the results generally disprove that idea.

A Soldier Pastor

The new pastor of Cargill Methodist Church, Rev. W. Almack, comes of a family that is very closely identified with the present war. One of his brothers, a captain of artillery, was killed in action in January last. His other brother is a lieutenant in a British battery. Mr. Almack himself would be fighting at the front if he had his way. He enlisted in the Canadian Artillery last year, but at Halifax he contracted pleurisy and was discharged by the medical authorities. Rev. Mr. Almack was connected with the Hamilton Conference from his ordination six years ago until he enlisted, and now he returns to the Conference as pastor at Cargill.—Telescope.

Ate Paris Green

The little three-year old son of Mr and Mrs Cottrill Morris, of 12th Bruce, had a close call from being poisoned with Paris green on Wednesday last. The child had gone out to the potato field where his elders were applying the bug poison, and unnoticed got into a parcel of the dry green powder. By the time his mother noticed what he was doing, he had regaled himself on quite a lot of the coollooking stuff, and had his mouth was full of it. After removing what she could from the mouth, Dr Gage was telephoned for. The latter gave first-aid instructions over the phone and then made a fast run in his car. The child was still carrying the stomachful of sure death when the doctor arrived there, but the latter administered emetics with such prompt and effective results that the patient was soon relieved of the dangerous cargo and no ill effects followed.

Patriotic Field Day in Paisley on Friday, Aug 4th

A strong representation of the business men and citizens of the village was out on Friday night for the meeting called to make arrangements for the Patriotic Field Day to be held in Paisley on Aug 4th. The chair was occupied by Mr J H Steele, Paisley Vice-President of the Bruce Co. Preparedness League, and Mr O. L. Carter was secretary. All present entered heartily into discussion of the business, and a first-class programme was soon drafted. It was decided to have a baseball match, tug-o'-war, foot race and other sports, also offer a special prize for the parent having the largest number of children in the service of the Empire. There will be a ticket sale of a building lot in Paisley, and a grand concert at night by the Fax-Wilson Co. The 160th Bruce Batt. Brass Band will be in attendance. The list of patriotic speakers for the occasion includes Lt.-Col Williams, chief recruiting officer for Canada; Lt-Col Weir, O C 160th Batt. Judge Klein, Pres B P L, Senator Donnelly, R H Truax, M P, Hugh Clark, M P, C M Bowman, M P P, W D Cargill, M P P, Wm McDonald, M P P, Alex McNeil, ex-M P. The committees appointed at the meeting on Friday night are: Decoration—J S Dewar, J H Steele; Parade —W M Barnett, F C Ryan; Games—R B Grant, Geo Weisford; Reception — the Reeve and Council, with Pres and Sec; Captain of tug-o'-war, D McArthur; Advertising—J H Steele, O L Carter, D Mc Kenzie. Other members of the Committee are—A Galbraith, H McKerracher, T Muir, J H Glover, L C Spofford, S M Ferguson, I Shoemaker, Jas Coulter, J McMillan, F S Ballachey, A A Steele, W H Davison, I Stanley, Geo Craig, J Simons, J Hope, D McGregor. The public will note that admission to the grounds for the afternoon is free.

THE DAINTIES OF LIFE ARE ITS REAL DELIGHT. WHY PERSECUTE YOURSELF DOING SOMETHING YOU DON'T WANT TO DO OR DOING WITHOUT SOMETHING YOU WOULD ENJOY HAVING?

DRESS WELL, LIVE AND BE HAPPY.

Ribbons for Every Purpose at Every Price

Geary—Mewhinney

A quiet but pretty wedding took place on Wednesday, June 21st, when Miss Eleanor Mary Mewhinney, a sister of ex-warden Mewhinney, of Bruce Tp. was united in the holy bonds of matrimony to Mr George Marshall Geary, a very prosperous farmer of Rosanna, near Tiverton. The ceremony took place at the home of the bride's sister, Mrs J M Webb, 9 Victoria Road, Guelph, and was performed by Rev C F McIntosh, of St Paul's Presbyterian church. The bride was dressed in cream silk coline trimmed with cream satin and lace, and was unattended. The bride was the recipient of many handsome presents. Mr and Mrs Geary have taken up their residence on the groom's farm at Rosanna. The many old Bruce Tp friends of the bride will join heartily in the good wishes. On June 27th the friends and neighbors at Rosanna assembled at the home of the newly married couple and gave them a kitchen shower.

Cargill Buildings Struck by Lightning

The Royal Bank building at Cargill was struck by lightning during a storm that passed over that section on Wednesday afternoon, but didn't reach Paisley. The lightning struck the south-east corner of the upper story and passed through a bedroom and bathroom, disturbing the furniture, and destroying some articles altogether, followed the electric light wires down into Manager Fowlie's office, breaking the electrical fixtures, blackened the wall and scattered the contents generally, filled the whole place with smoke and gas, but finally grounded without causing a fire. Fortunately Manager Fowlie and family are not at present occupying the apartments. The manager and clerk were in the bank at the time, but were not affected by the lightning. The lightning also struck Mr J. Sherritt's stable and killed a pig kept therein.

Successful Form II. Students

The following candidates from Bruce County have passed the Lower School examination for entrance to the Normal School and Faculties of Education:

A B Anderson	B L Keys
L J Bilger	C Kinnmont
M Buschlen	R H Lamont
F L Bridge	G McCallum
R Brown	A C McCool
A C Brown (honors)	R R Macintyre
G M Bell	M MacLennan
H B Bains	J MacKenzie
R R Coulter	A MacLeod
E Campbell	J MacPherson
P Clements	H F Morrison
R Convey	M I McKay
M Convey	R McLeod
M Carey	C W McQuillan
W L Curtis	R Matheson
M M Davey	I. G Nelson
L M Duff	M A Nicholson
C Douglas	G L Pfoff
A G Dinniwell	A Patterson
O C Dinniwell	M Patterson
W M Forsythe	J F Sexsmith
J M Finlayson	R W Stanley
S Gee	A A Telfer
J M Hauch	W R Tanner
B C Harrison	M L Treleven
A L Henry	R L Treleven
M Hambidge	C R Walsh
W D Howey	J H White
F Johnston	W S Woods
H A Kennedy	J M Young

Partial pass—not successful in subjects mentioned:

F A Atchison, arithmetic
D M Cooke, arithmetic
P Congram, history
S Hambidge, art
F Kreg, art
O N Lewis, arithmetic
J McLeod, history
F R McMurchy, art
Ethel Roberts, arithmetic
C Rutherford, grammar

These Spectacles have overcome the misty vision that creeps on with the advance of years, and now I am the most pleased man I know."

A pleased patron is the best advertisement.

We give free tests and guarantee satisfaction.

A STOPPED WATCH

—one that will not go AT ALL—does not cause as much bother as one that runs now fast, now slow, in an erratic fashion.

The first you don't pretend to depend upon—the other is a constant source of annoyance.

Most people can afford a watch, but no one can afford an uncertain fast and slow one.

And when our Repair Department is so close at hand there is really no excuse for carrying anything but an accurate time-piece, no matter what the first cost was.

Consult us about any watch troubles that may arise.

Canned Goods Safety

IS IN PAYING THE PRICE

There is no use in the world trying to combine cheapness and quality in Canned Goods, nor in any other line, for that matter.

High grades cost a trifle more, but for that extra in Canned Goods you get—

Assurance of purity
Appetizingness
Wholesomeness

—and these are the things that stand for healthful food.

We confine our purchases to well known and tried brands.

So we offer every customer Canned Goods safety in every article.

Toronto Saturday Night

The far from cordial feeling now existing between the Germans and the Americans leads to some amusing incidents in the business correspondence between the two nations. For instance, a Hamburg house wrote an American publisher respecting the non-receipt of certain numbers of a publication, with the request that they be sent on. In place of so doing, however, the American publisher sent the following terse note:

"Enclosed is an account for three dollars and sixty cents ($3.60) which now falls due for your subscription from May, 1914, to March, 1916. Every issue has been regularly mailed to you. If any is missing it probably is because the ship was sunk by one of your submarines. You had better lay your claim against the Kaiser. We take no responsibility."

To which the German replied in the following choice Billingsgate:

"Your reply is a piece of shameless impertinence. We request you not to connect your failure to deliver goods ordered with German submarines. Instead we advise you to take action against your friends the English, whom you allow to do as they like with your mails. In the circumstances we decline to pay you a cent. If you want your money ask the dirty-souled Britons to pay you on our behalf. Pray do not send us any more of your publications. We shall decline to receive them henceforth."

MARRIED

MCARTHUR—DUNLOP—At the residence of the bride's parents, on July 19th, by Rev. L. W. Diehl, Mr. Alex McArthur, son of Mrs. Chas. McArthur, to Miss Elizabeth, daughter of Mr. and Mrs. John Dunlop, 15th Bruce.

MIDDLETON—BARBER—At the residence of the bride's parents, on July 5th, by Rev. R. L. Ockley, Mr. Wm. Middleton, of Arran, to Mary Elizabeth Fern, daughter of Mr. and Mrs. Walter Barber, of Arkwright.

—THE ADVOCATE office has a splendid stock of wedding stationery and calling cards on hand, also the most beautiful styles of type, so we are able to turn out the finest lines of wedding invitations, announcements, cards, etc. We can do work fit to invite the best of people to a wedding, so why pay two or three times as much to city printers or engravers?

A HARD QUESTION— WHY DO WE SMOKE?

A Frenchman's View on the Use of the Fragrant Weed—Is Smoking a Necessity to the Indulger?

Why do we smoke? What mysterious and irresistible attraction does this strange pleasure exert? It is indeed a strange pleasure, for you cannot in this case, as you can in regard to other human pleasures and the vices that result from excesses, point out that it responds to a certain craving in our nature, which has gradually become excessive and tyrannical. In more or less perfect forms all our modern enjoyments have been practiced at all times, but this particular enjoyment was unknown to the ancient civilizations, and became known in Europe only at the time of Catherine of Medicis.

Those of our senses which seem to crave for it today are really not tickled by it. If it were the smell we enjoyed, we should really smoke through the nose, while we do with our palate that is nearly unable to appreciate odors. It has been proved that when you blindfold a smoker and compress his nostrils he is unable to tell whether the cigar he is smoking is lighted or not. Everything in the act of smoking is, therefore, abnormal.

A smoker forces the mucous membranes of his mouth and throat to perform a work which they do not crave for, and, wanting to inhale an aroma, he inhales it through the mouth, which is almost as strange as if you would put a straw in your nostrils to appreciate the flavor of a glass of fine Bordeaux.

Tobacco Odor Pleasant?

"I admit," a smoker will say, "that the odor of another man's tobacco is unpleasant, but you surely will not deny that to a man who smokes a choice Havana possesses an exquisite taste and delicious aroma."

Yes, my smoking friend, a choice Havana does really contain a perfume in its smoke, or rather a subtle taste, which may even be compared with the taste of the best Burgundy. But do you always smoke choice Havanas? And, if you do, how many smokers are able to do the same? Before the recent added tax was put on tobacco in France connoisseurs agreed that a good cigar could not be bought for less than 80 centimes, and if you wanted to get a really good cigar you would have to pay one franc and thirty centimes. Then you may easily figure out what you must pay to-day not to smoke refuse.

Refuse is just what cheap tobacco is in France as well as other places. It is equivalent to fifth class meat, to wine at two sous the litre, to the kind of food you get in the poor houses. Remember that the French Government makes 900 per cent. on a package of tobacco and on other things almost the same proportion. When you pay four sous for a cigar, it has not cost but a fraction of-cent sou to produce.

Only Smoke Refuse

The result is you smoke only refuse, and, if you are quite honest you will admit that you know it. The taste of your cigar is almost disgreeable to you. If it does not taste so all the way through it does so least when you have smoked half of it. It vitiates the air, it is bitter and nauseating. It is no more tobacco than the workingman's "petit verre" is choice liquor.

Why do we smoke? Because smoking is a pastime, because of the intoxication which the poison produces for the same reason that makes the laborer gulp down his glass of execrably poisonous brandy.

Tobacco, like alcohol, is nothing but an Occidental form of opium, and that is why the quality of tobacco and alcohol, after all, matter very little to the consumer, who is only looking for the pleasure of certain gestures and various degrees of intoxication.

MARKETING POULTRY

A poultryman writes on marketing as follows: Aim to please the customers. Dress and prepare the poultry for market that they at once attract the eye. See that the carcasses are thoroughly chilled before packing, as they spoil quickly if packed while still retaining the animal heat. See that the crop of the fowl is perfectly empty before shipping to market. It is always best to have regular set days for killing and marketing. It is difficult to change a buyer's prejudices, therefore it is best to cater to his whims. It is more profitable to sell the poultry live than to offer it poorly dressed. Pure food and rapid maturity produce the juicy broiler. Mongrels do well for family use, but are no good for market. Appearance as well as merit is required these days to make goods sell. As a broiler cannot be secured on free range, and as it can attain the required weight in a given time only by a systematic feeding of pure foods, it carries with it a reputation and demand on account of its juiciness, tenderness and purity.

Medicine Man Heavily Fined

Although he had never passed through a medical college or qualified as a physician, yet this did not deter Julius Wichels, of Waterloo, commonly known as "The German Doctor," from coming into Brant and prescribing for the pains and ills of the township. He was apparently doing a land office business in the neighborhood of Dunkeld, and was fast exchanging physics and concoctions into cash, when David Pile, a prosecuting officer of the Ontario Medical Council, swooped down on him, and had him before Magistrate Tolton in the Walkerton police court on a charge of unlawfully practising medicine for gain by prescribing for and attending on John Boddy of Brant, Anthony Sutter and others. On being arraigned before the court, Wichel, it seems, contended that he merely sold his medicine and didn't, like doctors, diagnose cases. Mr Boddy, who testified at the trial, stated that he had been ailing, and on consulting Wichels the latter enquired about the symptoms, and after he had related the nature of his ailments, the same as he would to a doctor, the defendant, who seemed to be taking cognizance of the different symptoms, said he could fix him up and made him a mixture of some kind to take. Others also testified and at the conclusion of their evidence the court held that he had been practising medicine within the meaning of the term, and fined him $50 and costs or a total levy of $56.75. Pulling out a roll of bills big enough to choke a whale, the defendant whacked down his fine and departed richer in experience but lighter in finance from the pinching he received. This is said to be the fourth time that he has been fined for unlawfully practising medicine. Lawyer Klein appeared for the prosecution at the trial, while Wichels looked after his own defence.—Herald and Times.

The Summer School at Wiarton

There were 60 students in attendance at the Northern Summer School held at Wiarton from July 3 to 10. The five classes studied the following books: (1) Sinaria within our gates; (2) Uplift of China; (3) Strangers within our gates; (4) The why and how of foreign missions; (5) Servants of the King. Bible study was given by Rev G King, Kingsville; Life talks by Rev C W Baker, Guelph. Evening addresses were given by Rev D Norman, Japan; Dr E C Wilford, China; Miss M Brimston, China; Rev J W Stewart, Owen Sound; Rev J A Jackson, Hanover; Rev T A Moore, Toronto. Afternoon outings included visit to fish hatcheries, hayrack ride to Bruce's cave, auto trip to Owen Sound, (the S S was entertained by ladies of First Methodist Church, Owen Sound), launch trip to the bay, visit to rose gardens of Mr Alex McNeill, ex-M P. The school was marked by a deep spiritual tone. It will be held in Wiarton next year. Officers for the coming year: Hon Presidents, Rev Stewart, Owen Sound, Rev Jackson, Hanover; Pres, Rev W S Daniels, Tara; Sec'y, Rev W W Pridham, Wiarton; Treasurer, Rev F N Bowes, Priceville; Registrar, Rev J W Scanlon, Port Elgin.

FOR FLETCHER'S
CASTORIA

The men whom I have seen succeed best in life have always been cheerful and hopeful men, who went about their business with a smile on their faces, and took the changes and chances of this life like men facing rough and smooth as it came, and so found the truth of the old proverb: "Good times and bad times, and all times, pass over."—Charles Kingsley.

HUSBAND SAVED HIS WIFE

Stopped Most Terrible Suffering by Getting Her Lydia E. Pinkham's Vegetable Compound.

Denison, Texas. — "After my little girl was born two years ago I began suffering with female trouble and could hardly do my work. I was very nervous but just kept dragging on until last summer when I got where I could not do my work. I would have a chill every day and hot flashes and dizzy spells and my head would almost burst. I got weak and was a walking skeleton and life was a burden to me until one day my husband's stepsister told my husband if he did not do something for me I would not last long and told him to get your medicine. So he got Lydia E. Pinkham's Vegetable Compound for me, and after taking the first three doses I began to improve. I continued its use, and I have never had any female trouble since. I feel that I owe my life to you and your remedies. They did for me what doctors could not do and I will always praise it wherever I go."—Mrs. G. O. LOWERY, 419 W. Monterey Street, Denison, Texas.

If you are suffering from any form of female ills, get a bottle of Lydia E. Pinkham's Vegetable Compound, and commence the treatment without delay.

MACLEAN'S

—THE MAGAZINE FOR REAL CANADIANS

Every phase of present-day Canadian life is reflected in the July issue of MacLean's Magazine. It is vibrant with the spirit of Canada to-day, interpreted by the Canadian writers of first rank, best fitted to treat of the topics assigned them. It is a Magazine with a universal appeal, a live interest for every member of the family. It is the Magazine you have been looking for. Consider the following list of writers and articles in the July issue, and ask your news dealer for the July MacLean's.

Robert W. Service whose virile verses places his books at the head of the best sellers, is driving an ambulance car at the front in Flanders, and his war poems, appearing exclusively in MacLean's Magazine, are saturated with the spirit and color of the trenches. "The Haggis of Private McPhee" in the July Number is a humorous yet pathetic treatment of a subject dear to the heart of every Scotchman. C. W. Jeffrey's illustrations make it more realistic.

Agnes C. Laut Well known to MacLean's readers for her amazing revelations of German machinations in the United States, and whose intimate connection with those high up in financial, business and diplomatic circles in the neighboring Republic, has given her series of articles in MacLean's prescience positively startling, contributes to the July MacLean's yet another of outstanding import under the heading of "Canada's Greatest Service to the Empire."

Brigadier-General Logie A fascinating character-sketch of the Hamilton lawyer, who, casting aside his gown and his briefs, is organizing and training as head of Number Two Division, a Canadian army larger than that Britain sent to Waterloo under Wellington. By Hugh S. Eayrs.

Immigration after the War Some plain facts are given and deductions drawn by Fisher King. No more vital question is occupying the minds of Canadian statesmen. Every business man should read this article.

Nellie McClung raises the startling question, "Now that women have the vote in Western Canada will they want to sit in Parliament?" Mrs. McClung, herself a leader in the Western Feminist movement, answers this question in a characteristic article in the July MacLean's.

Stringer and McFarlane continue in the July MacLean's their captivating stories, "The Anatomy of Love" and "Behind the Bolted Door." Both these men are first flight fiction writers, and both Canadian born and bred, and both with continental reputations.

Then there is that ever popular department, The Review of Reviews, which gives the busy reader the cream of the world's best periodical literature.

Buy the July MacLean's. Learn at first hand just how good and how interesting this thoroughly Canadian Magazine is.

Fall Term Opens Aug. 28th

ELLIOTT Business College

Yonge and Charles Sts., Toronto

Made this remarkable average record for the last three months: We were asked to fill more than thirty times as many positions as we had graduates. The business world calls you: prepare here and now; splendid opportunities; good salaries. All who are anxious for a successful start in life should arrange now to enter this popular school.

W. J. ELLIOTT, Principal

THORNEYCROFT'S CURE

I.

Private John Hardy was feeling very content. Late the assistant estate agent at Darnaliston, but now Private Hardy, he was on his way to spend a short six days' leave with Mabel Thorneycroft, who wore a diamond ring for which Hardy had paid.

The Thorneycrofts lived at Meadstrand-at-Sea, in a little bungalow. Mr. William Thorneycroft, who had retired from his career as a timber merchant with a fair fortune, was apt to become cranky at times, but his two daughters knew how to manage him, as a rule.

The two-hours' railway journey was all too long for the impatient wooer, but all his restlessness vanished as he saw Mollie waiting for him on the platform.

But somehow her greeting, enthusiastic though it was, disappointed Jack. She seemed nervous and irritable, he thought.

"Come on, Mollie! I'm just in form for a two-mile tramp!" Jack said, after the first exchange of compliments.

"And I'm not!" Mollie retorted. "For goodness' sake, Jack, take me to the best hotel in the town and order the biggest meal you can. I'm starving—literally starving!"

"But, I say——" Jack began. "You don't really mean you're hungry dear?"

The bare idea appalled him. But Mollie was in dead earnest.

"I'm horribly and atrociously hungry," she asserted solemnly. "You'll probably find Mab hanging around outside, also hoping to get a big lunch. It's the sober truth, Jack; we're simply dying for food. There isn't a decent restaurant in Meadstrand, and girls can't walk into an hotel very well, unless they've got a nice khaki thing like you beside them."

"But way on earth——" Jack began again.

"Didn't I tell you in my last letter?" Mollie asked. "Dad's going in for reform—food reform. I told you all about it."

"Yes, I know; but I thought you meant Tariff Reform, or something like that," Jack excused himself weakly. "How did he catch this latest complaint?"

"He went to London to attend one of his committee meetings a fortnight ago, and that began it. He heard an address on 'East less meat,' and now he's taken up with the 'Back to Nature system. You can't eat anything cooked; you have only to have one meal of raw vegetables each day, and drink as much cold water as you can. Nothing more—no tea or coffee or anything. Hallo, here's Mab!"

The younger sister greeted Jack enthusiastically. "You've heard the latest trouble?" she asked. "Come on. Where are you going to take us, Jack?"

That question was speedily settled, and over the excellent lunch provided by the landlord of the Royal, Jack heard the full and harrowing story of the hardships through which the two girls had passed.

"Oh, I'll soon talk him round. You can't feed a soldier that way," Jack assured them. "We'll go up there at once, or your father will wonder where we are."

Mr. Thorneycroft seemed pleased to see Hardy.

"Hallo, hallo!" he cried. "Come in, Jack! Had a good journey? Good! Glorious weather, isn't it? What d'you say? Feel hungry? Ah, I expect you are! I know all about that. It's unnatural, artificial—a craving caused by your habits of over-feeding. I've written to the War Office about it. If they and you adopted a rational——"

For a quarter of an hour Jack listened to a brilliant, scathing lecture on the evils of modern foods. His chance remark about hunger had given Mr. Thorneycroft his opening. In fact, during the course of the afternoon Hardy found it quite impossible to touch on any topic which did not lead almost directly to the question of the hour—the need for food reform.

"Wait till you've been here a week!" Mr. Thorneycroft declared. "You'll be a different man, Jack! You'll not call your training 'pretty stiff'; you'll think it's child's play. You're flabby, tired, and listless now; an overfed mass of unhealthiness—"

"I'm not!" Hardy interrupted. "Never felt better in my life!"

"You think so," Mr. Thorneycroft laughed, in a superior manner that irritated his future son-in-law; "but come and try your first rational meal."

Hardy struggled hard to eat the first course. Two or three dishes of greenstuff and a plate of nuts completed the full menu, and salt or other condiment was strictly forbidden.

"That's the only meal we have," the host remarked at the end, "but I think you'll admit we all look well on it. Mabel——"

"Is starving!" his young daughter interrupted.

"Don't be foolish!" her father told her irritably. "You know you are in much better health——"

"I'm not!" she answered undutifully.

Mr. Thorneycroft rose and left the table. In a short time Jack followed him, smoking a pipe. Tobacco, at least, was herbiferous.

The head of the household looked at him pityingly.

"I don't want to be rude, Jack, but if you don't mind I'd be glad if you would not smoke anywhere near this house. The smell of tobacco has become absolutely distasteful to me. You'll feel the same about it after a few days of rational diet."

"I dare say," Jack answered. "But don't you think you are carrying the diet question too far? I mean, it's always better to begin these things slowly."

The argument began with that. At the end of an hour Mollie came to interfere, but both her father and her lover advised her gently to leave them alone.

• • • •

The little rift between Mr. Thorneycroft and Hardy grew the following day. By the end of the morning their arguments were almost devoid of theory and had become distinctly personal.

Before lunch-time Jack had spoken to Mollie; they called Mab, and she hurrahed the proposal put forward. Whereupon the three set off for town. Mr. Thorneycroft did not see them go, as he was busy in the kitchen, lecturing the only maid at the bungalow. But the girl had stood it long enough, and insisted on having her wages to date. Then she went off. A man came for her box later in the day.

So the head of the household washed the greenstuff himself, and laid the table. Patiently he waited for an hour, but no one appeared. Then he dieted in solitary state.

When the others did turn up towards six o'clock Mr. Thorneycroft was suspicious.

"Oh, we've just been for a tramp!" Hardy explained, in answer to his questions. "Had our meals out."

Then Mab giggled. That roused her father to fury. He poured forth his scorn principally on Jack.

"I know perfectly well where you've been!" he stormed. "Stuffing yourself at some common lodging-house! You, who ought to be doing everything in your power to be strong and well! My daughters were content enough before you came, and were growing healthier every day. But now——"

"I shall be quite happy to leave!" Hardy interrupted.

A sudden flush had risen to his face.

"Then go! I certainly won't detain you! So far as I am concerned, our friendship is at an end! You have been guilty of meanness—gross meanness! If Mollie still holds her promise to you binding, she must not expect me to recognize it, that's all! Good-night!"

He stamped out of the room. For half an hour Jack and Mollie discussed the situation. Then Jack an hour later engaged a room at the Royal Hotel.

II.

"Utterly ridiculous!" Dr. Whiteman growled. "He'll learn sense before long!"

Hardy had lost no time in hunting out the only medical man he knew in Meadstrand, and was now unfolding his tale of woe to him.

"Of course!" Jack agreed. "But, meantime, it's uncomfortable for the two girls. I'd like to bring him to reason quickly. I wonder——"

"Wonder what?" demanded the doctor.

"If you could help?" Jack returned quickly.

After that they progressed cheerfully. Half an hour later Hardy went out, with a much brighter countenance than when he entered.

In the morning he met Mollie. To her he gave brief explanations, also a small bottle.

"Put half of it in the water-jug," he told her. "And just warn Mab to leave that jug severely alone to-day. Then, as soon as you think it advisable, suggest that the doctor be called. I'll be near your place somewhere about six to-night."

And Mollie returned to the bungalow to carry out the instructions. She watched her father closely during the next seven hours. Every time he drank a glass of water from his own particular jug she smiled.

At last the sign for which she waited came. Mr. Thorneycroft had struggled against that horrible pain as long as he could, but it was growing worse.

"Mollie," he gasped, "I—I don't feel well! I think——"

"I'll fetch a doctor," Mollie answered. "You look horribly ill, dad. Oh, dear! What——"

She disappeared without finishing the sentence or waiting for her father's protest. A short way down the lane a man in khaki was waiting.

"All's well! Go ahead!" she cried.

In something under an hour Dr. Whiteman was entering the bungalow. By this time Mr. Thorneycroft would have seen anyone in the world. Besides the pain he felt, something had gone wrong with his eyes; the whole room was swimming round him.

The doctor made a rapid examination.

"What's the matter with me, doctor?" asked Thorneycroft presently.

"Matter!" Dr. Whiteman jerked. "I don't know. Seems to me a case for good food. Sheer lack of nourishment, though you don't look like a man who starved himself. What do you eat?"

"I—— Oh, I've been experimenting!" Thorneycroft stammered. "Trying a rational diet, you know."

"Experimenting!" The doctor almost exploded. "Do you call it experimenting to try and kill yourself? Now, then, young lady"—he turned sharply to Mollie—"just go and make your father some beef-tea, and make it strong! I'll call and see you to-morrow. Meantime, feed! You understand? Feed!"

And then Dr. Whiteman went out.

It was two hours later when Jack Hardy called. Mr. Thorneycroft had just got over the effects of a decent meal, and was now puffing contentedly at a cigar.

"I've called to apologise," Hardy began.

"Don't, Jack!" Mr. Thorneycroft begged. "I want to apologise, too! It was all my fault, of course! But let's forget it—eh? I'm a bit of a crank at times, you know, and—— Here, try one of these cigars, and let's be reasonable. You must really stop here for the few days you have left."

And Jack stayed.—London Answers.

THE CITY OF TREBIZOND.

Has An Exceedingly Picturesque and Beautiful Situation.

Trebizond, the important city on the Black Sea that the Russians have taken, has a very checkered and very interesting past. Originally a Greek colony from Sinope, the city has been besieged and occupied by the Goths, the Georgians, the Seljuks, the Turkomans and the present Ottoman Turks in turn. It was at Trebizond that Xenophon rested his army after his retreat from Persia, and a hill some few hours' journey inland is still pointed out as the place where his tired hosts first greeted the sea with the famous cry, "Thalassa! Thalassa!"

The Grand Comneni founded an empire here when the Byzantine Empire fell to pieces at the time of the fourth crusade, and the ruins of the fortress and citadel they built are still, in spite of Turkish vandalism, almost intact.

The ancient town, strongly walled and protected on the east and on the west by deep ravines, with the only access to it from the land side along a narrow and exposed ridge, is a fine model of ancient warcraft and natural strength combined. The outlines of the old harbor testify to an admirable scheme both for defence and offence. The Palace of the Comneni still commands an extensive view of the wooded heights surrounding the town. Lying on a low plateau on the shore of the Black Sea and backed by mountain ranges of imposing height, the town has an exceedingly picturesque situation. The luxuriant foliage that the moist and equable climate of the region encourages makes the place beautiful as well.

Before the days of regular sailings round the Cape of Good Hope, almost the whole of the Indian and Persian trade came through Trebizond. But after they took Batum the Russians built a railway thence through Kars to the Persian frontier, and this alternative route, in spite of its heavy charges, has robbed Trebizond of much of the prestige that the cape route and the Suez Canal had left it. There are no manufacturers and no industries native to the town, and in recent years the value of the imports has always exceeded that of the exports from the district, the difference being made up from the profits yielded by the transport business. The population in 1913 was estimated at nearly fifty thousand, of whom the most were Turks; the rest were Levantine Greeks, Armenians, and a motley crowd of Persian muleteers, porters and passing merchants.

Running parallel for some miles with the Deirmendereh River, is the one and only road into the interior and Persia. Constructed by European engineers, this highway is an excellent one for the East. It is available right up to Erzerum for wagons of any sort, and only in two places are the gradients serious and the conditions unfavorable. It is the only road by which supplies can be carried to Erzerum. The distance from Trebizond to Erzerum, as measured in the East, is twelve to fourteen days by caravan, eight days by carriage and relays, and three to four days by the Turkish post.

SOLDIER OF FIFTEEN.

Gains Battle Record Before Mother Has Him Discharged.

John Charles Hartably, aged fifteen years, of London, England, has a notable war record. He enlisted in the Seventh East Surrey Regiment when thirteen years seven months old, and before he was fourteen he was in the trenches.

He went to France after three months' training in England, and was in the trenches nine months. Then he was wounded by shrapnel and taken to a hospital. It was discovered that he was under military age, and when he recovered he was sent to his home by the authorities.

Soon afterward he ran away and enlisted again, this time in the Third East Surrey Regiment. By the time his mother discovered where he was he had nearly finished another spell of training. A letter from her reached the military authorities at Dover just as the lad was starting again for the front in France, and he was discharged a second time.

Better Face Surgery.

Surgery is making great advances as a result of the war. W. H. Dolomore, president of the British Dental Association, told his fellow members at the annual meeting that one of the lessons the war will teach will be the correct method of treating injuries of the jaw and face. Photographs exhibited showed remarkable successful results in healing gunshot fractures of the jaw with a minimum of disfigurement.

A Man's Meal for Five Cents. Living on mush makes a mushy man. A man who works with hand or brain must have a man's food. Two **Shredded Wheat Biscuits** with milk or cream will supply all the strength-giving nutriment needed for a half-day's work or play at a cost of not over five cents. Simply crisp a few Shredded Wheat Biscuits in the oven and serve with fresh fruits and milk or cream.

Made in Canada

WAR DOGS IN THE VOSGES.

They Come From Alaska, Canada and Labrador and Do Good Service.

Last year, when the question of transport through the mountain snow had become a matter of urgent importance, the French authorities had the idea of using dog-drawn sleighs for carrying supplies. Several hundred trained dogs from Alaska, North-Western Canada, and Labrador were brought over by a French lieutenant who had spent 11 years in Alaska, says a writer in the London Times.

From the beginning of the year to April 21, with a short interval, the snow in the neighborhood of the Schlucht Pass was deep enough for the dogs to be able to render yeoman service. They were able to draw heavy loads over almost inaccessible country and to supplement to a valuable extent the wheeled transport, which would otherwise have been the sole means of revictualling the army of the Vosges. But their utility has not ceased with the disappearance of the snow. They are now being harnessed to small two-foot-gauge light railways, which run everywhere behind the front, and they are capable of drawing the heaviest load up the steepest gradient. Eleven dogs, with a couple of men, can carry a ton up some of the most precipitious slopes in the mountains, and I was assured that two teams of seven dogs each could do the work of five horses in this difficult country, with a very great economy of men.

The kennels, which I visited, lie just below the crest of a certain mountain in the Vosges. It would be hard to conceive more amiable creatures than the 250 dogs who welcomed our visit. Of them all, there was only one who was passed by with the warning, "He bites!"

Three breeds are in service—the Alaskan, the Labrador, and the Canadian—and the best of these is the Alaskan, as his courage never fails, and he will work until he drops, though he is perhaps the weakest of them. They are all shaggy dogs, with prick ears and bushy tails, their color ranging from black to white, between grays and browns. Their chest development, so necessary for hauling, is remarkable. They are mainly fed on rice, horseflesh (of which there is abundance), and waste military biscuits, and this fare seems to suit them admirably, as they are always in splendid condition and disease is practically unknown.

A team of seven dogs was harnessed to a makeshift truck, formed of ammunition cases, to take us along one of the two-foot-gauge railways. The harness consists of a chest strap and a wooden bar behind, which takes the place of a horse's kicking strap. It is extremely simple, and can be put on or taken off in a minute. No whip was used, and order was maintained simply by commands shouted in English. As soon as they were hitched to the truck the whole team gave tongue and began to pull with obvious delight. They soon got up speed, and in a few minutes we were jolting along over the rails with seven bushy tails waving vigorously in front of us.

The experiment of transporting these dogs to France has shown that they can be of real service in mountainous country, and represent a real economy.

Homesickness

The recruit walked into the barrack-room and inadvertently left the door open. An old soldier immediately yelled, "Shut the door, you fool! Where were you born—in a barn?"

The youngster closed the door, then, dropping down on his cot, buried his face in his hands and began to weep.

The old soldier looked somewhat uncomfortable, and, rising, finally walked over to the weeper and tapped him on the shoulder.

"Look here, boy," he said, "I didn't intend to hurt your feelings. I just wanted the door closed."

The weeper raised his head and grinned. "Comrade," he said, "I'm not crying because you hurt my feelings, but because you asked me if I was born in a barn, and every time I hear an ass bray it makes me feel home-sick."

The calves should be sprayed with the fly repellant also.

The AUTOMOBILE

The Care of a Car.

The care of a car is largely a matter of common sense, and we feel sure that every farmer can exercise this faculty to far better advantage than his city brother because of his acquaintance with machinery and its needs. After you have driven your car home, make arrangements for a wash rack. This should be located in a shed or barn, but if such a building is not available, any shady spot will do. Make sure, however, that the place selected is not reached by the sun, as the cleaning of an automobile in the bright rays of Old Sol would soon dull the varnish and kill the lustre. If you have a satisfactory building, see that there is a vent in the middle of the floor in order that the water may be run off to some place where the earth can absorb it. Sloping down to this vent you should have slatted boards in order that the dirt may be carried away without necessary trouble. The big essential for preserving the appearance of your car is water. This can be arranged for by a pipe from a windmill or a pump. These sources of supply not being handy, the water should be brought up in barrels, as an unlimited quantity is absolutely necessary. The preliminary arrangements having been made and the car placed upon your rack, cover the engine with thick oil cloth or other water resisting material. You are now ready to proceed. Throw the water, either with a hose or a bucket, all over the car from end to end and side to side. If a large quantity of dirt has adhered to any part, give separate treatment, but do not in any event rub the earth except in a flow of water, as fine particles of grit are sure to scratch the paint and enamel. When all the dirt has been removed, give another aplication of water and follow the spray along with a sponge. Having been completely assured that all foreign matter is removed, rub down the car with chamois leather, and when it is dry, move it out into the sun, but under no circumstances allow any hot rays to strike the machine until every drop of water has been rubbed off. If this system is followed with regularity, your automobile should present a spick and span appearance years and years after the date of its purchase, but neglect will rapidly throw your investment into quick depreciation. As long as your engine is covered, no possible damage can come to any part of the motor, and tires are built to withstand water under every condition.

Use Plenty of Oil.

Automobiles requires liberal quantities of oil and grease. The great from whom you buy your car, will advise you the level for the oil in the crank case. Do not exceed the point he indicates because then there will be a large amount of burnt oil exhausted from the back of the car and your driving will become a source of inconvenience. Perhaps you have noticed upon many occasions. The great volume of smoke that is thrown out on the road by a passing machine. This is always due to an excess of oil. You should also have your agent advise you regarding the grease cups which necessity demands should be turned down at regular intervals in order that the lubricant they contain may be allowed to work to the best advantage. If upon looking under the hood you find that there is not a place provided for an oil can, buy or build a little bracket yourself in order that the oiling of the engine may be brought constantly to your attention. Naturally, any piece of machinery constantly becomes covered with the products necessary for its easy operation, but an oily, greasy mechanism of any kind never looks attractive, so do not hesitate to use large quantities of rags or waste in wiping down engine. If you make visits to city or town garages it might be well to ask for a coal oil or gas spray. Shoot the mixtures into all the external parts of the motor, and by subsequently rubbing it down, the power plant can be kept bright and shiny. Do not, however, start your engine until the gas and coal oil have been wiped off as there is sometimes an element of danger. There are many ways of keeping the leather in first-class shape, but it seems useless to waste any words of advice upon farmers in this respect as their vocation has always called for skilled service in the maintenance of harness and kindred products. When the top of your car is down, make sure that the envelope has been pulled over it snugly in order that the dust may not fill the creases, and never under any circumstances, operate your automobile if this envelop has been removed. Should you do so, your top, when next erected, will present an inferior appearance that will not impress your guests. Upon filling a car with gasoline, it is always advisable to cease smoking, and under no circumstances allow the presence of a naked light, as a breath of wind may blow the vapor in the direction of the flame and cause instant trouble of the most serious character.—"Auto" in Farmer's Advocate.

STOPS THAT COUNT.

Even the Comma May Be the Cause of Laughter—and Tears.

The untoventional "sky pilot" who was made to say, "I will wear no clothes, to distinguish me from my fellow-Christians," only meant to say he objected to a clerical collar and vest; but it was a little embarrassing to find a comma in such an odd place.

But perhaps he had less cause for complaint than the Scottish divine whose sermons were eagerly listened to in Glasgow, even though he preached temperance.

This good man was made to say in the morning paper:

"Only last Sabbath, my dear friends, a young woman died within a stone's throw of this very church with awful suddenness, while I was endeavoring to preach the Word in a state of beastly intoxication."

At a well-known "fashion and fancy" publishing-office, the nursery expert nearly got "fired" the other week for letting her eagle eye fail to observe the absence of a very necessary comma. One of her masterpieces of domestic chat ended up: "When the baby has done drinking it must be unscrewed."

But even this was not quite as bad as the classical example: "If the baby refuses cold milk boil it."

A well-known writer about country rambles was made to say recently: "The good farmer having finished milking, his cow offered to show me the way across the fields."

As the writer is a lady, it is perhaps safe to say she would not relish her escort.

A leader of New York Society came an awful cropper in the papers lately through no fault of her own; and it is so difficult to get a verdict for libel against a misplaced or superfluous punctuation mark.

This fashionable dame had gone to a great reception at the palace of a multi-millionaire in a dress more remarkable for taste than show, and one of the disappointed frock fanciers present on behalf of her paper wrote afterwards: "Mrs. Castor wore nothing in the nature of dress that was remarkable."

That was all right until the compositor spoiled it. He made it read, for all America to laugh at: "Mrs. Castor wore nothing in the nature of dress. That was remarkable."

Advertisements often err in this way. There are the classic examples: "Wanted a piano, by a young lady with nicely turned legs," and "Wanted a boy to open oysters with a reference." Examples of the comma that wasn't there.

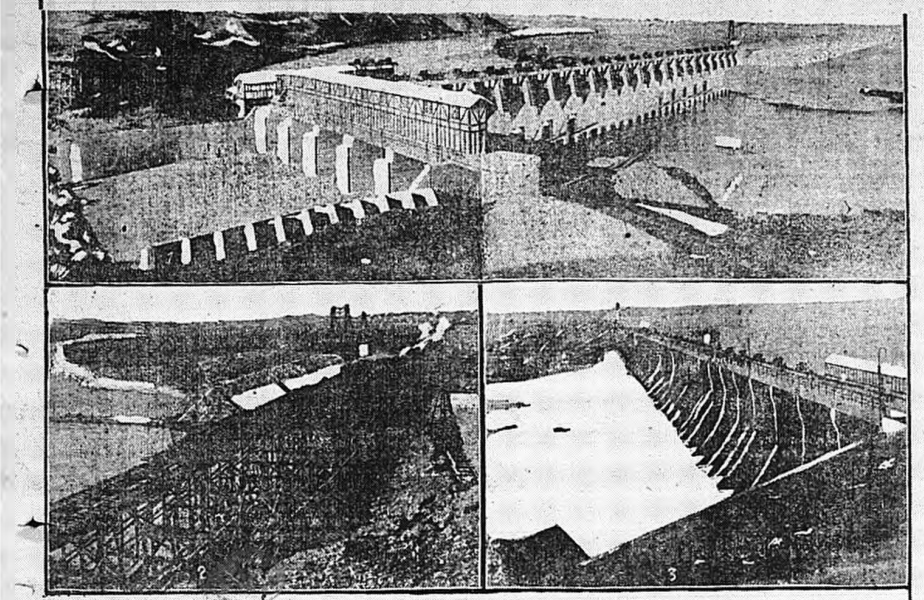
But perhaps this instance may be news to most of our readers: "Wanted a boy, to attend to pigs with a religious turn of mind."

Talking of dashes, a student in one of our colleges was asked by the English professor how he would punctuate the sentence: "I saw a beautiful girl as I was passing along the street."

The student replied, with much good sense: "I should make a dash after the beautiful girl, sir."—London Answers.

VALIANT WOMEN.

Many Have Been Decorated for Their Heroism in War.



Since Napoleon founded the Cross of the Legion of Honor on May 19th, 1802, France has publicly recognized the heroism of some twenty women. Napoleon himself decorated at least seven women for distinguished conduct in warfare, the chief of these being Anne Biget, a Sister of Mercy, who earned the Cross of the Legion of Honor for her devotion to the sick and wounded, for whom she constantly risked her life.

Another Frenchwoman who earned the Cross was Mlle. Dodu, a postmistress of Pithviers, a village which had fallen into the German's hands. She destroyed a message which she had been ordered to transmit, and was, of course, court-martialled and condemned to death. On the arrival of Prince Frederick, however, she was released, the Prince himself commending her for her heroism.

There was a Russian woman named Kirtchaya, who joined a mounted regiment as a man to fight against the Japanese. She took an active part in an engagement with the Chinese, rescued several wounded comrades under fire, and defended them till the end of the battle. For this magnificent heroism she received the Military Order of the Fourth Degree.

TURNING DESERTS INTO GARDENS

(1) Bird's Eye View of the Dam.
(2) The Dam Under Construction.
(3) The Sluice Gates Open.
(4) Distributing the Water.

OUT on the prairies of Western Canada and among the mountain valleys of British Columbia, deserts are being turned into gardens by the application of life-giving waters.

Every desert is a potential garden if this one chief necessity is met, though it is not fair to use the word desert or even an arid region, for Alberta is neither arid or desert. But nature may often be assisted in her great task of production, and this is what the irrigation systems of the Canadian West are doing.

In Alberta the Canadian Pacific Railway is developing the largest individual irrigation project on the American continent, with an area larger than the total irrigated area in either Colorado or California. Portions of a tract of three million acres will be included in this prosperous and fertile so-called "dry belt" region. The western section is already completed, including sixteen hundred miles of canals and ditches. The eastern section is in process of development where twenty-five hundred miles of canals and ditches will be required for the service.

On April 25, 1914, the great irrigation dam at Bassano, Alberta, was opened. Built across the Bow River, eighty miles east of Calgary, the huge structure, 7,000 feet long, will conserve the water of the Bow for the eastern section. Another great engineering work, which will serve the same tract, is a giant aqueduct at Brooks, thirty miles east, two miles in length, which carries the waters of a branch canal over a wide valley.

One has only to visit this great undertaking of the Canadian Pacific Railway to realize not only its magnitude but the results it will, indeed is, producing. Here is one of the smaller radiating ditches, filled with rippling water. On either bank nature has responded with a luxuriant growth, and a garden of productivity is the result. The wheat fields extend in another direction, showing a fine head of grain after imbibing the thirst-quenching waters, for nature thirsts as do humans. All kinds of growths prosper—fruits, cereals and garden truck, while dairying and live stock growing flourish wherever there is an irrigation canal. The country is filling up with what are called dry farmers for the waters ensure a practical certainty of crop. A six-year yield of Marquis wheat on irrigated land ran forty-four bushels to the acre, compared with only 29 on non-irrigable lands. Here the C.P.R. provide their Ready-Made Homes, where the settler is assisted generously in establishing a foothold.

Through southern British Columbia the effect of irrigation systems is shown in the flourishing orchards of the Okanagan, Arrow and Kootenay Lakes country, along the Cariboo road and in many another section. Thus this most ancient of natural aids as it is the most modern, dating from the Garden of Eden and continuing to the Alberta irrigation system is one that has contributed to the world's productivity and to Canada's wealth.

AUSTRIAN VIEW OF BELGIUM.

Teuton Conquest Means Subjection Not Freedom.

Austria does not always see eye to eye with her ally, Germany. While the Austrian censorship sympathizes with the anti-Russian tendencies of Chancellor Von Bethmann-Hollweg, it does not permit discussion of the Polish question. As to Belgium, the Socialist Arbeiter Zeitung is permitted to write as follows:

"Matters are, of course, quite different in the west. Even the wildest pettifogger cannot assert that there is a work of liberation to be accomplished in Belgium and in France; that there are here peoples groaning under foreign rule, and that freedom must be brought to them by the German sword. In the west the principle which the Chancellor rightly proclaims for the east would signify not liberation but conquest—not the freedom of peoples from foreign rule but their subjection to foreign rule. The artificial reference to the long oppressed Flemish races cannot deceive one about the true state of affairs. The question of the national development of the Flemish is a Belgian domestic question, which the Flemings themselves regard as such, and for which they seek no help from abroad. Whether Walloons or Flemings, both races feel themselves to be Belgians and see their salvation only within the framework of an independent Belgium."

This is to certify that fourteen years ago I got the cords of my left wrist nearly severed, and was for about nine months that I had no use of my hand, and tried other Liniments, also doctors, and was receiving no benefit. By a persuasion from a friend I got MINARD'S LINIMENT and used one bottle which completely cured me, and have been using MINARD'S LINIMENT in my family ever since and find it the same as when I first used it, and would never be without it.

ISAAC E. MANN,
Aug. 31st, 1908. Metapedia, P. Q.

Not Second-Hand.

"Is that china of yours, Mrs. Comeup, old Chelsea?"

"No, indeed, it isn't. It is all brand new stock."

Keep Minard's Liniment in the house.

Uncomfortable Economy.

They were a very saving old couple, and as a result they had a beautifully furnished house.

One day the old lady missed her husband.

"Joseph, where are you?" she called out.

"I'm resting in the parlor," came the reply.

"What, on the sofa?" cried the old lady, horrified.

"No, on the floor."

"On that grand carpet!" came in tones of anguish.

"No; I rolled it up!"

Not Broke Yet.

Country Judge—"How long have you owned a car?"

Motorist (charged with speeding)—"One week, your Honor!"

Judge—"Um—then you can still afford to pay a fine! Twenty dollars!"

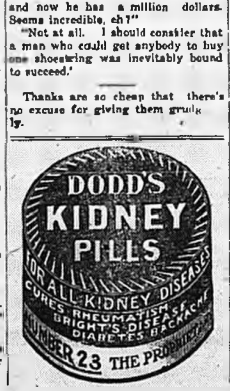
A gentleman is one who tries to make life as easy as possible for the other fellow.

It Worked Well.

A honest citizen of Brussels, returning home late at night under artificial stimulation and singing at the top of his voice, was apprehended by a German patrol, says the Echo Belge. The citizen resisted, and after a scuffle broke away from his captors and fell into the canal. Unable to swim, he began to call for help without eliciting response from the German policemen, who seemed to think this was as good a way as any out of the situation. Just as he was going down for the third time the fugitive had a happy thought. With all his remaining strength he yelled:

"Vive la France! Vive la France!"

A couple of Germans dived for him at once. He was hauled out, taken to the lockup and the next day, sentenced to three months for uttering seditious cries.



Ask for Minard's and take no other

Evidence of Genius.

"He started life with a shoestring and now he has a million dollars. Seems incredible, eh?"

"Not at all. I should consider that a man who could get anybody to buy one shoestring was inevitably bound to succeed."

Thanks are so cheap that there's no excuse for giving them grudgingly.

SUMMER HEAT HARD ON BABY

No season of the year is so dangerous to the life of little ones as is the summer. The excessive heat throws the little stomach out of order so quickly that unless prompt aid is at hand the baby may be beyond all human help before the mother realises he is ill. Summer is the season when diarrhoea, cholera infantum, dysentry and colic are most prevalent. Any one of these troubles may prove deadly if not promptly treated. During the summer the mothers best friend is Baby's Own Tablets. They regulate the bowels, sweeten the stomach and keep baby healthy. The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

ITALY'S KING A GOOD SOLDIER.

He Has Had Many Narrow Escapes From Death.

The military correspondent of the London Times, describing his recent tour of the Italian front, says:

"Italy is fortunate in having at her head at this critical hour of her destinies a King who is a soldier born and bred. It is a common saying that the King of Italy is homesick when he is absent from the army, and it is certain his Majesty spends every hour he can spare from state affairs with his troops. He wears on his breast the medal and ribbon given only to those who have been at the front a year and though he deprecates any allusion to the fact, it is true that he is constantly in the firing line. He has had many narrow escapes, and is personally known to the whole army, who love to see him in their midst.

"I have not found any officer of his army who has a better, more intimate or more accurate knowledge of his troops than the King. His attention to the wants of the army is absolutely untiring, and his cool judgment and large experience must often be of great service to his ministers and generals.

"I do not know whether the field headquarters of the King of Italy or of King Albert of Belgium is the most unpretentious, but certainly both monarchs live in circumstances of extreme simplicity. My recollection is that when I last had the honor of visiting King Albert's headquarters, the bell in which I must call the parlor did not ring, and the Queen of the Belgians had to get up and fetch tea herself.

"When I had the honor of being received by the King of Italy, I found his Majesty in a little villa which held only four people, and the King working in a room of which the only furniture, I can recall, consisted of a camp bed, close to the ground and of exiguous breadth, a small table and two chairs of uncompromising hardness. The only ornament in the room was the base of the last Austrian shell which burst just above the King's head. It had been mounted as a souvenir by the Queen."

Honest.

He—There goes the honestest girl in the world.

She—How's that?

He—She won't even take a kiss without returning it.

Adds a Healthful Zest to any Meal

Most everyone likes a hot table drink, but it must have a snappy taste and at the same time be healthful. Probably no beverage answers every requirement so completely as does

POSTUM

This famous pure food-drink, made of roasted wheat and a bit of wholesome molasses, affords a rich, delicious flavour, yet contains no harmful element.

The original Postum Cereal must be boiled; Instant Postum is made in the cup "quick as wink," by adding hot water, and stirring.

Both forms of Postum have a delightful aroma and flavour, are healthful, and good for children and grown-ups.

"There's a Reason"

Sold by Grocers everywhere.

We Handle All the Good Things You See Advertised in the Big Magazines.

THIS store is headquarters. You will always find here everything you would expect to find in a similar store—and many things more.

We specialize on articles of genuine merit. Articles we have tested and tried ourselves and we can recommend and indorse.

You will find here all of the good—the best—the pick—of the standard household articles advertised in magazines.

We add our own guarantee to that of the manufacturer's.

We call your especial attention to the O-Cedar Polish Mop, the greatest boon to cleaner and better housekeeping we know of.

With it you can dust, clean and polish a hardwood floor without getting down on your hands and knees. You can dust the tops of doors, the molding, the tops of high furniture without standing on chairs. You can dust and clean the stair steps and banisters in half the time it usually takes.

You can dust under the bed, and under heavy furniture without moving it, and so on throughout the house—wherever there is dusting to do. You can do it quicker, easier and better with the O-Cedar Polish Mop.

Unlike other dusting mops the O-Cedar Polish Mop can be washed when soiled, and then renewed by adding a few drops of O-Cedar Polish.

We are so confident that you will be delighted with the O-Cedar Polish Mop that we will deliver one to your home on two days' trial. If it is not satisfactory in every respect we do not expect you to keep it, and will instantly return your money. The price of the O-Cedar Polish Mop, complete, is $1.10. Let us send you one on trial.

PINKERTON

Mr Jas Gale returned to Bethany after spending a few holidays at the Manse.

Miss Sadie Colwell spent Sunday in Kincardine.

Ptes Gordon Pinkerton, Edgar Campbell and Gordon Garland of the 160th are home from London helping on the farms.

Miss Alma Reid visited friends at Lovat last week.

Mr and Mrs A Gregg and family are spending the summer at their cottage at Inverburon.

The entrance results are out and show that five of the eight candidates from this school were successful which is a remarkably good showing for such a large school.

Mr and Mrs J McRae of Paisley spent Sunday at Mrs J Murray's.

The secretary of the Pinkerton Red Cross Society has received the report of the collection of paper, rags, etc., which were sent to Toronto some time ago which realized the sum of $22.81.

TURNER'S

Miss Kate McKinnon, of Toronto, spent a few days with her sister, Mrs Archie Bell.

Mrs J Forrester and Mrs Wm Forrester, of Port Elgin, spent a day last week with Mrs J Munro.

Miss Margaret Clark, of Toronto, is spending holidays at her home here.

Farmers are at the haying just now. Any man out of a job in town should try the country.

Archie Pollock, sr, left Tuesday on a trip to Alberta. All being well, he will celebrate his 89th birthday in the west.

Mr and Mrs Wm Piper, of Vancouver, were calling on friends here last week.

Mrs Hardy, of Toronto, spent a few days last week at Mr G Christie's.

GRESHAM

Mr J B Cottrill and sons, including Pte V D Cottrill of Camp Borden, motored over one day last week to renew acquaintances here.

Miss Lettie Young who has been teaching at Glen Orchard for the past year and a half, is holidaying at her home here.

Ptes Harvey McArthur, Rob Roy and Bruce McGegor are home for a month's haying and harvest.

Mrs J Irwin motored to Stayner lately and visited her sister.

EDEN GROVE

The farmers are busy making hay while the sun shines, and the town people are just as busy trying to keep cool.

Mr and Mrs Sullivan, Mr and Mrs Connon, and Miss M Sullivan, of Denver, Col, were the guests of Mr and Mrs P O'Reilly last week.

Quite a number from here took in the barn raising on Mrs Elder's farm, Cargill. When it comes to raisings there is nothing can beat the boys from the Grove. I'm quite an expert on raisin' pie myself.

Mr and Mrs John Volsing and Mr Nelson Dahm, teacher, Floradale, were guests at the home of Mr and Mrs John Seiler, King St, on Sunday.

Our young ladies are getting a little dearer. Ice cream now Saturday afternoon and evening.

Messrs D Forrester and P McKinnon, of Paisley, called on friends in the Grove last week.

Pte Ed Bailey, of the 160th, is home for the harvest.

Mr and Mrs A McKeeman called on Walkerton friends on Friday.

Mr Len O'Reilly is visiting friends in Toronto.

Rev W C Almack, Cargill, was in town on Tuesday making a few pastoral calls.

The Misses Reid, of Arcola, Sask, are guests of Mrs Allen, King St.

Mr and Mrs Rosseau motored to Hanover Saturday.

Pat Desmond has accepted a position with the G N W Tel Co at Palmerston.

Mr and Mrs Eddy and family, of the Telescope, Walkerton, motored up and called on Grove friends last week.

Miss Subject spent Sunday at her home in Elmwood.

A few from here attended the garden party held at Cargill Monday evening and report having a good time.

The Red Cross Society forwarded a large case of supplies for the soldier boys to the head office in Toronto last week.

Mr and Mrs Campbell have returned to their home at Leamington after spending a few weeks at the home of Mr Emory.

"Sunny Jim" called on Paisley friends Friday.

Most people thought it was too hot to go to church Sunday. It certainly was a scorcher alright.

DO YOUR BIT FOR THE FALL FAIR

Farmers' Advocate

There is one line of work where many farmers are called upon to assist themselves, and that is with fall fair. When this is read the fair dates for Ontario will have been announced, and they should act as a signal for all directors and committee men to get busy. Some directors are energetic in assisting the secretary before the event, on fair days, and after it is over. Others appear only for their badge and dinner ticket. Fortunately the majority of the officers are big enough men to see the importance of fostering the local fair, and making it a sucess, but we are appealing to the indifferent directors who had not the manliness to decline the honors when appointed, or the spirit to help when needed. A fall fair is a local event, and every farmer, whether an officer or not, should have pride enough in it to boost it in every way. A greater effort should be made to get the good stock out this season, but perhaps this cannot be done without sheds or some better accommodation. Few breeders will risk tying valuable horses or cattle to a fence post. There is also, generally speaking, room for improvement in the display of agricultural products. Pianos and sewing machines are useful all the time and are alright at the fair, but the farmers might adopt some of the merchants' enthusiasm regarding the display of goods, and make the products of the old farm eclipse anything the town can bring forth. Endeavour to make a strong feature out of some class of live stock or farm products. It will draw a crowd and help the fair for the succeeding years. Some fall fairs are noted for their show of heavy and light horses, others for their display of fruit, some again for poultry and vegetables, while still others make cattle a drawing card. The directors should work up these lines and advertise them. Go to the men that have these things to show and get them to come out. Work for and boost the fall fair so that the people who are now beginning to see something in agriculture will be obliged to admit that after all there is nothing that can surpass the old farm and what it can produce.

GLAMIS

Mr Albert Pickard and family, of Wiarton, spent Sunday with friends here.

Mrs Fisher, of Paisley, Sundayed at Mrs Howson's.

Miss Helen Oliver, of New York, and Miss Jean MacIntyre, of Toronto, are visiting at J C MacIntyre's.

Mr Bruce Reid, of Beamsville, and the Misses Troax, of Toronto, are spending some time in Mr McKeeman's cottage at Inverburon.

Mr and Mrs Nesbitt motored to Chesley on Sunday.

Miss Roleston, of Owen Sound, who was visiting her aunt, Mrs R J Nesbit, returned to her home on Sunday.

Leslie Black, of Clifford, spent Sunday with friends here.

Mr and Mrs Jevons, who were spending some time at Mr Reith's, returned on Saturday to Toronto.

Miss Lizzie Ferris is home from Toronto on a visit.

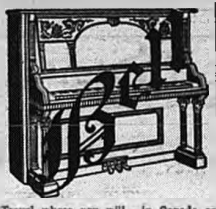
Mr Geo Ferris and Miss Fowler, of Ripley, are visiting at Mrs Woodstock's.

Mr McColeman, of Toronto, is spending some time at the Ferris brothers' on the boundary.

HUMAN SKELETONS FOUND

About twenty human skeletons were found a few days ago in a pit on Griffin's Island, near Owen Sound. The discovery was made by men operating a steam shovel excavating gravel. The skeletons were covered by only about two feet of gravel, about two yards from the shore, and had evidently been placed in the excavation. Thirteen of the skulls were in a good condition of preservation, while seven others were more or less broken. Naturally the find has created interest and the bones were gathered carefully together in boxes, and the discovery will probably be referred to the archeological section of the education department at Toronto. There was nothing in the pit in which they were found to indicate whether they were the skeletons of white men or Indians. There were no remains of buttons, clothing or utensils to give any clue as to the cause of so many bodies having been placed in the same receptacle.

The Owen Sound Advertiser says: At first hand it is evident, from a careful examination of the facts, that the bones have reposed in the shade where found for many, many years. It is also evident that they were placed there with intent and deliberation.



All evidence obtainable indicates to us: (1) That the Indians met peaceful deaths. (2) That they were natives of, or at least frequenters of, the islands and surrounding districts. (3) That they were buried in the bone pit by friends. (4) That this "collective funeral" took place about three centuries ago. (5) And that the occasion upon which they were placed there was one of the usual "communal burials" common to the Hurons of this district; and more especially peculiar to the Missisaugas, a sub-tribe of the Hurons and who made their summer home around the shores of the Georgian Bay from the present site of Collingwood north and around to the mouth of the French River. In winter, according to authentic missionary historians (Jesuit Lalement, Father Perrot, Jean Nicolet, and later Mr Alexander Chamberlain), they moved south to Simcoe, Grey and South Huron, or the Bruce Peninsula, and the islands of Georgian Bay.

The Jesuit missionaries, Jerome Lalement, Claude Figart and Charles Raymbault, were in the year 1648—seven years after Nicolet first made their acquaintance—invited to a "Feast of the Dead" held by these people in the month of October of that year. This "Feast of the Dead" lasted several weeks and was brought to a conclusion by a "Communal Burial" in which all the deceased members of the tribe who had passed away to the happy hunting ground during the preceding season were all buried at once and in one common grave. This event took place on the northern shore of Lake Huron; and collaborative evidence by other authorities would indicate that it was not far from the present site of Gilliphant. This Communal Burial was one of the most sacred and impressive religious rites of the Missisaugas and took place regularly each autumn and spring. A usual thing the ceremony was performed at the summer camp—the real home of the tribe—but when an epidemic swept the tribe, which was a usual occurrence during the winter months, the ritual was observed at their temporary winter camping grounds.

We find that there is every evidence of the bodies having been placed in the pit where found, according to the laws of this ritual. The "Feast of the Dead," which invariably preceded the actual burial, took the form of a prolonged religious conclave or convention. Gods, Spirits and Deities addressed in long formal prayers and exhortations. Good spirits are invoked and their intercession with the Great Spirit craved. The "Agothons" or sorcerers, who were hated by the tribes to which they belonged, were publicly persecuted and defied religion; and national gambling tournaments were periodically arranged in honor of certain deities.

Prior to the day of actual burial, complete preparations for interment were made. A pole, usually round, and large enough only to contain a number of corpses to be buried was dug in an open place where there was little concealment for "okies" in the immediate vicinity. Around this hole, on three sides only, was erected a platform about six feet in height with a continuous floor about four feet in width. Under this platform were placed the dead, who in life had possessed certain degrees and standings in the tribe, socially. Around the outside of this rectangular three-sided platform, there was raised to a height of about eight feet, a row of rails, from which were suspended the skeletons and part skeletons of the more longest dead. All the skull bodies and skeletons were placed somewhere upon this platform or raised railing. At a distance of some forty or fifty feet from the edges of the hole a row of poles twelve to fifteen feet in height were set up at ten foot intervals all around the platform. Upon these poles were hung the apparel and implements of the deceased. Outside of these poles again a row of bonfires were built. Inside the circle of poles, between them and the platform a procession of braves was organized under direction of the chief. Each brave carried a corpse on his back, walking round and round, while the women, children and other spectators set up a tremendous wailing and howling—a noise unbelievable according to current descriptions. Finally the bodies were placed in the hole and were covered with earth. The scaffolding and poles were removed and sometimes mounds were built over the "joint graves." Often, however, the location of the pit was carefully obscured to prevent desecration by vandals or enemies.

In cases where the dead to be buried were warriors killed in action, they were thus interred without further ceremony. But when death had been due to disease or natural agencies, the pits were first "purged" by building a fire in them, to supply some of the lacking of glory occasioned by death in battle. The hallowed graves of slain warriors needed not this purification; but it was supplied to others that their entrance into heaven might be "through the purging of fire" if not through the glory of battle.

PETER McKINNON, Agt., Paisley
Ross Street

WHAT ONTARIO FOLKS SAY.

Hamilton, Ont.—"This is to state that I have received great benefit from the use of Dr. Pierce's Favorite Prescription. Some time ago I was run down and weak, suffered loss of appetite and was miserable. Four bottles of the 'Prescription' cured me up in fine shape; it did wonders for me and I can recommend it very highly to women who are ailing."—Miss Marie Miller, 127 Hess St., Hamilton, Ont.

Brantford, Ont.—"Some few years ago I got in a very much run-down condition. Was very weak; could not do anything; had no strength at all. I began taking Dr. Pierce's Favorite Prescription; I only took five bottles and it put me in splendid condition. I felt better than I had for years. Other members of my family have used this medicine and found it equally as beneficial. I can highly recommend it to weak women."—Mrs. A. Gilmour, 71 Brighton Row, Brantford, Ont.

The use of Dr. Pierce's Favorite Prescription makes women happy by making them healthy. There are no more crying spells. "Favorite Prescription" makes weak women strong, sick women well.

Take an open book, our faces tell the tale of health or disease. Hollow cheeks and sunken eyes, listless steps, sleepless nights—tell of wasting debilitating disease some place in the body. It may be one place or another, the cause is generally traceable to a common source.

Get the "Prescription" to-day—either in liquid or tablet form—if you want to better your physical condition speedily.

Dr. Pierce's Pellets regulate and invigorate stomach, liver and bowels. Keep the body clean inside as well as outside.

Teacher Wanted

FOR U.S.S. No 1 Saugeen, Arran & Elderslie (Bruchsaw). Duties to commence Sept 1st, 1916. State salary and qualifications. Applications received up to August 5th. JOHN MOTT, Sec.-Treas., R R No 1, Port Elgin.

—Mr and Mrs W G Brown, of Russell, Man., are here on a visit at the home of his brother, Mr Jas Brown, blacksmith. Mr Brown went west nineteen years ago and has done well.

—Mr Trumbley, of Detroit, was a visitor at Mr Jas Beaton's over Sunday, returning on Tuesday accompanied by his wife and child, who have been here for a few weeks.

THE EARL'S SECRET

Or, a Martyr to Circumstances.

CHAPTER I.—(Cont'd.)

"Five years ago I was the most popular man in Madras. You cannot understand all that short sentence means, my friend; no matter. I was a rich man—as men went—and could count friends by the score. If there had been fewer friends and less whist I might not have been here; who knows? No one, and no one cares; not even I myself. Madras! I see it now. Bah! A highflown description of the presidency would be lost on you, Jem, and it is a rule of mine to waste nothing. At Madras, among the host of friends, some of whom plundered me, and some of whom I had the exreme happiness to plunder, was one, the best and bravest of the lot, John Mildmay——"

"John Mildmay," repeats the man, Jem, to show his companion that he is listening carefully.

"John Mildmay, a merchant, a prince among merchants, with a fortune to England, India—and I know not where else also. He was a fine fellow, but simple—simple as a school girl, and too bountifully supplied with those awkward incumbrances called feelings. We were boom friends. I borrowed his money, and he loved me too well to remind me of the debt—you understand that, Jem—that is something within your comprehension."

Jem chuckles with hoarse enjoyment.

"He made me his confidant—told me everything of his own affairs and a great deal of other people's. He had a daughter. I remembered her name—Violet, Beautiful, he said she was; but that goes for nothing. I'll be bound, my friend, that you would have called a bantam of your own, though it copied every one of your extremely plain features, a swan. The mother was dead, there was only one relation of any consequence—an aunt, and Jack Mildmay loved this little girl better than he did me—and that's saying a good deal. One night—when we were sitting in the verazda of his mansion on the hills, watching the Brahmins at their prayers, he declared his intention of making me the sole guardian of this girl. He prayed me—if anything happened to him—to be a second father to her, or at least brother, considering that he was so much older than I. I swore—readily enough—that I'd watch over her like a guardian angel, and, after drawing tears from him by my fervid eloquence, delicately borrowed a hundred pounds. Poor Jack! We never saw each other again. A special messenger arrived that night with news from England. His business—an enormous one—required his presence by the next steamer, and with a hasty handshake he left me, reminding me of my promise, and declaring his intention to draw up on parchment the declaration of his wishes as to my guardianship over his daughter.

"'Good-by, old fellow,' he said. 'It's a long journey; but I feel safe. I've written about you in every letter to my darling; I shall be able to tell her now what a grand guardian she'll have. Good-by, and Heaven bless you!'

"Jem, my friend, don't believe the good people of this world when they talk of a special providence for honest men: Jack Mildmay was drowned on that homeward voyage, and I, Captain Howard Murpoint, was left to live and rot in a convict station.

"Yes, the ship went down, and soon after Captain Howard Murpoint went down likewise. I got 'broke' of the army; that's the mild way of putting it, though if the truth must be spoken, the army got tired of me—or rather of my wonderful luck at cards. You know my little trick with the ace? Enough. It suited me to cut the military life. How was I to do it? A fool would have deserted, and got shot. I, not being a fool, managed differently. There was a slight skirmish on the frontier one moonlight night. My men were cut to pieces like packthread. I, by a miracle, escaped. Walking over the corpse-strewn field, one of those happy thoughts which are the inspiration of knaves, struck me. My corporal, a good fellow, had fallen at his post. I knew it was my corporal by his accoutrements, his face and features had been obliterated by a cannon ball. Supposing, was my thought, that Captain Howard Murpoint's regimentals were upon that poor fellow, then every one would say that that said Captain Murpoint had fallen with glory and honor, and that the missing corporal had either been carried away by the Sepoys or deserted.

"Jem, my friend, I lost not a moment, but there and then exchanged clothes with the corpse, threw a cloak over my corporal's regimentals and started for the coast.

"I reached Paris—unfortunately for the Parisians. When Paris grew too hot I gracefully fluttered to my native land. My native land for eighteen months proved as rich a harvest as a man of talent could wish.

"During those eighteen months I cleared—no matter—it is all gone, swallowed up in that fiasco. Idiot that I was to descend to the level of such poor vermin as you! What could I expect? Were these hands made for burglary, were these brains? Bah! this is wasting time. Some sweet friends of your persuaded me to change my line, and I came to grief; dragging you in for revenge's sake. Plain truth, you see, Jem. I scorn to tell a falsehood—when there is nothing to be got by it. Transportation for life! It was a hard sentence, and I wished when I heard it, and a hundred times since that they had not balked Jack Ketch. I wished it every day till a week ago.

"What changed me? A mere bagatelle. A newspaper. A year-old newspaper, which that lout of a warder had dropped from his pocket. I snatched it up and hid it in my bosom. It would lighten many a hateful hour in that horrible cell. I opened it next morning, and the first words my eyes rested on were:

"'Grand Fete at Mildmay Park, Penruddle.—On the occasion of Miss Mildmay's sixteenth birthday a large party of personal friends and the tenants of the Mildmay estate was gathered at the park, where most extensive preparations have been for some time in progress to insure success for the various festivities. In the morning the numerous gayly dressed visitors gave themselves with a zest to the enjoyment of archery, boating and the subtleties of croquet. In the evening the grand hall—which was decorated by Owen Jones—was opened for a ball to which invitations to the number of two hundred had been issued. It is needless to say that the whole affair was brilliantly successful, and the twelfth of July will be a white stone in the lives of Miss Mildmay's tenants and those fortunate friends who were enabled to partake of her hospitality. Miss Mildmay is at present staying, in company with her aunt, Mrs. W. Mildmay, at her residence, Mildmay Park.'

"That is something like it, Jem—all glitter and sparkle, diamonds and rubies. I swear, much as I revele in that greasy paper a moment before, I could not read another line of it. Every time I tried my eyes looked back to Mildmay Park and the wealthy Miss Mildmay.

"This Violet was to have been my ward, and Jack's money, his enormous estates, aye, the very diamonds she wore, were to have been under my charge. What an opportunity I had lost! With such a chance, what might I not have accomplished? I might have feathered my nest, aye, have filled it even with every penny of Jack's gold; for what a pretty little bit of a girl to count for!—if I had been free. Free! that was the word, and it haunted me. One day it rang in my ears, making a chorus to the grand doings at Mildmay Park, and at last I swore that I'd give this place the slip or die in the attempt. Once away from her—once in England, the way to Jack Mildmay's gold is as plain as the road to Rome. I am once more Captain Murpoint. I turn up, looking the gentleman that I am, at the park in the character of her father's friend. She knows all about me, remembers me almost as well as she does her father. Keeps all his letters, those letters in which he with his dear Murpoint, on her bosom, perhaps. Here is dear Murpoint, and she welcomes me to Mildmay Park with open arms and a shower of tears."

There was a moment's pause; Jem crept closer to the daring schemer.

"And me, captain? You won't forget me?"

Private Prince Henry

Who is His Majesty's third son, and a private in the Eton O.T.C., the reincarnation of the old Eton College Volunteers, for which O.E.'s who were in them in those primitive days had a pet name that was more expressive than polite. Prince Henry has also recently elected to pursue the ambitious existence of a Wet Bob. We do not know whether the ancient mariner who used to rescue aspiring carmen from the watery depths of Father Thames is still alive, but we hope so. His nom de guerre used to be "Ginger," so far as memory serves us.

"No; you go with me as my servant. No thanks. I shouldn't take you if I didn't want you, my friend. I never did a generous action in my life. I leave that for idiots. I want you for a hundred things. I want a man who is completely under my thumb—in my power. You are in both those situations, so I help you to escape and take you with me. If you have any gratitude, keep it bottled up, don't let it evaporate in words. Well?"

The man mutters something, faintly "But, captain, is that all the game? Don't we hold no more cards than that? It seems a chance, a regular chance."

"And what else is life?" says the captain, with a short laugh of contempt. "But those are not all the cards. Even to you, my bosom friend, I do not choose to show my whole hand. Enough that I hold sufficient cards to play the game, and I have sufficiently brains to win it. You, my poor Jem, have neither cards nor brains! Stop! what's that?" and his low, subtle voice sinks to a sharp hiss.

"That's the light of the fishing smack," hoarsely returns his companion.

"No; that, idiot!" is the retort, in a sharper voice, "That up above. A thousand fiends! It is the moon!"

A smothered cry breaks from the parched lips of the convict Jem.

He springs to his feet, then falls to the ground with a quiver of excitement.

"Captain, we are lost! In two minutes it will be like day! The soldiers can see every speck on the water for a mile round!"

"Silence!" cries the captain, crouching so motionless that his grey-clad figure looks part and parcel of the rock against which it crouches. "The tide is in. That is the smack before us. Swim like the fiend! If we reach it we are safe. I have enough to bride them. Swim for liberty and life!—now!"

And, with the word, he rises to his feet, leaps over the patch of beach that intervenes between cliff and sea, and plunges into the foremost wave.

His companion follows, and not a moment too soon.

The moon that had been battling with dark mass of clouds, rises conqueror at last, and swims majestically into the clear heavens, lighting up the sea till it glows like a plain of diamonds.

Not a moment too soon for the monotonous tramp, tramp of the nearest sentinel upon the ramparts above is suddenly broken, and his sharp voice gives the challenge:

"Who goes there?"

For answer the moon shoots a bright gleam of light full upon the dark figures swimming toward the smack.

With a shout of alarm, the sentinel brings his musket to his shoulder.

"Dive!" hisses the white lips of the captain.

Crack! ping! and a bullet cleaves the air.

Another moment, and the rampart is alive.

Lights flash to and fro, showing up for a moment the excited faces of the soldiers.

(To be continued.)

Wife at Home.

"I guess the wife is home, all right.'

"What makes you think so?"

"I've been trying to get the house on the phone for three-quarters of an hour, and the line has been busy all the time."

Many a man doesn't realize what he is up to until he is called down.

For Preserving, Use

LILY WHITE CORN SYRUP

One-third "Lily White" to two-thirds Sugar, by weight.

"Lily White" Corn Syrup prevents fermentation and mold—brings out the natural flavour of fruits and berries—and makes much more delicious Preserves, Jams and Jellies than you can make with all sugar.

In 2, 5, 10 and 20 pound tins —at all dealers.

THE CANADA STARCH CO. LIMITED, MONTREAL. 278

THE LITTLEST LIEUTENANT.

Russian Officer, Aged Thirteen, Wears Two Decorations.

"I should have put him down as ten, but an officer's word is not to be doubted."

So wrote a correspondent of the London Times who recently shared a railway compartment with Lieut. Misha Turukhanis, aged thirteen, wounded in the shoulder, wearing two decorations for valor, and on his way to Petrograd to join his mother—an army nurse—because the orders were that "all women and children serving in the army" were to be mustered out.

"No smoking here!"

In the crowded station, awaiting the start, the correspondent saw a big Cossack drop his cigarette and come hastily to the salute.

"The order, shrill, incisive, seemed to come from somewhere near my elbow, and, looking down, I saw beside me on the crowded platform a trim little figure in the uniform of a Cossack officer. It was not much more than four feet high, and its boots seemed to come nearly up to where, on its breast, two Georges glimmered in the sun. The station gong struck twice; the voice shrilled again, 'Come, children!' The burly Cossacks who had been lounging about the platform climbed into third-class carriage, and as the train began to move, the amazing little person swung himself aboard at the tail of the procession and followed his "children" into their stuffy quarters."

He was travelling with his "children" because they liked to have him with them; but later he visited the first-class carriage in which were the correspondent and some ladies.

"For all his dignity he was of quite a friendly disposition, and he was soon free of all the compartments in our carriage. He knew his world, too, and the iron hand of discipline that had been in evidence on the platform of the way station was now appropriately concealed in the velvet glove. The sweets an admirer gave him he duly handed to 'ladies first.' Only in the dining car he was a little perplexed by the variety of cutlery. But he would not resort to natural weapons and when I ventured to come to his rescue on the pretext that his wounded shoulder put him at a disadvantage in the struggle with a stubborn drumstick, his ready abandonment of the unfamiliar knife to me betrayed no consciousness that anyone might suspect the possibility of another reason.

"He has been on service in Poland, and with a child's facility had mastered Polish as well that he was able to give lessons in that language to the colonel of his regiment. This attainment gave him a decided advantage over his brother officers with the ladies, chiefly Poles, in our train."

From Misha himself and the other officers the story of the two Georges on the boy's breast was elicited. The first George he had won—and with it his promotion—by a singularly daring and clever escape from six uhlans who had taken him prisoner while reconnoitring. He had shot one of them, searched his clothes, and captured important dispatches. The second medal he obtained when he led a forlorn hope in the taking of a redoubt, and was wounded in two places.

It was a record of which any soldier might be proud; but the question of discipline still lurked in the correspondent's mind, despite the "no smoking" episode. He ventured delicately to inquire:

"How do your men like your making them throw away their cigarettes?"

"Well, you see," answered Misha, simply, "they couldn't be expected to mind a little boy like me if I were nothing else; but I am an officer."

Simple Enough.

"When do you think peace will come?"

"When some of the belligerents send it an invitation."

Luck.

"There's one thing I've noticed about good luck."

"What is it?"

"It falls oftenest to the men who use good judgment."

It was Josh Billings who said that silence is the best substitute for wisdom that has yet been discovered.

PRACTICAL FARMING

Helping Out Grass Feed.

Natural grass pastures provide the cheapest and best feed for all animals, except horses that are expected to do heavy or fast work, but an addition of oats, bran or even more concentrated feed will bring paying results in nearly all cases and most decidedly when big production of milk or quick fattening is desired.

All cattle, from the calf to the steer ready for finishing, need forcing to keep up with the demand of the present day. Lambs may be satisfactorily finished on pasture if clover and raps are added to the natural grasses, but better speed can be made if a little grain is added to the ration. It is doubtful if any of the recent milking records have been made on pasture alone and most of the good dairymen use soiling crops and grain or millfeed to keep up the milk yield of the whole herd.

Hogs, have as a general thing been denied pasture to too great an extent, some people refusing to let them have a run on grass, even for exercise; but the other extreme should not be jumped to if best results are desired. Hogs at all ages may be kept on pasture to their advantage, but "kept" must not be taken to mean maintained, or improved. A run on clover or rape plus milk and some grain, will grow the animal satisfactorily to within a few weeks of butchering, when they should be pened, not too closely, and finished on good hard feed. At present prices for hogs, a great deal of wheat can be fed to advantage in the pro duction of pork, but judgment must be used regarding the size of each feed. Ground wheat alone cannot be considered a satisfactory grain ration for hogs; as it is likely to bring on digestion troubles, but mixed with other grains it gives good results.

Horses and colts at pasture make their best and quickest growth when some grain is fed with the pasture grass and it is generally understood that the colt should be encouraged to eat oats, preferably crushed and mixed with bran, early in his lifetime.

When it comes to the feeding of horses that are at hard work for long hours as are farm horses during nearly the whole of the summer season, it is necessary to increase the amount of grain fed, to double or more than double the amount fed for ordinary maintenance. The amount prescribed in such a case by the Dominion Animal Husbandman, is 1½ pounds per 100 lbs., of horse, of a mixture of 65 per cent. oats, and 15 per cent. bran. To keep the work horse in good health, it is also necessary that he be fed a bran mash at regular intervals. Saturday night being the time best suited for this, on account of the day's rest that follows.

Turning out the work horse to grass, on Sundays, work all right; if the grass is not too soft and if the flies do not trouble the animal. This scheme works well with horses that are given to stocking up when kept in the stall for long after hard work, but such a condition should by rights be made impossible by a treatment for the benefit of the blood. The idea of trying to save grain by pasturing the working horse over night, should not be considered, and it is a question if he does as well outside, as in the stable, even if fed his full ration before being turned out. With this last mentioned practise there is also the extra work and time of the teamster to be considered, and the horse is likely to get better treatment during the work if the man who drives him starts off in the morning in a satisfied frame of mind.

A cool, clean stable, screened so as to keep out flies and regularly disinfected with a wholesome-smelling wash, will make the horse more comfortable at night, than will the average pasture field.

Points in Cattle Feeding

At the end of the third year of fattening steers in the open air at Lacombe, Alberta, Mr. Hutton, the superintendent, draws the following deductions:

1. Three-year-old steers seem better adapted to straight wheat feeding than are two-year-old steers.

2. From the results of the three years' work, it is evident that low-grade grains may be made to bring the producer a higher price per bushel sold through steers than will high-grade grains sold through the elevators.

3. Hay, green feed and straw may be profitably fed at home.

4. From experimental work conducted with grain plots at this station, a valuation of the manure produced through feeding cattle at $1 per ton applied is warranted. The fertile soil of our Western prairies will not retain its fertility indefinitely without a return of at least a portion of the constituents drawn fro mit in the production of crops.

5. It is not necessary to provide an extravagant equipment in order to be able to undertake the satisfactory feeding of steers for the production of beef in this climate.

6. Bankers consider the lending of money for the purpose of feeding cattle a safe loan.

7. From the figures submitted it would appear wise for the breeder to be a feeder also and market his product in finished condition.

Requirements of a Good Animal.

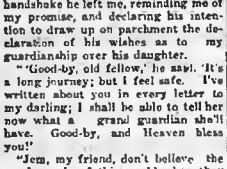
An animal is like a machine. A good machine requires that each part be of good material and just the right weight and strength. The good animal must have its parts developed in the right proportion to make the type desired. The adaptability of a machine and the proportioning of its parts can largely be determined by looking at it. However, the make of the machine is the guarantee as to its possessing or lacking quality. Likewise in the animal a good deal can be determined as to its type by looking at it. Its real quality, however, can not be determined in this way. To get at this it becomes necessary to go further back. The quality was put into the animal by its parents, its grandparents, its great-grandparents etc. This makes it important to know that all these parents had qualities that would contribute to the making of a good animal of the type wanted. A pedigree is a scheme for keeping track of th eparents of an animal. It is a guarantee of what is back of the animal, of what has contributed to its make up. It is this fact that makes the pure-bred animal valuable.—North Dakota Experiment Station.

Windbreaks Pay Dividends

Windbreaks are usually more or less ornamental on a farm, and add to the contentment of the owner. But it is not generally known that windbreaks actually pay dividends. It must be admitted that windbreaks occupy space that could be profitably devoted to agricultural crops, and that the roots of the trees and their shade render a strip of ground on either side of the windbreak relatively unproductive. Yet in spite of these drawbacks, efficient windbreaks do more good than evil.

The windbreak reduces the velocity of the wind, and, consequently, the loss of soil water from evaporation from the soil surface and from the field crops. This is equivalent to additional rainfall, just as "a dollar saved is a dollar made." It seems that the greater yield of field crops and apples behind the protection of a good windbreak is enough to warrant every farmer in planting windbreaks.—W. J. Morrill, in Farm and Dairy.

A Suggestion.



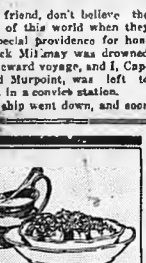
A politician who was seeking the votes of a certain community thought it worth while to make mention of his humble origin and early struggles.

"I got a start in life by serving in a grocery store at $3 a week, and yet I have managed to save," he announced.

"Was that before the invention of cash registers?"

Apply the Remedy.

"I see you no longer call your place Idle Hour." "Nope; that name seemed to attractive to tramps. So I changed it to Woodpile Villa."



The best sugar for the sugar bowl is

Lantic Sugar

Its purity and "fine" granulation give it the highly sweetening power. It dissolves instantly in your teacup or on your breakfast cereal.

2 and 5-lb Cartons

10 and 20-lb Bags

"The All-Purpose Sugar"

Doctor Tells How To Strengthen Eyesight 50 per cent In One Week's Time In Many Instances

A Free Prescription You Can Have Filled and Use at Home.

Philadelphia, Pa. "Do you wear glasses? Are you a victim of eye strain or other eye weaknesses? If so, you will be glad to know that according to Dr. Lewis there is real hope for you. Many whose eyes were failing say they have had their eyes restored through the principle of this wonderful free prescription. One man says, after trying it: "I was almost blind, could not see to read at all. Now I can read everything without any glasses and my eyes do not water any more. At night they would pain dreadfully; now they feel fine all the time. It was like a miracle to me." A lady who used it says: "The atmosphere seemed hazy with or without glasses, but after using this prescription for fifteen days everything seems clear. I can even read fine print without glasses." It is believed that thousands who wear glasses can now discard them for a reasonable time and multitudes more will be able to strengthen their eyes so as to be spared the trouble and expense of ever getting glasses. Eye troubles of many descriptions may be wonderfully benefited by following the simple rules. Here is the prescription: Go to any active drug store and get a bottle of Bon-Opto tablets. Drop one Bon-Opto tablet in a fourth of a glass of water and allow to dissolve. With this liquid bathe the eyes two to four times daily. You should notice your eyes clear up perceptibly right from the start and examination will quickly disappear. If your eyes are bothering you, even a little, take steps to save them now before it is too late. Many hopelessly blind might have been saved if they had cared for their eyes in time.

Note: Another prominent Physician to whom the above article was submitted, said: "Bon-Opto is a very remarkable remedy. Numerous cases have come to my notice of its successful use in relieving many cases of eye weakness and weakly prescribed for them. The manufacturers guarantee it to strengthen eyesight in two weeks' time in many instances or money back. It can be obtained from any druggist and as it is not a secret remedy, I can conscientiously recommend it to my readers who have eyesight weakness." If you have any eye trouble it is important to use Bon-Opto as directed or some form of glasses may be necessary. Bon-Opto is sold in Toronto by Valmas Drug Co.

GOOD RICH BLOOD MEANS GOOD HEALTH

Just a Little More Rich, Red Blood Cures Most Ailments.

The lack of sufficient rich, red blood does not end merely in a pale complexion. It is much more serious. Bloodless people are tired, languid, run-down folk who do not enjoy life. Food does not nourish; there's indigestion, heart palpitation, headache, backache and nearly always nervousness. If this bloodlessness is neglected too long, a decline is sure to follow. Just a little more rich, red blood cures all these troubles. Then you have new health, new vitality and pleasure in life. To get more rich, red blood the remedy is Dr. Williams' Pink Pills. No other medicine increases and enriches the blood so quickly or so surely. This is not a mere claim. Dr. Williams' Pink Pills have done this over and over again and that is why thousands of people always have a good word to say for this medicine. Miss Gertrude Haffner, Kingston, Ont., says:—"About two years ago I was suffering greatly with anaemia, so much so that I had to give up my situation. I became so weak that I could scarcely walk without help. I had no ambition, no color, no appetite and was constantly troubled with headaches and dizzy spells. I was taking medicine from the doctor, but it did not do me a particle of good. One day a friend asked me if I had tried Dr. Williams' Pink Pills. Though as the result of my condition I was greatly discouraged, I began the use of the Pills, and thanks to that good friend's advice after using a few boxes I began to feel much better. Under the continued use of the pills I gained in weight, my color came back and I grew gradually stronger. I looked so much better that people would ask me what I was taking and I had no hesitation in giving the credit to Dr. Williams' Pink Pills. I am so grateful for what this medicine has done for me that I will do all I can to extend its use."

You can get these pills from any medicine dealer or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

HOW TO BE WEATHER WISE.

Nature Supplies Signs by Which Conditions May be Foretold.

If you want fine weather, look for fine-weather signs, says A. D. Beard, in St. Nicholas. Here are some of the most reliable, for they are based upon scientific facts:

When the sunset sky is red, you may expect clear weather on the following day.

At night, when the moon is clear and shows clean edges, with no halo or ring of mist surrounding it, there is little danger of rain.

When the wind blows steadily from the west the weather will continue fair.

Watch the smoke from a chimney or from your campfire—it is a good barometer. If the smoke rises high it means clear weather.

A gray early morning, not a heavy, cloudy one, promises a fair day.

A heavy dew at night is seldom followed by rain the next day. Think of it this way and you will remember: wet feet, dry bed.

Animals are said often to show by their actions what the weather will be, and there is reason in this. Some of them certainly have a knowledge of coming storms. We are told that spiders are especially sensitive to weather changes, and when they make new webs the weather will be fair; if they continue spinning during a shower, it will soon clear off.

Grape-Nuts

(Made in Canada)

embodies the full, rich nutriment of whole wheat combined with malted barley. This combination gives it a distinctive, delicious flavour unknown to foods made from wheat alone.

Only selected grain is used in making Grape-Nuts and through skillful processing it comes from the package fresh, crisp, untouched by hand, and ready to eat.

Through long baking, the energy producing starches of the grain are made wonderfully easy of digestion.

A daily ration of this splendid food yields a marvelous return of health and comfort.

"There's a Reason"

Sold by Grocers everywhere.

Canadian Postum Cereal Co., Ltd., Windsor, Ont.

WOUNDED SOLDIERS IN TRAINING

SCOPE OF THE GOVERNMENT'S NEW SCHEME.

No Canadian Worthy of the Name Who Will Not Agree to It With All His Heart.

The Military Hospitals and Convalescent Homes Commission, with Sir James Lougheed at its head, has already given a great deal of consideration to re-education for men who need it, and has taken steps to organize the training required in many parts of the country. Th complete establishment of the system may be expected very soon; for the Government, by Order-in-Council, has just adopted a report of the Military Hospitals Commission, of which we are enabled to give this summary:—

The report begins by explaining that the Commission aims at benefiting not only disabled members of the Canadian Expeditionary Force but also disabled Reservists of the British and Allied armies who were bona fide residents of Canada when the war broke out.

The Commission has received assurance, it tells us, of the active cooperation of the Provinces and various Municipalities in carrying out such a policy. Technical Schools, Agricultural Colleges and other public institutions have agreed to receive disabled men for training and many offers have also been received from private commercial establishments to provide training and subsequent employment when the men have become proficient.

The period of training for a new vocation will vary according to the previous education and industrial history of each individual. The cost of tuition will vary in consequence, and also owing to the fact that in many cases the tuition will be free or the fees nominal. (The training will be free to the men in all cases. If there is any charge, it will be paid by the Dominion Government.)

A Scale Prepared.

The Commission has already undertaken the provision of training in general subjects and elementary vocational work for all men under treatment in the various hospitals and convalescent homes operated by the Commission, irrespective of whether or not such men will later be subjects for vocational training leading to new occupations. In a few cases, arrangements have also been made for that special training.

The Commission was not able, however, to put into operation a general scheme of vocational training until a scale of maintenance could be arranged for the men undergoing the training and for their dependents. The Commission has therefore prepared a scale under which a small sum for personal expenses will be granted to the men undergoing training, while provision on a sliding scale is made for married men and their dependents, and for those unmarried men who may have persons legally dependent upon them.

Here is the scale which the Commission has now been empowered to establish. It will be understood throughout that "maximum age" means 16 for a son and 17 for a daughter:—

1. A single man, with pension, living in, receives free maintenance; that is, board, lodging and washing.

2. A single man, with pension, living out,—60c a day.

3. A married man, with pension, living in—free maintenance and $8 a month, with the following additions:—

For wife having no children, $35 a month, less her husband's pension.

For Wife and Children.

For wife and one child, if child is under five, $38; from five to ten years, $39.50; from 10 to maximum age, $42.50; less, in every case, the amount of husband's pension and children's allowances under the pension regulations.

For wife and two children, from $41 to $47 a month (less pension and allowances) according to age of children.

For wife and three children,—$44 to $50 (less pension and allowances), according to ages.

For wife and four children,—$47 to $53 (less pension and allowances), according to ages.

For wife and five children,—$50 to $56 (less pension and allowances) according to ages.

For wife and six children,—$53 to $59 (less pension and allowances), according to ages.

A wife with seven or more children under the maximum age may be given the maximum allowance of $59, less pension and allowances.

All these allowances for wife and children will be paid direct to the wife, unless otherwise thought fit by the commission.

4. A married man living at home will receive 60c a day. (This of course is in addition to the allowances for wife and children.)

The Widowed Mother.

5. A widowed mother, if dependent entirely upon the unmarried son who is receiving training, and if the son made an assignment of his pay to his mother and also arranged for her to receive separation allowance while he was on active service, may be paid at the same rate as the wife of a married man with no children.

6. The parents of a man undergoing training, if both are old and past work, and entirely or partially dependent upon him, may also be paid at that rate.

7. The guardian of a widower's children (under the maximum age) will be paid monthly:—for one child, $10; for two, $17.50; for three, $22; and $3 for each child in excess of three, with a maximum of $35.

Payments under these regulations will be continued, for one month after the completion of vocational training, whether the man has secured employment or not.

It is clear that this system of allowances will enable many men to take advantage of the training offered, by providing for their families while the training is being given.

The President of the Military Hospitals Commission asks us to say that any further information desired by our readers will be gladly given on application to the Secretary, at 22 Victoria Street, Ottawa.

HOW TO CREATE AN ESTATE.

The Way a Man May Have Something When Old Age Creeps Upon Him.

As a means of preventing poverty and as a method by which families deprived by death of the providing member may not become objects of charity, there has never in the world been anything devised which equals the power for good as a well-managed life insurance company.

Life insurance as developed to-day is of the greatest economic value. It is the bonding together of many men, and the paying in of certain sums by each, to minimize the financial loss experienced by other members of the company.

Life insurance in the beginning was solely for protection, but variations in the different forms which exist to-day have been brought forth to meet the demands of the public, as they arose from time to time, but we believe the farther a company varies from the primal idea—namely protection—the less is its power for good.

As an investment we have nothing to say against it, and the vast accumulations of surplus which the different companies have made and which they hold for policyholders speaks for itself, but the principle of making provision is often lost sight of in the attempt to create an asset, at a future date, for a person's own benefit.

It is a curious thing that no matter how badly a man may need life insurance, he has a tendency to sidestep it until he is finally caught, and, as has been aptly said, some men get life insurance to-day much in the same manner as they get religion. His emotions must be appealed to, and he often takes the step in a moment of enthusiasm generally he is pleased with himself afterwards, and if he is a right-thinking and a proper business man he seldom or never lapses his policy.

In going over the daily press week by week and year by year, we see the probates of wills of many people, and we are often astounded by the smallness of the estate, if any, to take care of those left behind, and in many cases we find that the principal asset, when any, is usually a life insurance policy taken out by the breadwinner.

The building of an estate at the present time, or even at any time, is a tedious and long-drawn-out matter. It is not generally known that fully 98 per cent. of the people who enter business fail during some time or other. Neither is it generally known that fully 97 per cent. of the public, when they attain advanced age, have little or nothing to live upon. If even a small fortune is to be accumulated it must be wisely and intelligently managed, and when people are so busy, as they are to-day, endeavoring to make ends meet, they have not much time at their disposal to look into investments.

By putting aside a small sum yearly, as one's means permit, the moment the first payment is made on a life insurance policy an estate is created of the face value of the policy, and if a man would only continue to add to this, in the best years of his earning capacity, he would have something when old age creeps upon him which would be security against many of the troubles he might have to meet, and if he has this sum at his disposal when he comes to advanced age he will have many people anxious to give him the comforts to which he is entitled.

In the Opposite Direction.

Sir Douglas Haig has a keen sense of humor and a gift of repartee. A big, blustering sergeant was cursing two men for being careless with ammunition, and shouted. "You'll send us all up to Heaven like a rocket." Sir Douglas chipped in, "Unless you improve your language, Sergeant, I'm afraid you may go in an opposite direction."

Marriage is a failure for a leap year girl who proposed in vain.

OVER 400,000 IRON CROSSES.

Most of Those Issued to Germans Are of Second Class.

More than 400,000 Iron Crosses have been issued since the start of the war, according to figures which were published in a recent issue of the Berliner Tageblatt, a German daily newspaper. The great bulk of these are crosses of the second class, such as are given to the privates in the ranks for distinguished service on the battlefields. There are 401,103 of this class alone.

Besides these crosses of the second class the Iron Cross of the first class is held by 8,506 persons. This includes 276 generals and 5,605 other officers. There are 368 aviators who have this decoration, 390 naval men and 136 in other branches of the service. This brings the total of Iron Crosses of both classes which have been distributed in the course of this war up to 409,409.

Why He Preferred It.

"How do you like my new gown?"

"Not nearly as well as your old one, my dear."

"What is there about the old gown you like better than this?"

"The old one is paid for, my dear."

Minard's Liniment Lumberman's Friend

A Persistent Flatterer.

Mother—Why don't you yawn when he stays too long? He'll take the hint and go.

Daughter—I did, and he told me what beautiful teeth I had.

Hens in War Time.

The fact that the Berliners have to content themselves with two eggs a week brings to mind similar hardships endured by the French in 1870. At that time the French ladies turned their boudoirs into hen-coops. One Paris butcher bought Pollux, the elephant, and slaughtered him. This unusual dainty was sold for forty francs a pound for the fillet and shoulder, and the price of the feet ran to twenty francs. Even the blood was not wasted. Black puddings, claiming to be exceptionally nourishing, were made from it, and sold well. One intelligent speculator made a corner in candles, melted them down, and sold the product for lard at a handsome profit.

The trouble with most of us is that we want to be known as charitable unselfish and high-minded persons, but we want to get rich first.

RUBBISH HEAPS.

Many Serious Fires Traceable to Such Accumulations.

More fires originate in rubbish heaps than from any other source. To permit rubbish to remain in the building not only invites a fire to visit your home or place of business, and render your family temporarily homeless, or cripple your business at a time when you can least afford it, but also endangers the lives of your family or employees. In addition to destroying an average of $3,000,000 in property value in Canada each year, fire caused the death of 141 persons last year.

The home is built to protect our loved ones, and we want to do everything to insure absolute protection to those who live in it.

That rubbish heap in the attic, storeroom or basement is a menace to your household, because there is always a possibility of fire starting in it, and it may start when least expected.

Consider what might happen, and then, without delay, eliminate the menace of the rubbish heap.

How to Keep Yourself Looking Young.

It has been proven that the woman who protects her skin will keep herself free from wrinkles and marks of age far longer than the woman who says "Oh no, I never do anything for my complexion."

If your skin is not naturally clear and fresh, or if it has suffered from lassitude—worry—sickness—age or the ravages of wind, sun and weather, the regular and persistent use of UBIT will soon restore to your complexion its natural color and freshness.

UBIT is a valuable formula of an old and famous beauty secret.

It feeds and nourishes the skin, wards off wrinkles and makes the complexion clear, smooth and faultless. It is not necessary to use any other treatment during the day. Apply UBIT at night before retiring, and it will tone the skin and give that silky softness and glowing freshness that alone indicates perfect skin health.

UBIT is put up in handsome opal bottles. It may be secured through T. Eaton Co. Limited, Robt. Simpson Co., Limited, Toronto, and other high-class Drug Stores, or direct from us.

Send 50c. (Br. war tax) to-day for trial bottle sufficient for six weeks' use.

See our exhibit at National Exhibition, Toronto.

UBIT MFG. CO., LTD., TORONTO, ONT.

THE SAILORS AT GALLIPOLI.

Two Ran Away to Get Into the Trenches.

Mr. Norman Wilkinson tells this story in his book, "The Dardanelles":

I had the story from a naval officer whose duties lay on shore. He was outside his dugout one afternoon when two men in strange raiment passed. Their gait and the fact that both were navy flannels told him at once that they were blue-jackets. Anxious to know what they were doing there, he stopped and questioned them.

"Where are you going?"

"Motor launches, sir—, sir."

"Do you belong there?"

"Yes, sir."

"Then what are you doing here?"

"Well, sir," hesitating, "we've just been up to the trenches."

"Were you sent there with orders?"

"Er—no, sir."

"How long, sir?" Then to his companion, "When was it we went up Bill?" Then to captain, "I should say about four days, sir."

Finally the captain ordered them under arrest down to a picket boat in which he was about to visit the flagship. On the way out the captain heard the two adventurers discussing their detention with some bitterness, ending with the same refrain. "Fine thing, this—under arrest. And they treat you like a gentleman in the trenches— treat you like a gentleman, I say."

It is difficult to imagine the point of view of men running away to get into the trenches and leaving them with regret,

Interference With Commerce.

A commercial traveller had been summoned as a witness in a case at court, his employers having sued a delinquent customer, and the lawyer for the defence was cross-examining him.

"You travel for Jabson and Co., do you?" asked the attorney.

"Yes, sir.'

"How long have you been doing it?"

"About ten years."

"Been travelling all that time have you?"

"Well, no, sir," said the witness, making a hasty calculation, "not exactly travelling. I have put in about four years of that time waiting at railway stations and junctions for trains."

The Paisley Advocate

PAISLEY, AUG. 2nd, 1916

—Liberalism, like Conservatism, in Canada, has passed its days of flamboyant partizanship. Both parties are today working to one common end, the advancement of our Dominion. It is only the small and weak minds of a by gone day, who regret the passing of the old days of political intrigue and uncensored corruption, who attempt to throw dirt upon the efforts of those who are trying as mighty as they may, to make the name of Canada stand out, even more gloriously than ever among the names of the nations of the world.—Owen Sound Advertiser

—The organization of another Bruce County battalion for overseas service seems an impossibility unless the young men of certain townships can be inspired to offer themselves as recruits. This done, there would be a splendid prospect for a second unit carrying the Bruce flag. The number of eligibles yet available in Paisley and vicinity is very limited. From some parts of Bruce Co, there has been practically no response to the recruiting call, and, unless we are ill-informed, there are in those sections hundreds of young men capable of bearing arms, who are comparatively free to go out to the defence of that measure of freedom they have enjoyed here, but would not be permitted to further enjoy if German militarism be victorious in this war. However, there is no measure of military compulsion in force in this country, and will therefore impossible to enlist men unless they come forward voluntarily. So far as we can discern, it appears to be up to those who would have another battalion of Bruce men to get out and employ their persuasive powers in a recruiting campaign.

—Ontario furnished 12 5 percent of the total enlistments in Canada up to June 30 last, according to a statement issued by the Provincial organization of resources committee. Ontario had provided up to that date 147,158 of the total of 345,938 men who where recruited for the Canadian expeditionary forces. Enlistments in Ontario were 5 8per cent. of the total population, 1911 census. For the rest of Canada the percentage was 4.2 of total census population. Enlistments in Ontario were 28 per cent. of Canadian and British-born between the ages of 18 and 45; for the rest of Canada the percentage was 22. In the raising of special funds Ontario's efforts so far exceeded the rest of Canada as to be noteworthy. For the British Red Cross, Trafalgar Day, Ontario contributed $1,514,000, and rest of Canada $370,000; Canadian Red Cross, cash only, September 1, 1914, to May 31, 1916, Ontario provided $963,865, as compared with $624,788 for the rest of the Dominion. Of the $7,000,000 raised in Canada for the Canadian Patriotic Fund, up to June last, Ontario contributed $5,000,000. In addition to these special funds, a sum aggregating $1,000,000 was raised in Ontario to aid overseas battalions, finance recruiting campaigns, and for the purchase of equipment not supplied by the Dominion Government.

—Bruce County has done what may be considered a fitable share in contributing men for overseas service, and as long as more men are needed there will be others going. We have also, principally through municipal grants, contributed liberally to the patriotic funds. There are very few idle men within our borders, the farmers have done what they could to make the land produce to its utmost capacity, and a number of our factories are making munitions. All these things have we done to help win the war that has been raging for two years. The end of the struggle may come soon, but at any rate it will not be prolonged more than a year or two, we hope. Following the cessation of hostilities and the marching back to their home districts of the hundreds of thousands of men who have been drawn from peaceful occupations, there will be a period during which even greater anxieties and responsibilities will be thrust upon us than we are bearing now. To find employment for the returned soldiers who are able to resume work at their former trades or occupations will in itself be a problem. Then those who will be rendered unfit to continue their old occupations will have to be provided for, and the most sane thing to do is to teach them to work at something they can do. Added to both these will be the foreign immigrants who will flock to this new land of the free that has become so widely advertised among the peoples of Europe by the war. The prosperity we are enjoying throughout the war is going to be the main factor in attracting immigration our way when peace is proclaimed. Upon Europeans will fall the heaviest burden of taxes that the war will inevitably necessitate, and to escape that burden there will be a rush to Canada from Britain and the Allied countries. All these things will entail upon the general citizenship of Canada a special duty of the hour, the performance of which will require special organization. The Bruce County Preparedness League, which meets in Paisley on Friday afternoon, is an organization formed with a view to doing our bit in solving the after-the-war social problems. The Government should do all this, but they are not doing it, therefore the people themselves must attend to the business. Citizens, be alive to the importance of preparing now for what must be done at no distant time in the future.

CHEAP MONEY FOR THE FARMER

Many people will agree with the proposition to have our Government provide funds to be loaned to farmers at the lowest possible rates of interest and on the most favorable terms of repayment, at the same time having careful regard for the safety of the funds thus put at risk.

Land-banks have long existed in Germany, France and other European countries. In the United States it has come to be recognized that farmers were not able to secure working capital on as favorable terms as merchants or manufacturers. The Federal Farm-Loan Bill, which aims to remedy this situation, has been passed by an overwhelming majority in both Houses. The New York American declares that no manufacturer or merchant could possibly do business successfully today if the obstacles in the way of securing credit and the interest exacted for the loans were as great in the case of the farmer. In signing the bill, President Wilson predicted that it would be immensely beneficial to the farmers of the country, because, in conjunction with the liberal provisions of the bill, it puts him upon an equality with all others who have genuine assets. It marks the successful ending of a battle of fifteen years, conducted by grangers and some banks of the South and West. What this new law does is concisely stated as follows:

"The bill creates a group of twelve farm loan banks, presided over by a Federal board of five members, and provides for loan associations. The farmer borrows from the bank, through the association, on mortgages running from five to forty years. These mortgages are used by the land-banks as the basis for farm-bonds, which are so drawn as to take rank with railroad or any other bonds as a means of safe, quickly realizable investment. In other words, the new law makes liquid the enormous amount of capital now locked up in the farm lands of America."

While it is not necessary that we adopt this U. S. plan in Canada, it is desirable that Canadians be afforded better facilities than at present for carrying on the business of farming. Farms in the older sections of this Dominion cannot now be acquired by the man of small means without encumbering himself with a burden of financial obligations that may keep him struggling for the balance of his days to pay off the mortgage. Many have honestly and industriously endeavored to do so and failed. The terms could not be met, and the efforts of himself, his wife and children wasted, so far as getting ahead financially was concerned. It may be said that hundreds of farms are unoccupied to-day because the young men born thereon would not undertake to work the land and make a living in addition to the interest that must be paid on the purchase price. On the other hand, many might now to go back to the land were the conditions made more favorable for obtaining the funds necessary to start up with.

Three New Teachers Engaged

The School Board have secured all three of the teachers necessary to fill vacancies on the staff. The principal is Mr A H Mark, of Parkhill, who last week followed his written application with a personal call upon the Board and thus secured the engagement. Mr Mark has the necessary scholastic standing and teaching experience to qualify him for the position at head of our Continuation and Public School. He has taken the specialists' honor course in Mathematics and Physics at Toronto University. He also has excellent recommendations as a man of good character and teaching ability, and one who will have a good influence upon his pupils. The assistant in Continuation work will be Miss Mildred B Sheldon who has a first class professional certificate, and has taken honors in Moderns at Toronto University, also has experience in teaching. Recommendations mark her as be a most capable and efficient teacher. From a numerous list of applications Miss Ella Mitchell of Arthur, was selected to take charge of the Entrance department of the Public School. She has had splendid success elsewhere and is undoubtedly competent to take the work here. The record of Paisley School under the staff of last term has been very satisfactory, in fact more than that when compared with many others, and the Board feels that in the coming year's course the results will be equally gratifying.

NOTED MUSICIAN OF MONTREAL

Advises The Use Of "FRUIT-A-TIVES", The Famous Fruit Medicine.

MR. ROSENBURG
5480 Casgrain St., Montreal.

April 20th, 1915.

"In my opinion, no other medicine in the world is so curative for *Constipation and Indigestion* as "Fruit-a-tives". I was a sufferer from these complaints for five years, and my sedentary occupation, Music, brought about a kind of Intestinal Paralysis—with *nasty Headaches*, belching gas, drowsiness after eating, and Pain in the Back. I tried pills and medicines of physicians, but nothing helped me. Then I was induced to try "Fruit-a-tives", and now for six months I have been entirely well.

I advise any one who suffers from that horrible trouble—Chronic Constipation with the resultant indigestion, *to try "Fruit-a-tives"*, and you will be agreeably surprised at the great benefit you will receive". A. ROSENBURG.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

A THOUGHTFUL GIFT

Send THE ADVOCATE to the absent member of the family or to the distant friend. It is as good as a letter from home and is a weekly visitor. You can better imagine how the home paper is appreciated when you are absent yourself and a copy is for wanted to you.

PTE. ALEX. BLUE

Of Paisley, who was dangerously wounded in the chest, and has been in hospital at Bologuge, France. He is reported to be improving. Alex enlisted with the 18th Batt., went overseas in April, 1915, and had been at the front since November.

LOCAL AND DISTRICT NEWS

Death of Miss Mitchell

Miss Annie McKellar Mitchell, formerly of Saugeen, who passed away in Toronto on Friday last, had been afflicted with rheumatic trouble for five years, which affected the heart. The deceased was a sister of Messrs Thomas, John and James Mitchell, of Saugeen. The remains were brought up from Toronto, and the funeral took place on Monday afternoon, from the residence of Mr Jas. Mitchell. Interment was made in Queen Hill Cemetery.

Patriotic Field Day

Now that the haying rush is over and harvest is not yet on, everybody in the surrounding country should be able to take the afternoon off to take in the Patriotic Field Day programme in Riverside Park, Paisley, on Friday, Aug 4th. There is a very interesting programme of sports, speeches, etc., and the Doyle Band will furnish music. In the evening a concert will be given in the town hall. THE ADVOCATE was in error last week in stating that the Pat Women Co would supply the concert programme. This was proposed at the outset, but it was otherwise decided. Watch for the programme.

Making a Lot of Butter

Paisley Creamery has had a record season so far this summer. The farmers of this district have more cows this year, while help is scarce, and many new patrons have been secured since the opening last spring. All these conditions have made the creamery a very busy industry, and increased the output largely, some days as much as 1800 pounds of butter being churned. Of course the favorable conditions for pasture during the early part of the summer contributed to the increase of cream production, too. Now that the pastures are drying up rapidly, there may be a falling off in that respect, but altogether it will be the biggest year yet for Paisley Creamery, as well as for many of the patrons.

PTE. ARCHIE McNEILL

Who went from Owen Sound with the First Contingent and who was wounded on June 22nd. In a letter to his sister, Mrs. N. McAllister, of Owen Sound, he informed her that he had just undergone an operation which removed from his knee the fifth piece of shrapnel. He had other injuries in his left arm and his side, and both legs were pierced. It is expected that he will be in the Leicester, Eng.) hospital for two or three months yet. Pte. McNeill was born in Paisley, the youngest son of Mr. and Mrs. Dan McNeill, and is a grandson of Mrs. Wm. McBeath, Inkerman St. He is 21 years old.

A Newsy Letter from the Front

Sergt And Babcock wrote from Belgium on July 15th: "Got back from leave about a week ago. Upon arrival was informed that our brigade horse show was coming off in about four days, so had to get busy cleaning up and getting the horses into shape. The show was a great success. We did very well with our horses. I suppose you have heard about Alex Rose getting wounded about two weeks ago. It was his first trip up with rations, driving a team. While unloading he was hit by a bullet in the back. The bullet came through his left breast not far from the heart. He had a close call, but is doing well. I had a card from him the other day. He is in a hospital at Bologne, France, and expected to go to England soon. The wound was a new clean one, as he caught it coming around again in about three months or so. I doubt if he will ever see the front again. Poor chap, he has doing well out there. He sure has done his bit, and when it came to the test proved himself a hero. Sam Tooke and I went out the other night to try and look up Andy Calham, but he had just gone to hospital with some minor trouble. We had a chat with Will McGowan. He is in the same corps. The other day I was reading THE ADVOCATE and saw a letter written by Nell McGillivray to his mother. It stated that he was in the 8th Batt. Well, it happened that they were right across the road from us at the time. So I went over and looked him up. S Tooke, Nell and I went to the picture show at ——. Then I found out from him that Jim McDonald, of Bruce, a son of Charlie the piper, was in the same tent with him, so after we come back I had a shake and a chat with him. Well, we are moving to-day, so will have to conclude for the present.

—Some farmers had so much hay to handle that the last fields were left uncut and the cattle turned in to graze the crop. As the pastures are getting brown and bare, the uncut hay surplus will not go to waste generally.

These Spex have overcome the misty vision tha creeps on with the advance of years, and now I am the most pleased man I know."

A pleased patron is the best advertisement.

We give free tests and guarantee satisfaction.

A STOPPED WATCH

—one that will not go AT ALL—does not cause as much bother as one that runs now fast, now slow, in an erratic fashion.

The first you don't pretend to depend upon—the other is a constant source of annoyance.

Most people can afford a watch, but no one can afford an uncertain fast and slow one.

And when our Repair Department is no close at hand there is really no excuse for carrying anything but an accurate time-piece, no matter what the first cost was.

Consult us about any watch troubles that may arise.

I. SHOEMAKER

Jeweler and Optician

—Mr. Wm. Brown, the first publisher of the Bruce Herald, died at Vancouver on July 14th. Mr Brown went west after selling out to the late Wm Wesley about 1882, and became the pioneer newspaperman of Vancouver.

Booze At Bottom of It

Wm Duffy was soaked $30 and costs amounting to $15 by magistrate Bell on Monday evening for being drunk and disorderly in the office of the shell factory. G. N Giffin, manager of the shell factory, refused to let Duffy go to work at 6.30 p. m. because he had a shinful of whiskey and then the booze artist became uproarious, swore like a trooper and wanted to fight with everybody in sight. Constable Kidd was summoned and he promptly arrested Duffy and put him in the cooler. Duffy became very penitent before the magistrate and said he was the son of a wholesale liquor dealer in Cornwall. A chum of Duffy's named Dempster, vouched for his friend's character and helped to put up the fine. It developed out of the evidence that Duffy got his booze at Elmwood. This is the nearest place to obtain strident spirits and thirsty individuals have been quaffing deeply of the beverages that intoxicate, and it is surprising that more of our citizens have not been before a J. P. before. It is only six weeks since till the reproach of the boozery at Elmwood will be removed and that village, like the rest of Ontario, will be under a prohibitory liquor law. Ardent spirits will still be brought in from Quebec after the new law comes into effect, nevertheless there should be much less drunkenness in local option places like Chesley,

Canned Goods Safety

IS IN PAYING THE PRICE

There is no use in the world trying to combine cheapness and quality in Canned Goods, nor in any other line, for that matter.

High grades cost a trifle more, but for that extra in Canned Goods you get—

Assurance of purity
Appetizingness
Wholesomeness

—and these are the things that stand for healthful food.

We confine our purchases to well known and tried brands.

So we offer every customer Canned Goods safety in every article.

Clerk's Notice of First Posting of Voters' List

Voters' List of 1916, Municipality of the Village of Paisley, County of Bruce

NOTICE is hereby given that I have transmitted or delivered, pursuant to the sections in section 9 of the Ontario Voters' List Act, the certified copies required to be so delivered or transmitted of the list, made pursuant to said act, of all persons appearing by the last revised assessment roll of the said municipality to be entitled to vote in the said municipality at elections for members to the Legislative Assembly and at municipal elections, and that the said list was first posted up in my office at Town Hall, Paisley, on the 31st day of July, 1916, and remains there for inspection. And I hereby call upon all voters to take immediate proceedings to have any errors or omissions corrected according to law.

Dated this 31st day of July, A.D. 1916

J C GIBSON, Town Clerk of Paisley.

A Wise Negro

A negro was in jail waiting trial on the charg of stealing. His wife called to see him. On the way out the jailor ask her if she had a lawyer for Jim.

"No, sah," said the negress. "If Jim was guilty I'd get him a lawyer right away, but he tell me he ain't guilty and so cose I ain't co'lating to hire none".

"Mr Jailor," came a voice from the cells above, "you tell dat nigger woman down there to get a lawyer, and a good one, too."

—Bonnycastle Dale gives some advice on how not to paddle in his article, "I a Light Canoe will Build Me" in the August issue of Rod and Gun and also some pointers on how to paddle with least danger of an upset. "Temagami Men," by R. J. Fraser is a tribute to the guides of Temagami, than whom there are "no finer band of men." Rex Snow contributes "Little Incidents among the big Mountains" P V Williams "Klir-r-r-r-r-ik-ik-ik," the well known New Brunswick Guide, Acorg Morehouse, writes of a mouse with a 52 inch spread secured before breakfast; B. C. Tillett gives some experiences in Snipe Shooting, and various other stories and articles of equal interest precede the regular departments which are replete as usual with information for the lovers of gun, rod and dog. W. J. Taylor, Limited, Woodstock, Ont., are the publishers of this representative Canadian sportsman's magazine.

Not Reckless

Jake Penticoff came to seek said from the city fathers.

"I gotta haf a sack of flour," said Jake.

"I'm all out and my family is starfin."

"All right, Jeke," said the official. If you need flour and have no money we'll get you a sack. But see here, Jake, there's a circus coming, and if we get you flour are you sure that you will not sell it and take your family to the circus?"

"Oh, no," said Jake; "I already got tat safed up. Yes, I got money to go to de circus."

MARRIED

SNOWDON—BARRIE—At the residence of the bride's parents, on July 26th, by Rev O C Little, B.A., Mr George W Snowdon, 6th Bruce, to Miss Margaret, daughter of Mr and Mrs Wm Barrie, Lovat.

AIR

Air has no color.

In summer air is lighter than it is in winter.

Older people breathe less than younger people.

Small song birds are the most vigorous breathers of all.

Most air contains water in the form of gas or vapor.

Air, when compressed, has valuable curative properties.

The atmospheres of the various planets differ greatly in quality.

An open chimney is very good for helping keep the air in a room fresh.

The weight of air, at the level of the sea, is fifteen pounds to the square inch.

If a man is in a room ten feet in each direction he has a thousand cubic feet of space.

It is a mistake to suppose that night air is dangerous to breathe; it is purer than that of the day.

If you varnish an egg, so that no air can get through the shell, it will die, and no chicken will come out of it.

Very nearly the whole of the air is composed of two gases only—nitrogen (four-fifths) and oxygen (nearly one-fifth).

Air may be turned to a liquid, or even a solid, by the application of great pressure, together with an extremely low temperature.

With each ascent of three miles and a half the density of the air is halved, and the steps shorten, through the condensing power of cold at high altitudes.

Compressed air is used as a motive power in certain forms of machinery, notably those employed in boring tunnels through rock and under mountains.

Grace Darling died of consumption, though during the day she breathed splendid air, because at night she slept in a tiny room with a closed window.

MISTAKES OF THE EAST

Warning Against Waste of Trees on Poor Land

In different parts of eastern Canada in the early days the country was settled up indiscriminately. To the immigrant from crowded Europe all land looked alike, and the result was that much land not fit for agriculture was cleared. After working this land for perhaps a generation it became so poor as to be utterly useless and the family had to remove to other land. Unfortunately in the meantime all the good land had been taken up, and, as the people on the poor land were practically driven off through poverty, they had no money to buy good farms and, consequently became hewers of wood and drawers of water to the rest of the community. Sentimentally the scenes in the abandonment of these poor lands were and are very pathetic, while economically the Dominion of Canada has lost the labors of two and perhaps three generations wasted in rocky, sandy hillsides; which labor if expended on good land would have made the workers well-to-do and would have produced abundance of real wealth to feed and clothe the community.

Worse than the millions of dollars thus wasted has been the waste of thousands of good lives. In eastern Canada the lesson has been taken to heart and settlement is now being directed into fertile areas, while the unproductive lands are being got back into forests. In western Canada the effort is to profit by this knowledge and to avoid the mistakes of the past. Once people were ashamed of admitting that there was any forest land in their district. Now they realize that to have a good piece of virgin timber, which is being properly protected as it is being cut, is to have something like a mutual gold mine.

BRANCHED SEARCHLIGHT

Arranged So As Not To Blind Approaching Pilots

That the pilots of approaching vessels may not be blinded by the glare of the searchlights on vessels going in the opposite direction, a novel branched type of electric light is used, which throws its beams toward both sides of the canal, leaving the path directly in front in comparative darkness. As the marks which guide the pilot in making the turns in the canal are obviously on the sides and not in the channel, this method of throwing the bright rays on either side gives all the information desired, and the eyestrain and confusion attendant on the direct beam is avoided.

Making It Fit

"Did you hear about the defacement of Mr. Skinner's tombstone?" asked Mr. Brown a few days after the funeral of that eminent captain of industry.

"No, what was it?" inquired his neighbor curiously.

"Someone added the word 'friends' to the epitaph."

"What was the epitaph?"

"'He did his best.'"

Aug. 4, 1914—War Declared *Aug. 4, 1916—Allies Winning*

ORGANIZE for Victory!

ONTARIO

THE THIRD YEAR OF THE WAR calls for the organized co-operation of every citizen of the Province of Ontario. ALL must help to hasten the day of final triumph. For the sake of those who have made the Great Sacrifice, and of those now overseas or in training, every citizen must give the best service possible. No one need feel "out of it" when the great day of Victory comes, but everyone must qualify now by sharing in the sacrifices which the War demands.

Suggestions for Organization

In many Municipalities there are already active patriotic organizations, such as Recruiting, Red Cross, Soldiers' Aid and Patriotic Fund Committees. In such cases, one of these, or, better still, a joint committee of these and the citizens generally, might undertake to co-operate with the Central Committee at Toronto.

Where there is no active representative organization, it is suggested that one be formed at the earliest moment. It should be non-partisan (in the broadest sense), and represent every interest affected by war conditions.

What Organizations Should Do

1. Find more men for Overseas service.
2. Help in keeping our munitions plants working to full capacity.
3. Induce every possible worker, men and women, to serve on the farm and in other essential industries.
4. Find money for the coming WAR LOAN and war funds.
5. In short, assist in the organization of Ontario's resources to meet war conditions and after-war conditions.

THRIFT and ECONOMY, and a careful consideration and preparation for our problems are essential if we would meet the present and future needs. For further suggestions and information you are cordially requested to write at once to ALBERT H. ABBOTT, Ph.D., Secretary, Organization of Resources Committee, Parliament Buildings, Toronto.

John S. Hendrie

LIEUTENANT-GOVERNOR OF ONTARIO

Chairman of the Organization of Resources Committee

WHY YOU SNEEZE

There is more than one cause for sneezing, and persons may differ in their susceptibility to them. A bright light will cause some persons to sneeze, the pollen of certain plants will affect others, and most people are likely to sneeze in the presence of dust. Such sneezing is due to superficial irritation. The sneeze caused by the effect of cold is different. It is an attempt of Nature to cure you. She makes you sneeze for the same reason that she makes you shiver—to generate heat for warming the blood and preventing you from taking more cold—to help relieve the cold you have. The sneezing from cold is not an act of the nose alone, this being merely the part of the body where it explodes. It is an act of the entire body during which every muscle gives a jump. The body is affected by a spasmodic effort to warm the entire system and throw off the cold.

Your Watch as a Compass

To use your watch as a compass is quite easy. Point the hour hand to the sun, and the south is exactly half-way between the hour and the figure XII. on the dial. For instance, supposing it is four o'clock: point the hand indicating four to the sun and it, on the dial plate is exactly south.

WHY WOMEN WRITE LETTERS

To Lydia E. Pinkham Medicine Co.

Women who are well often ask "Are the letters which the Lydia E. Pinkham Medicine Co. are continually publishing, genuine?" "Are they truthful?" "Why do women write such letters?"

In answer we say that never have we published a fictitious letter or name. Never, knowingly, have we published an untruthful letter, or one without the full and written consent of the woman who wrote it.

The reason that thousands of women from all parts of the country write such grateful letters to the Lydia E. Pinkham Medicine Co. is that Lydia E. Pinkham's Vegetable Compound has brought health and happiness into their lives, once burdened with pain and suffering.

It has relieved women from some of the worst forms of female ills, from displacements, inflammation, ulceration, irregularities, nervousness, weakness, stomach troubles and from the blues.

It is impossible for any woman who is well and who has never suffered to realize how these poor, suffering women feel when restored to health; their keen desire to help other women who are suffering as they did.

About the House

Useful Hints and General Information for the Busy Housewife

Putting Up Summer Fruit.

Jelly-making and preserving without the proper tools is hard work. Try to have all the utensils ready before the task is undertaken. Be sure to have a plentiful supply of new rubbers for the jars, and the jars well scalded before the fruit is put into them. The enameled ware or porcelain lined kettles should be used rather than tin, because of the action of the acids on the tin.

Have at hand all necessary spoons; silver forks for lifting the larger fruit; a large and a smaller funnel; plenty of cheese cloth for jelly bags; a colander, a gravy strainer and a wire seive. Measures and a good scale are also necessary if the work is to be done properly. Then with plenty of sugar, spices, vinegar and ripe unspoiled fruit, the putting up of summer fruit should be a pleasure and a success.

Blackberry Pie.—Pick the berries clean, rinse in cold water take up the berries by the handful, sorting out all stems. Line a buttered pie tin with a pie paste, put in the berries one inch deep, sprinkle with sugar, using about ½ cup of brown sugar, sprinkle with flour, a salt spoon of salt and a little nutmeg. Put on top paste, pressing the two crusts together around the edge, trim, cut the top for steam to escape and bake in a quick oven for 30 to 45 minutes.

Blackberry Pudding.—Three cups flour, 1 cup molasses, ½ cup of milk, 1 teaspoon salt, a little cloves, and cinnamon, 1 teaspoonful soda dissolved in a little of the milk, stir in a quart of Blackberries (floured) boil in a well buttered mould for two hours. Serve with brandy sauce.

Canned Blueberries.—The berries should first be thoroughly picked over and washed, then placed in a kettle with one-half cupful of sugar and one-half cupful of water to each quart of the berries. Cook until each berry is done, then turn into hot jars and seal at once.

Currant Jelly.—Gather the fruit before it is too ripe. The first of the season, rather than the last, is the time to make currant or for that matter any jelly. Strip from the stems, removing all imperfect fruit. Wash and put over the fire in a porcelain kettle that will fit inside of another of another kettle full of boiling water, like a double boiler. Let them cook in this way until the skin of each currant has broken, stirring now and then. Pour into a jelly bag and allow it to drain over night. In the morning, if the day is fine, put the juice on to boil; at the same time put the sugar, ten pounds to a gallon of juice, in a pan in the oven to heat, watching it closely that it does not burn, and stirring that it may heat through. As soon as the juice is boiling briskly add the hot sugar, being careful that the former does not boil over when the sugar is added. The juice should be skimmed carefully from the beginning and allowed to boil about twenty minutes after the sugar is added. As soon as it will congeal on a spoon when held in the air, remove it from the fire and pour it into hot glasses. Do not seal until the jelly is cold.

An Idea for the Jelly Season.—When straining jelly turn a kitchen chair bottom up on the edge of the table then tie a piece of cheese cloth, coubled, on each leg of the chair. Do not allow too much fullness or sag. Place a dish big enough to hold the juice under the bag, on the chair seat, pour the hot fruit into the bag; cover with a clean cloth, and leave all night to drain.

Pickled Plums.—Pour plenty of hot vinegar seasoned with salt and mustard seed over a quantity of plums. After they have stood overnight heat the vinegar again and pour it over the plums. The fruit should be pickled just as it is beginning to turn from its green color. Cover close as soon as cold.

Ripe Gooseberry Catsup.—Cook the gooseberries in a little water until soft. Press through a colander to remove skins and then through a sieve to remove seeds. Add two-thirds as much sugar as fruit, and cinnamon and cloves to taste. Cook slowly one-half hour and bottle hot.

Hot Plum Cake.—An excellent method of making this is to take about two pounds of large blue plums, one cupful of sugar, one cupful of milk, one teaspoonful of baking powder, one teaspoonful of melted butter, a quarter of a teaspoonful of salt, one egg, half a cupful of sugar. Sift the flour, baking powder, salt, and two tablespoonfuls of sugar into a bowl, add the milk, egg and melted butter; mix well. The plums should be washed and cut in half; remove the stones; place in the dough skin side down, cover with half a cupful of sugar, put in a moderate oven for twenty-five to thirty minutes. The cake should be served hot.

Preserving Fruit Without Sugar.—The fruit is prepared in the ordinary way, the jars are cleaned and scalded while the rubbers and tops are boiling. The fruit is then placed in the jars, in which cold water is placed. When the jars have been sealed air-tight they are placed in a boiler filled with cold water and brought to the boiling point. Berries will do if removed when the boiling point is reached, while large fruits, such as peaches, cherries, plums, and apricots should get 20 to 30 minutes boiling. Keep cover of wash boiler on tight.

Facts Worth Remembering.

A cabinet to keep card recipes in is a great convenience for a young housekeeper.

A few minced nasturtium leaves sprinkled over an omelet gives a snappy flavor.

Keep a surprise box with novel play things in it for the children and bring it out on rainy days.

A pair of scales is a necessity in every kitchen, if the high cost of living is ever to be reduced.

Faded plush may be brightened by brushing it lightly with a clean sponge dipped in chloroform.

Fresh mint may be always at hand for cooking purposes by growing it at home.

Chopped preserved ginger added to the sauce served with cottage pudding is a delicious accompaniment.

Use paper napkins occasionally at luncheon in the summer and there will be a great saving of washing.

Butter will keep sweet much longer in a crock jar with a tight-fitting cover than in any other way.

There is nothing in a drug store that will relieve the pain of a bee sting quicker than a handful of mud.

Lard is much better to grease cake pans than butter. Butter will burn and cause the cakes to stick and char.

When making beds use a smooth stick about a yard long. It smooths out the sheets and blankets, and saves having to walk around the bed.

When plates and dishes have to be warmed in an oven if a newspaper is put underneath, this will break the heat and prevent plates from cracking.

Do not leave matches in the box in which they come from the store, but put them in a glass jar with a screw top. You will then be sure that there is no danger.

Sprinkle your shoes inside with a generous quantity of talcum powder. You will find this the greatest relief to the burning and smarting caused by new leather.

Perspiration stains can be removed from a shirt waist by soaking it in cold water to which you have added a little sodium bicarbonate before it has been washed.

CREDIT FOR OLD ENGLAND.

A Scotchman Has Words of Praise for the English Stock.

James Douglas, a well-known Scotch journalist residing in London, rises to say a few words for the English people, as follows:

One does not hear very much of the English people during the strain and stress and strafe of the world-war. My correspondents persistently try to intimidate me whenever I use the word "England" or the word "English." Not being myself an Englishman, I sometimes marvel at the modesty of the English, at their patience, at their self-control, at their cool imperturability, at their fulness, at their capacity for "playing the game" in every crisis and in every catastrophe. They are the most wonderful race the world has ever seen. I know they have their defects, but in this war their virtues have shone and burned with a hard gem-like flame.

The English are ready to wait till everything is prepared for the knock-out blow. I think this explains the really miraculous acceptance of universal military service. It is pure, undiluted patriotism that has done the trick. Remember that many of those who have accepted it do not believe that it will help us to win the war. They have accepted it for patriotic reasons, and have deliberately put aside their own private judgment in the matter. It is easy for a man who believes in conscription to accept it. The really splendid display of patriotism is the acceptance of it by men who do not believe in it.

I do not believe that the Germans would have taken the Gallipoli failure and the fall of Kut as calmly as the English have taken them.

The English for hundreds of years have fought best in adversity. It is their tradition to stay the course, and to grow stronger as misfortunes thicken. If you study the psychology of the English during this war you will see that their spirit has steadily mounted as events buffeted it. Mons was a tonic. Antwerp was a stimulant. Gallipoli was a source of new energy. Kut and the Irish Rebellion produced conscription by consent. I fancy that historians will be able to prove that the surrender of Townshend and the Dublin commune welded the English together, and made conscription possible. They will show that these disasters were blessings in disguise.

Anyhow, my diagnosis of the English temper at the moment is that it is more serenely cheerful and more confidently resolute than it has been since the war began. The English are ready for any sacrifice and any service. They have got their second wind and are settling down to outstay and outstick the Kaiser.

England's Women War Workers—This One Is an Engineer

THE RE-BIRTH OF RUSSIA.

By Chas. M. Bice, Denver, Colo.

Nothing that has taken place during this devastating war is so grandly significant as the almost miraculous manner in which the great Russian Empire has recuperated after its first defeat at the hands of the Central powers.

Germany, and not without reason in the ordinary course of events, had proudly proclaimed that the huge over-grown bear of the North had been rendered helpless and harmless by her Krupp guns and bayonets.

To one unfamiliar with the real Russian spirit, this prediction would be but the announcement of a foregone conclusion, for it was based upon the admitted fact of Russia's unpreparedness at the beginning of the war, and her apparent inability to assemble the necessary machinery with which to manufacture arms and ammunition to supply her vast numerical force.

But despite all adverse circumstances, and while much of her strategical territory was in the hands of the enemy, Russia has surprised the world, not only in "coming back," but in the superior courage and valor of her soldiery, and is now sweeping the foe before her as chaff in the wind.

There must be some adequate cause for this wonderful rehabilitation, that does not show itself on the surface. We must go deeper down into Russian life to find the reason for this new life and spirit that has challenged the admiration of the world.

When the war began, Russia was cursed with a Bureaucracy the most vile, corrupt and inefficient, that ever disgraced humanity, while her people were ignorant, degraded, indolent, drunken and impoverished to a degree hitherto unknown in any even half-civilized nation on the earth.

The first grand step towards emancipation was the abolishment of intemperance,—the vodka had to go, and that quickly by imperial decree which was soon forthcoming. With this prolific source of poverty removed a wonderful change came, for even bureaucracy could not be longer tolerated by the quickening spirit of the new democracy. It, too, had to go, and many of the pampered recipients of its unholy favors lost their lives.

Even the severe Autocracy of the Czar was resented for it was inimical to the liberty of the new patriotic spirit. The Duma gradually gained ground over despotic imperialism, until the rights of the oppressed people were respected.

The astounding results of it all are eloquently told in a recent article by the Secretary of the Russian-American-Asiatic Corporation, Ivan Narodney, from which we glean a few facts.

The Co-operative bank, and the Co-operative store are the two institutions, that chiefly reflect this wonderful change that followed the abolition of vodka in Russia.

Some 16,000 of these banks, and over 14,000 stores have been created, since vodka was prohibited. The people have become sober, industrious and saving, while the general increase in intelligence and the purer moral tone of the people that resulted is simply astonishing.

Mutuality of economic interest has led to political demand, and the lopping off of unjust discriminations and other autocratic impediments, until the people have become measurably free, and are able to realize their true manhood.

The government has largely adjusted itself to these new forces and conditions that are constantly incubating within the empire.

Vodka was ever the ally of oppression, for it had kept the people sodden, poor and easily amenable to authority, however cruel and severe. But the first step to political freedom is an emancipated mind.

Mr. Narodney says that beside these banks and stores, 116 peasant commercial institutions have placed orders in New York for printing presses, types and other accessories. That publication centres are to be established, crude doubtless they will be at first, but wonderfully meaningful as evidences of the awakening of community consciousness in a renaissance of expression.

The printing press will do more to end autocracy in Russia than all the Nihilist bombs ever made to blow Czars skyward. The 20th century may have no stranger story to tell than the rebirth of the Slav.

NO MORE FOREIGN NAMES.

Even Christian Names of Allied Origin Must Go in Saxony.

Saxony is one of the most patriotic States in Germany. Having removed foreign words from their hotels and eating houses, their barbers' shops, theatres, and milliners' establishments the Dresden authorities have turned their attention to Christian names, and have begun an agitation which is sure to spread to other cities.

It has been noted with pain that a very large number of people have Christian names borrowed from other countries. In peace no reasonable objection could be urged to this practice, but at the present time for German women, men, and children to be obliged to go through life saddled with a name which is not German, and which is closely identified with a belligerent country, is intolerable. Accordingly, good Saxons have been notified that those persons with foreign Christian names who desire to get rid of them, and adopt instead sound German names, may do so, the civil authorities giving them every legal facility, and removing all obstacles from their path. Among the names considered undesirable are: Harry, James, John, Ivan, Rene, Jules, Gaston, Margot, Claire, Daisy, Olga, Vera, Renee, Gabrielle, Sylvia.

The officials at registry offices are instructed to draw the attention of parents registering their children with foreign Christian names to the desirability of choosing a German name, and only to enter foreign names when the parents absolutely insist.

BARON ASTOR'S TAXES.

Pays $1,650,000 in England and $1,250,000 in U. S.

William Waldorf Astor has recently paid British taxes totalling $1,650,000.

His income from real estate investments in New York City is stimated at $4,000,000 a year.

He pays about $1,250,000 a year in taxes on his real estate, which is assessed at about $50,000,000.

The value of his holdings of railroad and other stocks is unknown. The total value is large. On this he pays an income tax, the amount of which is not made public.

String beans seasoned with mint are delicious served with roast lamb.

When cooking tomatoes to strain and use for tomato jelly, the flavor will be improved by a bay leaf and a piece of mace added.

THE FASHIONS

The Passing of the Hoop Skirt.

The hoop-skirt scare has entirely passed. There is no denying the charm of the hoop, but in this day and age it has no place except in the most frivolous of dance and evening gowns, and even from these, it is being ripped out. This does not mean, however, that we are going back to the narrow skirt; no indeed, merely limp skirts.

The dainty mid-summer voiles and organdies are as full and bouffant as ever, but their fulness falls softly about the figure, and their bouffancy is induced by their width and the nature of the material.

Collars and Sleeves.

Having finished with skirts as far as width, shortness and trimming are concerned, Fashion has now turned her attention to the bodice, laying especial stress on collars and sleeves. Any little becoming idea which strikes one may be used in both of these, affording charming possibilities of showing individuality. From the dainty, picot-edged turnover or frill on the dark taffeta frock, the collar ranges to the deep broad collar extending to the waistline and below. There are many of us who favor the high collar, even in summer, but this is fashioned of net or organdy, and is open in front, so it is really not a high collar after all, but a very becoming detail of frock or blouse. The wide, cape-like collars are most popular this summer. For summer even-

ings, with light frocks, there are becoming ruffs of net, chiffon, or mallines, and the chic little shoulder capes of Georgette trimmed with fur or marabout.

Sleeves are transparent, or semi-transparent, of crepe, net or chiffon to match the color of the material of the frock; and are both long and short The closely ruffed sleeve is favored, and also the flowing sleeve. These

Taffeta and Organdy in Afternoon Dress

latter are very easily made, being finished around the lower edge with a bias fold, or the effective picot edge.

Underfittings for Sheer Frocks.

Although not as conspicuous, equally as important as the frock are the dainty underfittings designed to complete it. Combinations, envelope chemises, camisoles, petticoats and knickerbockers are being fashioned of pale pink or blue cotton crepe or voile, the barred and striped cottons, wash satins, and the daintiest possible of sprigged silks with pale tinted grounds.

The pink or blue crepe or voile is usually finished around armholes, neck and lower edges with bias folds of contrasting color attached with hemstitching. The flowered silks are also bound with white, or a plain color, or are finished with lace. The envelope chemise is one of the most popular of garments, being shirred, smocked, tucked or box-pleated. For general wear glove-silk knickerbockers and a plain camisole are most practical.

Shanting Used in Simple Dresses

The summer muslins are exceptionally dainty and charming in their color combinations this season; maize, rose, the palest of pinks and blues being popular, and also white. Shantung and pongee are modish, too.

Shantung Used in Simple Dresses being used in many of the imported frocks and suits. These Shantungs come in charming colorings, in stripes, dots, conventionalized designs and plain tones. They are most practical for street dresses and suits of the sports type. Plain natural pongee is being trimmed with vivid contrasting touches of rose, emerald green, which is one of the most popular of shades this season, orange, and the other popular shades. Shantung and pongee are also modish and practical materials for the separate coats for general wear over light frocks and for motoring.

Speaking of separate coats, they have been more in demand these last few seasons than for some time, owing to the popularity of one-piece dresses. Some of the most attractive of these coats are being made of dark blue Bedford cord with collar and cuffs of white broad-cloth or flannel. Gay silks are used for lining them, or no linings at all. Some of the new lining foulards and voiles are particularly effective.

These patterns may be obtained from your local McCall dealer or from The McCall Company, 70 Bond St., Toronto, Ont.

IN A BAGDAD HAREM.

Interesting Description by a Privileged Visitor.

"Where Adam and Eve Lived" is the title of an interesting article about Mesopotamia in the National Geographic Magazine, written by Frederick and Margaret Simpich. While in Bagdad Mrs. Simpich visited the harem of a dignified old pasha, and was introduced to his numerous wives. She says:

As we walked toward the doorway of the walled, windowless structure, I imagined that I should see languorous Eastern beauties in baggy bloomers and gilt slippers. I dreamed of marble baths wherein olive-skinned beauties lolled. I thought of precious perfumes and beveled mirrors, of priceless jewels and of bronzed eunuchs waving peacock fans, while servant maids gently brushed the soft tresses of the harem favorites; but these dreams did not last long. . . .

There was a great square court, surrounded on three sides by the small rooms occupied by the pasha's wives and womenfolk. On the tiled floor there was a variegated lot of cheap Oriental rugs. A few red plush-covered chairs completed meagre furnishings. My host called aloud, and women began to pour out of the tiny rooms. There were fourteen of various size, shape, hue and dress. I looked at their faces and their clothes, and I knew suddenly that all my life I had been deceived. The women before me were not beautiful; most of them were absolutely commonplace, some were stupid-looking. A few wore bright-colored scarfs about their necks, with jewelry on their ankles and wrists. The popular article of dress, however, was a short baggy "Mother Hubbard" garment, worn over yellow trousers. Gilt or beaded slippers adorned the feet of the young women; the older ones were barefooted.

Hardly had the old pasha withdrawn when the women were about me. And such chattering, giggling, exclaiming, pulling and pushing as followed! It was a great day—a day long to be remembered in that harem. As far as I could learn, I was the first woman from the Western world who had ever visited them; I was the first white woman some of them had ever seen.

They felt of my hands and face, got down on their knees to admire my high-heeled shoes, stroked the skirt of my tailored suit, and behaved like children with a new toy. My hatpins were a source of great wonder, and my tight-fitting suit brought forth many a fervent "All-a-a-h!" They asked me how many children I had, and wanted to know how I had managed to get out of the harem alone.

When I told them I was a Christian, and that my countrymen have only one wife apiece, and that she may come and go as she likes, they were voluble in their pity; for these women do not wish to leave the harem.

Not the Gordian Knot

"What is your name, sir?"

"My name is Knott Martin, your honor."

"Well, what is it?"

"Is is Knott Martin."

"Not Martin again! We don't ask what your name is not, but what it is. No contempt of court, sir."

"If your honor will give me leave I'll spell my name."

"Well, spell it."

"K-n-e-double-h, Knot, M-a-r-t-i-n, Martin."

"Oh, very well, Mr. Martin; we are through it now, but it was one of the most knotty cases we have had before us for some time."

The AUTOMOBILE

Gasoline Expense Reducible.

A writer in Motor Print, gives the following advice on keeping down gasoline expense:

Gasoline is elastic; a gallon will drive a car almost any distance. This is food for thought for those that are worrying over the high price of fuel, by taking a few simple precautions, it is possible for every owner to reduce greatly the consumption per mile..

If the car is run too slowly or fast, there is fuel waste—15 m.p.h. is a good average.

Until now the average motorist has been careless about the amount of fuel he used because it was comparatively cheap and was a small percentage of the total car expense.

Make sure that you are getting all the gasoline you pay for; some owners are not. Watch the counter on the pump to see that it registers the correct number of gallons, and that the operator does not tamper with it while filling your tank. Furthermore, be certain that you obtain full measure; some gasoline pumps leak. It is necessary to check the amount in your tank by frequent measurement. Or, if this is not feasible, it is advisable occasionally to buy a gallon in a can of your own, and measure the quantity when you get home.

Most cars can be operated with a leaner mixture without affecting the production of power; some motorists may even deem it advisable to run with a very lean adjustment, notwithstanding a reduction in hill-climbing ability or speed. The exact adjustment must be determined by trial.

An auxiliary air device which may be attached to the manifold and operated from the dash should be used. It will be found helpful when running with light load, along a smooth level road, or down hill. When the motor is used as a brake, the suction on the carburetor is reduced to a minimum by opening the auxiliary air device wide.

The car shoud run easily. All the bearings should be well greased and free. It should be possible to push the car without difficulty with one hand on a smooth level surface. The importance of reducing friction to the minimum is shown by the fact that a racing car in good condition may be pushed with one finger.

The wheels should spin readily, which means that the bearings must be free and the brake bands and shoes must not drag.

When descending long hills, the car may be allowed to coast with the motor dead and the clutch out, or the shifting lever in neutral. If the letter is done, then the motor must be started and the clutch shaft brought to a speed higher han that of the car before the gear can be re-engaged.

Except on very rough roads, it takes less power to drive a car with tires well inflated. Use the tire guage often.

Drive with the spark advanced as far as possible; usually this is all the way. Retard it only when the motor knocks.

Don't allow your power to be wasted by leaky valves or piston rings.

Always shut the engine off when the car is standing. A great deal of fuel is wasted by idling—more than motorists realize.

Traffic should be avoided. There is an astonishing difference between the amount of fuel required by identical cars, one driven in traffic and the other in the country. Running on low gear, slipping the clutch, and the idling of the motor when standing are the causes.

Warm Weather Battery Hints.

With the pleasant days of summer, comes a tendency for every motor car owner to overlook the necessary care of certain parts of his car which can't be seen.

One of these parts is the storage battery, and because of the important part it plays in starting, lighting and ignition, too much emphasis cannot be laid upon its care.

During the summer, a storage battery should receive pure distilled water at intervals of a week or ten days. This is necessary because of the evaporation of the solution which gives the battery its life. If this solution is allowed to leave a portion of the battery plates exposed to the air ,these plates will deteriorate and the life of the battery will be greatly shortened.

Another point to consider is the hydrometer test to determine specific gravity of the solution. This test should always average 1,280 and in cases where the car owner does not want to make the test himself, he can have it made free of charge at any Williard Service Station. If the battery is allowed to go below the gravity mentioned, it will gradually run down and refuse to turn over a starting motor or operate the electric lights.

By watching these two most important things, any car owner may expect the very best service from his storage batteries.

OLD-FASHIONED COURTESY.

An Incident in the Life of the Late Lord Strathcona.

It was characteristic that he adhered all his life to old-fashioned politeness in letter writing. He long shrank from the use of an amanuensis or a typewriter as being a breach of courtesy. He patterned the openings and subscriptions of his letters on the old Hudson's Bay model. Even the longest or most official letter he persisted in writing by hand at an almost incredible cost of time and patience. On one occasion, which Mr. Beckles Willson notes in his "Life of Lord Strathcona and Mount Royal," at least considerable physical suffering was involved. He had had the misfortune while in Scotland to fracture one of the bones of his right wrist. His arm was put in splints, and while chafing under the restraint he seized the occasion to make a voyage to Canada by the way of New York. In transit his arm became worse, the inflammation spread, and he became unable to leave his berth. On arriving at New York he was met by Sir William Van Horne, who found him in a very feverish and distressed state. Nevertheless, he insisted on accompanying his friend immediately to Montreal, where he was induced to put himself in the care of a surgeon. What preyed upon his mind most was that he had a number of letters to answer.

"But," urged his friend, "you can employ an amanuensis."

"I've never done such a thing," Lord Strathcona declared emphatically. "It would give great offence, I assure you. I have always written my letters myself, and I must do so now."

But after considerable argument he consented to try the experiment.

"At least I must sign the letters," was his stipulation. "Put the pen between my fingers, and, although it will perhaps be a little difficult and painful, I must certainly sign the letters myself."

So the letters were dictated, and when the sheets were brought to him the invalid begged to be left alone to consider them and affix his signature. A pen was fastened between two of his disengaged fingers and a bottle of ink placed on the table.

When, a couple of hours later, the secretary entered to dispatch the correspondence, he found that to every letter Lord Strathcona had added a postscript, scrawled slowly and painfully, explaining how and why the writer had been forced to depart from his lifelong practice of writing his own letters and apologizing for doing so.

"And in every case," concludes the narrator of the anecdote, "the postscript was longer than the body of the letter."

FISH, BIRDS AND GAME.

Special Bulletin From the Commission of Conservation, Ottawa.

A report just issued by the Commission of Conservation, "Conservation of Fish, Birds and Game," directs attention to the great value of these resources to Canada. The volume is a report of the proceedings of a conference of the Committee on Fisheries, Game and Fur-bearing Animals of the Commission, and contains a fund of information regarding the present condition and the necessity for protection of Canada's fish, birds and mammals.

Canada is taking a prominent part in the international movement for the protection of wild life. A Migratory Bird Treaty between Canada and the United States is under consideration. Through the influence of the Commission of Conservation and other interests, bird reservations are being created, where the birds may find safe nesting and breeding places.

The fur-bearing animals of Northern and Western Canada are being rapidly exterminated. This is clearly shown by the present report. To secure their more adequate protection, the Commission is advocating the amendment of the North-west Game Act to place responsibility for its administration upon the Dominion Parks Branch, which already protects the animals in the Dominion National Parks.

The future of the fisheries of Canada is dealt with in an able manner by the highest authorities in this country. That they are of great present value is recognized, but there is also a potential value in our oceanic and inland waters which, upon development, would mean the creation of new industries. To meet this condition, the Commission is suggesting vocational training and simple demonstration stations for the fishermen, that they may take advantage of the most practical and modern methods of their calling.

The report is replete with illustrations applicable to the subject matter.

The fewer scruples a man has the more drams he takes.

MARCONI'S WIRELESS TELEGRAPHY

HAS DIRECTLY SAVED WELL OVER 5,000 LIVES.

Stories of the Greatest Life-Saving Invention of the Age.

In these days of war, the greatest brains of the world are vying with one another in establishing records for newer and more invincible ways of killing!

The principal Powers of the world are in a death-grip; every corner of Europe resounds to the clash of arms—or, to be more up-to-date, the bursting of shells. What science can do to help in the terrible work is being done by every scientist—save one!

There is one man whose name stands out amid the conflict for what he has done to save life. While others destroy, he preserves.

And this man is Chevalier Marconi, who invented and perfected the wonderful "wireless" telegraphy. To him belongs the credit of saving life all over the world, since to his great invention thousands of people owe their rescue from maritime disaster.

With a Short History.

The history of wireless telegraphy is still short. As recently as 1899 messages were first sent from England to France, while in 1902 the "waves" he had mastered carried greetings between Canada and England.

But the side of wireless telegraphy with which this article deals is its power of saving life from the sea.

The first case on record of "wireless" being employed by a ship in distress occurred on March 3rd, 1899. On this date the R. F. Matthews ran into the East Goodwin lightship during a heavy fog. The weather conditions would, in the old days, have rendered the work of rescue very difficult if not impossible. But the R. F. Matthews was equipped with what was then a novelty—Marconi's system of wireless telegraphy. Messages were sent ashore, and speedily brought lifeboats to the rescue.

During the next ten years instances are recorded of wireless aiding ships in difficulties, but not until 1909 was public interest really roused in this matter.

Called to the Rescue.

On January 23rd, 1909, just ten years after the case of the R. F. Matthews, the Florida rammed and sank the great White Star liner the Republic, off the Nantucket Lightship, some thirty miles from the American coast.

The story of the loss of the Republic is the story of the pluck of Jack Binns, the wireless operator. Binns at once began to send out the urgent call for help, "C Q D." Through the boundless the magic letters sped, being recorded by every wireless receiver for hundreds of miles. And in answer ships changed their courses and hurried to the scene of the disaster.

Sixty miles away was the Baltic, separated from the sinking liner, with its two thousand human souls, by a dense fog. And from half-past seven in the morning till half-past six at night the Baltic scoured the surface of the ocean on its errand of mercy. All through the long hours Binns sat at his instrument sending out messages and directions to the ship coming to the aid of the Republic.

After a Day's Search.

And then, in the evening, after a day of zigzagging 200 miles on the ocean, the Republic sent the welcome word to the Baltic that they were close together. The look-outs on the ships could see nothing, but the wireless operators knew. And so the passengers on the Republic were saved by means of wireless telegraphy.

Only a few years ago such a disaster as that of the Republic could not have had so satisfactory an ending. Doubtless some of the passengers would have been rescued by the ship's boats, but exposure to the January weather must have levied a heavy toll even on those. Instead, every man, woman, and child was safely brought to land.

This splendid rescue brought the use of wireless for saving life well before the world. Shipowners at once began to see the necessity for having their vessels fitted with it. Marconi had fully proved his right to the honor of saving life.

The following year after the saving of the Republic, wireless telegraphy was put to still another use. In the autumn of that year an American inventor named Wellman set out in his dirigible balloon, patriotically called the America, to cross the Atlantic. In theory the idea was good; in practice it went wrong. Presently Wellmann and his band of devoted helpers found themselves drifting aimlessly about over the wide Atlantic, with apparently little hope of rescue. But the wireless operator with the balloon succeeded in calling aid to the stricken airship.

Wreck of the Delhi.

This was one of the first cases where two of the marvels of the age—wireless telegraphy and airships—came into contact. Since then wireless telegraphy has been adapted to all sorts and sizes of aircraft.

Perhaps the next notable case of wireless saving the passengers and crew of a vessel was that of the Delhi in 1911. This vessel stranded off the coast of Morocco, and became a total wreck. The fact that among the passengers were the Princess Royal, with her husband, the Duke of Fife, and their two daughters, drew great public attention to this wreck.

While the Republic was the instance which first drew attention to the powers of wireless, the story of the Titanic excels it in drama. On her maiden voyage across the Atlantic this gigantic liner struck an iceberg in mid-ocean on the night of April 14th, 1912. On board were 2,201 passengers and crew, while the vessel itself had cost well over one million pounds to build. Yet in a moment she became a helpless wreck.

The Titanic Disaster.

The wireless operator sent his call for help broadcast into the air, and it was answered by the Carpathia, which vessel steamed as quickly as possible to the rescue. But before she had reached the scene of the disaster the Titanic had sunk. Out of the two thousand odd human beings 712 were saved from the lifeboats of the ill-fated vessel. And it is quite accurate to say that, but for the wireless call, most, if not all, of these must have perished from exposure.

But it is not possible to mention even all the most remarkable rescues effected by wireless. There was the Volturno, which caught fire one thousand miles west of the Irish coast and in answer to the wireless appeal no less than eleven ships went to the rescue, saving altogether 521 lives.

Then, again, when the Empress of Ireland was struck by the Storstad a wireless call ended in the saving of 452 lives.

But the instances are endless. And the modern usages of war have multiplied them. Of this period nothing as yet can be written; we must wait till the coming day of peace. But brief mention may be made of the Lusitania, when 764 lives were saved.

A Fine Record.

It is no idle boast of the Marconi Company that wireless telegraphy has directly saved well over 5,000 lives.

A word here as to the call used—S O S—is not out of place. "C Q D," the original call for danger, was adopted from the old "all stations," or general, call of line telegraphy. But at the first International Wireless Congress it was suggested and approved that a better call was "S O S," which, by its arrangement of dots and dashes, is different from any other call.

"S O S" has no special meaning. It is not intended to express "Save our souls!" or anything else equally dramatic. This call is an international one, and has the same meaning in all languages.

Another aid in saving life, allied to wireless telegraphy, is the direction-finder. By switching on this simple apparatus, the operator can indicate on a compass the ang from which a call comes so accurately that the vessel can be steered by it. As he turns his indicator round the points of the compass the sounds wax strong-er and stronger the nearer he gets to the correct degree.

Nowadays the Atlantic is peppered with vessels carrying wireless, over two thousands ships being equipped. And as the number of these increases so the peril of the sea grows less. Marconi has robbed the ocean of much of its terror; Old Neptune is slowly being muzzled.

WAR MONEY IS CIRCULATED.

But a London Financial Expert Fears Inflation.

Commenting upon Chancellor of the Exchequer McKenna's statement in Parliament that the daily cost of the war to Great Britain has increased from $25,000,000 to $30,000,000, the financial editor of the London Morning Post predicts that if the war continues to the end of the year, at the new estimate Great Britain will have to raise in loans the enormous sum of $5,180,000,000, adding:

"These are stupendous figures, but —and while by no means overlooking the serious position they represent—they must not be regarded as so much capital entirely lost, because, quite apart from the extent to which the figures are affected by advances of some hundreds of millions to our allies, much of the expenditure may be said to simply represent the circulation and distribution of capital throughout the country. It is, in fact, to the possibilities of inflation created by this rapidly accumulating debit, to say nothing of the more difficult problem represented by payments to neutral countries, that we should give special heed.

"So vast are the ramifications of all the problems incidental to financing this greatest war in history that only by the appointment of a war finance council composed of the best financial and business experts in the country can our resources be mobilized and organized to the fullest possible advantage, both during and after the war."

The reason a married man wears such shabby clothes may be that his wife wears better ones.

Though the Canadian National Exhibition only dates back to 1879, the first Exhibition, from which the C.N.E. grew, was established in Toronto in 1846.

FRANCE'S PLANT FOR WAR SUPPLY

LE CREUSOT'S OUTPUT SURPASSING EXPECTATIONS.

It Is In the Centre of Iron and Coal Region and Well Situated.

Le Creusot, the centre of France war munitions works, where the output of an iron torrent with which to deluge the Central Empires of Europe is said by a French Cabinet officer to be surpassing all expectations, is the subject of a war geography bulletin from the National Geographic Society.

Like the famous Krupp works of Germany, Le Creusot's vast ordnance factories owe their origin to the organizing and inventive genius of one family—the Schneiders. At the outbreak of the war the Schneider Iron Works employed more than 15,000 workmen and their great shops, covering hundreds of acres of ground, were connected by a network of nearly 40 miles of railroad tracks. Since the war this plant has been enormously increased.

Le Creusot owes its importance in the manufacturing and foundry industry to the fact that it is in the centre of one of the richest coal and iron mining districts of France. The coal beds of this region were discovered in the 12th century, but it was not until 500 years later, in 1774, that the first iron works were established. Sixty years later the Schneiders, Adolphe and Eugene, established their first workshops here, and the little hamlet formerly known as Charbonniere, began to grow. In 1841 it was a town of 4,000 people; just before the war there were 35,000 inhabitants, nearly half of whom were employed in the armor-plate factories, the gun shops, the locomotive works and the ordnance plants. It was one of the Schneiders incidentally, who revolutionized warship armament in 1876. Up to that time the most progressive nations used wrought iron for protective armor on their ships. Schneider proved the superiority of steel in resisting the penetration power of projectiles.

Well Situated.

Le Creusot is admirably situated with respect to the French frontier, for while it is not so far from the firing line as to occasion undue delay in the transportation of munitions, it is sufficiently removed to be well beyond the danger zone. It is 135 miles, in an airline, south-west of Belfort, a fortress of the first class on the Alsace front, and is 175 miles south of Verdun. If an invading army should succeed in passing either of these bulwarks there would still be Dijon, with its eight detached forts, guarding the approach 50 miles to the north-east. Paris lies to the north-west, 236 miles distant by rail.

Supplementing its railway connections, Le Creusot enjoys the transportation facilities of the Canae du Centre, five miles to the east. This waterway joins the Saone and Loire. The former, rising to the north in the Faucilles mountains a few miles below Epinal, flows south and mingles its waters with the Rhone at Lyon. The Loire, the longest river in France, rises to the south and flows northwest into the Atlantic.

This is not the first war in which the Schneider works of Le Creusot have played an important part in furnishing France with arms. During the conflict of the Crimea and the Franco-German war of 1870, the factories produced enormous quantities of munitions.

While Le Creusot has practically no historical association of its own, it is only a few miles south-east of Autin, the famous Augustodunum of the Romans, celebrated for its famous schools. The 62 towers and most of the old walls have disappeared, and the town now occupies only about half the area of its most prosperous days. It was here that the Christian martyr, St. Symphorien, was put to death in 179. This too, was the scene of St. Leger's sacrifice, he who as the Bishop of Autun led the nobles in revolt against the tyrant Ebroin, Frankish "Mayor of the Palace." When the city was besieged in 678 and its fall was seen to be inevitable Leger, then called Leodeger, surrendered himself to his implacable enemy in order that the wrath of the conqueror might be visited solely upon him rather than upon the whole community. Untouched by the valor of such a sacrifice, Ebroin ordered his followers to put out the Bishop's eyes, subject him to prolonged torture and finally behead him.

Single Women Lack Food.

The London Morning Post quotes a Danish statement to the effect that a great number of German single women have arrived in Denmark seeking employment. According to the statement, the women say that it is nearly impossible for women, except mothers with children, to get food in Germany.

Vindictive.

"Did you ever see a woman that was tongue-tied?"

"No, but I've seen lots of them that ought to be."

The wise girl fears a man far more than she does a mouse.

Be sure you are right—then pause a moment for reflection.

OUR FORESTS AND THE WAR.

Much Timber Will be Required for Reconstruction Work.

The economic importance of the forest resources of this continent will be greatly enhanced as a result of the war. Enormous quantities of timber are necessarily used for military purposes, in addition to what is unavoidably destroyed in the fighting zone.

The shortage of tonnage has made it impracticable for the needed supplies of timber to be furnished on any large scale from Canada or the United States, and, as a result, heavy cutting has become necessary in the belligerent countries. While England is not generally regarded as a forest country, and has made relatively little progress in public forestry, there is still in England and Scotland a considerable amount of timber, mostly on royal and private estates. The imperative necessity for utilizing this timber has resulted in the despatch of a battalion of Canadian woodsmen to cut in France and in Russia. In Belgium, the Germans have cut a large proportion of the timber and have used it in military operations or shipped it to Germany.

The result of all this over-cutting will mean a heavy shortage of timber for reconstruction purposes after the war, when it should be possible to make large shipments from this continent. This will mean a largely increased drain upon Canadian forests, and serves to emphasize the necessity for still more complete conservation of this tremendously valuable asset, if Canada is to take full advantage of her opportunities for world-service in this direction.

The greatest enemy of the forest is and always has been fire. It has been estimated that the average annual forest fire loss in this country is sufficient to pay the interest on the recent Dominion loan of $100,000,000. To reduce this loss, it is necessary not only to grant larger appropriations for fire-ranging services, but also to reorganize such services in a number of cases, with a view of securing a dollar's worth of protection for every dollar spent. It has been stated on competent authority that at present more money is wasted on forest fire protection, for lack of proper supervision, than is expended advantageously.

The importance of the forest in the internal economy of Canada is shown by the fact that the average total value of forest products of Canada is in the neighborhood of $180,000,000, or an average wealth production of about $25 per head of population. Nearly $5,000,000 in direct revenue is received annually by the federal and provincial governments from the sale or lease of cutting rights to publicly-owned timber lands and from royalty and stumpage payments made upon timber so cut. Some 5,000 wood-using industries in Canada are directly dependent upon the supply of timber cut from non-agricultural lands.

The importance of preventing the continued destruction of this great resource can scarcely be over-emphasized.—C.L. in Conservation.

Moon as Weather Forecaster.

The moon plays an important part in sign talling. All kinds of weather hang on the changes of the moon. As a matter of fact, you and I rather like to see the new moon over the right shoulder. To be sure, we have no faith in the baleful influence of this sign. Still, it is just as well to be cautious about offending her ladyship. Farmers study the shape of the new moon to determine if the month is to be wet or dry. The Indians used to say that if you could hang a powder horn on the curve of the new moon the month would be generally pleasant. A circle about the moon means a storm approaching. The number of stars within the circle tells the number of days which will elapse before the storm begins. Farmers tell about planting corn in the old of the moon.

We Handle All the Good Things You See Advertised in the Big Magazines.

THIS store is headquarters. You will always find here everything you would expect to find in a similar store—and many things more.

We specialize on articles of genuine merit. Articles we have tested and tried ourselves and we can recommend and indorse.

You will find here all of the good—the best—the pick—of the standard household articles advertised in magazines.

We add our own guarantee to that of the manufacturer's.

We call your especial attention to the O-Cedar Polish Mop, the greatest boon to cleaner and better housekeeping we know of.

With it you can dust, clean and polish a hardwood floor without getting down on your hands and knees. You can dust the tops of doors, the molding, the tops of high furniture without standing on chairs. You can dust and clean the stair steps and banisters in half the time it usually takes.

You can dust under the bed, and under heavy furniture without moving it, and so on throughout the house—wherever there is dusting to do. You can do it quicker, easier and better with the O-Cedar Polish Mop.

Unlike other dusting mops the O-Cedar Polish Mop can be washed when soiled, and then renewed by adding a few drops of O-Cedar Polish.

We are so confident that you will be delighted with the O-Cedar Polish Mop that we will deliver one to your home on two days' trial. If it is not satisfactory in every respect we do not expect you to keep it, and will instantly return your money. The price of the O-Cedar Polish Mop, complete, is $1.50. Let us send you one on trial.

SECOND CON ELDERSLIE

Red Cross garden party at M. Sparrow's, Elora Road North, on Thursday, Aug. 3rd.

Mr A McCulloch and Master Archie spent Sunday week with friends here.

Mr C Smellie has been suffering from an attack of asthma for the last few weeks but is somewhat better at present.

Mrs Dawson and Miss Burrell were calling on Paisley friends one day recently.

Mrs T Wright, of Waskada, Man, spent last week with her aunt, Mrs W Hope.

Rev F Brown and son Edward of Keady, visited their aunt, Mrs D Allen, over Sunday.

Owing to the extremely hot weather the farmers have not been able to make the progress with the hay they otherwise would have done. The hay is an extra heavy crop and almost every farmer along this con. will need to stack to leave room in the barns for the grain. If the weather keeps favourable it will all be gathered in this week.

Miss M Burrell spent a part of last week with Galt friends.

Mr and Mrs B Wright visited at Mr W Young's on Sunday.

Children Cry
FOR FLETCHER'S
CASTORIA

ELORA ROAD NORTH

Red Cross garden party at M. Sparrow's, Elora Road North, on Thursday, Aug. 3rd.

Messrs Thos Irwin, Neil McArthur and J S Campbell took a motor trip to Ripley last week in Mr Irwin's car.

A A McLaren of Wiarton called on Elora Road friends last week.

Mrs Charles Rusk, Gainsboro, Sask, is visiting at Mr Neil McArthur's.

Mr Jas Bryce has purchased a motor attachment for his bicycle.

Pte Wm Bryce called on his old neighbors last week. His battalion is going overseas shortly.

Armstrong Bros are now running a car, having got one in a deal with Mr Robert Irwin of Walkerton.

This continued dry weather is hardening up the ground and making large cracks in it. Some of our citizens with large families of small children are almost afraid to allow them to roam at large in case they might fall into a fissure and be unable to climb out again.

GLAMIS

Red Cross garden party at M. Sparrow's, Elora Road North, on Thursday, Aug. 3rd.

Miss Jennie McDermid, who has been spending holidays at her home returned to London on Saturday.

Pte Clyde McKeeman, of London, Sundayed at his home.

Mrs Jas McLennan has returned from her visit to Detroit and Port Huron.

Miss Dewar, of Kincardine, spent a few days at Mr Jas McLennan's.

Mr Col McLean, of Sudbury, is visiting his home on the boundary.

The Misses Truax, of Toronto, who have been spending some time with friends at the lake, returned to Toronto on Saturday.

We are sorry to learn that Mrs Chas McKinnon passed away on Monday night at half-past nine. She had been a sufferer for a long while, and her death came as a blessed release.

Bruce Preparedness

The Bruce Preparedness League meeting, which was advised to be held at the Court house at Walkerton on Thursday afternoon at 2 p. m., but which was adjourned for the want of the outside speakers who were to have been present, was held in the Council Chamber of the Town Hall on Thursday evening last, when Lieut.-Colonel Williams, Chief Recruiting Officer for Canada, addressed a large gathering of men and women, and delivered a splendid speech on the war. He showed that the Allies had now an abundance of munitions and as the drive on Berlin had been launched the crying need at present was for more men. Although Bruce has done splendidly, he urged the county to rally still further to the colors and play a big part in the greatest world drive for liberty. The speaker asked the county to send a big representation to the meeting at London on Aug. 2nd, when the recruiting problem for Military District No. 1 will be discussed. He regretted not being present at the meeting here in the afternoon but gave as his reason that he had never been notified of the afternoon gathering and also that he only been in the habit of speaking at night. Short addresses were also delivered by Mayor Lippert, who was chairman, Judge Klein, W D Cargill, M P P, Warden McNab and Mrs J J Wiser, regent of the Walkerton I O D E. The meeting appointed Judge Klein to name delegates to the London meeting, with the result that the following were chosen, namely: S R Brill, Teeswater; R D Cameron, Lucknow; G H Mooney, Ripley; Reeve McDonald, Tiverton; E R Sayles, Port Elgin; C M Bowman, Southampton; Hugh McKerracher, Paisley; Sheriff Jermyn, Wiarton; S C Cooper, Lions Head; Reeve Douglas, Hepworth; J A McDonald, of Tara; C J Mickle, Chesley; W D Cargill, Cargill; J Rowland, Walkerton; Dr. J A Wilson, Mildmay; Reeve Johnson, Bruce; A McCannell, Port Elgin; C E Whicher, Colpoy's Bay; Mayor Miller, Kincardine; Judge Klein and A E McNab of Walkerton.—Herald and Times.

WITH THE SIGNALLERS IN ENGLAND

Sapper I A Neilson, in writing to his parents, Rev and Mrs M Neilson, gives a very interesting and detailed account of the trip from camp at Ottawa to camp at Shorncliffe, England, from which we make the following excerpts: June 25th, at sea. "Here I be at sea, a mere speck of humanities. See! We left the barracks at 8 30 Saturday morning, and marched to the station with our overseas kit. The march to the station was quite impressive in more ways than one. The people lined the streets nearly all the way to the station, a distance of more than a mile. I saw many a tear in their eyes as we passed. I had a smile on my face nearly all the way. When I looked at the crowd I smiled, and I received many a sweet smile in return. I did not see the use of looking sober and downcast. I looked ahead, not backward. There was a spring in my step when I marched. I was sweating very muchly, but I smiled. My shoulders ached, but I smiled. I find it pays. The crowd at the station was immense—mothers, wives, sisters, daughters and sweethearts were all assembled to bid a last farewell to their soldier laddies. I couldn't smile much then. One has to go through it to know what it is like. It is an experience one cannot describe. "But is a time when sinful and evil thoughts are as far from the minds of men as east is from the west. Only one thought stood out clear and plain—the fact that we were leaving home and loved ones, perhaps never to return." An incident is here related by the writer, showing that there are some good, firm christian fellows in the army, although they may be few, and there is the fear that too many hide their light under a bushel. Halifax was reached on Monday forenoon, and they embarked an hour later, sailing next morning. The signallers were delighted at being given first-class quarters aboard ship. The letter was finished after reaching Shorncliffe, giving incidents of the voyage, how they were accepted on board ship with parades, drills, sports, concerts, etc. One day a strange ship was seen some distance away "and our cruiser placed herself between us and the ship. She took no chances. It was like a cat watching a mouse, and it thrilled me to see her. Not till we were safely past did the cruiser allow the ship to pass on. By signalling they found she was Swedish ship. On Sunday a church parade was announced for 2 30 in the afternoon. When the time came we were all lined up ready to enter the first-class dining saloon for the service. As we prepared to file in we were stopped by a sergeant who gave us the order, "About turn! Quick march!" The service was only for officers and sergeants. I guess some of them thought it beneath their dignity to worship with privates and sappers. This refusal did a lot of harm, I think. That is, to influencing the fellows as regards church services and churches in general. There was much discussion and opinions were expressed freely among the soldiers. They were indignant, and I don't blame them. We passed into the danger zone Tuesday morning. All the lifeboats were made in readiness and swung out on the davits. The gun was cleaned and loaded and the deck cleared for action. We took a zig-zag course, guards with loaded rifles and fixed bayonets were mounted at each set of life-boats. We sighted land Wednesday morning, disembarked Thursday morning, and entrained for Shorncliffe camp. Our chaps were quite amused at the English trains and passed all kinds of remarks. They were constructed with the English scenery, though. The English roses were everywhere, and so were our eyes. The hedges attracted quite a lot of attention, also the canals and the barges. I enjoyed that railway trip as much as anything. At times we went as fast as 60 miles an hour. That made the boys open their eyes, all right. At one station at which we stopped (Crewe, I think) our fellows poured out on the platform to get a drink. The conductor were a silk hat, and that tickled the fellows for a fair. Even the officers laughed. When it was time to start he blew shrilly on his whistle, but our chaps didn't make any more to get on at first. The conductor began to get excited, blew still harder and waved his arms. Then it dawned on them that they were to get aboard, so they made a rush for the coaches. They weren't used to the whistle system. You should have heard the fellows tease that conductor about his hat. We arrived at Shorncliffe about 7 p m. Our first night under canvas proved to be a wet one. Nothing of note has happened yet. We have to forget all we learned at Ottawa and start afresh here. The officers we have here have been to the front and know a few things. (July 8th)—This is Saturday, and we have the afternoon off. I am at Folkestone, in the Soldiers' Club in connection with the Church of England. This is one of the best places here for a soldier's recreation and meals. They "soak" the soldiers for everything in Shorncliffe and Folkstone, but at this club things are quite reasonable. Have seen a woman police here. When we came along in the train we saw lady coode-tors, and in the fields nearly all the workers were women. The jewellers here cannot fix our watches, as their workmen have enlisted. I had to send mine to London.

"ANURIC!"
THE NEWEST
DISCOVERY IN CHEMISTRY

This is a recent discovery of Doctor Pierce, who is head of the Invalids' Hotel and Surgical Institute at Buffalo, N. Y. Experiments at Doctor Pierce's Hospital for several years proved that there is no other eliminator of uric acid that can be compared to it. For those easily recognized symptoms of inflammation—as backache, scalding urine and frequent urination, as well as sediment in the urine, or if uric acid in the blood has caused rheumatism, it is simply wonderful how surely "Anuric" acts. The best of results are always obtained in cases of acute rheumatism in the joints, in gravel and gout, and invariably the pains and stiffness which so frequently and persistently accompany the disease rapidly disappear.

Go to your nearest drug store and simply ask for a 50-cent package of "Anuric," manufactured by Dr. Pierce, or send 10 cents to Dr. Pierce for a large trial package. If you suspect kidney or bladder trouble, send him a sample of your water and describe symptoms. Doctor Pierce's chemist will examine it, then Dr. Pierce will report to you, without fee or charge.

NOTE.—French scientist affirms that "Anuric" is thirty-seven times more active than lithia in eliminating uric acid, and is a harmless but reliable chemical compound that may be safely given to children, but should be used only by grown-ups who actually wish to restore their kidneys to perfect health, by conscientiously using one box—or more in extreme cases—as "Anuric" (thanks to Doctor Pierce's achievement) is by far the most perfect kidney and bladder corrector obtainable.

Dr. Pierce's Pellets are the original Little Liver Pills. One little Pellet for a laxative—three for a cathartic.

Teacher Wanted

FOR C. S. S. No 1 Saugeen, Arran & Elderslie (Hamilton). Duties to commence Sept 1st, 1916. State salary and qualifications. Applications received up to August 5th. JOHN SCOTT, Sec'y-Treas, R R No 1, Port Elgin.

Tenders Wanted

Guaranteed Clothes!

You get a complete and absolute guarantee when you buy made-to-measure clothes here—the guarantee means what it says—you're the judge.

You'll find that we don't ask you why the clothes are unsatisfactory or how—if you say they're not right, we don't argue about the matter.

That sort of a guarantee, added to the very evident advantage of wearing custom-tailored clothes, makes them all the wiser choices.

I S CRUICKSHANK

Hardy Canadian Soldiers

A stretcher bearer at the front, in writing to a friend in Toronto, tells of the grit and endurance of Canadians. He was carrying a Lieut Campbell on a stretcher to the clearing station. On arrival an attendant asked if he were dead and the stretcher bearer replied, "He's dying." But an unlooked-for interruption came from the "near corpse" in the shape of an emphatic "You're a liar." And Campbell still lives to justify his words. This six-footer's injuries were caused by bursting shrapnel. His head had to be trepanned, that is, a silver plate put in, for it appears when he was picked up his skull was smashed open and brains actually protruding, as well as his body wounded in many places, but fortunately his face was intact. The surgeon stated that almost any human being would have died, but Campbell is progressing splendidly.

ADVERTISING RATES

Subscription Price—$1.50 per annum in advance. To United States subscribers $2.00 per year in advance.

—Mrs Jas B Fleming spent the week end with friends in Goderich.

—Miss Marjory Ellis, of Brantford, is the guest of Mrs A. Sinclair.

—Miss P Land, of Toronto, is the guest of her cousin, Mrs Jas Stark.

—Miss Barbara McAllister, of Elderslie, is holidaying at Southampton.

—Mrs. L. Long, of Walkerton, visited at Mr Geo Weisford's over Sunday.

—Misses Edna and Jean Hamilton have been spending a few days at Port Elgin.

—Misses Annie McBeath and Vio's McPherson, of and Elderslie, are visiting in Owen Sound.

—Mrs Clark and daughter, Miss Prudence, of Brampton are visiting members of the family here.

—Spr. Norman Allen was up from Toronto on a few days furlough before going to training camp at Ottawa.

—Miss S Kelsey, of Toronto, and her niece, Miss Blanche Dunn, are visitors at Mr Matthews', North St.

—Miss Ida Shouldice, Vesta, returned home on Monday, after a month's vacation with her sisters in Toronto.

—Miss Marjory Sewell and Miss Constance Richenbach, of Walkerton, are visitors at Mr. T. H. Glover's.

—Misses Ita Sutherland of Ripley, and Kate McNeill of Southampton, are visiting at Malcolm McAllister's, Elderslie.

—Messrs Hubert Kerr, George and Charles McElroy spent over Sunday with their aunt, Mrs Jos Stoddart, 4th Elderslie

—Mr and Mrs. Elmer Stoneman and little daughter Hilda, of West Toronto, are spending holidays at Mr H Lemont's, Lovat.

—Mrs (Dr.) McCartney and son Lincoln, of Delaware, Ohio, are visitors at the home of her brother, Mr C. W. Kissack, 13th Bruce.

—Pte. W. S Mitchell, who is on home service with the special company of the 77th Pioneers, of London, was up visiting his family over Sunday.

—Pte Bernard Brown of Paisley, has been promoted to the office of Quartermaster's Sergt of the 160th. He was home from London over Sunday.

—Miss Belle McMillan was home from Toronto for a few days, accompanied by her cousin, Miss Bruce. Miss Addie McMillan is also home from Renfrew for vacation.

—After spilling clondsful of moisture upon nearly all the surrounding country, Jupiter Pluvius at last favored us with a quiet, but very useful shower on Monday night, for which we are indeed grateful.

—Mr. and Mrs. W. G. Bersht, of Guelph, were visitors at the home of the latter's brother, Mr. P. R. Bore, for a few days. They were accompanied home by Myrtle and Margaret More on a month's visit.

—Mr. and Mrs. W. Cummings and son, Dr. P. C. Dodendorff, wife and son, and Mrs. H. Jackson, of Detroit, form a motor party who are spending a week in town, at the Belmoral hotel. Mr. Cummings is an old Paisley boy who periodically revisits his old home town and friends.

—Mr. J. B. Bowes, of Chatsworth, was a caller at The Advocate office on Tuesday. J. B. is still one of the busiest of men, and contemplates going after a big prize offered by the British authorities for the most useful artificial arm. Hope he wins it, as the premium is somewhere around $50,000.

Bruce To Soldier Wounded

Pte. George Kempston, formerly of the 16th of Bruce, is reported wounded. He was about the first man who enlisted from Bruce Tp., having signed up in Jan., 1915, and went over seas the following month. He was born in Scotland.

From Pte Andy Culham

On July 10th Pte Andy Culham wrote to friends here: "I am in hospital just now with la grippe. Every limb of my body is like a boil. This is the third day in here, and I am feeling a lot better. I think I will be able to go back to duty again the last of the week, for I don't like lying around with nothing to do. Well, we Canadians are holding our own and then some. We are getting the best of Fritz, if anything. I met Elmer Gregg the other day, and he looks fine. Also saw three or four other boys I know from Cargill so it is not so lonesome now. We are having some very fine weather here now. The crops all look good here. Grain is all as high as my head and the farmers are all as busy as bees.

INSECTICIDES!

Church's Bug Finish, Bug Death, Paris Green, Arsenate of Lead, Hellebore, Insect Powder, Hess' Instant Louse Killer, Hess Dip and Disinfectant for flies, Eureka Fly Killer, Zenoleum, pheno, Chloro.

Valuable Load of Pigs

On Tuesday morning we noticed a fine load of live pigs passing to market and later learned the value of the bunch. There were ten porkers and the sum received for them was $398.60. The hogs were raised by Mr S Winch, Elora road north.

Successful Garden Party

The Red Cross garden party at Mr. M. Sparrow's, Elora road north, was quite a success in every way. The programme was an exceptionally good one. First there was music by the Kincardine silpe band, and lots of it; solos by Miss May Warren and Mrs Ferguson, of Paisley, Alma Fraser, Flossie Beach, Messrs. Jas Scott, Neil McArthur and two members of the pipe band; recitations by Miss E Miller and Miss Eden Sparrow; Highland step dancing by Miss Ruth McDougall, and chorus by the school children. The total proceeds amounted to $110. Mr W Pearce was chairman.

With the Artillery in France

Artilleryman Guy Purdy wrote to his home here on July 20th, after arriving at the front, somewhere in France: "We left England on July 14th, and had a lovely ride across the channel. I enjoyed it very much. Until we got to where we are now one would not know there was a war on. The channel seemed to be full of boats of all kinds. There were dozens in sight all the time. They do not seem to be afraid of the German fleet or subs. Where we landed we could see several ships that had been sunk at the first of the war, but none have been sunk lately—at least that is what they tell us where we landed. I cannot tell you where I am or where we landed, but it was one of the biggest ports in France. When we were unloading I saw Jack Hamilton and Leslie Shaw passing on another boat, but haven't seen them since, and do not know where they are now, although they are not far from here, as this is the Canadian front. When we landed we went into camp for forty-eight hours' rest, but we didn't get much rest. Then we got on the train and are now just behind the firing line. We can hear the guns and see the shells bursting. The first night we were here we saw a big afreal fight. It certainly was some sight to see the machine flying around and the shells bursting. It lasted for over an hour, and as usual the allies were victorious. This is a lovely country. The weather is great and the crops are as good as I ever saw in Canada. We are billeted in an old barn, or at least we sleep in it. It is full of straw abde good place to sleep in, only it is full of lice. I have enquired about the battalion that George is in, and as far as I can make out he is not far from here, so I may see him at any time.

The Dominion Government is erecting a huge observation tower on a high hill on James Kemp's farm on the first concession of Carrick. The structure is to be 75 ft. high and can be seen for miles around. Enormous quantities of lumber are being used in its construction. The tower is being built for the purpose of taking observations to correct former maps and surveys. Kemp's hill is said to be the highest point of land in the southern part of Bruce.—Mildmay Gazette.

The Housewife's Corner

Eggs for Hot Days.

Nature is a pretty good judge of what is the best for us, and so when the really hot weather comes we generally feel a distaste for meat or other heavy foods, and naturally turn to the lighter dishes; at the same time it is very poor policy not to look after their nutritious qualities, for extreme heat is likely to lower our vitality anyhow.

Under these circumstances eggs come to the rescue, and we turn with pleasure and relief to some more novel ways of serving them than the incessant boiled, fried, poached and scrambled. The following recipes will give enough variety to add a zest to the food and stimulate the jaded appetite:

Creamed Eggs.—Use little fireproof pans for this, and proceed as before, but pour a tablespoonful of cream over each egg. If a more substantial dish is needed, boil some rice in stock, season it well, and half fill the pan with it before adding the egg and cream.

Creamed Eggs and Potato.—Place a layer of smoothly mashed and well-seasoned potatoes in the dish or little pans (previously greased), and then an egg on the top as before.

Creamed Eggs With Fish.—If you have any remnants of cooked fish, flake them carefully free of skin and bone, add salt and pepper and mix with some white sauce and add a little mashed potato. Line some little greased pans with this, add an egg as before, and put into the oven to set.

Fricasse of Eggs.—Boil the necessary number of eggs hard and cut in half. Remove the yolk, and add to it any tiny remnants of finely minced meat, a few bread crumbs, salt, pepper, a very little chopped parsley and grated lemon rind. Stuff the eggs with this and put the remainder aside. Make sufficient white sauce (using half milk and half stock or water). Grease the bottom of a casserole, put in the eggs, stir the remainder of the stuffing into the sauce and pour over the eggs. Make very hot in the oven, and serve boiled rice in another casserole. A very little bacon cut into dice improves this dish.

Scrambled Eggs With Rice.—Have ready some boiled rice, allowing half a teacupful to each person. For people allow two eggs, and cook them very lightly, adding the rice and stirring it well in with salt and pepper to season. Serve very hot.

Eggs With Fried Bread.—This method of serving eggs and bacon is economical; Cut some stale bread into cubes, allowing about half a cupful to each person, and to each serving of bread about eight little pieces of bacon. Fry the bread and bacon in hot fat in a frying pan, and break the eggs in, stir and cook until beginning to set. Dust with salt and pepper, and serve very hot.

Surprise Eggs.—Choose potatoes all of a size and bake them. Cut off a piece lengthwise, and scoop out as much potato as possible. Mash it smooth and very moist with some white sauce, salt and pepper. Line the potatoes thickly with this. Break an egg into each, cover with potato and bake until the potato is lightly browned.

Eufs Mollets.—Have ready boiling water and put the eggs in, and keep the water boiling for five minutes. At once place the eggs in cold water and leave them for 15 minutes. Then shell very carefully. The object is to cook the egg sufficiently to shell them without the yolks being hard. Thus cooked, drain well and place them in a casserole, and cover with shrimp or tomato, onion or curry sauce, and serve with plain boiled rice.

Poached Eggs With Onions.—Take two or three onions, peel, and parboil them, slice, and fry until quite brown. Fry some squares of bread, spread the onions on these, and serve a poached egg on each. By parboiling the onion before frying the flavor is rendered far more mild.

Little Egg Pies.—Have ready two hard-boiled eggs chopped and half a pint of white sauce well flavored. Stir the egg into the sauce. Line the required number of little fireproof pipkins with mashed potato, fill with the sauce, cover with potato, rough up with a fork, and bake until the potato is colored.

Bird's Nests.—These are generally made with sausage meat, but they are cheaper if mashed potato is used. Boil the eggs hard, and cover fairly thickly with smoothly mashed and well-seasoned potato. Egg, crumb, and fry a golden brown. Cut in two with a sharp knife, and serve very hot.

Spanish Eggs.—Three parts cook three large, ripe tomatoes (bake them or boil them, whichever is most convenient), rub through a sieve. Put 1 oz. of dripping in a pan, add the tomato pulp, season with pepper and salt. Add the eggs, stir over the fire until the eggs begin to set, and serve very hot on squares of buttered toast. This makes an excellent course to serve in a wall of savory rice or spread on boiled macaroni.

Tested Recipes.

Peanut Pilau.—Put a thin layer of freshly cooked rice into a shallow baking dish. Sprinkle it with salt and dots of butter. Top it with a layer of finely ground peanuts, then add another layer of rice, then one of peanuts, and so on until the dish is full. Bake it twenty minutes and serve it with tomato sauce.

Cheese and Rice Croquettes.—Add one-half of a cupful of grated cheese to a pint of boiled rice; season it with cayenne and salt, and add a well-beaten egg and enough cream sauce to make the mass properly moist. Mix it well; form it into small rolls or balls; roll it in bread crumbs wet with egg, and fry it in deep, hot fat.

Apple Syrup Custard.—One-quarter of a cupful of apple syrup, one and three quarters cupfuls of milk, two eggs, one-quarter of a teaspoonful of salt, one-half of a teaspoonful of vanilla, two tablespoonfuls of sugar. Beat the eggs just enough to mix the whites and the yolks. Add the other ingredients, and bake the custard in cups for fifty minutes in a slow oven. If you bake it in one dish, use three eggs.

Potato Turnovers.—This is a good way to serve meat and potatoes. Boil and mash enough potatoes to fill a pint measure. Add one well-beaten egg, sufficient salt and pepper, and one tablespoonful of flour. Turn the mass on a well-floured board, roll it out carefully, and cut it into disks the size of a saucer. On each disk place a large spoonful of cold meat chopped very fine and highly seasoned. Turn the potato dough on itself and pinch the edge together as if making an ordinary turnover. Put the turnover on a flat greased pan, brown them in a hot oven, and serve them with brown or tomato sauce.

Cauliflower With Cheese Cream Dressing.—Wash a fresh cauliflower or as many heads as you need. Boil water in the kettle in which the vegetables is to be cooked, salt it well and add the cauliflower while the water is boiling. Cook it until it is tender. To prepare the dressing, heat one cupful of sweet milk in a double boiler; thicken it with a level tablespoonful of cornstarch dissolved in a little cold milk; season it with salt, pepper and butter; add about one-eighth of a pound of grated cheese. Pour the sauce over the cooked cauliflower at the last minute before you serve it, after draining the water from the vegetable, and serve it on hot buttered toast.

Household Hints.

Lemons will keep fresh if stowed in dry sand separately.

Tomato juice will remove ink stains from the hands.

Never allow fresh meat to remain in paper; it absorbs the juice.

A dish of cold water in the oven will prevent cakes from burning.

Dry flour applied with a newspaper is an excellent and easy way to clean tinware.

Salt will remove the stain from silver caused by egg when applied dry with a soft cloth.

To get cake out of pan whole when taken from the oven set it on a wet cloth for five minutes.

Never keep vinegar or yeast in stone crocks or jugs; their acid attacks the glazing, which is said to be poisonous.

Put a silvered spoon into the most delicate glass and boiling hot liquid can be poured into it without breaking it.

A delicious salad is made of boiled beets, scooped out, filled with sliced vegetables and served on lettuce leaves with French dressing.

Don't go on the theory that the less you eat in the summer the cooler you will be. Eat moderately of rather light but nourishing food.

Corn should always be cut from the cob very carefully—slitting the middle of each row of kernels with a sharp knife and scraping out the pulp.

War and Words.

England's sixteenth century war with Spain was responsible for several new words being added to the language. Embargo and contraband are two of them; while to the campaigns in the low countries we are indebted for such words as freebooter, furlough, cashier, leaguer, drill, unslaught, aconce and domineer.

Odd.

Fair Hostess (entertaining wounded soldier)—And so one Jack Johnson buried you, and the next day dug you up again and landed you on top of a barn! Now, what were your feelings?

Tommy—If you'll believe me, ma'am, I was never more surprised in all my life.

THE SUNDAY SCHOOL

INTERNATIONAL LESSON.
AUGUST 13.

Lesson VII.—The Grace of Giving. 2 Cor. 9. Golden Text,—Acts 20, 35.

Verse 1. The Saints—"God's people," as we have paraphrased, in Jerusalem, where impoverished largely by the famine (Acts 11, 28), which had occasioned the former gift of the Gentile Christians. But we must not forget the consequences of their experiment in communism, undertaken in the enthusiasm of their conviction that the advent would be speedily accomplished, and provision for earthly needs accordingly was needless.

2. I glory. Paul was a very boastful man—about other people's good deeds. He kept these unstable Corinthians up to the mark by committing them in advance, to talk with other Christians to a generosity they had promised, from which it is clear not a few of them were in danger of receding. Macedonia—including the far more generous and high-minded Philippians. Paul used their generosity as an incentive for the Corinthians in the previous chapter. Stirred up—Paul uses a term capable of a bad meaning, just as the writer "to the Hebrews" daringly speaks of the "provocation of love." (10. 24—see last week's note on 1 Cor. 13. 5). It is the one field in which rivalry is a good thing, for love sterilizes all its microbes.

3. The brethren—Especially Titus and "his brother" (so render 2 Cor. 8. 18), who from that verse appears to be none other than Luke. The notable discovery of an inference from the Greek, obvious when once pointed out, incidentally shows us why Titus is not named in the Acts. We must go to the Epistles to see how important these two brothers were, modestly having suppressed their record where we should have expected it to figure largely.

5. Make up beforehand — Superintending such arrangements for collection as Paul sketched in 1 Cor. 16. Bounty, here and in verse 6, is, literally, blessing; see note there. Extortion—The word usually rendered covetousness. Even though they had promised this gift to a good work, Paul was acutely sensitive to the possibility that by postponement and hurried collection the money might be got ultimately by methods unworthy of the high privilege of Christian giving. It might come as an irksome duty, and God would know those coins again, even if they did meet the need. Hence the wise provision of the weekly gift, a regular sacrifice bellowing the Lord's day. John Wesley was wise as usual when he ordained the penny a week!

6. Bountiful — Paul applies the thought of Gal. 6. 7 to one more of its many fields. That large-handed bounty is a "blessing" (see above) may be illustrated by Shakespeare's great line about mercy:

"It blesseth him that gives and him that takes."

7. Giving is to be (1) calculated, not merely impulsive; (2) an act of "cheerfulness," not of "grudging" (literally pain); (3) absolutely spontaneous, not enforced by any kind of pressure. God loveth—Quoted from the Greek version of Prov. 22. 8, where there is nothing resembling it in the ordinary Hebrew text. It is a good illustration of Paul's regular use of the Greek Bible. He does not call it a quotation, and he knew the Hebrew may well have remembered it was a mistranslation.

8. The figure calls up a flood of divine bounty, which after satisfying every need flows over into the manifold activities of good men. Sufficiency—The everyday use of the word which in Phil. 4. 11 Paul has with the same context, common in the philosophers.

9. Quoted from Psa. 112. 9, which establishes the familiar Jewish idea that almsgiving establishes perpetual merit. See note on last Sunday's lesson, verse 3, for New Testament qualifications. He who told the young ruler that it would save him—for it meant the abandonment of his own besetting sin—told also how limited was the "reward" of almsgiving that was preceded by "sounding brass" instead of love (Matt. 6. 2).

10. Seed to the sower and bread for food—Quoted from Isa. 55. 10. Paul turns it into a parable of spiritual husbandry. Seed for sowing—A single word, that of Luke 8. 11, which is its commentary. The fruits of your righteousness—a reminiscence of Hos. 10. 12.

Liberality—As in Rom. 12. 8. The noun is derived from the word single (as in "the single eye"). The suggestion is that niggardly giving is from trying to look at two things at once, personal advantage as well as the neighbor's need, where the "single-minded man" can only see the latter. Through us—Paul is to have the privilege of telling the recipients how much that gift meant.

12. Ministration of men who remembered his coming "not to be ministered unto, but to minister." Service—Greek liturgy, a word originally used of a service to the state, but now beginning to be applied to the service of God, which colors its use here. Aboundeth—"Overflows," again: Its secondary effect is beyond its primary importance. Note what stress Paul lays on the enrichment that comes from gratitude to God.

13. Proving—A favorite word, also rendered proof and probation. Thus in Rom. 5. 4 it is the outcome of endurance and the producer of hope. Obedience—The Corresponding verb in 1 Cor. 15. 28 speaks of the subjecting of all things to Christ. Confession—Compare 1 Tim. 6. 12; Heb. 4. 14. Contribution—This rendering misses the great feature of the word, fellowship, sharing. A true gift brings giver and receiver to a common meal.

14. Grace, the same word as thanks in verse 15. In this context the collocation is hardly accidental. God's free bounty—this is the essential idea of grace—was evidenced by the Corinthians' generosity, which showed that they" knew the grace of our Lord Jesus Christ". (2 Cor. 8 9). It was God's grace, which never can stay in a heart unless it is always flowing out as fast as it comes. It pours out upon God's people, and it rises back to God in thankfulness for "his unspeakable gift."

15 Unspeakable—The same sense of the inadequacy of languages breaks out in Rom. 11. 33. Compare Eph. 2. 18, 19. Gift—"In the redemption of the world through our Lord Jesus Christ." It is the word of Eph. 2. 8, and is found in the Master's saying, "Freely ye have received, freely give"

NO ARCTIC WARRIORS.

Armies Not Recruited From People of Polar Regions.

Little history halts at the Arctic Circle. Beyond that human life is so difficult to sustain that its willful waste is unthinkable. The Lapps and Samoyeds of Arctic Russia, like the Eskimos of North America and Greenland, are so often compelled in times of dearth and famine to sacrifice their aged weaklings that this form of death has become a vague religious and social principle with them.

The armies of the great White Czar, like those of the King-Emperor, says Pearson's Weekly, are not recruited in such distant places; indeed, the men are of such meagre stature and intellect that a military training is next to impossible. Essentially not a thing to be persevered with in days of a great campaign.

The population of Arctic Russia, both in Asia and in Europe, outside the official and mercantile classes, contains few elements which are truly Slavonic, but in the minds of insular Britons the reputation of Arctic dwellers pretains to all the people living in Siberia, which is always portrayed as a land of ice and snow and unhealthy marshes.

The Siberian battalions, which have won so great a fame in the Russian campaigns, are drawn mainly from territory as near the equator as Great Britain. It is undeniable that their winters are terribly severe, but in the hot Summer crops of the utmost value can be sown, ripened and harvested. It is not possible to lead a robust life in the Siberia of military Russia.

The real natives of the Arctic can endure hunger and fatigue—can march in their own fashion through hurricane and blizzard—but their value is rather to the explorer of the hospitable North than to the soldier. As hunters they are wonderfully clever, yet they are curiously formal in administering the coup de grace.

They will apologize to the fierce white bear which they have cornered before advancing to a close attack with bone-tipped arrows and spears, a duel in which the odds seem decisively on the bear destroying the man. They are therefore not cowards in any sense and few British sportsmen would risk their lives against bear and wolf and walrus protected only by futile weapons and their own personal dexterity.

How goes the news of the war to these Arctic dwellers? Most casually and slowly without a doubt. There are colonies in the frozen North which have not yet heard of the Russo-Japanese War, and certainly have no knowledge of the present war.

They are free from national duties and taxation and their intercourse, even with fur traders of blood alien to their own, is meagre indeed. There are dialects spoken by those tribes which have never been interpreted and never reduced to writing, and their ideas of the great world outside the tundras and steppes are very crude.

A generation may pass before the story of the Grand Duke's great campaign filters north, and even then it will be incomprehensible to persons to whom a crowd of even a hundred human beings would be a marvel. Now and again a stray whaler or exploring ship comes within sight of the shore camps and a little barter by means of signs is carried on, but the inland dwellers have not even this communication with the outside world.

Stores From Ordnance Station Being Loaded Onto Motor Trucks at Camp Borden

The AUTOMOBILE

How to Correct Failure of Lights.

Open circuits usually come from broken wires or from loose or disconnected terminal wires at one or more of the electrical units of the system. In most connectors the wires are soldered when the system is fitted, and if one of these become dislodged due to the solder having become crystallized or jarred loose, the wire does not take long to work its way entirely free of the terminals. Often it is hard to find such defects unless the terminals are each carefully examined with this thought in mind, says Motor Age. There are many instances where a connection looks to be all right, but which in reality is no connection at all when investigated closely. Sometimes, when the connector is all right, the fault lies in the binding post nut having worked loose or fallen off, with the result that the terminal can move around on the post, causing a very poor contact, if any.

Do not mistake simply a burned out lamp filament for trouble in the system. Too often the driver will examine the bulb that does not light, and, failing to notice the broken filament, will cause himself a great deal of trouble tracing the connections throughout the system, when in reality there is nothing but the lamp itself to blame. If you cannot see plainly whether the dark bulb is broken or not, try a known good one, and if that, too fails to light, it is time to delve deeper into the wiring intricacies.

One of the first points to look is at the light switch to see if there are any defective connections there. Then examine the wires going out of the socket, for this is a very common point of open circuiting.

Watch the Battery.

Shaking of the wire due to continuous road work will often work the wire end loose from the binding screw, which is a none too permanent connection, anyway, due to the space limitations.

So far, we have devoted our attention entirely to those troubles that come with the lighting system when the engine is running. Having touched upon practically every possibility that could cause this condition, we can now turn to the things that might prevent the lights from behaving properly when the engine is not running.

The first thing to expect when they go out or are dim under these conditions is that the battery has become discharged through some cause of causes. Besides short circuits, batteries can become discharged in a number of other ways, the most common of which are the result of overloading the starting or the lighting system, the electrolyte being too low in the cells, or the battery being loose in its container, so that it can move around and become damaged.

Current Leaks.

Another source of annoyance is battery discharge due to lighting or starting overloads. Naturally if there is leakage of current due to a short circuit somewhere, the generator and the entire system are called upon to furnish more energy than would be required normally, and this overloading results in battery drainage.

A good way to tell if there is current leakage is to note the position of the indicator handon the ammeter when he engine is not operating and no lights are on. The hand should point to zero, since no current is being demanded, nor any being put into the battery. Unless the instrument is out of calibration, if the hand indicates that current is being used, then it is time to look up leakage points. To make sure if the ammeter is correctly calibrated, disconnect one of the battery terminals and see if the hand then swings to zero; if it does there is leakage. But if it remains one side or the other of the zero mark, the trouble is in its calibration, and it is well to remember how much it is off, for future reference, in reading the instrument.

Use Care in Starting.

Most all of us have gone along the street at some time or other, and heard a motor churn and churn under the power of an electric starter without any apparent results.

This is one of the most frequent causes of storage battery trouble according to a service representative of the Willard Storage Battery Co. He explained that very few motorists seemed to realize the immense amount of electrical power which is required to turn a motor, and what a considerable amount of driving at charging speed is necessary to restore same amount of current to the battery.

A little care in operating the self-starter will obviate this trouble. The driver should always make sure that the starting switch is thrown before attempting to operate the self-starter. Sometimmes the gasoline tank is empty and under such conditions no amount of cranking would start the motor.

The ignition button should always be pressed in firmly and all wire connections should be tight. Occasionally the gasoline mixture is too weak and on most cars this can be adjusted from the dash. The coil and distributor should be kept perfectly dry in order for the current to reach the spark plugs.

Housewife—"It seems to me that your pint of milk is very small." Milkman—"My cows are of the small kind, mum!"

In Great Britain there are 221 reformatory and industrial schools, and the number of young persons and children in these schools is about 25,000. In one recent year 5,267 boys and 1,126 girls were admitted to such institutions.

CURIOUS FACTS.

Water rolls off cabbage-leaves because they are covered with a very fine dust.

Dark clothes are the warmest because they attract more heat from the sun.

Dusty shoes are always the hottest because polished shoes throw off the heat.

A negro has black eyes because that color defends them from the strong sunlight.

The bubbles in a teacup follow the spoon because it attracts them just as a magnet attracts steel.

It is in the lungs that our blood becomes red. Before it gets there it is of a dark purple color.

Plants grow quicker on bright moonlight nights because such nights produce dew, which is very good for plants.

A kettle "sings" because the air in the water escapes by fits and starts, and so makes the "singing" noise.

Animals are covered with fur, hair, and feathers because those substances prevent the heat of the body from escaping.

Hawks can see such a long way because they have a special eye muscle by which they can alter their sights to long distances.

A black man's skin does not scorch or blister with the hot sun because black absorbs the heat and takes it beneath the skin.

HEATED GLOVES.

Electrically Heated for the Use of Aviators.

A British firm has recently introduced electrically-heated gloves for aviators. Cold hands and feet are among the prime discomforts experienced by airmen flying at great altitudes, and it is obvious that numbed hands in particular may lead to disaster. Ordinary gloves, irrespective of their thickness, are of little use. The electrically-heated gloves, on the other hand, maintain the hands at a comfortable temperature. As in the instance of the electrically-heated gloves for automobile drivers, electrical connection is made between small brass discs on the gloves and metal plates on the steering wheel of aircraft.

The Joy of a Vacation may be turned to the sorrow that comes from indigestion. The battle with hotel menus is a losing one for the man with a weak stomach. Happy is the man who listens to the call of the wild—who goes fishing, hunting and canoeing—who takes with him **Triscuit**, the Shredded Whole Wheat wafer. Triscuit is made of the whole wheat, steam-cooked, shredded and baked. A tasty Summer snack, supplying the greatest amount of nutriment in smallest bulk. Delicious with butter, soft cheese or marmalades.

Made in Canada

ALSATIANS LEARN FRENCH.

Children Acquire Language in Fifteen Months.

H. Warner Allen, the representative of the British Press with the French army, describes in the following dispatch the rapid progress the Alsatian children have made in the study of French since the welcome invasion of the French:

"After 45 years French is once again taught in the schools of Alsace. When the French marched victoriously into Alsace they marched from the frontier toward the Rhine beneath a rain of flowers which moved the Germans to send a message to the rebellious Alsatians: 'You have received the French with roses, but we shall return with forget-me-nots!'—and nothing could be more surprising than the extraordinary progress made by the children in learning French in the interval since then.

"French has become for them a familiar tongue. I have heard children teaching one another French in the street, and every child makes a point of saying "Bon jour!" to the French officer who passes. One little girl was saying good-by to a relation, apparently an aunt. 'Auf wiedersehen!' said the aunt. 'No,' said the child indignantly, 'we are French now! Au revoir!' The authorities have found that 15 months' schooling is sufficient to give an Alsatian boy or girl a thorough grounding in the language and literature which were once forbidden.

"One of the pupils of one of the schools which I visited is a girl of 12. She was chosen to present a bouquet of flowers to a certain high personage who was visiting the district. 'I knew,' said the administrator, 'that she would say something apt and to the point.' The high personage, as he accepted the flowers, asked the child whether she was fond of France. To his horror she replied, in French, of course, 'No, sir; I am not fond of France.' There was an awkward pause, which the child obviously enjoyed, and then, with a wicked twinkle in her eye, she finished her sentence, 'I adore France.' This pupil gave me a message for the English people, which I am happy to transmit.

"'Please, monsieur,' she said, 'tell the English to hurry up and win.'"

Legislation was once threatened to prevent Toronto holding an Exhibition except in years specified by the Ontario Government. Fortunately, the matter never reached the House.

Auntie—"Are you getting marks at school, Freddie?" Freddie—"Yes, auntie—only I can't show 'em to you."

Tea and Coffee For Children?

These beverages contain drug elements that hinder development of both body and mind, especially in children.

Nowadays, for their children, wise parents choose

POSTUM

This delicious table beverage, made of cereals, has a wonderfully satisfying flavor and is entirely free from caffeine, the drug in both tea and coffee. Postum is a true, pure food-drink that has helped thousands to forget the tea or coffee habit.

"There's a Reason"

Grocers everywhere sell POSTUM

Canadian Postum Cereal Co., Ltd., Windsor, Ont.

EARL OF CRAWFORD IS A DEMOCRAT

NEW MEMBER OF THE COALITION CABINET IN BRITAIN.

In Army Medical Corps When War Broke Out, and Rose to Rank of Corporal.

The inclusion of the Earl of Crawford in the British Cabinet as successor to Lord Selborne, as President of the Board of Agriculture, is an appointment that is certain to be popular with members of all parties. It will be very popular with members of the House of Commons, in which chamber the earl sat for fifteen successive years as member for the Chorley division of Lancashire, prior to his accession to the peerage on his father's death three years ago. For Lord Balcarres (pronounced "Balcarres" with the accent on the second syllable) as he was in his House of Commons days, was immensely popular personally with political friends and opponents alike. In fact, it used to be said of him that he was one of the four most popular men in the House, the other three being Sir George Younger, Unionist Member for Ayr; Mr. Ure, then Lord Advocate for Scotland in Mr. Asquith's Govern-

Earl of Crawford.

ment, and Sir Edward Carson. Which goes to show that the House of Commons is pretty catholic in its tastes as regards its favorites.

For some years the then Lord Balcarres was a junior Lord of the Treasury and one of the Unionist whips. In fact, his tact and geniality had not a little to do with keeping Mr. Balfour's Government, in the days when it was tottering to its fall, in office. When the war broke out the Earl, who is forty-five years old, went to the front as an ambulance bearer, enlisting as a private and subsequently attaining the rank of "Corporal Crawford."

The Tory Democrat.

David Alexander Edward Lindsay is his full name, but he is known to his friends (and their number is legion) as "Hal." Though a Tory in politics, he is extremely democratic in temperament. He is an athlete, a fine boxer, a teetotaller, and possessed of a fund of humor which never degenerates into bitterness. He owns about fifteen thousand acres, and a couple of fine country seats, Haigh Hall, Wigan, and Balcarres House in Fifeshire, for one division of which Scottish county Mr. Asquith is member.

The Lindsays, of which family he is the head, are known in Scotland as "the Light Lindsays" because of the sandy hair which usually prevails in their family, though, as it happens, the present Earl's hair is dark. In the same way, all over Scotland the Campbells are known as "the Red Campbells," and the Douglasses as "the Black Douglasses." The present Lord Crawford has six children—two boys, of whom the elder, the heir to the earldom, is sixteen years old, and four girls. His wife is the younger daughter of the late Sir Henry Pelly, Baronet. Her elder sister, as Miss Annie Pelly, was well known in Canada as lady-in-waiting to H.R.H. the Duchess of Connaught, and married Capt. Rivers-Bulkeley, A.D.C. to the Duke, who was killed in action the year before last.

Lord Crawford is an extremely good chess player. He is also an authority on Italian art, is trustee of the National Portrait Gallery, and belongs to the Fine Arts Club. As a Parliamentary speaker he is bright and original, and, while he has no pretensions of eloquence, his speeches are full of sound common sense. Altogether, he is one of those aristocrats of whom it cannot be said, as it can of many, that they are like potatoes because the best part of them is under the ground.

His Famous Lineage.

The Lindsays are one of the greatest houses in Scotland. The Earl of Crawford is the twenty-seventh earl—the premier Earl of Scotland. The house has a very remote feudal, and even legendary, history, an early ancestor being reputed to be descended from "Thor," who was reputed to be the son of "Odin." The family is supposed to be related to William the Conqueror, and members of it frequently intermarried with the Royal Scottish houses of Bruce and Stuart. Walter de Lindsay, an ancestor of Lord Crawford's, sat in the Scottish Parliament as a lord, in virtue of his estates. The first earl, who was known as the ninth Lord of Crawford, obtained his earldom from King Richard II. in the year 1398 as a reward for his "prowess in a passage of arms with Lord Weyles upon London bridge before King Richard II. and his Queen." The sixth earl fell, with so many other Scottish nobles, in the battle of Flodden Field, and the sixteenth early fought on the Royalist side in the battle of Marston Moor.

Some idea of the high esteem in which the family held itself, and was held by others, may be gathered from the fact that when King James IV of Scotland, in 1488, created the Earl of Crawford of that day, who was Lord High Admiral and Lord Justiciary of Scotland, Duke of Montrose, the earl didn't assume the title. He thought his dignity of such a degree that it was not in the power of any monarch to enhance it. His successors in the earldom took the same view, and a couple of hundred years later, the dukedom of Montrose was conferred upon the house of Graham, another ancient Scottish house, who held it to-day.

However, we live in other days. The Earl of Crawford in the fifteenth century would accept no title from his king. The Earl of Crawford of to-day has wooed the suffrages of the electors, and very successfully, too, for he came triumphantly through seven elections in his House of Commons days. And as member of the present Cabinet is more simple and unaffected, and less "stuck on himself" than he is.

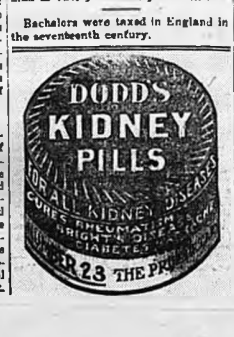
Batteries, Magnetos, Generators, Etc.

ROLL OF HONOR.

Several thousand officers and employees of the Canadian Pacific Railway Company enlisted for active military duty with the Canadian Expeditionary Forces, and the majority of them are now in Europe, bravely battling for Canada and the Empire.

As particulars of Army Recruits are not available, these lists of those who have given up their lives for their country or been wounded in action are necessarily incomplete, and do not therefore indicate fully the extent to which the Company's officers and employees have participated in the great struggle.



Addison, Herbert, carpenter, Winnipeg, wounded; Anderson, John M., clerk, Calgary, wounded; Arlke, Harry, tariff compiler, Winnipeg, wounded; Atkinson, Arthur, cook, Montreal, wounded; Boushear, Henry, engineer, Fort William, wounded; Burritt, Edgar M., clerk, North Bay, killed in action; Chapman, Edward, machinist, Angus, killed in action; Diver, John W. car repairer, Toronto, killed in action; Ellis, Thomas G. G., record clerk, Montreal, died of wounds; Foster, James B., car repairer, Fort William, wounded; Gilchrist, Thomas R., draftsman, Ogden shops, suffering from shock; Hamilton, Edward, deliveryman, Winnipeg, wounded; Haswell, John, boilermaker's helper, Moose Jaw, wounded; Hilliard, Samuel J., porter, Edmonton, wounded; Hogg, James, clerk, Montreal, killed in action; Hunt, Thomas, fitter's helper, West Toronto, suffering from shock; Kinahan, Ernest, switchman, Brit. Colurs. Div., wounded; Kirwan, George I., brakeman, MacLeod, wounded; McCourt, Samuel, laborer, Strathcona, killed in action; MacLaurin, Douglas C., student fireman, Sortin, died of wounds; Maslin, Walter, wood machine hand, West Toronto, wounded (2nd time); Morrison Harvey, asst. agent, Pilot Mound, wounded; Moss, Albert, car inspector, Saskatoon, killed in action; Parkes, Herbert W., clerk, Montreal, wounded; Price, John, loco. fireman, Montreal, wounded; Ross, Lorne, fitter's helper, London, killed in action; Scammell, Edward J., clerk, Bull River, wounded; Sheen, Wilfred J., clerk, Winnipeg, suffering from shock; Sweetman, L. H., asst agent, Strathcona, died of wounds.

Would Be Unkind.

He—I wish you'd drop the "Mister" and call me plain George.

She—Oh, but it would be very unkind to twit you about your looks.

Bachelors were taxed in England in the seventeenth century.

OUTNUMBERED BY WOMEN.

German Men in Government Service Now in Minority.

As a result of the men having been called to the colors, the number of women employed in Government bureaus and offices in Germany has gradually increased until now the female employes are in a decided majority, says the North German Gazette. The rate of increase in the employment of women in office work during 1915 is shown by the figures during each three-month period. Of these new employes the women formed 40 per cent. in the first quarter of the year, 43 in the second, 48 in the third and 52 in the last.

Another feature brought out by the report of the State Insurance Fund is the rapid increase in the number of young persons taking office jobs. While in the first few months following the outbreak of the war the number of new employes under 18 years old was smaller than that of those over 18, a sharp change in the average age of the applicants was noted in December, 1914, and the data for 1915 shows that the number of employes under 18 hired during that year was 134,461, against 83,815 who had passed that age.

He Knew.

"Now," said the professor of chemistry, "under what combination is gold most quickly released?"

The student pondered a moment. "I know sir," he answered. "Marriage."

One Chance Left.

Husband—"Take dancing lessons! Not much! There are too many other ways by which I can make a fool of myself."

Wife—"Yes, dear; but you have tried all those."

The Toronto Board of Trade urged the C.N.E. directors to run the Fair for three months as far back as 1885, but the management thought two weeks quite long enough.

Proving the Proverb.

"'Distance lends enchantment to the view,' some poet says."

"That's right! At any rate it's easier to admire a girl when she's well off."

Keep Minard's Liniment in the house

She Knew a Windfall.

"Why, these apples are dirty," complained the young housekeeper.

"Well, yes, they are," admitted the farmer. "You see they are windfalls, and that is why I can sell them so cheap."

"You mean they've fallen from the trees on to the ground, but they are otherwise all right?" the customer inquired; then, proud of her ready understanding, she bought them.

Several days later she called the farmer's wife on the telephone.

"I ordered the best cucumbers for pickling," she said sharply, "and you've sent me windfalls!"

"Sent what?" gasped the farmer's wife.

"Windfall cucumbers! I can tell; you needn't think I can't. There's dirt on them!"

Measuring the Wind.

The speed of the wind is measured by means of an ingenious instrument called the anemometer. It is like a weather vane, with cups instead of lotions at the ends of its arms. The cups, catching the wind, while round, and thus turn the central shaft. This passes down into a box in which are several dials. The indicators of those dials are connected with the shaft, and move according to its revolutions. Thus the number of revolutions of the cup in a certain time gives the exact speed in miles per hour.

The first successful Atlantic cable was laid in 1866.

RATS IN TRENCHES.

Killed by Electricity—How French Clean Rodents Out.

Numerous have been the methods employed by the soldiers in the French trenches to kill the rats which constitute a veritable plague in the western war zone; but perhaps none has been so interesting—and so effective—as the electric method. A trough is excavated along a rat-run adjoining the trenches, and over this are placed three wires running parallel to each other. A constant supply of current is maintained in the wires, which are spaced only a few inches apart. The rats, in crossing the trough, come in contact with the wires, resulting in immediate death. It is reported that hundreds of rats are killed each week by this method.

KEEP CHILDREN WELL DURING HOT WEATHER.

Every mother knows how fatal the hot summer months are to small children. Cholera infantum, diarrhoea, dysentery and stomach troubles are rife at this time and often a precious little life is lost after only a few hours illness. The mother who keeps Baby's Own Tablets in the house feels safe. The occasional use of the Tablets prevents stomach and bowel troubles, or if trouble comes suddenly as it generally does—the Tablets will bring the baby safely through. They are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

He Also Ran.

A young man was stopped at the door of a fashionable church by the sexton with the inquiry:

"Are you related to the bride or bridegroom?"

"No," was the answer.

"Then," the sexton said, "you will pardon me for asking what interest you have in a ceremony that is to be of the quietest character?"

"I am," the young man announced, sadly, "I am the defeated candidate."

I bought a horse with a supposedly incurable ringbone for $30.00. Cured him with $1.00 worth of MINARD'S LINIMENT and sold him for $85.00. Profit on Liniment, $54.

Differentiation.

"How did Smith make all his money?"

"By judicious speculation."

"And how did Jones lose his fortune?"

"Dabbling in stocks."

A Chance for the Boys.

The Prize List of the Seventh Annual Toronto Fat Stock Show is now out and contains many new classes with attractive prizes. Among these is the Boys' Steer Feeding Competition, open to the boys entered in the inter-county Baby Beef Competition conducted by the Department of Agriculture. The management are offering a good prize and this class should be a popular one.

Minard's Liniment Lumberman's Friend

Elephants Not Cowards.

The fear an elephant has for a rat has often been spoken of as an example of colossal cowardice. But it is nothing of the kind. The elephant, when captive and in chains, has every reason to regard with terror the little rodent, which, in the still watches of the night, gnaws the toenails of the helpless pachyderm. Not much of this sort of thing is required to make the huge creature lame.

The Paisley Advocate

PAISLEY, AUG. 9th, 1916

—There was one person who didn't get fair play at the public meeting here on Friday. Surely a Lieutenant who was personally attacked in the speech of a Major should have been allowed to vindicate himself right there.

—How much the east has been behind the west is demonstrated by the difference in transportation methods on the French warfront and in the Balkan region. In their first advance into Serbia the Bulgarian army used old time ox-carts, but since then the motor truck has been adopted instead. The officer in charge of the supply department states that one truck does in a day the work of five hundred oxen, two hundred and fifty carts and three hundred men. The same advance, of course, has occurred since the day of the ox-team in the back woods of Canada, but that is now fifty and sixty years back.

—The following message to the press from Lloyd George is reassuring: "The beginning of the third year of the war opens out a prospect which was not visible except to those of strongest faith a year ago. In August, 1915, those who knew the difficulties and the means at the command of the Allies to surmount them had grave apprehensions as to the course of the war in the coming months. Now those who know the most fear the least. We have now the equipment for victory in men and material. The great battle of July has demonstrated that our armament is, to say the least, equal to the best our foe can command, and that our men are better than the best he can put into the battle line. Each month sees our armament increasing and our men improving. Let the nation be of good heart. Its sacrifices for humanity are great, but its services for humanity are greater."

Former Paisley Man Shot

John Marshall, chief of police in the town of La Grange, Ill., and a brother Mr Henry Marshall of Paisley (now with the overseas forces as an electrician), lost his life a few days ago in the performance of his duty. Chief Marshall had been advised that a couple of bad ones had struck town, and went in search of them. He accosted a couple of men noticed standing in the shade of a tree, and without replying to his question as to what they were doing there, one of the thugs drew his revolver and shot him. As Marshall fell the two men ran and escaped the bullets he sent after them. The chief died from his wounds a few days later. John Marshall had been connected with the police force for eight years, and for many years before was with the fire department of La Grange, and was a conscientious and fearless officer. He was born in Ireland in 1868, and from nine to fourteen years of age lived in Paisley. He had been at La Grange since he was 21. He is survived by his wife and four children.

Editor ADVOCATE—

At the public meeting here last Friday Major Moffatt of the 160th Batt. C.E.F., made the statement that a lieutenant of Paisley had said that he had offered his services to go overseas with the 160th but that his application was not considered, and further, that he actually hindered recruiting, and he could prove it. And as the major acknowledged that I was the lieutenant referred to, I asked the chairman for permission to refute the charges but this was refused me. Since I was not permitted to reply on the public platform where the charges were made, I take this opportunity of saying that I never made such a statement and the charges are pure fabrication or idle gossip. The records will show that I did recruit quite a number of men for the 160th, without asking for or receiving any remuneration whatever, and I rendered every assistance to the recruiting officers placed here. Now, since Major Moffatt has made the public statement that he did I trust that he will be man enough to come across with the proof. I am ready at any time to back up my statement.

Thanking you, Mr Editor, for your valuable space.

H G ECKEL, Lieut.,
D Co., 32nd Regt.

Passed Form III Exam

Five out of fifteen students from Paisley Continuation School were successful in the recent examination for Entrance to the Normal School. The fifth pupil is Elizabeth McLennan, who has been in Port Arthur since Easter. Following is the list of successful students from Bruce Co:

DIED

SPARROW—In Elderslie, on Aug 5th, John Sparrow, aged 78 years, 11 months and 25 days.

Patriotic Field Day

Farmers were exceedingly busy and the weather was very hot on Friday last, and considering these two conditions alone, the attendance at Riverside Park for the patriotic speaking and field day sports was very gratifying. There was a representation here from all the nearby towns and villages, as well as from a number of the more distant ones. The platform proceedings at the grounds were opened by Warden McNab, who occupied the chair.

Mr Alex McNeill, ex-M P, of Wiarton, is a speaker well known to Paisley audiences of long syne. In the course of an able address he recalled a night of forty years ago when a joint meeting of both political parties was held in Paisley to endorse a resolution passed at Allenford by the Conservative Association, which assured the mother country of our sympathy and determination to support her in the hour of her extremity. The resolution was sent to the High Chancellor of Britain, and was later acknowledged by Premier Beaconsfield. The London Times published the resolution, also gave a long reading article anent it. The resolution had done a great deal in promoting imperial unity, establishing preferential trade within the Empire. Eighteen years later, Mr Jos Chamberlain referred to the resolution, stating that its words reverberated around the world, and had emboldened him in enunciating his policy of tariff reform.

Capt. McConnell, of Loudon, brought a direct message from headquarters to the effect that the officers there are very well pleased with the work done in recruiting in Bruce Co. The 160th band, he said, was the best he had yet heard, and if the Batt is as good as its musical unit it would not be long before getting overseas. The war of to-day is being fought for the maintenance of liberties won to Britons in the days of King Alfred, 1000 years ago. He alluded to the pride that Canadians felt in being able to send 3,300 men to England in six weeks. The voluntary system of enlistment, he said, had accomplished more than any on record, but recruiting has now practically stopped. The Government is going to adopt what in the opinion of the public is the best plan. The military department is getting information from all sources as to the best methods to adopt. Business men, professional men and the laity will be asked to take a part in the work. Conscription would root out a great many men who should be in khaki. We know that that there are now many in khaki who are making such sacrifices that they can never be fully compensated. Capt McConnell does not think we need conscription. He is firmly convinced that the volteer system is not dead nor likely to be. He expressed the opinion that Bruce Co could raise another half battalion in the near future.

Major Moffat, of the 160th, appeared as the representative of Col Weir, the C.O., who could not be present. The major, in the course of his address, stated that according to the returns accumulated in the 160th recruiting campaign, there are still 5000 eligible men in Bruce Co., of whom there should be fully 3000 available.

Senator Donnelly pointed out that there was food for thought in the statement that had it not been for conscription in Russia and France the German armies would have marched entirely over those countries before Britain could get her army ready.

MP R F Truax, M P, said there would be some difficulty at present time if an attempt is made to organize another battalion in this county. He did not think Major Moffat was fair in his comparison of counties. There are more young men in large towns such as there are in Wellington Co. Also many of our young men had gone west. There are not as many young men in the rural districts of Bruce as in other counties, and to take more away would make it very difficult to carry on farming as it should be. On the previous Wednesday, in the course of a run through the country, Mr Truax had observed three women helping at haying, driving horses while they held babies in their arms. He gave his opinion that about three or four hundred more recruits in about the limit that can be secured in this county. If more were taken it would cripple both farming and manufacturing. Factories would simply have to shut down. Practically all men in his factory who are eligible have enlisted. He quite agreed with Major Moffat, however, in that there are scores of young men at whom the finger of scorn can be pointed.

Mr W D Cargill, M P P, drew attention to the fact that the aims and objects of the Preparedness League had not so fully been laid before the meeting as they might have been. He urged all to rally for the League when local meetings are called in the various polling subdivisions, and do utmost to have committees appointed that will take a live interest in the League, which is intended to serve the interests of all classes of citizens. In regard to supporting the mother country in this great crisis, he said Bruce does not take a back seat to any other part of the Dominion. To come back and ask for more men now seems like rubbing it in. But it is a serious matter, and we may all have to go yet, although the outlook at present is hopeful.

Mr Wm McDonald, M P P, noted in connection with conscription, the changed attitude of Britain towards that method of getting the men. If we are going to make a success of our recruiting campaign, he said, we should have a modified form of conscription. It is not such a bad thing after all, and if we are going to have conscription at all we ought to have it now. After the war we don't want any more soldiers than will police the country. He is in accord with the Preparedness League. He had noticed that some soldiers who had come back to Toronto from the front cannot get their old jobs.

Mr C M Bowman, M P P, holds that Bruce Co will continue to meet every demand that becomes its duty to meet. He desired to impress upon his hearers the importance of the Preparedness League. A duty devolves upon every man and woman in Bruce to face the serious problems that will confront us after the war. He expressed himself as in favor of a form of conscription that will bring the one slacking province up to the standard of the others. The call for further enlistment of men from Ontario does not appeal with the same force as it would if all were doing their full duty.

Mr John Rowland declared there were 600 young men available in Carrick Tp. also a lot in Culross.

Sheriff Jermyn favors a form of conscription after the war. This does not mean that every man should be a military man, but would provide for future war emergencies, should any arise. Quebec has a double right to rally to the support of the Allies, as the people of that province are of French blood and British birth. Conscription was Germany's strength, and had there been conscription in Britain the war might now be at an end. Conscription is only a form of organization.

A E Belcher, of Toronto, also gave a short speech.

Chairman McNab intimated that it was desirous to have all branches of the Preparedness League organized at once and returns completed.

The following resolution was read and passed by a vote of the audience:

"That at this public meeting of Canadians, and in particular citizens of Bruce County, assembled at Paisley this 4th day of August, 1916, in response to the request of His Honor Sir John S Hendrie, K C M G, Lieut-Governor of the Province of Ontario, on this, the second anniversary of the declaration by Great Britain of war against Germany, we desire to re-affirm our conviction of the righteousness of our cause; to again record our inalienable loyalty and devotion to our beloved Mother country; to acknowledge and impress upon our children and people generally the grave fact that this contest fought on foreign soil is as fully in defence of our own and all British homes across the sea as well as in Great Britain, as it is waged at the call of honor, and justice and humanity, to restore the liberties ravished by the Huns in Belgium, France, Russia and Serbia; to honor the heroes who have fallen; to express our pride in the glorious achievements on land and sea of our soldiers and sailors; to thank them for their supreme sacrifices and devotion; to assure them of our care for their families and of our support of their arduous labors. Finally, we would earnestly remind the Prime Minister and the Government of this Dominion of Canada of the unfaltering public support that has been given to all measures tending to strengthen the hand of the Empire in this dreadful struggle, and we would entreat them and the Loyal Opposition in Parliament to continue to make this grave matter their supreme care. We pledge our support to all enactments which in their wisdom our representatives in Parliament may consider it necessary to secure the men and financial aid required to make victory sure and to wrest from our enemies that peace which militarism has so wantonly scorned.

The Women's Patriotic League had arranged to hold a concert in the town hall in the evening, but on account of the oppressive heat it was decided to make it a promenade concert on the grounds, and this decision proved to be a happy one, as the evening was an ideal one for outdoor enjoyment, while it would have been unbearable in a hall. The programme consisted of concert selections by the 160th Band, solos by Miss Giles, of Tiverton, recitations by Mr Harry Stevens of Chesley, and a short address by Judge Klein. The chair was occupied by Mr J H Steele. The committee are particularly grateful to Miss Giles and Mr Stevens for the services they rendered free of charge in entertaining the audience.

The Band was the big attraction. The music enlivened the day when ever heard, and everyone noted the great improvement since their first appearance here last winter. Good music is essential to the existence of a military regiment, and the 160th certainly has it in their band.

A tug-o'-war between ten civilians and ten soldiers was easily won in two straight pulls by the former. The giants of Bruce are not all in khaki. A majority of the victorious team are past the military age. The young men have the activity and endurance necessary for soldier life, while these twenty years older have the weight and power for pulling a rope end.

Paisley baseball team again put it over Ebenezer in the match played.

The Paisley building lot donated by Mr H Boettger to patriotic purposes, has not yet been disposed of. Tickets are for sale at 25c each.

The drawing for crochet toilet set was made at the concert. Mrs J Thompson, of R R No 2, was the lucky ticket holder.

The Women's Patriotic League did a great trade in cooling refreshments. Ice cream sold like hot cakes, so to speak, and the fish pond was well patronized. In all about $210 was taken in during the afternoon and evening. The large tent loaned by the 160th was used as a restaurant.

To Tie Dogs One Year

Even more energetic measures are to be undertaken by the Provincial Board of Health to stamp out rabies within the Province. The board has decided to issue regulations requiring that all dogs suspected of being affected by the disease shall be securely tied up or kept within an enclosure for a year. It has been found that the muzzling of dogs, as required by the regulations which have been in force since 1910, is really a farce and do not effectively mitigate the danger, hence the new regulations requiring the animals to be tied up or kept within an enclosure.

FELT LIKE A NEW PERSON

After Taking Only One Box Of "Fruit-a-tives"

EAST SHIP HARBOUR, N. S.

"It is with great pleasure that I write to tell you of the *wonderful benefits* I have received from taking "Fruit-a-tives". For years, I was a dreadful sufferer from *Constipation and Headaches*, and I was miserable in every way. Nothing in the way of medicines seemed to help me. Then I finally tried "Fruit-a-tives" and the effect was splendid. After taking one box, I feel like a new person, to have relief from those sickening Headaches".

Mrs. MARTHA DEWOLFE.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

A THOUGHTFUL GIFT

Send THE ADVOCATE to the absent member of the family or to the distant friend. It is as good as a letter from home and is a weekly visitor. You can better imagine how the home paper is appreciated when you are absent yourself and a copy is forwarded to you.

OUR SHOES LOOK, FIT, FEEL AND WEAR WELL

AND WE "PRICE" OUR SHOES LOW WHEN WE MARK THEM. SHOES MAY LOOK THE SAME AND YET NOT BE THE SAME -- NOT BY A WHOLE HIDE FULL.

THE LEATHERS USED IN MAKING THEM AND THE WAY THEY ARE MADE HAS ALL TO DO WITH THE WEARING QUALITY OF SHOES.

WE STAND BEHIND EVERY PAIR OF SHOES WE SELL.

Men's White Elk Shoes

We have a limited quantity of these White Elk Shoes for everyday wear. The leather is soft and pliable as a glove, and will stay that way. The last is comfortable without being clumsy. We think this is extra value at the price.... ..... $4.50

Men's White Oxfords

Several pair of Men's White Canvas Oxfords. The coolest shoes you can wear. To clear at $1.25

We have nearly every requirement in Shoes.

BALLACHEY, LAIDLAW & CO.

Both 'Phones — Top Prices for All Produce

Eye Aid.

Just how much is required must be accurately measured. Too little would only partly relieve the trouble. Too much would injure the eyes. We use the best modern optical appliances, absolutely correcting optical defects and guarantee satisfaction.

A STOPPED WATCH

—one that will not go AT ALL—does not cause as much bother as one that runs now fast, now slow, in an erratic fashion.

The first you don't pretend to depend upon—the other is a constant source of annoyance.

Most people can afford a watch, but no one can afford an uncertain fast and slow one.

And when our Repair Department is so close at hand there is really no excuse for carrying anything but an accurate time-piece, no matter what the first cost was.

Consult us about any watch troubles that may arise.

Clerk's Notice of First Posting of Voters' List

Voters' List of 1916, Municipality of the Village of Paisley, County of Bruce

NOTICE is hereby given that I have transmitted or delivered to the persons mentioned in section 6 of the Ontario Voters' List Act, the copies required by said sections to be delivered or transmitted of the list, made pursuant to said act of all persons appearing by the last revised assessment roll of the said municipality to be entitled to vote in the said municipality at elections for members to the Legislative Assembly and at municipal elections, and that the said list was first posted up in my office at Town Hall, Paisley, on the 31st day of July, 1916, and remains there for inspection. And I hereby call upon all voters to take immediate proceedings to have any errors or omissions corrected according to law.

Dated this 31st day of July, A. D. 1916

J C GIBSON, Town Clerk of Paisley.

Snowdon—Barrie

A pretty wedding was solemnized on Wednesday evening, July 26th, at the home of Mr and Mrs Wm Barrie, Laval, when their daughter Miss Margaret became the bride of Mr George Snowdon, concession 6, Bruce. Rev G C Little, pastor of Knox church, officiated in the presence of immediate relatives. Miss Snowdon, the groom's sister, played the wedding march. The bride, who was given away by her father, looked charming in a lovely gown of white embroidered point d'esprit over duchess satin, and carried a bouquet of pink roses and maiden hair fern. Her little niece, Sybil Parker, was her only attendant, wearing a dainty frock of white voile, carrying a basket of sweet peas enclosing the wedding ring. The groom's gift to the bride was an emerald and pearl necklace, to the pianist a silver chatelain and to the flower girl a locket and chain. Mr and Mrs Snowdon are spending part of the honeymoon at Laverburn Beach, and will reside on the groom's farm, con 6, Bruce.

Canned Goods Safety

IS IN PAYING THE PRICE

There is no use in the world trying to combine cheapness and quality in Canned Goods, nor in any other line, for that matter.

High grades cost a trifle more, but for that extra in Canned Goods you get—

Assurance of purity
Appetizingness
Wholesomeness

—and these are the things that stand for healthful food.

We confine our purchases to well known and tried brands.

So we offer every customer Canned Goods safety in every article.

Veteran Wanted to Enlist

An aged man, over 62 years, has offered his services to Lieut S Clement, recruiting at Sarnia for the 21th American Legion. Owing to his age he was turned down, although he was apparently strong and hearty. He told that he had seen service in Egypt, South Africa, India and that he was not yet too old to see some more real fighting. When he was told that he was too old the would-be legioner refused to give his name, but went away with a disappointed look.

Dave Circus With a Car

Lymon Chapman, a farmer of Williams, brought his car and neighbor to Strathroy, one day lately and while Chapman was in a store on Front st the car and the neighbor put on an interesting performance which ended in the wreck of the car. Mr. James McQueen, the neighbor, had no experience with cars, so that when he accidentally stepped on the self starting lever he did not know what the consequence would be. The car had been left in high gear and when the engine started it almost lifted the car off the road, and started it down the road at a speed approaching 25 miles an hour. McQueen could not stop the car, but hung to the wheel, cork-screwing at high speed through the street. Finally the machine skidded and crashed through the front door of James Northcott's residence, knocking out the door frame. Several windows also were broken in the house. The car was almost a complete wreck. But Mr. McQueen escaped. The tires were torn to shreds and the floor of the car was badly smashed.

Nearly Stopped the Fair

Walkerton's annual Fall Fair was nearly but out of business for this year by the dismal discovery made by the directors that the soldiers who were quartered in the exhibition grounds had done away with the tables in the palace, and had burned up the hog-pens for fuel, besides laying a destructive hand on many of the cattle and horse stalls. It was a sight for sore eyes, and judging by the amount of lumber consumed the soldiers certainly kept "The Home Fires Burning" during the sojourn on the grounds. As it would be unchivalrous to put up a holler, and as all is fair in love and war, the directors took the blow with the resigned look of ones who had been struck in the stomach with a baseball batted by a blacksmith's apprentice. It hurt, but they didn't squeal, though they almost decided to quit the game and throw up the Fair for this year on account of the slap. Just how near the Fair was from being put off will probably never be known, but just as the picture looked its bluest, some of the missing lumber turned up behind the Town Hall, where it had been carted by the battalion teamsters, and as even this meagre blessing look good to a board got overburdened with finance, they grew optimistic and decided to take another chance and get out a prize list. Thus was Walkerton's annual attraction saved for 1916, and the Board demonstrated that it is a regular old Canadian burr for stick-to-it-ness in this crisis.—Herald and Times.

—We have a big assortment of ladies wash skirts, middies and other hot weather wearables. Ballachey, Laidlaw & Co,

"UNCOVENANTIT BODIES"

Toronto News

The Methodist and Congregational churches and three-fifths of the communicants in the Presbyterian church have voted for organic union of the three bodies. A meagre two-fifths of the members in the last named denomination block a movement designed to lessen materially the cleavages in Canadian Christianity, to eliminate much duplication of effort, and to increase enormously the combined efficiency of the evangelical church in the home and foreign mission fields. It is recognized that the task of Canadianizing the foreign born population of the Dominion can scarcely be overtaken without united action of the character which the proposed amalgamation would bring.

To those in favor of union the persistence of a small minority in blocking a great national church union is in accord with the ecclesiastical history of the Scottish race, which Robert Louis Stevenson called the most perverse and melancholy in man's annals. As he said, "we are wonderfully patient haters for conscience sake up here in the north." The General Assemblies of the Established and Free Churches meet simultaneously in rival halls, on either side of High Street, Edinburgh, and "they can hear each other singing psalms across the way." There is but a street between them in space, but a shadow between them in principle, and yet there they sit, enchanted, and in "damnatory accents pray for each others' growth in grace. It would be well if there were no more than two; but the sects in Scotland form a large family of sisters, and the chalk lines are thickly drawn and run through the midst of many private homes."

Stevenson proceeds: "Edinburgh is a city of churches as though it were a place of pilgrimage. You will see four within a stone cast at the head of the West Bow. Some are crowded to the doors; some are empty like monuments; and yet you will ever find new ones in the building. Hence that surprising clamor of church bells that suddenly breaks out upon the Sabbath morning; from Trinity and Ue sea-skirts to Morningside on the borders of the hills, I have heard the chimes of Oxford playing their symphony in a golden autumn morning, and beautiful it was to hear. But in Edinburgh all manner of loud bells join, or rather disjoin, in one swelling brutal babblement of noise. Now one overtakes another and now lags behind it; now five or six all strike on the period tympanum at the same quartual instant of time, and make together a dismal chord of discord, and now for a second all seem to have conspired to hold their peace."

In his conception there are not many uproars in this world more dismal than the Sabbath bells in Edinburgh, "a harsh, ecclesiastical tocsin; the outcry of incongruous orthodoxies, calling on every separate conventicler to put up a protest, each in his own synagogue, against "right-hand extremes and left-hand defections." And surely, says Stevenson, there are few worse extremes than this extremity of zeal and few more deplorable defections than "this loyalty to Christian love." He wonders why people, who think almost exactly the same thoughts about one religion, cannot condescend to worship God under the same roof. One is reminded of the much travelled Scotsman who found no satisfaction in the religious exercises of the "uncovenantit lands," with their "graceless means of grace" and who on returning home repaired with pleasant anticipations to his "ane kirk."

An' man it was a joy to me
The pu'pit an' the pews to see
The pennies drillin' in the plate,
The elders lookin' on in state;
Pleased as I was, I'm no denyin'
Some matters were not edifyin';
For first I fand—an' here was news!
Here hymn book's cockin' in the pews—
A humanized abomination,
Unfit for any congregation.

As the service proceeded he took umbrage at the new precentor's style, the prayer was not what he expected, and his drooping spirit did not recover until the mesmister "waled a judeecious text," and "swoopt wi' a skirl on a' delusions." There is the important thing. Let all defections and minor differences in forms of worship be magnified and the emphasis placed upon non-essentials. Let there be no tarrying with "Methodists or other uncovenantit" bodies and strange religions.

HOW MRS. BEAN MET THE CRISIS

Carried Safely Through Change of Life by Lydia E. Pinkham's Vegetable Compound.

Nashville, Tenn.—"When I was going through the Change of Life I had a tumor as large as a child's head. The doctor said it was three years coming and gave my medicine for it until I was called away from the city for some time. Of course I could not go to him then, so my sister-in-law told me that she thought Lydia E. Pinkham's Vegetable Compound would cure it. It helped both the Change of Life and the tumor and when I got home I did not need the doctor. I took the Pinkham remedies until the tumor was gone, the doctor said, and I have not felt it since. I tell every one how I was cured. If this letter will help others you are welcome to use it."—Mrs. E. H. BEAN, 526 Joseph Avenue, Nashville, Tenn.

Lydia E. Pinkham's Vegetable Compound, a pure remedy containing the extractive properties of good old fashioned roots and herbs, meets the needs of woman's system at this critical period of her life. Try it.

If there is any symptom in your case which puzzles you, write to the Lydia E. Pinkham Medicine Co., Lynn, Mass.

ADVENTUROUS LIFE OF ENGLISH STEEPLEJACK

Carelessness of Veterans is Cause of Accidents—Some Record Climbs Under Dangerous Conditions

W. Larkins, the famous English steeplejack, writes: Anyone who finds ordinary life dull should become a steeplejack; it is a profession about which there is very little monotony. One's jobs vary very much, and are often exciting, because the steeplejack works in all kinds of weather and at all manner of heights. I have been at the game since I was a lad of twenty-one, and on many occasions I have met with danger and excitement combined during the course of my work. Take a job I once had to do near Stirling, where a chimney stack had got about four feet out of the perpendicular, and had to be pulled down. While I was making the ascent a fierce gale got up, and rain descended in torrents, so that it was all we could do to keep a footing on our ladders. Then, as we got higher, we were further alarmed by the descent of a lot of loose masonry, which, fortunately, just missed us, otherwise we should probably have been dashed to the ground. In spite of these difficulties, we eventually reached the chimney top, where we found a lot of loose bricks and mortar lying, part of which had evidently blown off during our climb. I think we were lucky to come safe through this undertaking, for I assure you that chimney did not need much assistance from us in the matter of coming down.

I met with another exciting adventure when the spire of St. John's Church, at Marchwood, in Hampshire, was struck by lightning. In order to repair this spire it was necessary for my assistant and me to cross Southampton Water, and the only boat we could procure was a tiny affair which would barely take our scaling ladders. We managed to get these on board with some difficulty, and were hoping to cross without trouble, when, after we had left the shore, a sudden squall struck us. We were now about half way across, and it appeared certain that we should be sunk over and over again. In spite of all our efforts, too, we were carried for a considerable distance out of our course. By dint of great efforts, we at last managed to reach dry land without a ducking, and here I managed to do a record climb by scaling the spire in ten minutes.

On another occasion the vane of Truro Cathedral needed greasing. This steeple is 200 feet high, and the climb occupied two hours, so that the greasing of the vane was the smallest part of the undertaking. Talking of accidents, the man in the street would probably never guess that many an accident overtakes the steeplejack through his own carelessness. You might think that anyone who had to spend much of his time high up in the air would exercise great care while in such a precarious position. As a matter of fact, one's tendency is towards carelessness when once one has grown accustomed to working at a distance from the earth.

SOME DEFINITIONS

Baseball—A game in which the young man who bravely strikes out for himself receives no praise.

Bone—Cone Dollar—The original price of a wife. Note, Adam, who had to give up one bone before he got Eve.

Union—An ailing individual frequently troubled by scabs and liable to strike without warning.

Virtue—A quality frequently associated with intelligence but rarely with beauty.

Family—Originally a wife and several children, a matter of pride to the possessor. Now obsolete among the careful, or confined to the wife, a bull pup and a canary bird.

Engagement—In war, a battle. In love, the salubrious calm that precedes the real hostilities.

Love—A man's insane desire to become a woman's meal ticket.

Lent—A church fast that is slow to go; or something loaned which is slow to come back.

Obesity—A surplus gone to waist.

Postscript—The only thing readable in a woman's letter.

Onion—The all-round strength champion of the vegetable kingdom, garlic and cabbage being close rivals.

Optimism—A cheerful frame of mind, that enables a teakettle to sing though in hot water up to its nose.

DISTURBERS OF SLEEP

Meals and Low Pillows Are Very Important Factors

A higher pillow aims at securing sleep. It is the opposite action to that used in first aid for infants. But a built-up pillow often helps sleep in other ways, as by making respiration easier for folks with bronchial or lung or heart defects (the ribs have more freedom to move so) or by facilitating the movements of gases in the intestines. Wind or flatulence is a great cause of sleeplessness. It may prevent one falling asleep for hours, and it tends to make sleep snatchy and unrefreshing. The comfort of the alimentary canal is thus important. A heavy meal within four or five hours of bed time is a mistake, and an indigestible article eaten before sleep may cause disturbing dreams or actual nightmare. Folks differ in their capacity for reconciling sleep and digestion, and there are many to whom a light meal or a warm drink of milk or gruel just before lying down will act like a hypnotic and secure speedy slumber, sound and refreshing.

Heroes Name Peaks

David Livingstone, the pioneer missionary of Central Africa, has had his name bestowed upon a whole range of mountains, not to mention several isolated peaks. Mount Evans, situated high up on the fringe of the eternal snow cap that covers the Antarctic Continent, memorizes the gallant seaman who went with Scott to the South Pole.

Yonge and Charles Sts., Toronto

Made this remarkable average record for the last three months: We were asked to fill more than thirty times as many positions as we had graduates. The business world calls you; prepare here and now splendid opportunities; good salaries. All who are ambitious for a successful start in life should arrange now to enter this popular school.

W. J. ELLIOTT, Principal

THE EARL'S SECRET

Or, a Martyr to Circumstances.

CHAPTER II.—(Cont'd).

"Oh! come back! Please come back! I am sure you will be killed! It is horrible! Do come back!"

While she was still entreating and commanding the handsome, careless face arose above the surface again, and, with slow, cautious movements, the stranger, with the recovered sunshade in his hand, was beside her.

Violet drew a long breath of relief, and then with a smile that was better than all the thanks in the world, said:

"I won't thank you, for I think you were more foolish than even I. You said it was dangerous to look over, and you actually went over! And all for this stupid worthless thing." And she shook the sunshade with annoyance.

"Not altogether for the sunshade," said the gentleman, smiling again. "But I am glad I have got it for you, and I assure you the danger was less than I at first imagined it; indeed, for me there was no danger. I am blessed with a steady nerve, and have had some experience in mountaineering."

Violet looked down, and then up at his calm face.

"It was very good and kind of you," she said, "and I will thank you, after all. I think." Then she made a movement, which he took in intimation that he might say good-day, and, accordingly, he raised his hat—or, rather, would have done so, had not the wind saved him the trouble.

"How provoking!" said Violet, looking after the hat, as it sailed over the cliff, in imitation of the sunshade. "I am afraid there is a fatality about this spot. I do hope you will not go down after it, too!"

"No indeed!" he said, with a light, pleasant laugh; "my hat is really of no consequence——"

"Oh! but of more than my parasol! You have nothing to protect your head, and the sun is quite as hot as it was five minutes ago." And she smiled naively.

"True," he said. "But my head is used to scorching; in fact, rather likes it."

"You must take my sunshade," said Violet, with provoking gravity.

"No, thank you," he said, imitating the gravity and suppressing the smile. "I do not dread the sunstroke, and I have but a few steps to go," nodding the the blazing Cedars.

Violet was guilty of an unmistakable start.

"The Cedars!" she exclaimed, extending her beautiful eyes to their widest. "Are you are not——" and she paused as if absolutely too astonished to conclude the sentence.

"My name is Leicester Dodson," said the gentleman, a slight, but not imperceptible reserve showing upon his face, and in the tone of his voice as he spoke.

"Mr. Dodson's son!" said Violet, slowly, as if the intelligence were too astonishing to be taken in instanter.

The gentleman bowed.

"Mr. Dodson's and Mrs. Dodson's son," he said, with a smile.

For a moment Violet stood still, then her face lit up with its delicious smile, and, with a frank gesture, she held out her hand.

"Then we are neighbors," she said, as Mr. Leicester Dodson, with as much surprise as his courtesy would allow his face to express, took the well-shaped, little hand, "I am Miss Mildmay."

Mr. Leicester dropped her hand as if it had grown redhot and had burned him. Violet colored then, but understood his gesture of repudiation instantly. "He knows how aunt dislikes his people, and is sorry he rescued my sunshade," she thought.

"I am happy to have been of some slight service to you, Miss Mildmay," he said, coldly, with a careless but distant bow; then he turned and walked slowly down the steep path.

Violet, looking down after him until his bare head had dropped slowly out of sight, then said, audibly:

"Well, that is pride now; but it is proper pride, I think," smiled rather sadly, and returned homeward.

"Aunt!" she said, coming into the drawing-room just before dinner was served, and more quietly than was her wont, "I've had an adventure on the cliffs, startling and melodramatic. My sunshade blew over, and a gentleman was polite enough to go after it."

"My dear!" exclaimed the old lady, thinking it one of her darling's jokes.

"It's true, aunt. A stranger risked his neck—precious, no doubt, to himself and family—for a fifteen-and-six-penny sunshade. Imprudent, but heroic, was it not?"

"Very good and kind, but imprudent, as you say, my dear. Young men are so rash!"

"This one was not," said Violet, picking at the costly fringe on her dress; "he was as calm and cool as—as—a cucumber."

"A stranger," said Mrs. Mildmay, smiling. "Whom can it be, I wonder? Somebody staying at the Wenningfords, no doubt."

"Aunt!" said Violet; then suddenly changing the subject, "do not the vicar and his wife dine with us on Saturday?"

"Yes, my dear, and I have asked Mr. and Mrs. Giles. The vicar is a dear, good man, but——"

"Rather a bore," put in Violet, decidedly.

Mrs. Mildmay looked shocked, but Violet, without waiting for a reprimand, went on, with slow and most unusual gravity:

"Do you know, aunt, I should like to ask this heroic gentleman of mine?"

"A perfect stranger, my dear!" said Mrs. Mildmay, with a smile.

"Yes, a perfect stranger, but a gentleman. Perfect strangers who are gentlemen, and heroic enough to risk their lives for one's sunshade, are people worth knowing. Aunt, ask him. He is tall, rather dark, golden-brown, you know, nice eyes, a yellow mustache and—I think that's all I remember—I was going to mention the smile but, of course, he may not always wear that."

"I don't remember him, my dear," said Mrs. Mildmay. "But if you really want to know him I'll try and find out who he is from the servants."

"And ask him to dinner?" urged Violet.

Mrs. Mildmay looked bewildered and puzzled.

"Yes, my dear, if you wish it, and he really belongs to the Wenningfords."

"I do wish it, aunt," said Violet. "But he doesn't belong to the Wenningfords. He belongs to the Cedars, and is no other than Mr. Leicester Dodson, the tallow melter's son!"

* * * *

It is Saturday evening, and Mrs. Mildmay's little dinner is in progress.

There are the vicar and his wife, Mr. and Mrs. Giles from the Farm, and, wondrful to say, the Dodsons from the Cedars.

Miss Violet, had, as usual, had her way with her aristocratic aunt, and the Dodsons are here.

For a whole day Mrs. Mildmay, with tears in her eyes, declared that she would not call at the Cedars; and it was not until Violet had, with greater firmness, vowed that she would go to the Cedars by herself rather than not at all, that the good old lady had given in.

And when they had called, and Mrs. Dodson had accepted the invitation for herself and two menfolk, Violet had still further worried her aunt by declaring that the Dodsons, though they were tallow melters, were not snobs, and that for her part she saw nothing to find fault with in Mrs. Dodson nee, perhaps, rather a redundancy of color in her morning cap.

"Which, my dear aunt," Violet said in conclusion, "is an error in taste not confined to tallow chandlers."

So there they are. Mr. Dodson, the father, a quiet, mild-eyed old gentleman, with a partiality for clear soup; Mrs. Dodson, a smiling, homely looking lady, with a devouring admiration for her son; and the son, Mr. Leicester himself, with no particularly prominent virtues or voices, save that of silence.

He had scarcely spoken a word during the soup and the fish, and Violet had almost made up her mind that he was too proud to unforgiving, and was prepared to dislike him, when suddenly he, looking across the table, met her questioning glance, and, with a smile dispelled his gravity or ill humor as a mist evaporates before the midday sun, broke out into conversation.

Then Violet understands that he is not only heroic but amusing, that he is handsomer even than she had thought him, and that, above all, his manner, speech, and bearing are those of a perfect gentleman.

The entrees are passed round and partaken of.

Mr. Leicester is prescribing the Vicani Pass to Miss Mildmay, and interesting her deeply therein.

Mrs. Dodson is comparing notes with Mrs. Mildmay, and Mr. Dodson is lost in the beauties of a curried fowl, when the butler, a model of solemn propriety, is approached by a footman, with whom he confers in stately, but rather disturbed asides.

"What is it, James?" asks Mrs. Mildmay, who has noticed the conference.

"If you please, ma'am, a gentleman——"

But all explanation is rendered unnecessary by the opening of the door, and the entrance of another servant, who says, with that clear sing-song, proper for the occasion:

"Captain Howard Murpoint!" and stepped, aside, allow a stall, dark gentleman to pass through the doorway.

Conversation immediately ceases.

Dumbly, hostess and guests regard the newscomer; dumbly still, Mrs. Mildmay arises from her chair.

"Captain Murpoint!" she repeats.

"Captain Murpoint!" suddenly echoes Violet, whose quick, thoughtful eyes have been scanning every feature of the dark, pale face from its piercing black eye to the scar on its left cheek, and its black mustache.

"Captain Murpoint!" she repeats, "my father's dearest friend!"

Captain Murpoint came forward, with a smile evidently struggling against some emotion, and met her halfway, taking her outstretched hands, and, looking with what may well pass for tear-dimmed eyes into her pure, youthful face.

"And you are John Mildmay's daughter!" he exclaims, in a tremulous voice. "Poor Jack, poor Jack!" and evidently overcome by the likeness or some memory of the past, Captain Murpoint, after wringing the girl's slight hand, conveys his own to his eyes and—weeps!

CHAPTER III.

In the few minutes consumed by Captain Murpoint in mastering the emotion which the sight of his old friend's daughter had produced, Mrs. Mildmay had recovered from her astonishment, and, with her well-bred composure still a little shaken, came forward, with out-stretched hand.

"And is it, indeed, poor John's old friend, Captain Murpoint?" she said, with a little smile.

"It is, indeed," said the captain, taking her hand, and bending over it with graceful empressement. "Alas, that I should return to find his place empty! Yet scarcely empty, for here is a beautiful reflection of my dear friend's face and form."

And he turned his eyes with affectionate admiration upon Violet again.

Mrs. Mildmay sighed, then quickly called his attention to her guests.

"We have got half through dinner, Captain Murpoint, as you see, but I am sure my friends will not mind a little extension of the meal, while fresh courses are prepared. Let me introduce you. Mrs. Dodson, this is an old friend of Violet's father, consequently a dear friend of ours, Captain Murpoint."

(To be continued).

NATURE GUARDS SECRETS.

Centuries of Study Yield Little to Moon.

Greenwich, England, observatory was founded by Charles II. mainly for the purpose of investigating the movements of the moon in the interests of navigation, but though generations of astronomers have in the intervening two and a half centuries been working at the problem, the moon has not yet been amenable to their mathematics. The astronomer royal, in his report of the work at Greenwich during the last year, calls attention to the increasingly big deviation between the calculated position of the moon in the sky and its real position as shown by the Greenwich observations.

This deviation has lately been increasing in a serious manner, the error last year being more than 12 times as large as it was 20 years ago, the average annual increase amounting in the two decades to half a second of arc in longitude. The cause of the failure of astronomers to make the moon amenable to their exact mathematics, based on the dynamical laws of gravitation, is believed to be some attractive force of which we are at present ignorant, though in all probability one factor is the true shape of the earth, which still awaits accurate determination. Fortunately the chronometer and wireless telegraph have made seamen virtually independent of lunar observations in ascertaining their position in the trackless oceans.

No man is too poor to give advice.

If a man doesn't marry a woman because she is pretty or because she has money, it's a pretty sure sign he is in love with her.

DAUGHTER OF LATE PRESIDENT CLEVELAND NOW A NURSE IN EUROPE.

Miss Esther Cleveland (left), a daughter of the late Grover Cleveland, one time President of the United States, as she appears in the uniform of a nurse in the European war zone. On the right is Sister Pat, a nurse who has been decorated for bravery on the allied front.

The Cream Separator.

It is wonderful to reflect upon the progress that the cream separator has made during the last few years. There are now very few farms where dairying is carried on that have not their separator, even though the people running them may be antiquated in regard to their methods in other respects.

It requires very little demonstrating to convince anyone that a cream separator is a great saving over the old pan method of securing cream. A separator takes up much less room in the dairy than the setting pans, and it obtains a greater yield of butter from the milk used. Moreover, the cream from the separator is quite sweet, and therefore the ripening of it is more easily controlled than where pans are employed, which develop a certain amount of acidity or other ferments due to bacterial activity while the cream is rising.

When the cream separator is carefully managed the skim milk should not contain more than 0.1 per cent. of butter fat, and thus the butter yield is increased by 10 to 12 per cent. as compared with the old pan setting system. This makes a considerable difference in the course of a year where good dairy cows are employed, and would soon pay for the separator.

With care a separator will last for many years and it is generally through carelessness or ignorance that it breaks down. It is important that the separator bearings be well oiled in order to avoid friction and wearing out of parts. Before starting to separate all the sight feed lubricators should be full, and tested to see that the vans in working order. The separated should always be started very slowly, and the speed worked up gradually, and no milk let into the bowl until it is running at full speed.

The milk should be separated as soon as it leaves the cow, as fat is lost in the skim milk when the milk is skimmed below a temperature of 85 deg. F. If cold milk has to be dealt with it should be warmed up to from 100 to 120 deg. F. just before being separated. The separator should be washed immediately after using. If left for some time, as is often done, it gives the slime a chance to dry on the interior of the bowl, and then more time and trouble are required to remove it than if the cleaning were effected as soon as the milk has passed through the machine.

Immediately after use all the parts with which the milk comes into contact should be taken apart and washed with lukewarm water. Hot water should not be used, as it causes part of the milk to cake on, and form a refuge for germs which taint milk. After this the parts should be washed in fairly hot water containing a little soda, and then be dipped in scalding water.

The creamy matter left in the bowl may be put in the pig tub, and care must be taken to thoroughly clean the bowl of all the slime present after separating. The amount of slime in the bowl is a good indication as to whether the milk has been obtained in a cleanly manner or not. The dirtier the milk the more slime there will be present in the bowl.

In order to secure the best results the separator must be worked at the correct speed, which must be maintained at a uniform speed until all the milk is separated.

Cows Need Mineral Matter.

That pigs require a considerable amount of mineral matter in their food is pretty well known but that cows will sometimes suffer from want of it is not so well known. Salt, of course, is always fed to the stock by careful feeders all the year round.

The late Herr Kellner estimated that a cow giving twenty pounds of milk per day should receive about three and a half ounces of lime per day. Many cases have been observed where cows had abnormal appetites and developed the habit of eating wood, etc., that when a sufficient amount of lime was fed the desire to gnaw wood and eat filth stopped.

In sections where the water is soft many good dairymen put lime in the water trough so as to make sure that the animals will get enough of this very important food constituent. The old saying that "a limestone country is a rich country" emphasizes the value of the lime, and it is a well known fact that the bigest boned and thriftiest cattle are raised where the soil has an abundance of lime.

Writing in Wallace's Farmer some time ago, Mr. C. H. Eckles, of the University of Missouri, wrote: "The use of clover, alfalfa, or cowpea hay, in the ration will make certain that this trouble (lack of lime in the feed) will not occur. These foods are the highest in lime content of any which we ordinarily feed. Corn, on the other hand, is the most deficient in lime of all grains ordinarily fed. A pound of alfalfa hay contains practically the same amount of lime as 100 pounds of corn.

"We found a herd of dairy cattle in this state suffering from a lack of lime—and on investigation it was discovered that the cows, which were producing 35 pounds of milk a day, were actually giving off more lime in their feed. Probably no trouble would have resulted except for the fact that the preceding summer had been dry and the grass short, making it impossible for the cows to accumulate a reserve supply of lime."

Which of These is the Better?

Two men were leaning over the pasture bars.

"Yes, sir, that colt is for sale, but he belongs to my son in the field yonder. You'll have to bargain with him," said the farmer, motioning to the boy. "He'll be here presently and you can talk to him."

"That boy!" ejaculated the stranger.

"Yes, George is seventeen and a smarter boy never was raised on any farm—if I do say it. You ought to hear him in debate. He can hold his end with the best of 'em. He raised that colt and the sale money saving for a course agricultural college, then I'll stay down and out he'll run the old farm. Here George, this man is looking at your two-year-old."

The bargain was soon concluded, but not before the buyer had learned that the seventeen-year-old boy was a keen judge of horse flesh and knew the worth of his colt.

Two men were leaning over the pasture bars.

"Yes, sir, them steers are as good as ever was raised in this town. That boy over there calls 'em his, and has fussed with 'em ever since they were calves. Hey? Oh, that makes no difference when it comes to selling. They were fed from my stock, and I reckon the cash goes into my pocket. Boys are ungrateful nowadays. He keeps talking of quitting and I can't keep him longer than he is twenty-one. He might take the old farm and let me have a rest, but he will not listen to that. Well—it can't be helped as I see. You don't offer quite what I consider the steers worth, but there's no use in feeding 'em any longer. They're yours." Which boy made a successful, contented farmer, and why?—Western Farmer.

HUNS ARE GLUTTONS.

Eat Far More Than Other People, When Possible.

Though the Huns are beginning to complain that they are being starved, yet what is starvation to them is plenty to most nations, says London Answers.

Before the war the Germans, both men and women, were the biggest eaters of any one on the Continent. The average German begins with coffee and milk between seven and eight in the morning. About ten there is a meat breakfast, at one o'clock a really heavy meal, as a rule about twice as much as an English lunch, with beer or wine, or both. At tea, cakes, chocolates and marzipans are invariably eaten.

At 8 p.m. comes supper, almost as heavy as the midday dinner, and consisting of cold ham, mutton, beef or veal with wine.

Of Course You Need

BENSON'S CORN STARCH

Ice Cream comes out of the freezer with a velvety smoothness — and a new fascination when it is made with BENSON'S.

And it is pretty hard to ask for anything more delicious than a Chocolate Blanc Mange or Cream Custard with Fruit, made of Benson's Corn Starch.

Our new Recipe Book "Desserts and Candies" tells how and how much to use. Write for a copy to our Montreal Office—and be sure to tell your grocer to send BENSON'S, the standby in Canada for more than half a century.

MONTREAL, CARDINAL, BRANTFORD, 216 FORT WILLIAM.

PUT IN LAYER OF MAGGOTS.

German Baker Also Mixed Ants and Bugs in His Cakes.

The Berlin Vorwaerts says:—The unscrupulous manner in which the preparation of various articles of food is being carried on has again been strikingly exemplified in Leipzig.

A master baker, C. A. Rabitz, the owner of one of the foremost fashionable establishments in Leipzig, has been found guilty of the most shameless transgression of all existing laws and regulations. His worst practice of all was to bake live maggots in his cakes.

On an assistant showing him that the dough was full of these vermin, Rabitz contented himself with covering them up beneath a layer of dough. "No need to remove the maggots," he observed, "people will eat the cakes all the same." The maggot paste was thereupon duly baked into cakes.

Rabitz had also prepared another kind of confection, styled "dessert cake," from ground wood and potato flour, in which quantities of ants and even bugs were present.

This infamous specimen of the baker tribe received five months' imprisonment besides being condemned to pay a fine of £31.

Kitchener Predicted Death.

When Lord Kitchener was in France some three months ago, visiting the British front, he met his friend the naval Capt. Testu de Balincourt, then on service at Dunkirk, whom Lord Kitchener asked to be his special aid if he should need one later during the war. Lord Kitchener told his friend how a heavy shell had burst close to him while on this visit, but added, "that did not disturb me, for I know that I shall die at sea."

Chickens Now $4 Apiece.

The London Times Berne correspondent quotes an American from Brussels as saying that the conclusion of that city is outwardly little changed; that the chief privation is the absence of news. Food commands extravagant prices, bread being thirteen cents and meat of all kinds a dollar a pound. Chickens are from $2 to $4 apiece. Butter is a dollar a pound. There is much distress and even starvation in the surrounding country.

Madge (reading letter from brother at the front)—"John says a bullet went right through his hat without touching him." Old Auntie—"What a blessing he had his hat on, dear."

Curing a Backbiter

"There goes as mean a man as ever walked," remarked Giles Bigelow as he glanced out of the window of his little shop.

Andrew Pike, the shoemaker, was not curious enough to look up from his work; but he did stare in astonishment when old Moses Rice, whose meekness was proverbial, rebuked the speaker.

"Giles," the old gentleman began, "I don't suppose you've got a thing against Deacon Tarbox. It's just your way of flinging out about folks, no matter who they be."

"I guess I know Deacon Tarbox as well as you do!" muttered Giles.

Well, then you know as likely a man as we've got amongst us; upright in his dealings and liberal according to his means. You are like a mischievous boy hiding behind a fence with a dirty snowball in his hand: first man that goes by is bound to have it thrown after him.

"You are getting to be a regular backbiter, Giles," Uncle Moses went on, in a voice tremulous with earnestness. "If you must talk about folks, why can't you try to think of something to say to their favor? It would be just as easy; and it would leave a better taste in your mouth."

Giles Bigelow had been so completely taken by surprise that he was not ready with his defence until after the door had closed behind Uncle Moses. Then he began with some heat:

"I'm not a backbiter. A backbiter says things behind your back that he wouldn't dare to say to your face. I speak my mind as I see fit, but I never say a word about a man that I would not be perfectly willing to have him hear."

Giles took his departure, much offended, and Webster Haines was left as the only remaining visitor in the shop.

"Well, said Webster, as he slid into a still easier position in his chair, "Uncle Moses spoke quite a piece, for him. But it didn't make a particle of impression. I'd like to see some one give Giles a lesson that he would remember. Look here, Andrew, you heard Giles say that he never says anything about a man that he wouldn't be willing to have him hear. Now Josh Flood and George Glover and Sam Nowell and I are coming here tonight to play checkers.

"I'll get them to come early, and we'll crowd into the little cubby-hole that you've got curtained off here, and be there when Giles comes for his boots. You give him a chance to air his honest opinion of us four. Just mention our names, incidentally, and he'll do the rest. Then when he has finished we'll step forth and have our innings."

"Won't it be taking an unfair advantage of Giles?" asked the shoemaker, a little doubtfully.

"Didn't he say he was perfectly willing to have anyone that he was talking about hear him?"

"All right," said Andrew. "Only you mustn't get mad at what Giles says. Listeners seldom hear good of themselves, you know."

Webster Haines had no difficulty in interesting his friends, and the four were hidden behind the dingy curtain in the shop when Giles Bigelow came in that evening.

"Almost finished, Giles," said the shoemaker briskly. "Sit down a minute. Plenty of room to-night, for a wonder. Josh Flood was here a few minutes ago, though," he added casually.

"Josh Flood," said Giles, as he sank into a chair, "is a clever, well meaning chap, when all is said and done. He wouldn't harm a mosquiter."

Andrew waited for further comment; none being forthcoming, he said, "George Glover is generally round before Josh is."

"George Glover is about as strong a man in his arms as I know of," said Giles. "I don't see why he couldn't do considerable of a day's work if he should take a notion to."

Again Andrew waited. "I was sort of expecting Sam Nowell in to-night," he said, at length.

"Sam Nowell is as good a judge of a hoss as there is in town, according to my way of thinking," remarked Giles, and with that he stopped.

By this time the shoemaker was having some difficulty in controlling his countenance, but he persevered. "Seen anything of Web. Haines since he was in here this afternoon?" he asked.

"No, I haven't," answered Giles. There was an appreciable pause before he cleared his throat and continued, "Web. Haines' wife is as smart as they make 'em. How he ever brought it about, I don't know, but it speaks well for Web. that he had gimp enough to get her to have him."

"There, your boots are done, Giles," said Andrew. "It will be a dollar. I must get to work on Uncle Moses' job."

Giles' face brightened. "Now, there's a man for ye—Moses Rice! Goes right along, minding his own business, and scarce ever says a word, but when he does speak he's worth listening to. You heard what he said to me this afternoon. Well, I've been chewing it over and I've come to the conclusion that he was right. I'm going to try to say a good word for every nameable person that is mentioned in my presence, but I must say that I don't see how I could have had a much harder test than those names that you happened to mention just now. Except, of course, Moses Rice; he's the salt of the earth. I scum, when you spoke of Web. Haines, I thought for a minute I was stumped! But I did it, and it all goes to show what a man can accomplish when he sets out. A dollar, did you say? I was in hopes you'd make it ninety cents."

When Giles had gone, the listeners emerged from their cramped quarters.

"Giles didn't need your treatment, after all," said the shoemaker, dryly. "Uncle Moses did all that was necessary."

"Well, I don't know," replied Webster Haines, with a wiry smile. "It kinder looked to me as if Giles wasn't more than half cured."—Youth's Companion.

"BUSINESS AS USUAL."

French Town Proceeds Calmly 1,500 Yards From Germans.

In a despatch from Pont-a-Mousson H. Warner Allen, the representative of the British Press with the French Armies, says:

"Pont-a-Mousson had the honor of being the first French town to be bombarded by the Germans, and since the very beginning of the war it has been a perpetual target for their shells. The inhabitants, who are known by the picturesque name of Mussipontains, live as though shells bursting in their peaceful town have been an incident to which they have been accustomed since their birth.

"In days of peace its principal square was a placid little place, surrounded by arcades, with the inevitable tobacco shop, cafe and chemist, which always take the most prominent positions in a French provincial town. To-day the arches of the arcade have been filled with sandbags up to the summit of the pillars. To reach the pavement through the arches one has to squeeze one's way through a narrow zigzag entrance between the sandbag walls.

"Once inside the arcade, one finds one's chemist, tobacconist, and cafe. 'Business as usual' is certainly a Pont-a-Mousson motto. In case of bombardment the Mussipontains can stroll about their square in perfect safety. German shells cannot prevent them from taking their aperitif at their cafe or buying their packet of cigarettes. The sandbags provide an impenetrable defence against the splinters of shells that may burst in the square.

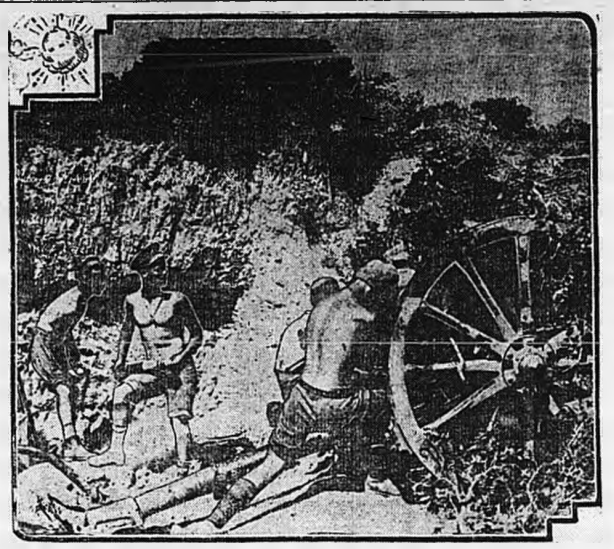
"To-day all is calm in Pont-a-Mousson. That is to say, no shells are actually falling. There was a heavy bombardment yesterday, and there will probably be a heavy bombardment to-morrow, but the main thing is that it is no longer raining. In fact, the sun is actually shining, and people are far more pleased at the change in the weather than they are at their temporary respite from German shells.

"I am writing this article in a little cafe that once looked out on the square, and now has as its only prospect a solid wall of sandbags wedged tightly between the arches of the arcade. Two grizzled men, certainly over 50 years of age, and from their appearance agriculturists, are having an animated conversation as to the price they are getting for their milk. One of them has just explained at great length an ingenious scheme that he had for carrying his produce to Nancy, the principal town of the district, and he has just expressed with great disgust his annoyance at having arrived at Nancy some months ago on the very night that it was being bombarded by a long-range German gun. 'I slept at Nancy that night,' he said, 'but after that I had had enough of it. I just came back to Pont-a-Mousson for peace.'"

Pont-a-Mousson is just 1,500 yards from the Germans.

THOUGHTS FOR THE DAY.

Let us be of good cheer, remembering that the misfortunes hardest to bear are those which never come.



He who does wrong does wrong against himself. He who acts unjustly acts unjustly to himself, because he makes himself bad.—Marcus Aurelius.

Wit must grow like fingers; if it be taken from others 'tis like plums stuck upon blackthorns; they are for a while, but come to nothing.—Selden.

When free from conjugal and parental ill-temper the love of wife and mother will preserve a woman's charms and endow her with many new ones.

A man cannot speak but he judges himself. With his will or against his will, he draws his portrait to the eye of his companions by every word.—Emerson.

There is some help for the defects of fortune; for if a man cannot attain to the length of his wishes he may have his remedy by cutting them shorter.—Cowley.

Canadian Guns in Action—A Red Hot Day in Flanders.

One end of the bombardment which blew German defences to bits on the western front, and paved the way for the advance of British infantry—in the present big advance. Gunners of the Maple Leaf, stripped to the waist, serving the guns in a warm corner of the fighting on the western front. Notice that the gun is in a crater, or dug-out and is screened with boughs, in order to escape the notice of the prying German aviator.—(London Daily Mirror photo.)

OLD DAYS IN CANADA.

Pioneers Had An Exciting Time With Three Bears.

Sixty or seventy years ago Richard Dowd and his four brothers were among the pioneers of Perth County, Ontario. For a number of years the family lived in two substantial log cabins in the midst of the cleared land, but as they grew more prosperous and Richard took a wife he determined to build a house—the first in the little township of Mornington. He selected a large pine tree that stood about thirty rods from his home as a shingle tree; he cut it and sawed it into blocks of the proper length; these he split into shingle bolts, which he rived into shingles and shaved during the winter.

Just as the sleighing was breaking up in the spring, Robert—one of the younger brothers—took a yoke of steers and a jumper and began to draw the finished shingles to the site of the new house.

The road to the shingle yard wound in and out round the large trees of the forest. Just before it came to the yard it passed a small clump of young pine that had grown up in the shade of the shingle tree. So thick was this clump that until you passed it, it completely hid the yard.

Robert made several trips uneventfully. The sun was melting the snow rapidly, and the snow road was soft and sleppy. Robert drove his steers leisurely round the clump of evergreens. As he turned into the shingle yard he saw the steers raise their heads in alarm, and looking up he saw up on the bear and her two last year's cubs sunning themselves on the shavings. The bears were as much surprised as the steers; but the old bear stood up and growled so savagely that the steers took fright and turned sharply. They upset the jumper, and twisted it so that it spread apart and let the roller into which the pole or tongue was framed come out of its bearings. Away they galloped toward home, with the pole trailing between them and banging against rocks and stumps in a most terrifying way.

Meanwhile, as Robert extricated himself from the wreck of the overturned sled, the bear made a rush at him. Robert swarmed up a small, leaning tree that stood close by, but as he did so the bear gave him a blow with her paw that tore his trousers and gave him a wound that bled freely. He got up to the top of the tree in a jiffy, but to his alarm he found that the bear was coming up after him. Taking out his pocketknife he cut a limb, and when the bear approached him he would rap her on the nose—which is a bear's tender spot. Each time he hit her she would show her teeth and growl, but she came no nearer.

When the steers dashed past the site of the new house on their way to the stable, John, another brother, saw them and hurried to see what was wrong with Robert. He came running into the shingle yard, but he had no weapon with him with which to defend himself or rescue Robert. He picked up one of the stakes of the jumper; but one of the cubs promptly knocked it out of his hands, and John at once took to the nearest tree. The cub sat on its haunches watching him.

All this time Richard was falling trees on the other side of his clearing, but his wife, who had heard the boys' shouts for help, called to him. He came running, carrying his axe in his hand, and hurried to the shingle yard. He told Robert to slip down from the limb he was sitting on and hold on with one hand. Then he struck his axe into the tree several times, and it gradually settled so that Robert dropped safely into the snow. The bear began to back down the leaning trunk, but as she neared the ground Richard struck her with the axe and broke her back.

Robert picked up a sled stake and ran at the cub that was guarding his brother John, but when the cub came at him with open mouth he backed off toward a large, fallen tree that lay near by. Before reaching it he sank into the deep snow at its side, and knew by the acrid odor that he had fallen into the bears' den. The cub was after him savagely, and it was all he could do to keep it off, until Richard with one swinging blow of the axe knocked it over and finished it properly.

The other cub disappeared into the woods, and the boys never saw it again.—Youth's Companion.

HEDGEROW NOMADS.

Gipsies Are Soul of Honor in Their Personal Relations.

Quite a number of gipsies are in the armies of Europe, both as allies and enemies of Britain, for they are international and know no country as their own, says London Answers. Their origin is a mystery, although it is certain they hail from the East. It is generally thought they come from Egypt—hence their name—but it is by no means certain. They have been thought to be the Ten Lost Tribes also, and they certainly speak of all non-Romany as Gentiles.

Gipsies are regarded as a nuisance wherever they go, as parishs and outcasts, but in their personal relations they are soul of honor, and a gipsy may be trusted to keep his plighted word and to stand by his friend. They possess a certain lofty pride, a certain proud code of honor which a gipsy would rather die than lower.

Daughters are more useful than sons in gipsyland and the parents often put obstacles in the way of the girls taking the man of their choice. Thus elopements are common and easy. There are no windows to climb out of and no ladders to scale.

Probably the custom of destroying everything that belonged to a dead gipsy is dying out, as it is a very expensive custom, but it is still done with the bigger families who are the nobility of the Romany people.

THE WISDOM OF MOSES.

His Laws Were Much the Same as Those of the Present.

The sanitary laws of Moses were not only on a line with modern rules of hygiene, but, in some cases, in advance of them, according to a contemporary. The Jew, a thousand or two years before Christ, settling in a semi-tropical country, was forbidden to eat pork or shellfish, and milk was described as a source of contagion. The Talmud prescribes a method of slaughtering animals that to-day is acknowledged by our market men to be the most sanitary.

Nearly four thousand years before Koch gave to the world his researches in bacteriology, the Mosaic law pointed out the danger to man from tuberculosis in cattle, but did not forbid infected poultry as food. It was only a few years ago that specialists discovered that fowl tuberculosis was harmless to man.

The Mosaic law also enforced the isolation of patients with contagious diseases and the burial of the dead outside all cities. These hints the Gentile world did not fully accept until a century or two ago.

Moses not only prescribed fasting at certain periods of the year, but commanded whole families to go into camps in the summer, where, for a time, they could live close to nature. Many of the laws of Moses were nothing else than hygiene prescriptions for the health of both mind and body.

KITCHENER'S KINDLINESS.

Personal Incidents Told by One Who Knew Him Well.

Sir Frederick Milner relates the following:—From many notices I have read of the late Earl Kitchener I think that people may be likely to infer that with all his great qualities he was somewhat lacking in goodness of heart. Those who knew him at all intimately would tell you he had a heart of gold. True, to those who knew him only slightly he appeared stern and somewhat cold, but this was far from being his real nature. He was reserved, and many may be surprised to know that he was by nature shy, but behind all there beat a heart as warm and generous as ever man possessed. This is borne out by the fact that those who knew him well regarded him with a devoted affection. Of all my many friends I know of none from whom I received more sympathy and kindness—especially in regard to the infirmity which has done so much to wreck my life. He was always doing things to show his sympathy with me. On one occasion when I was going to Egypt to join the Duke of Fife, one of the kindest of my friends, the duke died suddenly while I was on the sea. Lord Kitchener asked the Consul at Port Said to meet me and give me a letter from him breaking the sad news, and I shall never forget his thoughtful kindness when I reached his house. In connection with this I am permitted to relate an incident which will show him as possessed of almost a woman's tenderness. When the Duke of Fife's body arrived in Cairo, a few days in advance of the princess, who was travelling by slow stages, it was placed in the Guards' Chapel, awaiting her arrival. Every morning Lord Kitchener sent from his garden fresh flowers to put on the coffin. How many men would have thought of a tribute as tender as this? It was only one of many kindly, thoughtful actions of his that came to my notice. The rector of the English Church at Cairo told me he could never sufficiently appreciate the help and kindness he received from Lord Kitchener during his residence there. Those who really knew him would have gone through fire and water for him and I know that many a one besides myself would joyfully have laid down his life to save one so precious to the empire. His remarkable services to his country have been fittingly recorded, and he will live in history amongst greatest of Great Britain's sons, but it is well, I think, that the world should know that this straight, true, stern man had a heart as tender as his will was strong.

New Use for Coffee Grounds.

The newest evidence of German war-time frugality is an official organization to make use of the coffee grounds hitherto thrown away in most cases with kitchen refuse. It is the result of successful experiments to convert dried grounds into nourishing fodder for cattle. A special filtering process has also been devised for winning a certain "extract" from the grounds, which has been found suitable for human nourishment. It is now proposed that all public institutions, such as barracks, hospitals, and prisons, should join with householders in systematically saving up the coffee grounds, which will be collected officially at regular intervals and exploited for the above-named purposes.

According to Her Cook Book.

Bride—Merciful heavens! That pie is burning and I can't take it out for 10 minutes yet!"

BATTLES CENTURY AGO AND TO-DAY

SOLDIERS' NEWSPAPER CONTRASTS THEN AND NOW.

Napoleon and Wellington Could See Each Other at Waterloo, It Points Out.

In speaking of the terrible conflict at Verdun, the Lille Kriegszeitung, a newspaper which is edited and published by German soldiers in Lille, behind the German front, has the following interesting comments to make comparing the battlefields of a century ago with those of to-day.

"This terrible war—all previous wars in history compared to it were mere child's play!" the publication says. "The present war up to the first of this year was so horrifying, so tragic and so destructive that it was believed that it was impossible that anything worse could occur. But something worse has occurred. It began February 21, and now we are in the first week of June. For three long months this terrible battle has been waged on a front of forty kilometers day and night without any cessation.

The Battle of Waterloo

was only three kilometers in length, and this decisive struggle, which over-threw Napoleon, began a little after one o'clock in the afternoon and was decided at nine o'clock that evening. The Prussians in that battle numbered about 210,000 men, and at Verdun we know positively that forty-five French divisions are engaged, making in all 675,000 men.

"If Napoleon's famous Guard or Wellington's men or the Prussian Grenadiers were alive to-day, how they would be amazed at what we are doing! How would they behave in the face of all the big shells falling everywhere?

"At that time, a hundred years ago, by Belle-Alliance, the opposing armies were so near each other that the two commanders—Napoleon and Wellington—could see each other distinctly. To-day the armies are sometimes many miles distant.

"A decisive battle a century ago and now is very much like a little windstorm in a village compared to a terrific thunderstorm at sea. Only one thing remains the same—the fact that a soldier has but one life to give for his country. But the soldier to-day must suffer more, endure more and possess stronger nerves in sacrificing his life than did the soldier in Napoleon's time. At that time the battle consisted of

A Number of Charges

lasting from a few minutes to perhaps half an hour each. Except for these occasional attacks the troops rested outside of the firing line. The muskets at that time carried a distance of 150 meters and the guns 600 meters. Our field guns carry a distance of more than thirty-five kilometers, and the rifles over a ground of three and one-half kilometers. In other words, the troops to-day are under frightful fire every minute of the day and night, extending, like Verdun, over many months.

"And even he who survives these terrible battles has died a thousand deaths. There is no emotional exhilaration equal to that intoxication in the face of death which is experienced by the soldier when attacking in battle to-day. He forgets everything for the time being. And there is nothing more terrible than to lie sleepless in trenches at night while the big shells explode over and all around you.

"Why are we able to stand all this? Because we know that we must. And why are we so happy and proud? Because it is a fine thing to live through something like this, and because it will be a great thing to be able to say that we had a part in this great war."

BUILDING A BATTLESHIP.

Half of the Cost of a Hull Goes in Labor.

Do you know how many hours' labor it takes to build a modern Dreadnought? Probably you have never given the matter a thought, as it will interest you to learn that a big battleship entails about 7,200,000 man-hours or labor equivalent to the work of one man working that time.

The making of the turbine machinery absorbs some 1,850,000 man-hours, and the mountings of the big guns can easily acquire two years' work, while a single armor-plate may take nearly three months to finish. None of these processes can be unduly hurried, as the very best work must be put in, the least scamping making all the difference between victory and defeat.

Between forty and fifty per cent. of the cost of a Dreadnought's hull goes in labor. Curiously enough, far less is spent on labor when constructing a turbine engine than when making one of the old reciprocating cylinder type. Much of the material is made by machinery, leaving only 28 per cent. of the cost for labor, whereas 45 per cent. went in wages when the older kind were in use.

Mrs. Bonnie—"How do you like my new gown?" Mr. Bonnie—"Reminds me of a crowded theatre." Mrs. Bonnie—"Crowded theatre! How so?" Mr Bonnie—"There seems to be standing room only."

We Handle All the Good Things You See Advertised in the Big Magazines.

THIS store is headquarters. You will always find here everything you would expect to find in a similar store—and many things more.

We specialize on articles of genuine merit. Articles we have tested and tried ourselves and we can recommend and indorse.

You will find here all of the good—the best—the pick—of the standard household articles advertised in magazines.

We add our own guarantee to that of the manufacturer's.

We call your especial attention to the O-Cedar Polish Mop, the greatest boon to cleaner and better housekeeping we know of.

With it you can dust, clean and polish a hardwood floor without getting down on your hands and knees. You can dust the tops of doors, the moulding, the tops of high furniture without standing on chairs. You can dust and clean the stair steps and banisters in half the time it usually takes.

You can dust under the bed, and under heavy furniture without moving it, and go right through out the house—wherever there is dusting to do. You can do it quicker, easier and better with the O-Cedar Polish Mop.

Unlike other dusting mops the O-Cedar Polish Mop can be washed when soiled, and then renewed by adding a few drops of O-Cedar Polish.

We are so confident that you will be delighted with the O-Cedar Polish Mop that we will deliver one to your home on two days' trial. If it is not satisfactory in every respect we do not expect you to keep it, and will instantly return your money. The price of the O-Cedar Polish Mop, complete, is $1.50. Let us send you one on trial.

Try our "PREMIER" GASOLINE — No Water in it.

EDEN GROVE

We could hardly believe it was raining, so we got up about one o'clock Tuesday morning and stuck our feet out of the window to make sure.

Miss Olive Watson, London, is enjoying vacation at her home.

Quite a number from here took in the patriotic celebration and concert at Paisley on Friday. We notice the young people seem to have quite a pull in that enterprising city, as the electric lights failed to shine.

Mrs Reynolds, of London, is spending a week visiting her son-in-law, "Sunny Jim," at the Simcoe House.

Quarterly meeting service was held in the Methodist church here Sunday morning, the church being well filled.

Mrs Foster of Tara, Miss Ella Ledgerwood of Tillsonburg, and Mrs McCall of Washington, D C, are the guests of Mr and Mrs Jas Watson.

Mr Rosseau has purchased the hotel at Tiverton, and expects to move into his new home about Sept 20th. Mr and Mrs Rosseau's many friends, although very sorry to lose them as citizens, will be glad that they will still be within the 20 mile limit, so we can often renew acquaintances.

Mr Todd, of Palmerston, was home for a few days this week on account of the illness of his little son Wayne.

Mr A McLean, of Paisley, visited friends in town Sunday.

Mrs Tennant visited Paisley friends Tuesday.

We notice some young ladies while out driving shading their face when meeting an auto. A little too much light, eh?

The Simcoe House car journeyed to Chatsworth with the family last week.

Mr Harold Reynolds, of the head office, Bank of Nova Scotia, Toronto, spent the week end with his uncle at "sunny station."

Miss Coulter, Walkerton, was a Sunday visitor at the home of Mr and Mrs Robt Perdue.

Wedding bells are ringing over on the town line.

Miss Gertie O'Reilly, graduate nurse, of Guelph, is enjoying a month's vacation at her home here.

The body of Mrs Margaret Dobie was brought from her late home, Toronto, to Eden Grove for burial last Saturday. The deceased was in her 90th year. A large number of old friends from this, vicinity attended the funeral. Rev Mr Gale conducted the funeral service.

Did that fellow who helped burn up dad's coal last winter treat you to ice cream Saturday evening?

Now that the rust has been knocked off the wedding bell, keep it going, girls. We hear there are a few diamonds scattered around.

PINKERTON

The picnic to Silver Lake this year was, as usual, very successful and a large crowd spent a very enjoyable day boating and bathing and ended up the day with a small dance.

Rev and Mrs Richardson and son of Arthur are istiting at the Manse.

Mr Wm Desmond returned home from Mildmay on Saturday with a new Ford car.

Messrs Harvey Garland and Adam Foreman drove to Parkhead last week.

Miss Mary McKee of Statford spent Sunday at her home here.

Mrs Stewart and daughter of Manitoba are visiting at Mrs J Murray's.

Mr Wilmer Donnelly, mail clerk on G T R, is spending his holidays at his home here.

GLAMIS

The funeral of the late Mrs. Charles McKinnon took place on Wednesday afternoon from the family residence, and was largely attended. The services were conducted by Rev Mr. Heith. Interment was made in Purdy's cemetery. Mrs. McKinnon was a native of Ripley, 61 years of age. She had lived all her life in the townships of Huron and Kincardine, where she was widely known and held in high esteem. Heart trouble was the cause of her death. She is survived by her husband, three sons—Daniel, of Glamis; Peter, near Battleford; and Allan, training in a western battalion for overseas service; also one daughter, Mrs Mabo. Mrs Crawford, Detroit, is a sister. Robert and Daniel McDonald, of Ripley, are brothers.

Mr. Wm. Robinson has purchased a Reo motor.

Misses Mary McIntyre, Helen Oliver and Laura Cunningham are at the former's summer home at Inverbarop.

Misses E. Campbell, M. McLennan, Mr. and Mrs. Maber motored over to Kincardine on Monday.

Mrs. L. B. Tufford, of Bomanville, is spending holidays at the home of her parents, Mr. and Mrs. W. J. McKeeman.

Capt W L McKay, Pets. Douglas McKay and Clyde McKeeman were up for the monster soldier's picnic at the bay.

McLean Bros. have started on another season's threshing.

Miss Blanche Moffat was operated on on Monday for adenoids, by Drs Gage and Houston, of Paisley.

Miss Janet Gilchrist, of Owen Sound, is spending a few days at Jos Weightman's.

VILLAGE COUNCIL

Council met Aug 2nd. Members all present. Minutes of last regular and subsequent special meetings were read and confirmed.

Communications read: From the supervisor, requesting an increase of salary; from Speakers' Patriotic League, offering for sale "Honor Roll" blank forms; from John Stoddart, accepting the conditions re gravel contract; from Paisley Public School Board, requesting a levy for the section of $400 for current expenses; from the Paisley Bowling Club, requesting a donation towards a new bowling green—filed; from corporations of Walkerton, Chesley and Southampton, per the Review, re standpipe and improved method of street sprinkling.

Mr Putnam asked if council would be satisfied with a cost of 10 cents per square foot for his proposed sidewalk. Council agreed, walk to be of same width and in line with present walk north of Alma St, and to be constructed under the direction of our supervisor.

George—Sparrow—That the clerk prepare a new by-law regulating pools, leaving out the words "knowingly or intentionally" where they appear in the present by-law."—Carried.

Sparrow—Nicholls—That the supervisor's salary be increased to $45 per month.—Carried.

Sparrow—More—That the Paisley Agricultural Society be made the usual grant of $50.—Carried.

George—Nicholls—That the clerk procure two blank forms of "Honor Roll," as per circular.—Carried.

By-law No 618, defining the duties of night constable, etc. was read a first time and on motion of Councillors More and Nicholls read a second and third time, passed and executed.

Building Collapsed, and Man Seriously Injured

What might have been a serious accident happened on the grounds of the Canada Spool and Bobbin Co. at Walkerton on Saturday. In preparation for moving, a large wooden storage building was being raised up on jacks, and when one end was raised the structure suddenly collapsed. Although about twenty men were working around the building, only one man was injured to any extent. Fred Hauch was caught under one of the floors, and at present the extent of his injury cannot be estimated, his arm being broken and his body badly crushed. W. M. Shaw, the manager, and two lady clerks were in the office at one end, but only received a shaking up. The building is a total loss.

NO ROOM TO GRUMBLE

For two or three months, during the present season, the people of Ontario protested strenuously against the program of Dame Nature, in that she was giving us too much rain. It looked as though the farmers never would get their land cropped and that the present harvest would be worse than the last, when much of the splendid crop was ruined after it had matured.

This spring and early summer, only by working early and late, as conditions permitted, the farmers managed to prepare and seed the land, and the hay and fall wheat now matured, and being harvested and stacked, are among the best on the record. "The proof of the pudding is in the eating." The outlook was discouraging, but the product is abundant, so far as these earlier crops are concerned.

Now conditions are changed, and the province is suffering from an intense dry spell and excessive heat which threatens to sizzel up the later crops and the people as well. We all feel, no doubt, that it would be a mercy if Dame Nature would avoid such extremes and gives us a reasonable average. There is one thing about her, however, for which to be eternally thankful. If she does sometimes go to extremes, even in this much favored part of the world, she always seems to relent before going too far and seeks to correct what she has done amiss. The gloomy days of spring were followed by warm days of sunshine which matured the bountiful hay and wheat crops, and just as sure as she is now overcharging the air with moisture from mother earth she will return it again in copious showers "to cheer the thirsty ground".

It is natural that we humans should be influenced by alternate periods of gloomy weather and broiling sunshine, but lest we should be disposed to grumble too much, let us contrast our lot in this of peace and plenty with that of those who live in devastated Europe, and of our own Canadian boys who are fighting there. Such a thought shou'd dispel the last vestige of pessimism on the part of Canadians who are privileged to live at home.—Guelph Mercury.

Fraser—Reid

A very pretty wedding was consummated on Wednesday morning, July 19th, at the home of Mr and Mrs Jas Moffatt, Hannah, N D, when Miss Annie Reid, of Elderslie, was united in marriage to Mr Peter Fraser, of Pilot Mound, Man. At nine o'clock the bride took her place under a bow of flowers in company with her brother, Mr Alex Reid, who gave her away. The wedding ceremony was performed by Rev W R Kelly, pastor of the Presbyterian church. The bride's dress was of white crepe de chene with lace trimmings, and she carried a boquet of pink roses. The bride is lady of sterling character, and for the past three years has held a position as sales'lady in the Valentine & Shelter store. Shortly after the ceremony a sumptuous wedding breakfast was served to the immediate relatives of the contracting parties. Mrs Peter Reid, of Paisley, Ont, Mrs Robt Muir of Glenelg, Ont, Mrs Peter Reid, jr, of Blumaerk, N D, Mrs D Fraser, Misses Jessie and Annabel Fraser, Douglas Fraser and Mrs Gordon Fraser, of Pilot Mound, Man, were out of town guests. A company of friends escorted Mr and Mrs Fraser to LaRivier where they took the train for Winnipeg and points west for a short wedding trip. They will return to their home at Pilot Mound about Aug. 1st, where the groom is engaged in farming.

MARRIED

WOMEN OF CANADA.

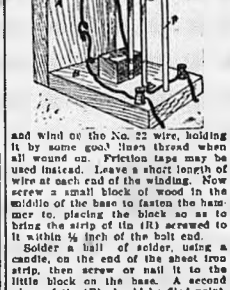
Fort Coulonge, Quebec.—"I am happy to tell you that your medicine did me wonderful good. I was troubled with weakness and I tried wines and other things but received very little benefit. I was young at the time and knew very little about medicines till a lady friend came to me with a bottle of Dr. Pierce's Favorite Prescription. I became strong and a year afterward had twins."—Mrs. J. Hardy, Fort Coulonge, Quebec.

Thousands of women right here in Canada who are now blessed with robust health cannot understand why thousands of other women continue to worry and suffer when they can obtain for a trifling sum Dr. Pierce's Favorite Prescription, which will surely and quickly banish all pain, distress and misery and restore the womanly health.

Young mothers who preserve the charms of face and figure in spite of an increasing family and the care of growing children are always to be envied. "Favorite Prescription" gives the strength and health upon which happy motherhood depends. It enables the mother to nourish the infant life depending on her, and enjoy the happiness of watching the development of a perfectly healthy child.

A GREAT BOOK THAT EVERY WOMAN SHOULD HAVE.

Over a million copies of the "The People's Common Sense Medical Adviser" are now in the hands of the people. It is a book that everyone should have and read in case of accident or sickness.



Send fifty cents (or stamps) for mailing charges to Dr. Pierce's Invalids' Hotel, Buffalo, N. Y., and enclose this notice and you will receive by return mail, all charges and customs duty prepaid, this valuable book.

EVERYBODY MAY BECOME THEIR OWN ELECTRICIAN

An electric bell to use in your home as a dinner gong, fire warning, doorbell, or for any one of a dozen other uses, will be a welcome convenience to your mother.

And your electric bell may be made easily from the following material arranged as shown in the illustration. A block (A) 4x5½ inches and one (B) 4x4 inches, a 2¼-inch iron bolt, a piece of cardboard, a piece of sheet iron 4x4¼ inches, a little solder, 10 feet of No. 22 magnet wire, a gong from an old clock, two binding posts from off a dry cell and a small round stick of hard wood 6 inches long (F).

First nail the two wooden pieces together as shown. In the upper end of the upright bore a hole just big enough to slip the bolt through. Cut out two washers from the pasteboard and place them on the bolt and screw on the nut. Next wrap a layer of common brown paper around the bolt

and wind on the No. 22 wire, holding it by some good linen thread when all wound on. Friction tape may be used instead. Leave a short length of wire at each end of the winding. Now screw a small block of wood in the middle of the base to fasten the hammer to, placing the block so as to bring the strip of tin (E) screwed to it within ¼ inch of the bolt end.

Solder a ball of solder, using a candle, on the end of the sheet iron strip, then screw or nail it to the little block on the base. A second piece of tin (E) should be filed pointed and after being bent like (E), nailed or screwed on the baseboard so that the point is very close to (H).

Bore a hole half way through the base and drive the small round hardwood post into it (F). Cut it off at the top just the right length to hold the gong where the hammer will strike it. The gong is placed on the sharpened end of the post.

Now screw the binding posts into the base. Connect one end of the magnet wire to a binding post and the other end to the hammer and rod, then connect (E) to the other binding post. When posts are connected to a battery and push button, the bell will operate.

Accepts Big Job

Mr Geo D McKay has accepted the big position offered him as the chief recruiting officer for the Military District No 1. and on Sept. 1st will jump into the harness and attempt to raise the 3000 men which this division is short in the matter of recruiting. It seems that according to population this division was assessed to raise 36,500 men, but to date has only come across with 30,500, leaving the above balance which Mr McKay has been assigned to raise from the eleven counties of Bruce, Huron, Lambton, Essex, Kent, Elgin, Middlesex, Oxford, Perth, Waterloo and Wellington. Mr McKay's headquarters will be at London, and his staff of assistants will include a retained officer from the front as a recruiting agent for each county. Of the new force Bruce is asked to raise 700, and a campaign to enlist this number will be launched in Walkerton on Sept. 1st, and the entire county be combed over for men.—Herald and Times.

—SHINGLES—Carload of British Columbia XXX shingles just to hand. J. S. DEWAR.

—Parties requiring repairs for the Mellotte cream seperator may obtain them at Fisher's flour Mill.

—FOR SALE—A Goldie & McCulloch steel fire proof safe, good size, and a bargain. Apply to A. A. Sinclair.

—Highest price for beefhides, horse hides, calfskins, sheepskins, tallow, &c. P. OLTSHER, Paisley Meat Market.

—All lines of hot weather goods are still pretty well assorted. We can keep you cool. Ballachey, Laidlaw & Co.

—FOR SALE—The McGill properties in town, house and business place. Apply to J M Hopper, executor, or D Forrester, Barrister.

—Fine clover honey for sale, thick and delicious. Western orders large or small, receive special attention. H. B. McCulloch, North Bruce P O R R A.

—No trouble to drop in to our new store in the old woolen mills and examine our stock of new goods at right prices. Fit and workmanship guaranteed. G B Irwin, tailor.

—Our first shipment of ladies' fall coats has arrived. The newest styles and fabrics at extremely reasonable prices. We want you to see them. Ballachey, Laidlaw & Co.

—Five Roses, Rainbow, Purity, Cream of the West, and Stark's high-grade flours, also Bran and Shorts, Blatchford's Sugar and Flax, Caldwell's Molasses Meal, and full line of Poultry Foods and Tonics. Always in the market for coarse grains. R. G. REGEL.

—Homeseekers' excursions, all rail, every Tuesday, and via boat Owen Sound every Wednesday up to end of October, to all points in Canada's north-west. For tickets, maps and all information call at the old reliable C.P.R. agency, McFarlane's old stand, Paisley.

—We now have in use in our dairy a Champion Cooler, with which we cool all milk to 40 degrees before bottling. This kills all animal heat quickly and aerates all milk thus improving the flavor and keeping quantities. We deliver twice a day during the summer. J. Milne, Paisley Dairy.

Win Western Prizes

Alex Bruce, son-in-law of Mr Wm Woodcock, Paisley, won the herdsman's gold medal for an animal of beef breed at the Saskatoon fair this month. He is in the employ of Auld Bros., of Guelph, who captured a big share of the awards in the Shorthorn cattle classes, including the grand championship for bull, and all the medals for champion females.

—Miss Lizzie Gibson is visiting her brother in Berlin.

—Mr and Mrs Nelson McMahon are visiting friends at Allan Park.

—Mr Wm Gibson, of Toronto, is spending holidays at his home here.

—Mrs J R Bryant and son, of Sarnia, are visitors at Mr L C Spofford's.

—Mrs. Alex Bannerman is visiting friends in Owen Sound for a couple of weeks.

—Miss Pearl Repley, of Owen Sound, is spending a couple of weeks with Paisley friends.

—Miss Belle Hopper, of Toronto, is visiting her mother and brothers at Killengowan.

—Mr and Mrs Lewis, of Ailsa Craig, visited at Mr Jas H Thompson's, Ross St, last week.

—Miss Ruth Leonard, of Purdwich, is visiting at the home of her grandmother, Mrs Roberts.

—Mr George reports the sale of Mr Robt Valentine's dwelling on Albert St., to Mrs Rolston.

—Miss Isabel Mackay, of Thornbury, is visiting at the home of her grandfather, Mr Geo Grant.

—Misses May and Irene Davison, of Tawase City, Mich., are guests of their aunt, Mrs M Daniel.

—Mrs Porter and daughter, Mrs. Moore, of Sarnia, are visiting at Mr And Porter's, 14th Greenock.

—Sergt. Patterson, Corps, Sparrow and Woodcock, of the 168th, were up from London over the week end.

—The Misses McBeath, of Fergus, are visitors at the home of their grandfather, Mr Thos McBeath, Goldie St.

—Mr. John McLaughlin, of the Royal Bank staff, left to-day for Hanover, where he will spend part of his holidays.

—Spr. W. Brown, of the Div. Signal Corps, was here spending a few days furlough, a guest at D. McKenzie's.

—Mr Geo Greer and daughter, Mrs H S Petrie, went to Palmerston on Tuesday to attend the funeral of a friend there.

—The pulpit of the Baptist church will be occupied at both services on Sunday next by Rev A C Campbell, of York Mills.

—Miss McLaren, Mr and Mrs Jos Stoddart and Miss Lily Stoddart motored to Southampton on Sunday to visit friends there.

—Mrs H Reed went to Toronto on Monday, having received a message that her daughter, Mrs Cook, had accidentally scalded her arm.

—Cyclist Jas. Brown, training in Toronto for overseas, was up on a few days' leave at the home of his parents, Mr and Mrs Geo Brown, 8th Bruce.

—Laurence Hopper, of the Standard Bank staff here, has been transferred to Victoria Harbor, Ont., and left Monday to take up his new position.

—Mrs. A. B. McLeod, of Calgary, and her daughter, Mrs. Jackson, are visiting friends in Bruce Co. and spent a few days in this locality, guests at Mr W Dryden's, Greenock.

—Mr and Mrs R H Pickard, of Brantford, have moved to Paisley, and are living in Mr Dan McLean's house on George St. Mr Pickard is employed at F S MacLachlan's Bakery.

—Rev A C Campbell and Mrs Campbell, of York Mills, are spending vacation visiting at the former's old home in Saugeen and the latter's mother, Mrs Buchanan, Paisley.

—Three rinks of Cargill bowlers were here on Thursday afternoon and evening. They put up a good game with the locals, but could not score heavily enough to win out, although the margin they left was a small one.

Enlisted in the West

Dr Fred Petrie, of Winnipeg, has enlisted with the 10th Army Medical Corps at Camp Hughes, near Brandon, where there are 30,000 troops in training. The Dr is a son of Mr John Petrie, of Vancouver, formerly of 4th Elderslie, and was a student at Paisley Continuation School. He bears the rank of captain.

Five More Recruits

Fred Blue, Harold Blue, Stewart Dewar, Wallace Diehl and Harold Collins all went to Toronto on Monday and signed on with the Divisional Signal Corps. These form a quintette of our best youth. Their decision to follow the scores of others who have gone forth from our village to lend their help in suppressing the apostles of blood and iron, shows that so long as the war lasts and there is the need for more men, Paisley will continue to contribute its quota of new recruits.

INSECTICIDES!

Church's Bug Finish, Bug Death, Paris Green, Arsenate of Lead, Hellebore, Insect Powder, Hess' Instant Louse Killer, Hess Dip and Disinfectant for flies, Eureka Fly Killer, Zenoleum, pheno, Chloro.

James Lothian Killed

In the list of casualties at the front lately the name of James Lothian, formerly of Ontario, born in Scotland, appeared among those reported killed. This is supposed to be a man who was a resident of this locality for about nine years. He worked for several farmers of Bruce and Elderslie until last winter. He then went to Toronto to enlist, but on account of his feet was not accepted. He went on to Montreal, however, and succeeded in getting on with some branch of the service, and very shortly afterwards went overseas. No one seems to have heard from him since his departure.

Greatest Garden Party Yet

Between two and three hundred people reached the Centre Bruce garden party by motor car on Thursday night last, while three times as many more arrived in wheeled rigs, and possibly not a few walked. At any rate, the gate receipts, which amounted to $195, show that from 600 to 900 paid their way through the gate at Mr Geo Brown's residence, where the garden party is annually held. Every man is said to have a hobby—that is, something which occupies his special attention or interest when he is not occupied in the ordinary pursuits of life—and Mr Brown makes some hobby of the C. B. g. p. While he is the kingpin of the event so to speak, he is not the whole thing by any means, as there are quite a number of other people who make a hobby of the same event—for among the contingent of helpers and army of spectators there are many who can be seen there every time it is held. The Kincardine pipe band was there last year, also this year, and will likely be there in 1917. This musical organization is an attraction that wears well for such occasions. Others who assisted in the entertainment on Thursday evening were: Prof John Barnes and Rev John McKittrick, two Bruce boys who are home for vacation; Mr and Mrs Schrank of Port Elgin, Mrs S Al Ferguson and Jean Fullerton of Paisley, Miss Gilet of Tiverton, Miss Lettie Young and Mr Watt McKay. Mr J J Hunter, of Kincardine, was chairman. The illumination was again a special feature of the arrangements on the grounds, the burning pine logs rivalling hydro-electric systems in brilliance and surpassing them in pleasing effect. With the sum realized from sale of refreshments the total proceeds amounted to $275.

Beat the Telephone

We hear of autos beating the train, and other feats of speed, but here the Barrie Advance relates the first instance of getting there and back ahead of a telephone message: "A prominent man in town put one over on the Bell Telephone Co. this week. He had occasion to put in a long distance call for Toronto and after waiting a half a day for his call decided to go to the city and transact the business which could have been done by the phone. Returning to Barrie he enquired if his call had been put in and was informed that the turn had not come yet. "Well, never mind that call. I went to Toronto and saw the party. Good-night."

THE FEUD

Neither Alice Lovell nor May Dunsford could have explained exactly how their quarrel had originally started, but at school they were bitter enemies, each with her own companions. The two parties would whisper together, throwing black looks at one another, full of disparaging criticism.

Their parents, perhaps, fostered this spirit of enemity, for they were in the same trade. Mr. Lovell, whenever he could bring himself to mention his rival, made statements bordering on the slanderous. Mr. Dusford's opinion of Mr. Lovell could not be expressed in polite terms.

Hence the children were, if anything, encouraged in their attitude; and as they grew up and left school they still proved their mutual dislike in various ways.

If they met in the street, May Dunsford would pretend not to recognize "that Lovell girl," who on the other hand, would stare in a manner which was intended to show her undisguised contempt.

Hitherto, young men had been considered of little account, but now they grew in importance. More were attracted to May Dunsford, because of her pretty face and showy dress; but Alice Lovell also had two or three "love affairs."

Then Stanley Chesilton entered their lives.

He was a junior clerk in a City office, very smart and dashing, with a remarkable taste in socks and ties. Alice Lovell knew him first, and often received picture postcards with mysterious messages in a private cipher, which usually meant "Meet me outside the station at 7.30, if fine." Her parents, although she did not suspect it, knew of these "appointments"; but the Chesilton family was reputed to be very well off, so things were allowed to take their course.

The girl was proud and excited and happy, living in an atmosphere of romance.

Presently, however, Stanley Chesilton was introduced by a mutual acquaintance to May Dunsford, and the picture-postcards arrived less frequently. Finally, after a stormy interview one evening under a tree on the common, they ceased altogether. Perhaps they were delivered at May Dunsford's address. At any rate, she was frequently in young Chesilton's company.

Her delight knew no bounds. She had scored off the Lovell girl this time with a vengeance.

She smiled in triumph when they met.

Time passed, and everyone was hinting that the couple would soon be making a match of it, when Stanley Chesilton's fickle fancy was suddenly attracted in another direction. Miss Dunsford was neglected, and he was seen with a different girl.

Alice Lovell was little affected. Indeed, her only sensation was one of satisfaction. It was her turn to smile at Miss Dunsford's dejected air, and she enjoyed the situation long after Mr. Chesilton had left the neighborhood.

Decidedly there was no love lost between them. If either could have hurt the other's feelings, or wounded the other's pride, she would have done so almost with enjoyment.

* * * * * * *

May Dunsford and her companion passed the other couple at a crowded corner. She edged markedly away.

"Is that anyone you know?"

"That plain, frumpish-looking girl? Yes; we used to go to the same school once upon a time. What on earth made you raise your hat, though? I'm sure I didn't take the slightest notice of her. She's no friend of mine—or ever was!"

The young man looked back over his shoulder.

"But, you see, she was with one of the fellows from our office. I don't have much to do with him, but I believe he's quite a decent sort."

"What's his name, Arthur?"

"Pinnock—George Pinnock."

"Trust Alice Lovell for getting hold of a man with something funny about him. Pinnock indeed!"

"I don't know for certain," remarked Arthur Ellis offhandedly, "but I believe they're supposed to be engaged."

"Fancy her being engaged!"

"It's quite a usual sort of thing." The young man, taking her arm, drew her into a quieter thoroughfare. Bending closer, he lowered his voice. "I was thinking that we—that is, you and I—might soon—might follow their example."

By the end of the week Miss Dunsford wore a ring on the third finger of her left hand, and for some time afterwards she carried one glove, in the hope that Alice Lovell might observe the important fact.

That young lady, however, was always far too occupied with her escort. About this time they were discussing a particularly interesting topic—the earliest possible date of their wedding.

"You say that old Mr. Blain is leaving, George, after forty years with the firm. Well, who's going to do his work? You could!"

"I might be promoted. I've hinted as much to the chief already. Can't do more. He may decide upon someone else. As a matter of fact, I'm pretty sure his choice lies between Ellis and myself—Arthur Ellis."

"May Dunsford's friend! Oh, you must beat him, George, just to spite her! I should love that!"

"I'll do my best—for our sake."

At last one evening he appeared, eager and excited with the news.

"The chief called me into his room, and asked me if I thought I could undertake the work. He mentioned that the salary would be——"

"Not as much as that, George, surely?" Miss Lovell gasped.

"Inquired whether I had any intention of getting married, and if so, when. Said it steadied a fellow. I told him 'as soon as possible—next month, most likely.'".

"You were taking a lot for granted! But—but won't May Dunsford be jealous and wild?"

"Are you only pleased because of that?"

"She'll be so envious!" declared Alice Lovell joyfully. He repeated his question.

"No, of course not; but it's one reason, and a big one, too!"

Miss Dunsford made it her business to find out the date of the wedding. Outside the church she stood and watched, making sneering remarks to a friend.

"She'll think she's everybody now, I suppose! Dare say he was the only offer she ever had in her life. I wonder where they're going to live? By the way, we're moving. Father's taken one of those new houses in Larch Avenue—very select and quiet."

Pantechnicons came and went one day in the following month, and the Dunsford family took tea, picnic fashion, in a disordered kitchen Afterwards they strolled in the garden.

A voice from the other side of the fence made the girl stand rigid.

To her amazement and disgust, she caught sight of Mrs. Pinnock engaged in weeding the flower-beds.

"Then they actually live next door! Just to think of it! If only I'd known, father, in time! Why, we shall be continually running across her and her precious husband. How sickening!"

Mrs. Pinnock, on her side, was equally annoyed.

"Still, we're been able to furnish nicely," she informed her husband complacently. "She won't find it easy to make any nasty remarks about the look of our front room."

Arthur Ellis, George Pinnock reported, had left to take up a position with another firm, where he hoped for a speedy increase of salary.

"He'd probably have got married to Miss Dunsford if they'd given him old Blain's place. But I was the lucky one."

"We can't help her troubles!" retorted his wife, shrugging her shoulders.

* * * * * * *

"The chief's promised to pay full wages to anyone who volunteers."

War had broken out, and thousands had responded to the appeal for recruits. From offices, banks, and warehouses in the City a steady stream of men came forth to enlist, eager to serve their country in her hour of need, furious at the accounts of the enemy's uncivilized brutality.

Alice Pinnock looked across at her husband, instantly apprehensive.

"The firm'll pay full wages," he repeated.

She reached across, seizing his hand.

"It's the single men that are expected to go, George."

"Not only the single ones. Everyone that's under the age limit — according to my idea."

"You—you don't mean to say that you think of joining?"

He nodded slowly.

"You'll be all right, dear. You will have plenty of money."

Her lips quivered.

"But I'll be so lonely."

Her husband held her tight for a moment.

"Look here, you're not going to be like Miss Dunsford next door, who's refused to let Ellis go? Yes; I met him in town yesterday, just by chance, and he told me as much."

Mrs. Pinnock raised her head.

"Not me! That's just what I should have expected of her," she observed scornfully.

When, at last, he had been drafted away to the training depot, she realized that she had now a new reason to look down on May Dunsford.

"I wonder she can hold up her head!"

Each evening she walked along the main thoroughfare of the suburb, and stood among the crowd outside the local newspaper office, where the latest war telegrams were displayed.

Our troops reached the firing-line. They displayed conspicuous gallantry against odds.

"List of Casualties."

Mrs. Pinnock turned away, with a lump in her throat, almost cannoning into someone immediately behind her. She had begun to apologise, when she looked up and recognized May Dunsford. Both abruptly moved aside.

"She only comes here out of curiosity," thought Mrs. Pinnock flushing.

After that, she often saw Miss Dunsford; but each ignored the other's presence.

"Allies retreat before German advance."

The news looked grave.

That evening May Dunsford stepped nearer as Mrs. Pinnock passed. A slight gesture and a half-appealing glance seemed to imply that she wished to speak. But Alice Pinnock, stiffening continued on her way.

"The impertinence! If that girl had dared to say a word——"

There followed some days of anxiety, when Mrs. Pinnock and many more hardly dared open a paper.

Then an official assurance settled the matter.

"The Tide Turns," read Mrs. Pinnock happily. "Enemy Driven Back."

Everyone, she reflected, must share her great relief. She longed to meet someone and knew, to say how glad she was.

May Dunsford was pressing through the outskirts of the crowd. Mrs. Pinnock made an impulsive movement to intercept her. Their eyes met; then the other girl immediately stared above her head.

She passed nearer to peruse the announcement.

Once again they came face to face. The crowd surrounded them, forcing them together.

Both tried to maintain a hostile attitude; but somehow it proved impossible.

"Arthur's gone!" blurted out Miss Dunsford.

"I—I didn't know," Mrs. Pinnock stammered.

"I'm glad now. I tried hard to keep him back; but he insisted. He was perfectly right."

"My George has gone too. It'll make things very hard for us, won't it? But we mustn't mind. We must try and not mind."

"We can only wait miserably at home, while they——"

"This"—Mrs. Pinnock nodded towards the placard—"all this may be happening to them later on. They'll be abroad—at the front. We'll have to comfort and encourage one another."

"I'm only next door, you must remember," said Miss Dunsford indistinctly.

"Look in any time you can. I'll always be very pleased."

"Thanks! I'll often call."

"No, no; I shall expect you every day. Promise you will come!"

"I'd like to," May Dunsford confessed.

In that moment the past was forgotten. To their own amazement they found themselves walking off together.

"Just like old friends!" Mrs. Pinnock whispered.—London Answers.

OUR TEETH ARE GOING.

Science Says They Are Growing Less Durable.

That our teeth are becoming progressively smaller and fewer is made manifest by a study of human jaws running back through the centuries to the earliest historic times. 6,000 years ago, and even to those of prehistoric people whose bones have been dug up. That they are growing less durable is shown by their extreme liability to decay. The tendency to a reduction in the number of teeth is shown by the departure of the third molars. These "wisdom teeth," as they are called, four in number, are in many individuals missing or undersized and irregular; or they may, in other instances, fail to "erupt." Evidently they are destined to disappear entirely. And because they are no longer required for use nature in making them of such poor material that commonly they start to decay as soon as they appear. Already there are signs that other teeth, such as the lateral incisors, will follow the same route. Our teeth are merely tools. They are not equivalent to limbs, but are only natural implements and were developed originally to meet certain needs. If the needs diminish the teeth must do likewise.

Euphemistic.

"Would you call Uncle Peter a stingy man?

"Well, no; I'd merely say that he had all his generous impulses under perfect control."

A Little Yet to Learn.

WOUNDED soldier (recounting some of his experiences): "And you should have seen the French girls—they was all over us, worse than you ladies."—London Bystander.

SMALL SALARIES IN JAPAN.

Men in the Learned Professions Poorly Paid.

Dr. Takata, Minister of Education, has recently published a popular book on dietetics, explaining the food values proteins, hydro-carbons, etc.—in various articles of general consumption, showing where and how the highest nutrition may be obtained at the lowest cost. Food and clothing are cheap in Tokio and rents relatively high. In view of the low native salaries, says the East and West News, the necessity for the greatest economy in expenditure is visible, and the pinch comes hardest in the middle rather than poorer classes, for the former must not only live, but often keep up a respectable appearance on salaries no greater than the men who work at trades.

A primary school teacher earns $15.50 a month, but his lowest budget for four in family reaches $17.32, and his wife must work at home to earn the deficit. He will even smoking, he says pathetically, when the new third baby comes. A magazine editor and writer who has a wife, two children and a maid spends $32.75 monthly on rent, food, light, heat, wages and sundries, including theatregoing, but excluding clothes. His earnings are irregular, but always below his expenses. Happily he has been able in three years to borrow $125 from his wife's relations. His wife's trousseau is not unknown to the pawnshop.

An official whose family consists of three adults and four children earns $37.50, and his mere living expenses just meet the amount. In ten years he has borrowed $300 from his wife's family, presumably for clothes. A doctor with a wife, four children, an assistant and three servants, has an outgo of some $120. He earns $95 but owns his house. He has private means and must be quite a swell among doctors, for the learned author states that two-thirds of the Tokio doctors earn no more than $50 a month. Truly, the learned professions in Japan have their heroes.

SOLDIER'S HAIR TURNED GREY.

No Scientific Explanation Can Be Given.

A phenomenon that has always aroused curiosity is the sudden turning grey of the hair under the influence of great emotion. Several historical instances are open to doubt, such as the case of Marie Antoinette, who is said to have become grey in the night before her execution, but there are several well authenticated cases vouched for by medical observers. One of these refers to a young soldier in the present war.

He was in a trench in the Argonne district which was blown up by a mine. He was projected into the air and then fell beneath a pile of debris. When he was extricated he was found to be deaf, and a few days later in an English hospital, he noticed to his great surprise that there were tufts of white hair on the left side of his head. The loss of color was complete from the roots to the ends of the hairs and the longest hairs were just as white as the shortest. There was not a brown hair amidst them. The grey hairs were solidly implanted and could be pulled out only by considerable force.

Subsequent investigation brought out the fact that the patient's left side of the head and face was most injured by the explosion and the fall of earth. He also suffered from an incessant twitching of the left eyelid. As his hair was whitened solely on the left side the physicians came to the conclusion that the injuries sustained were directly responsible, but they arrived at no definite conclusion. In fact, science has yet to find a cause for the sudden turning grey of the hair.

MARKING GRAVES OF DEAD SOLDIERS

LABORS OF THE RED CROSS IN FRANCE.

Germans Burn the Bodies, But British and French Give Them Decent Burial.

One important phase of Red Cross work which has now passed to the control of the army, and which has attracted too little attention, is that of marking the graves of the soldiers who fall in battle. Only those who have lost dear ones can fully understand the keen desire that the exact resting-spot of the dead soldier should be known, and that some permanent memorial should be raised, even if it were a metal cross, so that the grave might be identified in the future. In respect for this universal and passionate desire the British Red Cross organizations of the other belligerents, has done its utmost to mark the graves of the fallen British soldiers, and an enormous amount of time and labor has been devoted to the task. Of course, there are many thousands whose last resting-place will never be more specifically identified than "somewhere in France," but thanks to the labors of the Red Cross, many other thousands of graves will be marked and may be visited when the war ends by mourning friends and kinsmen.

Burning the Dead.

This will be a solemn satisfaction denied in great measure to the friends of slain German soldiers. They have no graves; they have pyres. The German practice is to burn the bodies of all the dead in or near their lines, and for this purpose some of the huge furnaces of Northern France have been used. Friend and foe are alike incinerated. The Germans say that this method is the more sanitary, and probably they are right. Bodies buried in a hurry are rarely buried deeply, and when the tide of battle ebbs and flows, and the shells plow up the ground it often happens that undesired exhumations occur, and the health of the living is menaced by the imperfectly-buried dead. The Germans solve the problem by burning the bodies of the fallen. The British and French burn only the bodies of the German dead, which it is their duty to dispose of. When it is at all possible they bury their own. Sometimes a dozen, a score or even a hundred are interred in a huge pit. When it is possible the names of those under the sod are preserved.

A Labor of Love.

Mr. Ian Malcolm, one of the leaders in British Red Cross work, says that it is amazing the trouble that soldiers will take to give their fallen comrades decent sepulture. In a breathing-space after a charge or the repulse of the enmy, when they are awaiting every moment the signal to renew the attack or to beat back another onslaught, the men will throw down their rifles, and taking pick and shovel will make a grave for their fallen comrades. In every case they will try to leave some sign beyond the heaped-up earth that a British soldier lies below. Almost invariably a cross of some kind will be erected. Sometimes it is an improvisation of twigs, sometimes of boards, occasionally of metal; and the name is preserved, often in a mere lead pencil scrawl. It has been one of the duties of the Red Cross to follow the army, search out these little graves, replace the fading pencilled words with chisel or paint brush, and erect a permanent cross or stone.

Henry Lavedan, a French writer, says on this point:

A French Description.

"Remember that soldiers are for the most part buried in their uniforms; there is not in France oak or pine wood sufficient to shroud the victims of this war, nor are there carpenters enough remaining living to make coffins for them. They are buried where they fall upon the battlefield, their comrades having just sufficient time to hew their rough graves with a few stout strokes from spade or pickaxe, while the enemy perhaps advances or ere they themselves must move forward to renewed battle. They always try to mark the graves. To make the cross they do the best they can with whatever may lie near ext to their hands. Twigs are broken from a tree or gathered from the ground, themselves victims of gunfire, and are tied together with a string or strap or bit of wire; perhaps instead two pieces of a broken box or two splinters from a paling are nailed together; anything and everything may do duty for the humble monument. That is why no two crosses in the great blood-stained areas are like each other; each has its own features and its own poetry. Even the smallest one is great with dignity, whether it be of metal or of willow, black or white, strong or weak, capable of resisting all weathers or tottering and nearly vanquished by the storm's wind. Some have been driven into the ground so surely that they stand no higher than a good tent peg; others are bending and insecure, as though the hand which planted them were fearful lest it should inflict yet another wound upon the dead."

French Honor to Dead.

In his search through France and Flanders for British graves Mr. Malcolm was deeply impressed by the sympathy of the French people. He says that while he does not remember having seen flowers in a single wayside cottage in his long wanderings, neither does he remember seeing a single British grave near a French habitation that was not garlanded with flowers. They are renewed even in the Winter, and could not be more lovingly tended if they were in an English countryside. Many of the British soldiers are buried in Roman Catholic churchyards, and Mr. Malcolm says that the priests have always cheerfully permitted Protestant burial services to be held over them. In many other places, where it has been desirable to exhume bodies and rebury them, the communes have decided little cemeteries for the purpose, and these, we may be sure, will be memorials of the British army in France for generations to come.

ENGLISH COMANDEER HAY.

Also Take All the Straw Crop for Army's Use.

A notice has been issued in England under the Defence of the Realm Act announcing that the whole of this year's hay and straw crop has been commandeered by the Army Council.

Applications for the sale or purchase or removal of the commodity must be limited to the amount dealt in or used last year. Sale will be allowed only of stocks not required for army use, but farmers and stock breeders may go on making a normal use of their own crops.

A Mean Remark.

"I can't eat," declared the bridegroom "Too nervous."

"Nonsense," argued his best man. "Buck up and run true to form. The condemned always eats a hearty breakfast."

Just One Thing After Another.

"Oh, Tom, baby has a tooth."

"Hush! More expense! Now we'll have to buy him a toothbrush."

He is a wise man who can gather dollars from another's lessons.

GOOD DIGESTION A SOURCE OF HEALTH

When the Stomach is Out of Order the Whole System Suffers.

Indigestion is one of the most distressing maladies afflicting mankind. When the stomach is unable to perform the work nature calls for, the result is severe pains after eating, nausea, heartburn, fluttering of the heart, sick headache, and often a loathing for food, though the sufferer is really half starved. People with poor digestion, too, frequently try all sorts of experiments to aid the process of digestion, but there is only one way in which the trouble can actually be cured, that is through the blood. That is why the tonic treatment with Dr. Williams' Pink Pills cures even the most obstinate cases of indigestion. They make rich, red blood that strengthens the stomach and the nerves, thus enabling it to do its work. The process is simple, but the result means good appetite and increased health and pleasure in life. In proof of these statements, Mrs. Albert Hall, Sonya, Ont., says: "I have used Dr. Williams' Pink Pills with wonderful results. For two years I was a great sufferer from indigestion, which almost made me a physical wreck. At times my sufferings were so great that I was unable to attend to my household duties. I had smothering spells at times and was afraid to lie down to rest. After every meal, no matter how sparingly I ate, I suffered great distress. I tried several doctors but their medicine was of no avail. I saw Dr. Williams' Pink Pills advertised to cure this trouble and decided to try them. I had not been taking them long when I felt somewhat improved. This improvement continued and after taking ten boxes I could eat and digest all kinds of food and felt better than I had done for years. You may be sure I am very grateful for the wonderful relief these pills have given me. I know they are also a cure for anaemic sufferers, as an intimate friend of mine was badly affected with this trouble and after taking several boxes she was entirely cured."

You can get these pills through any dealer in medicine or by mail, post paid, at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

A WONDERFUL CLOCK.

Timepiece Tells Movable Feast Days of the Catholic Church.

The clock in Strassburg Cathedral is one of the most wonderful of its kind. It was first made in 1574, and went through various phases till it was remade in 1842, and since that date has been in perfect working order. This clock not only tells the time of day, but the month and day of the month, and all the movable feast days of the Catholic Church, says London Tit-Bits. A statue of Apollo points out the day of the month and the name of the saint corresponding to that day. The clock shows the rising and setting of the moon round the earth, its passages over the meridian, the phases of the moon, and the eclipses of both sun and moon. Allegorical figures in chariots representing the days of the week drive into view, appearing each day in proper order: On Sunday, Apollo; Monday, Diana; Tuesday, Mars; Wednesday, Jupiter, armed with a thunderbolt; Thursday, Thor; Friday, Venus; and Saturday, Saturn.

At a quarter past the hour a child comes forward and strikes a bell once; at half past a youth strikes the bell twice; at a quarter to the hour a middle-aged man strikes it three times; and just before the hour a tottering old man strikes the bell four times. Then a figure of death steps forward and solemnly strikes the hour.

On the stroke of twelve the twelve Apostles appear, each one bowing as he passes the figure of Christ, who stands with hands uplifted in blessing; and as the procession passes, a cock which stands on the top of the clock at the left side crows three times in a very life-like manner and flaps its wings.

At the Aquarium.

Visitor—What kind of a fish is that?

Attendant—That's half dogfish and half catfish—he just eat a catfish as big as himself!

It is estimated that there are 10,000 permanent residents of Canadian National Exhibition City during the two weeks of the Fair.

Even the youth who claims to have a finished education has a lot to learn.

Sir Rider Haggard.

the British novelist, photographed just before his departure from New York for London on the steamship St. Louis the other day.

The English writer said: "Even before the war there were superfluous women in England to the number of over one and one-half millions. Now there are millions more, and these, at the Government's request, have gone into industry to take the places of the men at the front. These women are there to stay, for there will not be sufficient men to marry them."

BAGDAD OF THE CALIPHS.

Now a City of Crumbling Mosques and Dilapidated Palaces.

One of the picturesque contrasts offered by the war, writes Mr. H. M. Allen, is that of the khaki-clad British soldiers contending with Germans and Turks amid the ruins of Mesopotamia. Across the very plains where once swept the war chariots of the Chaldeans are now moving the armed motors of Germany and England. In the rivers where the Babylonian and Persian barges once plied, the shallow-draft gunboats that fly the Union Jack now manoeuvre. British aeroplanes have already been seen flying across the skies that looked down upon Harun-al-Rashid, and a German Zeppelin may be reported to-morrow hovering over the bazaars where the Commander of the Faithful delighted to wander.

The visitor to Bagdad recalls that it was the capital of a domain reaching from Spain into Africa and from Africa to India, and he knows that Harun-al-Rashid was once its ruler. These facts have been inscribed on the tablets of memory through the medium of "Amine," "Ali Baba," "Sindbad the Sailor," and other delightful "Arabian Nights'" tales. But the Bagdad of to-day, although the Turkish documents still call it "the glorious city," has naught but crumbling mosques, dilapidated palaces and neglected tombs to bear testimony to the splendor of the past.

It was Al-Mansur, the second caliph of the Abbasside dynasty, who removed the capital of Islam hither from Damascus. When he first saw the spot he was enchanted with it, although there was then only a single habitation upon it—the cell of the venerable hermit Dad. The latter, ignorant who his distinguished visitor was, not only entered into conversation with him, but predicted that one Moslem was destined to found a city where they were standing.

"I am that man!" exclaimed the caliph, and he went on to inform the hermit that in his boyhood he had stolen a bracelet, and his nurse had ever after called him "Moles," the name of a thief then well known. The old recluse must have made a considerable impression on the mind of Al-Mansur, for the town was eventually named for him. "Bag" signifies a garden in the Persian tongue, and the whole word means "The garden of Dad."

This caliph, by the way, was perhaps the richest man of his time, for he possessed some $150,000,000. He did not, however, invest his wealth in Bagdad real estate, for he and his sons left it a small town, confined to the western bank of the Tigris. Moreover, they economized in building materials, for they used fragments plundered from the ancient Persian city Ctesiphon, its near neighbor Seleucia, and from ancient Babylon.

It remained for Harun, ally and friend of Charlemagne, who came after Al-Mansur and his sons, to extend the capital to the eastern bank. With him, too, began the era of culture, science, literature, and that distinctly Persian luxury that at last wrought the downfall of Saracen power. Against such effeminate degeneracy Omar, conqueror of Syria, Persia and Egypt, sedulously warned his people, but in vain.

MAX HARDEN TELLS THE TRUTH

Germans Driven Like Flock of Sheep by a Merciless Shepherd.

Underground rumblings in Germany have grown in intensity, like the British artillery fire, within the past few weeks. The real import is conveyed by the only man in Germany still out of gaol who has the courage and the opportunity to speak the truth.

In a late number of his Government-defying weekly review, Zukunft, Herr Maximilian Harden has a remarkable article entitled "Those Underground." It is a straight-from-the-shoulder attack on the Government and the War Party's fear to unmuzzle public opinion. Written on the eve of the Socialist Liebknecht's sentence and the suppression of the Liberal-Radical Berliner Tageblatt for merely demanding afresh the right to discuss "our war aims," Harden's article is proof that the crusade to face the present facts about the war—Germany's hopeless fight for peace on her terms—is a strong and growing movement. Without at all exaggerating its importance it is undoubtedly a manifestation of no little promise and encouragement.

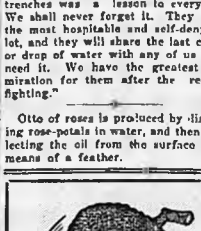
The significance of the crusade for the truth lies in the identity of the crusaders. They include:

1. The working classes, who realize the utter impoverishment which prolongation of the war means for Industrial Germany.

2. The moneyed, commercial and financial classes, shippers, merchants, manufacturers, and bankers, for whom the Berliner Tageblatt and Harden have always been recognized as spokesmen.

The latter—the Ballins, Gwinners, Rathenaus, Riesers, Thyssens, Kirdorfs, Forstenbergs, Stinnes's and the other captains of industry and finance—know perfectly well that time is fighting on the allies' side. Their own interlocking associations with the Government make it impossible for them to speak out. So they use Harden for their purpose. When Harden declares that if the German people's real sentiments could be expressed the end of the war would be in sight he is talking not for himself but for Germany's gagged and muzzled men of affairs. The Government's attitude toward the demands of these classes is that public discussion of the war would "injure us abroad" and "undermine domestic unity." This is the crusaders' reply, made in their name by Harden:

"It is not what Schmidt or Schultz thinks about the conduct and object of the war which damages us abroad. What hurts our prestige is the figure we have cut for nearly two years now of a flock of docile sheep driven before a merciless shepherd. Our enemies are listening to the right and the left, but can nowhere hear what the will of the German people is. If they could, we would be near to the peace which is to-day possible, and which only a miracle can improve."



PRAISE FOR CANADIANS.

British Staff Officer Says They H...e Done Wonderful Work.

Lord Tennyson, writing in the London Times, encloses a letter of an English staff officer in France:

"The Canadians have done wonderfully well, and we are proud of fighting with them," he says. "The way they fought to recover the lost trenches was a lesson to everyone. We shall never forget it. They are the most hospitable and self-denying lot, and they will share the last crust or drop of water with any of us who need it. We have the greatest admiration for them after the recent fighting."

Otto of roses is produced by distilling rose-petals in water, and then collecting the oil from the surface by means of a feather.

As the acorn grows to be the mighty oak, so children, when rightly nourished, grow to be sturdy men and women.

Good flavor and the essential nourishing elements for mental and physical development of children are found in the famous food—

Grape-Nuts

Made of whole wheat and malted barley, this pure food supplies all the nutriment of the grains in a most easily digested form.

It does the heart good to see little folks enjoy Grape-Nuts and cream.

"There's a Reason"

Sold by Grocers.

Canadian Postum Cereal Co., Ltd., Windsor, Ont.

Come Out of the Kitchen. It is the closed season for the bake-oven. Banish kitchen worry and work. Forget cooks, servants and gas bills. Solve your Summer problem by serving **Shredded Wheat Biscuit**, the ready-cooked whole wheat food. A food that restores the digestive organs to their natural vigor, supplies all the nutriment needed for a half-day's work, and keeps the bowels healthy and active. We have done the baking for you. Eat it for breakfast with milk or cream; serve it for luncheon with berries or other fresh fruits.

Made in Canada

Dublin Castle.

Dublin Castle has a history of over seven centuries, says The London Chronicle. It was King John who, in 1204, ordered it to be built, "well fortified, with good fosses and thick walls, strong enough to defend or control the city." Henry III., when about to visit Ireland in 1243, ordered the addition of a hall "with sufficient windows and glass casements," and other improvements were made in succeeding reigns, particularly by the Duke of Clarence, son of Edward III., who as viceroy spent much money on the castle to make it convenient (as his father complained when called upon to pay) "for his sports and other pleasures."

Minard's Liniment used by Physicians.

Germans Eat Crows.

Crows and crows' eggs are recommended by the German Ministry of the Interior as articles of food. Crows' eggs are described as having the taste of plovers' eggs.

Sore Eyes Granulated Eyelids, Eyes inflamed by exposure to Sun, Dust and Wind quickly relieved by Murine Eye Remedy. No Smarting, just Eye Comfort. At Your Druggist's 50c per Bottle. Murine Eye Salve in Tubes 25c. For Book of the Eye free ask Druggists or Murine Eye Remedy Co., Chicago

Curious Thing.

The captain—Dashed curious thing, Peters—women living longer than men.

The Chemist—Speaking from experience, sir, I should say that women are dyeing much younger than they did.

Ask for Minard's and take no other

Impatient Parent.

Lawyer—You say you want this damage suit pressed through with the utmost speed?

Client—Exactly. I have a child six weeks old, and I want the money to pay his college expenses.

Montreal, May 29th, '09.
Minard's Liniment Co., Limited,
Yarmouth, N.S.
Gentlemen,—I beg to let you know that I have used MINARD'S LINIMENT for some time, and I find it the best I have ever used for the joints and muscles.
Yours very truly
THOS. J. HOGAN.
The Champion Clog and Pedestal Dancer of Canada.

Courteous Princes.

Prince Albert was seen recently coming out of a Regent Street (London) shop, and as the girl commissionaire swung open the door for him he saluted and thanked her. Our royal sons have been brought up to the highest notions of chivalry towards all women. When Prince John was a tiny boy he always raised his cap to a flower-woman who had her basket in Buckingham Palace road. It is recorded that the Queen said: "I'm very pleased; I like my boys to respect all women."

It is estimated that the Canadian National Exhibition attracts 400,000 people to Toronto annually, a large percentage from across the line.

Minard's Liniment Lumberman's Friend

What Goes in the Missionary Box.

"Whatever are you doing, Molly?" asked mother, as she entered the nursery. For her five-year-old daughter was busily stuffing broken toys, headless dolls, ragged clothes, and other odds and ends in an old leather bag. "Oh, mother, can't you see?" cried Molly. "I'm packing a missionary-box, just like the ladies do. And it's all right," she added proudly. "I haven't put in a single thing that's any good."

A Young Financier.

"Auntie, can you change a dime for me?"

"How do you want it changed, dear?"

"Into a quarter, please."

The hospital ship Salta recently arrived in the Liffey with about 400 wounded soldiers on board, and was greeted by a great crowd of people.

THE "BIG DRIVE."

By Charles M. Bles, Denver, Colo.

Delusion, if not disappointment, lurks in the phrase "big drive," as applied to the offensive movement of the allies on the western front. The over-enthusiastic have visions of a vast army of millions sweeping north and east and driving the Germans before them. The thing, unfortunately, is impossible.

It was as nearly realised as it probably ever will be in this war at the battle of the Marne, but that was before the era of trench warfare. Northern France and Belgium behind the German lines is now a vast area of prepared defenses and military trenches.

A comparatively few men can hold entrenched positions against vastly superior numbers of infantry. No army in modern warfare can advance much beyond the range of its heavy guns, nor any faster than they can be brought up to prepare the way.

Those who conceive of the so-called "big push" as one great continuous movement along the whole front cherish an uninformed conception of the true situation. The big drive now taking place is the composite result of many smaller drives. The main significance of this movement lies in the fact that these small pushes are a part of a co-ordinated plan, including the Italian, Russian and Balkan fronts with the western. The British drive between Arras and the Somme is not the hurling of an army of over 2,000,000 men against the German lines as interpreted by some of the headline writers in the papers. This vast army will not be hurled en masse. So far as developed, it is primarily a powerful, localized attack intended to relieve pressure at Verdun. At least, that appears to be its object, but also to realize such strategic gains as will lead to further successful offensive movements after adequate preparation for them.

In choosing the sector south of Arras for the attack, the British greatly surprised their foe.

The sector north of Arras has been the favorite fighting ground because the positions held by the British are within close reach of important strategic points in the German front. Vimy Ridge commands the plains that surround Douai and Lens. The capture of these cities would seriously menace Lille, and the fall of Lille would demoralize the military organization of the Germans along the Artois front. But by striking south of Arras the strongly defended region north of it may be weakened, and the way prepared for a second blow that will prove more effective than those hitherto dealt on the sector from Arras to La Bassee.

The significant thing is that the initiative on all the fronts is now with the Allies—and this for the first time since the war began.

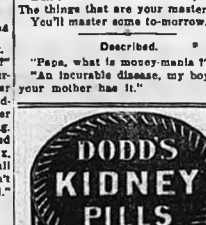
It looks as though the first sentence in the first paragraph of the last chapter is being written, and the doom of the Hun is sealed. Let us hope that the end is near.

THE SELKIRK TUNNEL.

Will Cost the C. P. R. $12,000,000 at the Least.

The Selkirk tunnel will be through in the fall, according to the C.P.R. officials. This is another of the notable things to which the company has put its hand—a tunnel six miles through a mountain whose peaks pierce the clouds—a tunnel which presented engineering difficulties almost unique.

This work will give the public an alternative route through the mountains; it will save six miles of snow sheds; it will eliminate danger, and it will minister to the comfort and convenience of the public. The cost will be $12,000,000 or more. That is about the only big work the C.P.R. has been engaged in lately, but it is interesting to recall that in the years before the war the company used to spend between $25,000,000 and $35,000,000 per annum in the development of the West. If, as a high official of the C.P.R. remarked, the C.P.R. took a dollar out of the West, it put that dollar back again in some form or other. It would hardly be believed, but the C.P.R. since its inception, has spent over $200,000,000 in the development of the West.



EFFORT.

The things you cannot do to-day
This is an old, old story,
Are things reserved along the way
To bring to-morrow's glory.
So keep on trying anyhow,
Don't sulk or wail in sorrow,
The things that are your master now,
You'll master some to-morrow.

Described.

"Papa, what is money-mania?"

"An incurable disease, my boy, and your mother has it."

NO ALUM MAGIC BAKING POWDER READ THE LABEL

Old-Fashioned.

"They're old-fashioned people."

"In what way?"

"They still have fried potatoes and pork chops for breakfast."

Keep Minard's Liniment in the house

Precautionary.

"Can you accommodate myself and family for summer board?"

"What's your politics?" inquired Farmer Corntossel.

"Does that make any difference?"

"Yep. I'm not having to take another chance on having the whole place stirred up with arguments day and night. All the folks that board here this summer has got to have the same politics."

No man is ever so important or unimportant as he thinks.

8. Frank Wilson & Sons
73 Adelaide Street West, Toronto.

The Paisley Advocate

PAISLEY, AUG. 16th, 1916

—Why is a sandwich not called something else? The Earl of Sandwich, four generations back, became hungry while playing a game of cards, and ordered a waiter to bring him a slice of meat between two slices of bread. That is said to be how the first sandwich was made, and the inventor's name stuck to it. Now, who made the first lemonade?

Several municipal councils in Ontario have passed a resolution to the effect that "Whereas, the Dominion of Canada is a democratic country, where class distinction does not and should not exist in the granting of pensions to soldiers who have suffered wounds as officers or privates, therefore, be it resolved that no preference be shown, but all be treated alike when the question of pensions is being considered by the Dominion Government." This resolution gets at the root of an inconsistency that should be removed totally from our patriotic fibre. Death is a great leveller, it has always been admitted, and "one touch of nature makes the whole world kin," is but a sentiment oft expressed, perhaps without much real meaning. If there is one place more than another where men should be considered equal, it is when they offer themselves on the altar of Mars for the cause of liberty of home and country. The general, the colonel or the captain may consider that they are making a greater sacrifice than their fellow-patriot, the private soldier in the ranks. But do they, when each suffers wounds or death on the field? The stoppage of the heart makes a soldier just as dead as a brigadier-general, and a major's wounds are no more painful than those of the ranker. Then why should one win greater reward than the other? It seems most reasonable when one looks it all over, that there should be no variation in the patriot's reward, be he officer or private, and every municipality in this democratic land should pass along that same resolution, and have the patriotic fund distributed equally to all classes who become entitled to a share.

—The two political parties of this Province had an excellent opportunity at the present moment of demonstrating to the country where they stand on the temperance issue. There is to be a bye-election in South-west Toronto, and this is a decidedly anti-prohibition constituency. There are within its precincts 24 hotels, 22 liquor stores and two breweries, all licensed, and there is a mighty fight on to prevent a prohibition candidate being elected, or even nominated by either party. The interests behind these 48 licenses are following up the "we'll show you" blow they dealt to the Hearst Government in the recent North Perth bye-election. They hope, after the South-west Toronto election is over, to be able to influence the Hearst Government to the extent of securing a change in the war prohibition measure that will be of distinct advantage to the liquor interests. The Conservative party has placed a candidate in the field who is in favor of wine and beer being sold instead of having total prohibition, and efforts were made to have a Liberal candidate selected who would compromise that party to the same extent. The Liberal selected in convention simply says the prohibition question is settled. There is no possible chance, perhaps, that the Liberals could win the riding with a straight prohibition candidate, but nevertheless the party will make a great mistake if they lend their endorsement to anyone who does not stand true to the temperance principles enunciated by Mr Rowell, the Liberal leader. And we opine that it will also be a mistake on the part of Conservatives to accept the candidature of Mr Norris. Social reform cannot be stayed by the opposing powers, and it would tone up the political atmosphere of this province if both parties should refuse to defy themselves with the booze dealers any longer.

DATES OF FALL FAIRS, 1916

Paisley	Sept 26-27
Chesley	Sept 19-20
Durham	Sept 28-29
Hanover	Sept 14-15
Walkerton	Sept 12-13
Tara	Oct 3-4
Hepworth	Sept 21-22
Lion's Head	Oct 5-6
London (Western Fair)	Sept 8-16
Owen Sound	Sept 13-14
Toronto (C.N.E.)	Aug 26-Sept 11
Wiarton	Sept 26-27
Kincardine	Sept 28-29
Tiverton	Oct 3

—This war has wholly dispelled the idea that explosions in the atmosphere would bring rain in a drouthy period. Along the battle front in France, where the cannons have produced the most terrific artificial thunder ever heard on this earth, the weather has been no different than usual.

From Pte. Alex. Blue

NOW IN ARMY HOSPITAL IN ENGLAND

Shot Through Body and Bullet Shifts His Heart

RECOVERING, BUT NERVES MUCH AFFECTED

Likely Unfitted for Further Army Service

In a letter to a friend here Pte Alex Blue writes as follows from the army hospital at Kirkheerb, Yorkshire, Eng.: "I guess you would be kind of surprised to see by the casualty list that I was wounded on June 29th. I was shot through the breast. I am able to sit up and walk a little now, but not very far, as the bullet penetrated my lung. The doctor says I was a narrow escape, the bullet missing a large artery and the spine only by a hair's breadth. They had to keep me in Salougne for eighteen days before they dared send me across the Channel. I was operated on there, and felt easier after that. The doctor had the lance into me five inches, and I thought once it was coming through the other side. I did groan a little. If I walk the length of the ward I am out of breath, and even when I stand up or sit in an upright position My best position is lying down. The

sisters are very kind to me. I seem to be the only Canadian around. My trip from the battlefield through Ypres was very painful. Going through shell holes and over the cobble roads fairly shook me to pieces. It was a sniper that caught me, when I was just a little to the right of Hill 60, where Tom Babcock was shot. The bullet went through my chest, coming out at the right shoulder, which left my right arm paralyzed for a few days. I don't think I will be fit to go back, and I hope to see Canada this fall.

It is nothing but hell on earth out there, and I know it. I hope it will end soon, but I believe the 160th will see some hard scrapping. We need the re-inforcements. Of the battalion that I left Canada with there are only about 170 old fellows left. I hardly know the battalion for strange faces. I have seen us get re-inforcements three times in four days. The charge is easy, but the counter-attacks are hellish. The Germans can fight, also, till they get into close quarters, when they lose heart. Is it any wonder? "Kamarde, mercy!" We show a lot of mercy—I don't think! The last fight we had was with the Crown Prince's favorite army, called the Wurtembrugers, but we made Wurtenbrugers of them. I have seen a lot of suffering out there. One thinks the hospital is bad, but the field of battle is awful. When looking for wounded on the field we hear some one crying, "Take me!" and so on. We might get a fellow on the stretcher who would die before going very far, when it would be necessary to dump him and go back to look for others. We have taken men who had been lying on the field for two or three days.

I am very nervous. If any person wakens me up from sleep I shake for half an hour. In it any wonder, when the bullet shifted my heart an inch out of place?

Same address as usual.

PAISLEY CONTINUATION SCHOOL

Complete List of Successful Pupils at the Recent Examinations

NORMAL ENTRANCE

Those whose names appear in Group I are completely successful. Those in Group II, though not successful in view of the marks obtained, are permitted under the regulations to qualify for a Normal Entrance certificate by taking the subject named in brackets along with another departmental examination which they have not already passed.

A—Lower School—Entrance to Normal Schools—Group I—Meryl Bell, Gertrude Brown (honors), Gladys McCallum, M Isabel McKay, Wallace Tanner, Jessie Young.

B—Lower School—Entrance to Model Schools—Group II—Ethel Robertsa(arith)

Middle School—Entrance to Normal Schools—Group I—May Grant, Nina Johnston, Beasie Laidlaw, Victoria Rose, Elizabeth McLennan (honors).

Group II—May Warren (Phys).

JUNIOR MATRICULATION

In Group I are given the names of candidates who have obtained complete matriculation by passing on the twelve required examination papers, viz: English literature, English composition, British and Canadian history, modern history, algebra, geometry, Latin authors, Latin composition, together with the four papers on any two of the following subjects: Experimental science (physics and chemistry), French (authors and composition), German (authors and composition), Greek (authors and composition).

In Group II are given the names of those who have failed to obtain the minimum required on the whole examination, but who have obtained 40 per cent on each of at least eight papers, with an average of at least 50 per cent on the same. Such candidates have been awarded partial matriculation, and in order to complete their matriculation must obtain at one examination 40 per cent on each of the remaining papers, with an average of 50 per cent on the same. The papers required for complete Arts matriculation are indicated by brackets after the name of the candidates:

Group I—M St Grant, B Laidlaw, A V Rose, E McLennan.

Group III—J F Brown (Eng, Lit. Phys, Chem), A M Kirkhown (Eng, Lit). R D McBride (Eng, Lit, Alg, Phys, Chem).

"I FEEL LIKE A NEW BEING"

"FRUIT-A-TIVES" Brought The Joy Of Health After Two Years' Suffering

MADAM LAPLANTE

85 St. Rose St., Montreal. April 4th.

"For over two years I was sick and miserable. I suffered from *constant Headaches, and Bad Palpitation of the Heart* so badly that I feared I would die. There seemed to be a lump in my stomach and the Constipation was dreadful. I suffered from *Pain in the Back and Kidney Disease*.

I was treated by a physician for a year and a half and he did me no good at all. I tried "Fruit-a-tives" as a last resort. After using three boxes, I was *greatly improved* and twelve boxes made me well. Now I can work all day and there are no Headaches, no Palpitation, no Heart Trouble, no Constipation, no Pain or Kidney Trouble and *I feel like a new being*—and it was "Fruit-a-tives" that gave me back my health".

MADAM ARTHUR LAPLANTE.

JOHN SPARROW

The late John Sparrow was born in the township of Godmanchester, Huntingdon County, Quebec, on Aug 11th, 1838. He was the second son of Jonathan Sparrow, who emigrated from Ireland in the year 1822, and settled in the township of Godmanchester in the district known then as New Ireland. Here the deceased grew to manhood along with five brothers and two sisters, of whom two brothers and one sister survive. Mr Sparrow was united by marriage with Mary Henderson, of Hinchinbrook, Que., and from this union there were born to them a family of three sons and three daughters. The sons are Charles and D H, of 12th con Elderslie, and Oscar J, of Fernie, B C. The daughters are Mrs Jas Isard, of Wingham; Mrs Jas R Craig, of Paisley, and Mrs Hal Hudgeon, of Bruce Tp. The late Mr Sparrow came to Elderslie from New Ireland in the year 1885 and bought lot 4, con 13. He was a very successful farmer, and bought lot 5 from the late Mr I McClure. He retired from active farm life to reside in Paisley a few years ago, but not liking town life he moved back to the east half of lot 5, con 13, which his son Charles had purchased. Here with his partner in life and surrounded by his children and grandchildren, he enjoyed the last years of a long life in peace and happiness. He was always of a cheerful and sociable disposition, and in his younger days was in great demand as a violinist at dances. His death was due to paralysis. He was first stricken last April when he was left helpless, but this was borne with true christian fortitude till he took another stroke a few days before his death. He was a faithful member of the Church of England since early manhood, and the funeral services were conducted by his pastor, Rev Mr Diehl, of Paisley. The remains were laid to rest in Stark Vale cemetery. The late Mr Sparrow was a veteran of the Indian Raid. He saw active service, and would tell stories about chasing green jackets across the border. But he received no land grant as did many who saw no fighting. This was partly due to his own neglect in not following up his claim. He was fond of telling stories of bygone years, and will be much missed in the neighborhood. His aged partner and the family have the sympathy of the entire community.—Com.

Pinkney—McAfee

On Wednesday morning, August 2nd, Miss Mary McAfee of Glamis, Ontario, and Robert B Pinkney of Mariel, Cuba, were united in marriage at the home of Rev Mr and Mrs William Norris Wysham at Tupper Lake, N Y. Nature wished the bridal couple the best of luck by giving them a wonderfully sunshiny day. Rev Mr Wysham used the Presbyterian double ring marriage ceremony in uniting Miss McAfee and Mr Pinkney, who are old friends of Rev Wysham. The bride looked very pretty in a silk coat of old blue, and carried a bouquet of pink and white sweet peas. She is a graduate of the Homeopathic Hospital in Washington, D. C. and since coming to this section of the country has been head nurse of the infirmary at the Trudeau Sanatorium, where her efficiency, and gentle, kindly manner endeared her to all with whom she came in contact. The groom is an Englishman, but has spent many years in Cuba, where he is superintendent of the quarantine station at Mariel, twenty-two miles out Havana. Mr and Mrs Pinkney have gone to Old Forge to spend the rest of the summer. Singly these two useful people have been doing their share in bearing the world's burdens, the one in nursing the sick back to health, and the other in carrying out efficient measures to prevent disease and its attendant sorrows. As together they continue the journey of life, the good wishes of their many friends go with them.—Adirondack (N. Y.) Enterprise. The bride is a daughter of Mrs H McAfee, of 14th con Greenock, and has a host of friends in this part who will join heartily in the well wishing.

LOOK AT OUR RUGS

YOU CANNOT SPEND YOUR MONEY ANY BETTER WAY THAN IN BUYING SOME NEW RUGS.

THE WHOLE FAMILY WILL ENJOY THEM ALL OF THE TIME. AND THEN YOU WILL BE PROUD OF YOUR FLOORS WHEN "COMPANY" COMES.

COME IN AND SEE OUR RUGS. YOU WILL LIKE THEM. PRICE THEM AND YOU WILL BUY THEM.

We are particularly fortunate in our large stock of Rugs. Prices have gone soaring, but we can give you a very good choice at prices that show practically no increase.

Instructions Issued to Aid in Inquiries

Because of the number of inquiries made daily at district headquarters concerning members of the C. E. F., Col. J. W Shannon, D O C, has promulgated the following in orders for the camp and district:

The following instructions regarding inquiries concerning members of the Canadian expeditionary forces are published for general information, and are to be given full publicity:

1. Inquiries relating to casualties are to be made direct to records office, Ottawa.

2. Other inquiries or any applications for leave, transfer or otherwise, relating to members of the C E F who have proceeded overseas must be made to Canadian Headquarters, Cleveland House, St James' Square, London, England.

3. Any application or inquiry relating to a member of the C E F in Canada must be made through the regular channels, i.e., to the officer commanding the unit to which the member of the C E F belongs, who will deal with the matter himself or forward it, after prompt investigation, with his recommendation, to the officer commanding military district in which the unit is situated.

4. Applications or inquiries concerning members of the C E F units in Canada, which cannot be made to an officer commanding a unit should be made to the officer commanding the military district concerned.

5. All officers commanding units in military district No 1 are to distinctly understand that all inquiries or correspondence in this connection must receive immediate acknowledgment and prompt attention.

Noted Canadian Horsewoman

LADY BECK

wife of Sir Adam Beck, who is here shown in riding costume, belongs to a family of athletes and horse lovers. To her keen judgment is attributed much of the success which Sir Adam's hunters have scored at English, Canadian and American shows. Lady Beck was the first woman to act as a judge at the New York Horse Show.

Unnecessary

Irate Father: "I'll teach you to kiss my daughter."

Young Man: "Not necessary, sir. I have just learned."

Old Sight and Old Age.

Old age is a matter of years.
Old sight is a question of glasses
If you find difficulty in reading, while for distance your sight is good you require old sight glasses.
Old sight shows itself at about forty
A competent optician should be consulted.
We examine eyes free and guarantee satisfaction.

A STOPPED WATCH

—one that will not go AT ALL—does not cause as much bother as one that runs now fast, now slow, in an erratic fashion.

The first you don't pretend to depend upon—the other is a constant source of annoyance.

Most people can afford a watch, but no one can afford an uncertain fast and slow one.

And when our Repair Department is so close at hand there is really no excuse for carrying anything but an accurate time-piece, no matter what the first cost was.

Consult us about any watch troubles that may arise.

I. SHOEMAKER
Jeweler and Optician

The Awful Cost of War

The New York Independent, in speaking of the awful cost of this greatest of all wars, says: Hundreds of cities razed. Thousands of miles of territory ravaged. Millions of men killed and wounded. Billions of wealth blown up in cannon smoke. Whole populations massacred. Half the human race drawn into the vortex. It matters little," the Independent goes on, "who started the war. It matters little whether militarism, monarchism or commercialism is most to blame. History will decide. The cardinal fact never to be forgotten is this: The war was precipitated by a handful of captains, and kings and cabinet officers. It was not a people's war.

Not the least of the tragedies of the situation lies in the fact that all of those who are engaged in mutual slaughter believe they are fighting for their liberties and homes. Germans believe they are fighting to avoid being throttled by Russia and commercially crushed by England. Frenchmen believe they are fighting from Teuton domination. Englishmen hold like views. Even in Austria a similar feeling prevails. The following letter was taken from the body of a dead Austrian soldier: "We go to battle for freedom and justice—and our struggle is for lasting peace. . . . If this lasting peace is really obtained, then I shall not have yielded up my life in vain. For when you read this letter I shall be resting under the sod. My spur of endurance was the thought of the world peace which is to follow this war. I left this world unwillingly. . . . Do not forget what I lived for—what in the end died I died for—the building up of a better order which shall create happier men."

—THE ADVOCATE office has a splendid stock of wedding stationery and calling cards on hand, also the most beautiful styles of type, so we are able to turn out the finest lines of wedding invitations, announcements, cards, etc. We can do work fit to invite the best of people to a wedding, so why pay two or three times as much to city printers or engravers?

There are 243 families on the pay list of the Bruce County Patriotic Fund. The July payments, which were sent out on Saturday, amounted to $4,700. Mr H M Lay, of Walkerton, is the treasurer.

GERMANS MURDER A BRITISH CAPTAIN

Cavell Case Paralleled by Execution of Captain Fryatt Who Tried to Ram a Submarine

Captain Charles Fryatt of the British steamer Brussels, which was captured and taken in to Zeebrugge last month by the Germans, was executed by shooting after a naval court-martial because of his alleged action in attempting previously to ram a German submarine. The trial was held at Bruges Thursday. U.S. Ambassador Gerard was instructed by Great Britain to see that Fryatt obtained a fair trial, but his efforts were fruitless.

News of the execution of Captain Fryatt caused a painful impression at the British Foreign Office. Under the instructions of Viscount Grey, the Foreign Secretary, a note was despatched immediately to the American Embassy requesting that James W. Gerard, the American Ambassador at Berlin, procure complete details of the affair.

The first intimation of the trial of Captain Fryatt was called to the attention of the Foreign Office by press reports on July 18 to the effect that he was to be tried as the result of finding on him a watch containing an inscription reciting his efforts to ram a German submarine.

Watch Story Germas Lie

From inquiries made of the owners of the steamship Wrexham, which Captain Fryatt commanded when the alleged incident took place, the Foreign Office learned the captain had with him neither a watch nor a letter to the effect that he had attempted to ram a submarine with him when he was captured. Therefore, officials in London state, the charges must have been based on press reports.

When the news that Captain Fryatt was to be tried was received the Foreign Office immediately sent a note to the American Ambassador, Walter Hines Page, requesting that American diplomatic representatives take all necessary steps to provide for his defence, calling attention to the fact that Fryatt's act in steering towards a submarine and forcing her to dive was essentially defensive, and precisely the same as if he had used the defensive arm which the United States and Great Britain hold to be an undoubted right.

Another Cavell Episode

No reply was received from Ambassador Gerard, but the Foreign Office is convinced he acted with his usual promptitude. Therefore it is their theory that the trial and execution of Captain Fryatt was hurried even more than in the case of Miss Edith Cavell.

Discussing the case with the Associated Press, Baron Newton, Under-Secretary for Foreign Affairs, who during the conversation was summoned to Foreign Secretary Grey's office for a conference, said: "On the face of the details of the report as received by us, the execution of Captain Fryatt seems to be worse than the Cavell case. It is an extremely grave incident, the importance of which it would be difficult to exaggerate. It must be borne in mind that when the alleged ramming took place German submarines were attacking merchant ships without any warning whatsoever." According to wireless messages from Germany, Captain Fryatt was executed "for a francstireur crime against armed German sea forces."

GEN. HUGHES IN LONDON

Acclaimed as Canada's Kitchener—Gives an Interview

General Sir Sam Hughes arrived in London Sunday afternoon. General Hughes stated that the main object of his visit was to continue the work of reorganization of the Canadian forces in England and at the front, which had to be suspended two months ago owing to his return to Ottawa. Sir Sam said that recruiting among the French-Canadians was now picking up in a marked degree, indeed it was more than satisfactory.

Three London papers have in the past week advocated a public welcome to General Hughes, whom they hail as the Lord Kitchener of Canada. The Sunday Pictorial says that if he were to ride through London at the head of his gallant troops he would receive acclamations Canada would never forget. In an interview Sir Sam says Canada's message to Britain was: "To persevere is to conquer."

"No peace terms must be discussed," the Commander-in-chief of the Canadian forces continues, "except the complete surrender of Germany. Canada is determined to fight to the finish. The wives, mothers and sisters of our Canadian lads are determined that this war shall be fought to a victorious conclusion. No matter how long it may go on there will be a constant, steady stream of Canadian troops."

LET GERMANS REPENT

Sir George Foster Would Exclude All Things German

The members of the Royal Colonial Institute, London, have seldom listened to a more eloquent speech than that delivered by Sir George Foster at the luncheon given in his honor. Sir George urged the immediate adoption of a vigorous trade policy, excluding all things German. "There are to-day in our midst," he said, "men in responsible places who are actually pleading that Germany must be allowed time to recuperate as one of the nations of the earth, despite the methods she had adopted of outrage, pillage, violation and base betrayal of friendship and hospitality. I say that for at least a generation German business men should be excluded from the pale of the British Empire. Give them a good long time to repent but be sure they do repent, then let them come and pray to be re-admitted into the neighborhood and fellowship of decent civilization."

A London despatch on Monday said: British casualties in the month of July in all the war areas totalled 7,084 officers and 52,591 men.

IN THE GARDEN

Plant the main crop potatoes. Plant two or three varieties, so if one fails the other will be likely to produce a crop. Plant an experimental plot of a dozen varieties to ascertain which will produce the best on one's own soil.

In transplanting flower and vegetable plants choose a cloudy day if possible for the work and plant in a newly-prepared soil. Set the plants so firmly that a leak can be pulled off without disturbing the roots.

The more one experiments the more he will learn regarding his soil and plants, and the greater will be the interest taken in farm and garden work. Utilize the present season to perform all the experiments possible.

In planting bush beans, sow the seed thinly. One seed dropped every two inches will give more and better beans than heavier planting. When grown thin the plants branch well and they will produce heavily.

Work a little quick-acting fertilizer into the soil about all perennial flowers. This will materially enhance their bloom. Keep the soil well stirred about them, but if this cannot be done then mulch the ground with stable manure.

In securing vegetable plants, those grown in pots will give better results than flat-grown plants. The cost is higher, but in the case of egg-plants, tomatoes and peppers the quicker growth compensates for the extra expense.

Nip the blossoms off strawberry plants set last Fall, and one-year berry bushes. Don't cut a one-year asparagus bed at all. Dress it twice in May with salt, a pound to twenty square feet of ground.

Keep the cultivator going; don't let the grass and weeds get large, and while you are busy in the vegetable garden, do not neglect the flower beds, for weeds and grass will grow there, too, and be harmful to the plants.

Un-alcoholized Wine

An Italian agricultural magazine describes what it calls de-alcoholised wine, which is quite different from unfermented grape juice. It is made from ordinary wine, and contains all the components of the latter except alcohol, including the ethers and aldehydes to which its pleasant taste and stimulating properties are due. It also contains the same acids, and especially tannic acid, which has been found to exercise a protective action against the germs of cholera and typhus. The operation of depriving wine of its alcohol without any other alteration is accomplished by means of fractional distillation under relatively low pressure.

Curing Fowl of Fat

When a young or old hen begs down, it is due to overfat. It is difficult to cure. Such fowls should be placed in a separate pen, and fed lightly. They should also be compelled to do considerable hunting among litter for their grain. Exercise is about the only treatment that might effect a cure.

Charcoal For Fowl

Wood charcoal for fowl is not only cheaper but better than charred or burned bone. Charcoal has a great absorptive power for gases, impurities and acids, and thus acts as a corrective when the stomach is sour and digestion has been impaired.

ELDERLY WOMEN SAFEGUARDED

Tell Others How They Were Carried Safely Through Change of Life.

Durand, Wis.—"I am the mother of fourteen children and I owe my life to Lydia E. Pinkham's Vegetable Compound. When I was 45 and had the Change of Life, a friend recommended it and it gave me such relief from my bad feelings that I took several bottles. I am now well and healthy and recommend your Compound to other ladies."—Mrs. MARY RIDGWAY, Durand, Wis.

A Massachusetts Woman Writes

Blackstone, Mass.—"My troubles were from my age, and I felt awfully sick for three years. I had hot flashes often and frequently suffered from pains. I took Lydia E. Pinkham's Vegetable Compound and now am well."—Mrs. PIERRE COURNOYER, Box 239, Blackstone, Mass.

Such warning symptoms as sense of suffocation, hot flashes, headaches, backaches, dread of impending evil, timidity, sounds in the ears, palpitation of the heart, sparks before the eyes, irregularities, constipation, variable appetite, weakness and dizziness, should be heeded by middle-aged women. Lydia E. Pinkham's Vegetable Compound has carried many women safely through this crisis.

ELLIOTT Business College

Yonge and Charles Sts., Toronto

Made this remarkable average record for the last three months: We were asked to fill more than thirty times as many positions as we had graduates. The business world calls you; prepare here and now splendid opportunities; good salaries. All who are anxious for a successful start in life should arrange now to enter this popular school.

W. J. ELLIOTT, Principal.

THE EARL'S SECRET

Or, a Martyr to Circumstances.

CHAPTER III.—(Continued).

The captain's quick, black eyes rested for a moment upon her and Mrs. Dodson's physiognomies while the introduction was being made; as quickly passed over Mr. and Mrs. Giles' and the vicar's, but rested a little longer when Mr. Leicester's turn came, and grew more searching in their expression as they met the calm regard of the young man.

But the keenness of scrutiny—for it was nothing more or less—was tempered by a smile. Captain Murpoint possessed the rare art of smiling well.

"I beg that you will not delay the meal, nor change a single course. I am a case-hardened traveller, and too used to short fare to think anything of the loss of soup and fish. Indeed, my dear madam, if you will pardon me for a few moments I will exchange these dusty and really disgraceful garments for something more orthodox and suitable."

Mrs. Mildmay bowed graciously, and turned to a footman.

"I have brought my man with me—a faithful fellow, who has been my companion in fair weather and foul all over the globe," said the captain, moving toward the door. "Pray, let me implore you not to spoil your dinner."

So saying, he passed through the doorway, outside which, eyeing the elegant room with a satisfied and comprehensive gaze, stood the grim-faced, sharp-eyed "faithful fellow," the captain's servant.

Violet had not spoken a single word save those she had addressed to the captain. A sweet, solemn gravity had settled upon her fair, young face, brought there by the memories of her father, which this stranger's arrival had called up.

She sighed when his soft, pleasing voice had died away, and turned almost with a start to her neighbor, Mr. Leicester.

"How strange—is it not?" she said.

"Very," said Mr. Leicester, looking at her, thoughtfully. "Captain Murpoint came unexpectedly?"

"Quite," said Violet.

Leicester Dodson toyed with his fork "Do you remember him?" he asked.

"I have never seen him before," replied Violet, quickly. "But he is such an old personal friend. My father never wrote me a letter without mentioning him."

Leicester, with all the interest he felt showing plainly in his face, nodded.

"They met in India, of course. Captain Murpoint must be a younger man than Mr. Mildmay would have been."

"Yes," said Violet, "much younger. Papa told me how much once, but I have forgotten."

Then her aunt spoke to her, and Leicester fell into a muse. Captain Murpoint's advent seemed to have struck all his eloquence dumb.

The rest of the guests were chattering with quite a mild excitement, but he sat turning the fork over and following the pattern of the table-cloth with that grim silence which did not sit ill upon him, though it would have made some men look sullen.

Suddenly the hum died out, and Leicester, looking up, saw that Captain Murpoint's re-entrance was the cause.

If Captain Murpoint had looked gentlemanly in his travelling suit he certainly looked distinguished in the orthodox army dress.

Leicester Dodson's eyes, as they watched him take his place between Violet and her aunt, took in every detail of the well-proportioned figure from its breadth of shoulders to the long stretch of arm with its strength-denoting muscular development.

But when he came to regard the face he was startled.

He had, on the captain's first entrance, thought him rather handsome, but now, seeing him sideface, he was surprised to find that there was a sinister look about some feature that had an unpleasant effect.

Suddenly the captain turned full face to address Violet, and the displeasing expression had gone.

Then he turned again, and Leicester understood it.

One side of Mr. Murpoint's face was better looking than the other.

On the right side, in sqhne with the rest, there was a scar—a small white scar—too small one would have thought to have marred his face, but mar it, it certainly did, for, whether the captain smiled or frowned, looked humorous or sad, that scar remained the same—indelible, white, repulsive, giving the sinister cast to the right side of the face which had startled Leicester.

Was the captain aware of this blot on his beauty?

Certainly that scarred side of his face was not half so often seen as the other, and Leicester, who was observant as well as quiet, noticed that when he was spoken to, the captain invariably turned his left side with a smile to the speaker, and kept it turned until the speaker's gaze was withdrawn.

But Leicester was not allowed to continue his silent examination of Mr. Murpoint's features long, for that gentleman, having blunted his appetite upon the greater portion of a fowl, with a fact which was remarkable, soon engaged the whole table in conversation.

Then he found that he could not only smile well, but talk well also.

He started a topic, chased and ran it to death in a light, graceful way, then raised another.

The spirits of the party, which had grown somewhat low, rose rapidly.

The captain was humorous, and made Miss Mildmay laugh.

Then, with a graceful ease, he veered round into the pathetic—some little Indian story—and the ladies sighed sympathetically.

As suddenly he managed to engage Mr. Leicester Dodson in a discussion on the catacombs, and proved to that gentleman, who knew the East pretty thoroughly, that Egyptian antiquities were also not quite hidden mysteries to the wonderful captain.

All the time he managed to eat in a noiseless, well-bred way about three times as much as any one else, and contrived to divert to his own plate the nice cuts and choice corners of the poultry and saddle of mutton.

He drank, too, with a quiet enjoyment of the good wine, which met with a hearty sympathy from the butler.

"This wine," he said, lifting his glass and bowing to Miss Mildmay with infinite grace, "this wine, my dear friend brought from India—eh? my dear young lady?" turning to Violet. "Many and many glasses have your father and I drank in the hot sunset. I have a wonderful memory for wine and faces. Do you know," he broke off, suddenly, addressing Leicester, who was regarding him with his quiet, earnest gaze, "I fancy that I have seen you before. Have I?"

"I can't say. 'Tis possible," said Leicester. "Have you any recollection beyond the indistinct surmise?"

"N—o," said the captain, hesitating. "Were you ever in India?"

"No," said Leicester. "I have travelled through the East, and know the Continent and England pretty well."

"There you have the advantage of me," said the captain, setting his wineglass down, and looking round at the attentive faces. "I left my native land when a boy of eighteen, and returned only two days since."

"Ah," said the vicar, in his nervous, jerky style, "then you have much to see, Captain Murpoint. England is small, but precious in beauty. It can compare creditably with any other spot on earth, even in its most unfair and ill features. What is softer and more beautiful than Devonshire? What more grand than the Cornish cliffs? Ay, even in picturesque Ireland it would be difficult to eclipse our little island. We defy you to find in any part of the globe so weird and grotesque a piece of scenery as the Portland wastes."

The captain, with a smile, had turned his left side to the well-meaning, but rather long-winded cleric, and the butler was filling his glass with the wine which he had so highly praised.

Suddenly, as the vicar's neatly turned sentence came to a close, the captain's face turned and presented the left side, which was as white as the scar itself.

"I beg your pardon, sir," said the butler, for the captain, in turning his head, had also moved his hand and spilled some of the wine.

"All right, my good fellow," he said, good-naturedly, and stooped to wipe the wine from his coat. Then, looking up as placid and smiling as before, he added, "Portland? Let me see, that is on the south coast, is it not? A—er—convict station?"

"Yes," said the vicar. "A most interesting place, and well worth a visit. If you think of making an English tour, you should by all means take it en route."

"Thanks," said the captain, with an air of gratitude. "It's a good suggestion." Then he rose to open the door for the ladies, his left side well to the front and the good-tempered, well-bred smile shining placidly upon it.

The vicar, being the oldest friend of Mrs. Mildmay, moved to the head of the table, and did the honors of the good old port and claret with formal exactness, but the gentlemen had evidently taken all the wine they cared for, and, with a nervous, "Er, shall we join the ladies?" the vicar pushed back his chair and led the way into the drawing-room.

Mrs. Giles was seated at the piano, Mrs. Tonson, the vicar's wife, was sipping tea with her sweet, little head on one side like a tomtit, listening to Mrs. Mildmay's explanation of the intricacies of some new needlework, and Violet and Mrs. Dodson were engrossed in conversation, which had for its topic Mr. Leicester's various habits and idiosyncrasies, a topic the fond mother could expatiate upon ad infinitum.

The captain's quick glance flashed through the handsome room for a moment, then sank into a quiet gleam of pleasure as he walked to Violet's low chair, and, motioning with his eyes to a small, black-edged portrait of himself that hung in a recess, said:

"No wonder you recognised me so quickly, Miss Mildmay. I had forgotten the portrait."

Violet smiled.

"But for me, who see it so constantly, it seems as impossible for me to forget you, or rather fail to recognise you."

Mrs. Mildmay turned, with a smile and a little nervous flush.

"You notice that it has a black frame, Captain Murpoint?"

The captain nodded, with a shrug of the shoulders.

"Yes, and I can guess the reason. Oh, my dear madam, I must reserve the story of my resuscitation for a more fitting opportunity. I am afraid you will find it tedious. Poor John! would that he could have lived to learn that instead of being among the killed, I was only one of the unfortunate captives."

Here the vicar, who had been vainly endeavoring to engage mild Mr. Dodson in a theological argument, turned, with very awkward interest.

"Ah, Captain Murpoint, that was a most extraordinary mistake. I am curious to hear how it occurred. My old friend mourned for you very deeply—er—er—and caused a tablet to be set upon the left side of the church aisle to your memory."

The captain smiled, then sighed.

"It was a mistake, and an extraordinary one. The facts are very simple though. My corporal, a worthy man, poor fellow, had, the evening before the skirmish, fallen into a water tank and spoiled his uniform, the only one he had brought with him. He came to my tent at sunset, dripping wet, and I, on the impulse of the moment, lent him one of my spare suits. Poor fellow, he promised to return it before the following morning, but Providence so willed it that the loan should become a gift. Before sunrise the Sepoys were upon us. I was wounded and taken prisoner, the poor corporal was killed and mangled to such an extent as to render his identification by features impossible. The clothes by which they imagined they could ascertain his personality, were, of course, mine, and so Captain Howard Murpoint was returned as dead and buried, and Corporal Mundy was cited as captured."

Violet, who had been listening, with her dark eyes fixed upon the captain's face, drew a long breath.

"And what became of you?" she asked, with that absent, abrupt way peculiar to her.

The captain passed his hand down his thick, dark mustache, and looked at her.

"I will tell you some day," he said, as I threatened. Suffice it for the present that I was held captive for two years far away beyond the hills—ay, outside the pale of civilization. It was a miserable time; to look back upon it even now, in this comfortable room and with your interested face, my dear young lady, before me, gives me an unpleasant sensation. The Hindoos are the connecting link between man and the monster!"

(To Be Continued.)

RECORD DOCTOR'S BILLS.

Huge Sums That Have Been Paid By Grateful Patients.

It is said that Dr. Israel, the eminent surgeon who operated recently on the Sultan of Turkey, received a fee of $30,000, and an additional $7,500 for expenses. Large though this sum assuredly is, it by no means creates a record.

A $50,000 fee was paid in 1903 to Professor Lureng, the eminent "bloodless" surgeon, for an operation in Chicago on Mr. Armour's little daughter. But in the whole history of the medical profession there is no parallel to the $300,000 fee paid to Dr. Gale, of Bristol—the blind physician—for having cured the injured knee of a wealthy patient.

Sir Morell Mackenzie received fees of $78,000 for attendance on the Emperor Frederick.

Millionaires, as one might expect, are by no means ungenerous to their pet medical advisers. The late Jay Gould paid his doctor a regular salary of $15,000 a year, and a fee of $90,000 during the two months' illness of his daughter.

It was an ancestor of an ex-Lord Mayor of London—Dr. Dimsdale—who inoculated Catherine II. of Russia against smallpox, receiving a fee of $50,000, travelling expenses to the extent of $10,000, a life pension of $2,500, and the office of Physician-in-Ordinary to her Majesty. In addition the lucky medico received the title of Baron and the rank of Councillor-in-State. That was as far back as 1762.

The Rothschilds have always been particularly generous towards their medical advisers. The head of the Paris house, in the days of the eminent physician, Dupuytren, had occasion to consult the famous medico; but no fee was tendered during or at the close of the doctor's several visits.

Later, when Dupuytren had almost forgotten about the matter, a considerable sum was placed in his hands—"the proceeds," it is said, "of a flourse transaction in which the financier had interested him without his knowledge.

A patient of Sir Astley Cooper adopted a similar means of repaying the services of the eminent physician, sending him the profit on $10,000 of a forthcoming loan, "which I had an opportunity, out of a very small sum Sir F. Baring has given me, of appropriating for your chance." The facts are recorded in an old issue of the "British Medical Journal."

But the greatest fee of all awaits some enterprising specialist—the million dollars offered by John D. Rockefeller for a new digestive apparatus. That fee has been long a-begging.—London Answers.

PRACTICAL FARMING

The Value of Underdrainage.

What has struck me most of late is the value and importance of tile drainage and how little farmers avail themselves of the opportunity of improving their land in this manner. I will quote a few particular instances of the effect of tile drainage that I have come across.

Our farm has a certain amount of tile-drains where they are most needed, but has by no means a thorough system. They were put in before my time at the rate of about one drain a year. A field we had in corn last year was always wet on the south side when the rest of the field was fit to work, and consequently was seldom worked up well, and, on account of this and its low-lying condition, never raised more than half a crop. A few years ago a five-inch drain was put through it, and although this did not drain it thoroughly, this part of the field always raises one-third better crops. Last year was wet and we had the field in corn. At one time, on such a year, there would have been practically nothing on this strip but the tile did the business, and it went 100 bushels to the acre and the rest of the field about fifty.

Another field was in oats last year and seeded down to alfalfa. There are several drains running across the field, but at quite a distance apart. When I mowed the field I received an object lesson. A few rods on each side of the tile drains there was a fine, thick crop, but farther away, the alfalfa was badly winter-killed and hardly worth cutting. If the field had been thoroughly under-drained it would easily have yielded two loads per acre. As it was it barely went a load to the acre and almost all of that came from over the tile drains.

We intended to put two fields in oats this year. There were both good fields and of similar soil. One is well underdrained, the other has no drains in it. The drained field was fit early, worked up nicely, and was one of the first sown in the vicinity. The other field was wet and sowed wet until it got too late for oats, so we decided to plow it and plant it in corn. The weather suddenly changed to the other extreme and became hot and dry. We were finishing another corn field and by the time we were ready to plow this field it was too hard and remained so until it was too late for corn. So in this instance lack of tile drainage meant the loss of a crop. These are just a few of many similar personal experiences in this line.

Now, I may be wrong in making such a general assertion, but from my personal experience tile-drainage means at least one-third better crops, or an increase in production of 33 per cent. Now by a recent law in Ontario a farmer without sufficient funds can, I believe, borrow up to $1,000 from the township for the purpose of tile drainage, and be charged interest on it in his assessment, together with his other drainage taxes, at the rate of 6 per cent. If he can invest this money at a profit of 33 per cent., and only pay 6 per cent for it what better investment could he desire? Why is he so slow to avail himself of this golden opportunity?—Reginald Jukes, in Farmer's Advocate.

Cow Comfort in Summer.

How stables have been generally designed with the object of keeping cows comfortable in winter only. This may have been all right in the past, but conditions are rapidly changing in the dairy industry, and it is becoming quite as necessary to provide for stable comfort in summer as in winter. The practice of milking in the barn is now common, and will become more so as the use of the milking machine increases. Instead of throwing green feed over the pasture fence to the cows we now have the summer silo and feed them in the stable. As dairy methods improve the fly nuisances claims more attention, and every one knows that flies bother the cows less in a cool, dark place than in the open sunlight. On most good dairy farms the cows are kept in for at least a part of the day in the warm months, and this should not be lost sight of when stables are built or remodelled.

The chief consideration in providing for summer comfort is to have a continuous stream of fresh air passing through the stables. The prevailing wind in this country is from west to east. In order to catch the most of this the stable should lie north and south, with the windows in the east and west side. This arrangement agrees with the winter demands for lots of sunshine. The windows should be entirely removable. Ventilating shafts and feed shutes should be made so that they will carry off a maximum amount of warm air. The stable fixtures should be such as to offer the minimum obstruction to the free circulation of air. This is one of the chief advantages I see in metal stable fixtures. At night when the cows are out everything should be kept open so as to provide for a complete change of air before they are put in again the following day. Cows kept in a cool, well ventilated stable for a few hours each day during the hot summer months will show their appreciation in an increased milk flow.—"Dairyman" in Farm and Diary.

To Prevent Overheating.

Horseman will soon need to be on their guard against overheating. Most cases of overheating can be prevented by keeping a few simple things in mind.

Give at least a pailful of water to each horse about 10 o'clock, and again at 3 or 4 o'clock on a hot day.

Be very careful with a horse that is a little out of health, if you are working him on a hot day.

Look out for a horse that after sweating freely suddenly stops sweating. Put such a horse in the shade as soon as possible and give a moderate drink.

Do not put a horse not in good condition for hard work, in the centeref a four-horse team in hot weather.

Work carefully on a hot day when the atmosphere is moist and heavy.

A horse can hardly get too hot to water, but one must regulate the amount by the temperature of the water.

In case of an attack of overheating the horse should be taken to the shade as soon as possible. A treatment of the surface of the body, particularly of the head, with cold water should be given until the temperature is within a degree or two of normal. Stimulants, such as whiskey or brandy, well diluted, should be given as early as possible.

In most cases it is better to plan to avoid over-heating than to plan to treat the horse for it.—M. H. Reynolds, University Farm, St. Paul.

GUNS ON SNOWCLAD PEAKS

Difficulties of War Preparations in Mountain Regions.

A description of the difficulties which have been overcome by the Italians on that part of the front where the fighting takes place on mountain peaks coated with eternal snow is given by a correspondent of the London Daily Mail.

The villages in the lower ground behind the front have been aroused from their accustomed appearance of sleepy comfort. In their streets are swarms of soldiers on their way to the front or back from it for a holiday. Thousands are camping out in the neighborhood of the villages or billeted on the inhabitants. Constant streams of motor vehicles rumble through the villages on their way up the steep road, bearing ammunition, food and supplies of all sorts to the batteries, trenches and dugouts on the peaks.

The road over which these vehicles travel was before the war a mere hill path—now the military engineers have transformed it into a modern road "graded, metalled and carried by cunningly devised spirals and turns three-quarters of the way up the mountains."

The correspondent says:

"It is a notable piece of military engineering, but it is not merely that. It will serve as an artery of commerce when it is no longer needed for the passage of guns and army service wagons. There is nothing temporary or makeshift about it. Rocks have been blasted to leave a passage for it and solid bridges of stone and steel thrown across rivers.

"Because the Austrians started with the weather gauge in their favor, being on the upper side of the great ridges, it was necessary for the Italians to get their guns as high as they could. The means by which they accomplished these tasks were described to me. They would seem incredible if one had not ocular demonstration of the actual presence of the cannon among these inaccessible crags.

"There are some of them on the ice ledges of the Ortler nearly 10,000 feet above the sea level, in places which is by way of an achievement for the amateur climber to reach with guides and ropes and porters and nothing to take care of but his own skin. But here the Alpini and Frontier Guides had to bring up the heavy pieces, hauling them over the snow slopes and swinging them in midair across chasms and up knife-edged precipices, by ropes passed over timbers wedged somehow into the rocks. I was shown a photograph of a party of these pioneers working in these snowy solitudes last winter. They might have been a group of Scott's or Shackleton's men toiling in the Antarctic wilderness."

By means of a suspension railway made of wire rope with sliding baskets stretched across chasms of great depth, oil, meat, bread and wine are sent up, for the soldier must not only be fed, but must be fed with particular food to keep the blood circulating in his body in the cold air and chilling breezes of the snowclad peaks. Kerosene stoves in great numbers have been sent aloft to make the life of the mountaineer soldiers more comfortable.

The cost of living can never go so high that it won't seem worth it to most of us.

The Secret of *Flaky* Pie Crust

It's in our Recipe Book—with a lot of other recipes for making good Pies. But—we're going to tell you right here how always to have the top crust fine and flaky—and how to have the under crust just right, even when using fresh fruit.

MONTREAL, CARDINAL, BRANTFORD, 218 PORT WILLIAM.

A NOTED ECCENTRIC.

Earl of Sandwich Believed He Possessed Psychic Healing Powers.

The death of the Earl of Sandwich has removed an interesting figure in English life. The Earl, who was nearing his seventy-seventh birthday, was known for his eccentricities. He believed he possessed psychic healing powers and had been able to cure many mental and physical illnesses.

After the South African war he had some sixty wounded officers brought to his home, where he served in the capacity of both nurse and physician, and announced that he was gratified at the success he obtained. His patients ranged from dwellers in palaces to those in the lowliest walks of life and included a Hindu monk, who was treated in his monastery, a Mohammedan, who was treated in the mosque he served, and a Hindu princess, who was brought 600 miles by her husband to Lord Sandwich.

He announced the possession of healing powers before the University College of London two years ago. At the time he said he had never failed in his treatment of sufferers. He said he could not explain his power, but knew the results and expressed the belief that many persons possess the same gift without being aware of it.

The Earl was fourth in descent from the peer, who, by ordering a writer to place a piece of meat between two slices of bread and bring it to him as he sat at cards, gave the sandwich to the world.

He was for long an ardent admirer of Mme. Melba, and it has been said that the singer could have been the Countess of Sandwich if she had so desired. The Earl never married.

Some years ago in protest against the custom among women of wearing their hats at luncheon he ordered his servants to wear their hats while serving the meal.

With the death of the Earl an American woman, formerly Miss Alberta Sturges, daughter of the late William Sturges, becomes Countess of Sandwich. Her husband, the new Earl, is George Charles Montagu, a nephew of the late holder of the title.

The cynic is a man who thinks everything he doesn't approve of can't possibly be worth while.

For many years past the population of Germany has been increasing at the rate of about 800,000 a year. In 1871 the population was 41 millions, and by 1910 it had risen to almost 65 millions.

About the House

Useful Hints and General Information for the Busy Housewife

Some Dainty Dishes.

When making pickles, remember that the very best white wine vinegar should be used, and that they should be made in an agate saucepan that is quite free from cracks or blemishes. When made, they must be put up as carefully as jelly in sterilized jars and kept tightly sealed. The jars should not be quite filled with the vegetables, but should have the liquid covering them for at least an inch in depth. The surplus vinegar is good for flavoring mince, hashes and gravies, if used very, very warily.

Now for the recipes:

Pickled Onions.—One quart of small white onions. Remove the outer skin and place in a pan of boiling water. Cook until they look clear, then remove, drain and dry. When cold place in jars and cover with the following mixture: One quart of wine vinegar, one ounce of white pepper, one dessertspoonful of salt. Make hot. Pour over the onions. Seal when cold. The onions must be peeled with a silver knife. A steel knife causes them to blacken. If peeled in a basin of water it will save the eyes.

Lemon Pickle.—Wipe six lemons, cut each into eight pieces. Add one pound of salt, six cloves of garlic, two ounces of horseradish; crush one-quarter ounce of cloves, one-quarter ounce of nutmeg, one-quarter ounce of mace, one-quarter ounce of cayenne pepper, and two ounces of dry mustard. Into these add two quarts of vinegar. Pour all into a strong fireproof jar, stand it in a saucepan of boiling water and boil for a quarter of an hour. Set the jar away and stir with a wooden spoon every day for six weeks. At the end of this time put it into small bottles and tie down tightly.

Pickled Beets.—To each gallon of vinegar, two ounces of allspice, two ounces of whole pepper. The beets must be carefully cleansed without breaking the outer skin. Lay them carefully into a pot of boiling water, let them cook gently for about one and a half hours, drain them, and when cold, peel and slice neatly. Put into a dry jar. Let the vinegar boil up for a minute, then stand to become perfectly cool before it is poured over the beets. Seal well. The beets will be ready for use in about a week.

Pickled Red Cabbage.—Slice the cabbage finely and place it in a colander; sprinkle each layer with coarse salt. Let the strips drain for two days, then put in a jar and cover with boiling vinegar. If a spice is used, it must be put in with the vinegar in the proportion of one ounce of whole black pepper and one-half ounce of allspice to the quart.

Pickled Gherkins.—Prick to put on the gherkins: to each quart of water take six ounces of salt. Strip the gherkins of the blossoms, put them in a stone jar and cover with boiling brine. After 24 hours take them out, wipe each one carefully and place in a clean jar with half a dozen bay leaves. Pour over them a pickle made as follows: To every quart of vinegar allow three blades of mace, two tablespoonfuls of bruised ginger, half ounce of black pepper, half ounce of allspice, four cloves, a small quantity of tarragon, if liked, may be added to the pickle. When boiling fast, pour the pickle over the gherkins, cover the jar with a small plate for two days, when the pickle must be drained off and boiled up again. At boiling point the gherkins must be thrown in for two minutes and then placed back in the jar. Seal tightly.

Pickled Mushrooms.—Young button mushrooms only should be used. Cut off the stalks from a quart of mushrooms, cleansing the skin with a piece of new white flannel dipped in salt. Place them in a deep stewpan and sprinkle over them two teaspoonfuls of salt, one half ounce of whole white pepper and two blades of crushed mace. Shake them over a bright fire until the natural liquor has been drawn out and has dried up again. Then pour over them as much cold vinegar as will cover them; let it come to the boil for one minute and no more. Pour them into a clean, dry jar and seal.

Pickled Walnuts (Another Recipe).—One hundred walnuts gathered while young enough for a pin to prick them easily. Brine sufficient to cover them, in the proportion of six ounces of salt to one quart of water. Pickle of a full half gallon of vinegar, one teaspoonful of salt, two ounces of whole black pepper, three ounces of crushed ginger, three ounces of crushed mace, one-half ounce of cloves stuck into three small onions, two ounces of mustard seed. Boil up the brine and remove the scum, and when cold pour over the walnuts, stirring them night and morning; change the brine every three days, removing them in nine days. Spread the walnuts on dishes and let them remain in the air until black (about twelve hours). Boil the pickle for a minute, have the walnuts ready in jars, and pour it on them when boiling. When quite cold seal and store in a dry place.

Pickle of Small Vegetables.—Take young cauliflowers, cut into small pieces, nasturtium pods, string beans, or young runner beans, and lay them in a stone jar, pouring over them a boiling brine composed of six ounces of salt to a quart of water. The next day drain them off, shake gently in a clean cloth and put them in a dry jar. Pour over them the following pickle, which must have come to the boil and have remained boiling for one minute: To each quart of vinegar, put one ounce of black pepper, one ounce of crushed ginger, one ounce of shallots, one ounce of salt, one ounce of allspice and a pinch of cayenne. Cover the jar for two days, drain off the liquor, boil it up and throw in the young vegetables for a minute. Replace them in a jar and cover tightly.

Things Worth Remembering.

When dusting have the duster slightly damp and finish off with a dry one.

Always rinse black stockings in blue water, and they will keep a good color.

When turning hems in napkins, rub well with soap, and then you will have no trouble to hem them.

When using a double thread draw it over a piece of laundry soap and you will never have a snarl.

Paste some soft blotting paper on the bottom of flower bowls and they will not mar polished surfaces.

If the brass polish gives out do not worry, but instead go to work at the brass with lemon juice.

To keep meringue from falling, beat a saltspoonful of baking powder into it just before putting it on the pie.

Before squeezing the juice from the lemons put them in a hot oven for a minute. You will get twice as much juice.

To clean linen blinds rub them with a clean cloth dipped in oatmeal, changing the oatmeal as it gets dirty.

When enclosing stamps do not stick one corner to the letter. Put them in loose. They can't get out of a sealed envelope.

To shade an electric light in a sick room make a little bag of thin green silk with a draw string large enough to slip over the bulb.

Take a catsup bottle with a top that will screw on. Then hammer small holes in the top. This will make a nice clothes sprinkler.

To remove odors of onions or fish from cooking utensils, boil a little vinegar in the utensils after they have been washed.

A coating of thick castor oil applied with a soft flannel cloth to tan shoes whose color is too vivid will tone them down considerably.

Paper bags which accumulate from the grocery store are very useful to slip over jars and various other articles to protect them from dust and flies.

Mud spots may be readily removed from dress skirts, trousers, rubber coats, or from children's clothing by rubbing the spots well with sliced raw potato.

Strong ammonia water is excellent for removing iodine stains, and blueberry stains may be removed by washing at once with cold water and white soap.

To get longer service from scrim or muslin curtains, hem both ends alike, and this permits you to reverse them when rehanging each time after being washed.

To prevent damp and rust attacking the wires of the piano tack a small bag of unslaked lime inside the instrument just underneath the cover. This will absorb all the moisture.

Pin the sheets at the foot of the bed together with several safety pins. They will not pull up, and this will add to the comfort of the night's sleep. This hint is all right—except for a tall man.

If the hems of each pair of stockings are pinned together with a small safety pin when they are washed it will save time and trouble of sorting; also they can be hung on the line more quickly.

To destroy flies in the summer simmer together one pint of milk and a pound of brown sugar and 2 ounces of pepper. Then place the mixture around in saucers. It is instant death to flies, and is harmless.

If you would have your summer supply of white silk stockings remain white, always see to it that they are dried in the shade and washed in lukewarm water, as heat turns them yellow.

To obtain a true bias place the material flat on the cutting table and with a ruler or yard stick laid across one corner draw a line with chalk or colored pencil. Use this line for a guide in cutting.

To remove a stain made by lemonade and root beer, from a changeable taffeta dress. Wet the spot with a mixture of equal parts of alcohol and ammonia. Afterward sponge gently with alcohol until the stain is removed.

To remove sunburn, dissolve one tablespoonful of epsom salts in one pint of warm water and wash the afflicted skin in this mixture. Rinse in clear water of the same temperature, then bathe freely in glycerine diluted with warm water.

To whiten handkerchiefs, fine waists and other lingerie, wash and dry in the usual manner, then to one pint of cold water add two tablespoonfuls of granulated sugar, stirring until thoroughly dissolved. Let handkerchiefs, etc., soak in the water one-half hour. Dry in the open air.

FOR YOU AND I.

If you would smile a little more
And I would kinder be;
If you would stop to think before
You think of faults you see;
If I would show more patience, too,
With all with whom I'm hurled,
Then I would help—and so would you
To make a better world.

If you would cheer your neighbor more
And I'd encourage mine;
If you would linger at his door
To say his work is fine.
And I would stop to help him when
His lips in frowns are curled;
Both you and I'd be helping then
To make a better world.

But just as long as you keep still
And plod your selfish way;
And I rush on and heedless kill
The kind words I could say;
While you and I refuse to smile
And keep our gay flags furled,
Some one will grumble all the while
That it's a gloomy world.

—Edgar A. Guest.

THE LORD CHANCELLOR.

Lord Buckmaster Was One of the Leaders of the English Bar.

Lord Buckmaster, recently appointed the Lord Chancellor, who has been urging everybody in Great Britain to economize and save all they can in war time, is one of the most important men in the Cabinet, for it is through him that King George signifies his consent to anything signed in his name.

The Lord Chancellor is technically "the keeper of the King's conscience," advising his Majesty in regard to signing all State documents. Furthermore, the Lord Chancellor is the custodian of the Great Seal which figures on these documents. The Seal is kept in an elaborate purse made of the finest purple velvet, heavily embroidered in colored silks with the Arms of England—the lion and the unicorn. Below is worked in silk a motto in Latin meaning "For God and My Country."

It is an interesting fact that the Lord Chancellor takes precedence of every temporal lord and anyone who is not a member of the royal family, and of all bishops, except the Archbishop of Canterbury.

The appointment of Lord Buckmaster to the Chancellorship in 1914 astonished a good many people, for his promotion to the highest position on the bench with £10,000 a year came after only two years as one of the law officers of the Crown. Lord Buckmaster, however, was, before his appointment as Solicitor-General in 1913, one of the leaders of the Chancery Bar, where he had a very large practice. For some years he was Chancery "special." "Specials" do not appear for a less fee than 100 guineas.

His Lordship, who is 55 years of age, is famous for his energy and youthful appearance. He only looks about 35, and it is related that on one occasion a client remarked, "It's a nice thing to pay a boy like that such a big fee." But after Lord Buckmaster had won his case for his client, the latter made a further observation: "There's no knowing what fee that young man will want when he reaches 60."

Undoubtedly his energy and industry have been the secret of his wonderful success. Furthermore, he is held in high esteem for his personal qualities, and, when his legal duties permit him to do so, there is nothing gives the Chancellor greater pleasure than to his himself to the country with a fishing rod and spend hours on the riverside.

THE FASHIONS

As usual, misses', juniors' and tiny tots' frocks and outer garments follow the same general lines of grown-up designs. Fashion now decrees that taffeta and the flowered summer silks are not too grown-up for small people. One especially pretty little frock of taffeta and net shown is trimmed with daisies, a band of them forming the girdle, a cluster here and there on the skirt, and one on either shoulder. Another Froncy little party frock of taffeta and crepe is made sleeveless, with a smartly flaring ruffled skirt; this design, however, will hardly appeal to mothers although it is charming as a picture. An effective simple dress for summer is of plain white voile, trimmed with bands of old-time fagoting arranged to form a round yoke and banding the cuffs.

Children's and Junior's Millinery Most Charming.

For the very small person there are charming little fitted caps of lace and net, and fetching little close-fitting bonnets of pale pink and blue Georgette trimmed with a cluster of tiny flowers or aroselte of ribbon. For the older girls the wide brimmed Bankok and Wes-Chows are appropriate, trimmed with a touch of bright color

7056

Misses Jumper Dress

in wool or ribbon, or a simple band of velvet or elastic banding the crown. These sports bands with the stripes running around or up and down, are very becoming to the young girl and harmonize well with a plain wash frock or a dark serge or linen suit.

Pongee Popular for Girls.

Natural colored pongee, trimmed with contrasting colors, blues, greens, and similar shades, is well liked for the shoe top suits now so popular with girls of from six to sixteen. The blouses worn with these suits are usually fashioned of the sheer cottons, voiles, marquisettes, crepe de Chine, China silk and pongee. The light colored lawns, dimities and linens are also popular for girls, being fashioned into simple frocks, middy dresses and like models. The wide stripes, so popular for grown-up sport skirts and suits, are also popular with the younger generation, being fashioned into Norfolk suits, modified Russian and middy frocks and similar loose-lined models, becoming to the growing girl. The sports styles are popular, too, smart little coats of silk and wool jersey in the popular bright tones being worn over tub dresses of linen,

7295

duck, pique, and the softer cottons, voiles, crepes and the like.

In the shopstop suits also, the Poiret twills, novelty wool mixtures, shepherd checks, gabardines, and serges are equally as popular as the pongees and Shantungs.

These patterns may be obtained from your local McCall dealer, or from The McCall Company, 70 Bond St., Toronto, Ont. Dept. W.

KITTENS DISPLACE LAP DOGS.

Paris Actresses Carry Tabbies to Bois de Boulogne.

The Parisienne is forsaking her lap dog of pre-war days and taking to the kitten as a pet, according to the Paris correspondent of the Pall Mall Gazette.

The correspondent does not attempt to say whether the change is due to hard times, to the doubled dog tax or merely to an inexplicable whim of the moment. He says:

"Actresses whose popularity is sufficient to shield them from the reproach of seeking a new form of personal advertisement have lately taken to frequenting the Bois de Boulogne at the fashionable parade hour with the dearest of little tabbies snuggling roguishly in their arms, or gambolling riotously round and about them.

"After all, it may be that the new fashion is merely another way of protesting against the latest order of the Prefect of Police enacting that all dogs must be muzzled in Paris and led on a string."

Ignoring the Bride.

"Fine way for one girl to speak of another girl's wedding."

"How's that?"

"She says the church looked lovely."

MAKING ARTIFICIAL LIMBS.

Great Advance in Science in Equipment of Maimed Soldiers.

"The only thing I dread is losing a limb—I'd far rather be killed!"

These words must have been echoed a thousand times by our gallant fighting men who, while willing and ready to lay down life itself, if necessary, on the sacrificial altar of the freedom of nations, have, very naturally, shrunk with horror from the terrible prospect of a helpless existence and the utter lack of precious independence which the loss of a limb suggests.

It is a fear which many of us to whom it has been expressed have found it very difficult to allay.

This though was certainly uppermost in my mind (says a correspondent to the London Times) when I first passed through the gates of Queen Mary's Convalescent Auxiliary Hospital (for soldiers and sailors who have lost their limbs in the war) at Roehampton, in the County of London; for I, too, had failed fully to recognize the wonderful progress of science, and had very little real conception of the rapid and marvellous strides which have been made in the creation of artificial limbs.

In the beautiful Roehampton House, generously lent for the purpose by Mr. Kenneth Wilson, with its peaceful grounds, our mutilated sailors and soldiers can obtain a new lease of life. They receive there the best possible artificial appliances and instruction in their use—an exceedingly important work, for in the past many a man has cast an artificial limb aside for the want of a little instruction as to its working.

There artificial hands are taught to grip. The men learn to walk with their new legs as well as they ever did.

Just a year ago the hospital was opened, and how urgent the need has been is very evident from the fact that up to the 25th of last month over two thousand cases had been treated and discharged, fitted with artificial appliances! Over two thousand men of our fighting forces—from the Mother Country and the Overseas Dominions—who had entered the hospital, regarded themselves useless cripples and mentally placing themselves "on the shelf" of life, have, after a brief period, varying between four and six months, passed out recreated. Men who had both legs amputated and never expected to walk again have walked out with the aid of a stick alone!

Yesterday dozens of maimed soldiers were making application for their reception into the hospital. In April last the waiting list numbered nearly 2,000, and notifications are pouring in at the rate of over 300 a month. The 550 beds are always occupied.

The great rooms, with their handsomely painted walls and ceilings converted now by the necessity of war into bright wards, were a wonderful sight. Over each bed I noticed the name of the donor (£50 maintains a bed for a year, and many are taking advantage of this as paying a fitting tribute to some dear one who has fallen in action). At the foot is pasted the name and rank of each temporary occupant. Such cheery patients they are too—some anxiously awaiting their new appliances, others proudly displaying the wonderful adaptability of theirs.

WAR INVADES JUNGLE.

Animals of Africa Resent the Fighting in Their Domain.

The complaint that war has lost its picturesqueness may be true of Europe, but it does not apply to the African campaign. Here nature provides the strongest contrasts of climate and contour, and here primitive savagery is allied with modern science in the art of destruction. This is the last of the world's great game preserves. The ultimate survivors of the grotesque mammals of the Cenozoic era have found refuge in these forests and plains, where they greet the shrapnel's shriek with the moriturl salutation of roarings, bellowings and gruntings.

Campaigning in German East Africa must seem like fighting in Hagenbeck's menagerie. Here is a recent despatch from the front:

> Gen. Smuts and his staff were held up by lions near Kilimanjaro, German East Africa. They were obliged to sit in motor cars all night firing revolvers.

The invaders have difficulty in keeping up their lines of communication, for the giraffes break down the telegraph wires by using them as neck scratchers, and the elephants pull up the poles out of pure mischief. As the troops on either side advance they drive into the enemy's lines herds of wildbeeses, gembok and sprinkbox, elands and buffaloes, zebras and ostriches.

The soldiers complain that they cannot sleep because of the howling of jackals, the laughing of, the hyenas and the grunting of the wild pigs. Naval combats on the lakes between the British and German motor boats are made extra hazardous by the crocodiles and hippopotami, which lie in wait for the castaways.

His Chance

When doctors disagree
About their dope,
A patient's apt to see
A ray of hope.

A miser is a great lover of generosity in everybody except himself.

Lancashire Lasses Are "Doing Their Bit" By Making Glass When the Men are Away Fighting.

THE lasses of Lancashire are now assisting in the making of glass at St. Helens, and do all kinds of labor, even to working the overhead cranes. There are many secrets in the trade, and before the war the Belgians were the chief producers.

The photo shows some girls carrying a huge sheet of glass. They have adapted themselves to the various processes.

GLAMIS

Miss Heudry of Weston is visiting her sister Mrs W J McKeeman.

Miss Margaret Campbell of Hariston is home on vacation.

Mr and Mrs Harry Maber renewed old acquaintances at Ripley and Kincardine last week. They intend leaving shortly for Ottawa.

Miss Helen Oliver and Laura Cunningham returned to the village after holidaying at Inverhuron.

Mrs John Gunn has returned from an extended visit to the North.

We are glad to see Mr Neil McFarlane on the streets of our village again.

Miss Sara Beere of Hamilton accompanied by her friend Miss Burns, are visiting at Mrs J Cunningham's.

Mrs Jackson is spending a few days on the second con of Bruce.

Miss Lizzie McCormick of Detroit is visiting at her home.

Mrs Lloyd Tufford, Beamsville, is visiting her parents at Cosy Nook Cottage, Inverhuron.

Friends of Mr Neil Currie, 2nd of Bruce, motored from Creemore and spent Sunday with the family.

Mr Thomas Thompson attended O O F Grand Lodge at Chatham recently.

Capt W L McKay returned to London on Friday.

Miss Kate A McLean, of Toronto, who has volunteered as a nurse for overseas red cross duty, is visiting her home on the 2nd of Bruce.

Mr and Mrs M E Peacock and family, of Meaford, are visiting at the home of her parents, Mr and Mrs N C McFarlane, for a couple of weeks.

Mrs Dudley, of Toronto, is a visitor at Mr G Percy's.

Albert Swalwell and Thos Patterson, of 11th Kincardine, were the injured victims in a haying accident on Thursday week. The accident occurred at the farm of the former, where the latter and others were helping to haul in. While Mr. Patterson was on a load, the horses took fright and ran away, throwing him off and causing him serious injuries. Upon seeing the team run, Mr Swalwell jumped from the stack, where he was working, with the intention of stopping them, but in the hasty descent his leg was broken. Both men are now improving as well as can be expected.

Capt. Wilfred L. McKay was the recipient of the following address on Monday of last week, the presentation taking place in the Baptist church, at the close of Bible class meeting, this being a convenient time and place for citizens to meet:

OUR DEAR FRIEND AND FELLOW CITIZEN:

At this late date we are met to express to you what we had planned for another occasion, namely, at the time of the visit of your company of the 160th Bruce Batt to our village on March 17th. We had then hoped to have the honor of entertaining you as Lieutenant of the Battalion, and expressing our appreciation of and good wishes for you then, but your superior officers planned otherwise. We are glad, however, of this opportunity of telling you how sincerely we appreciate your action in so willingly responding to the call of King and Country in this our nation's time of need. We recognize the great sacrifice you necessarily were compelled to make in interrupting your studies and postponing the entering upon your life work. So in no qualified terms we would express our esteem for you as a citizen and a friend. We rejoice with you in the attainment of the distinction of being appointed an officer of the 160th Bruce Battalion and passing so successfully the examination prescribed in that connection. Many of our citizens recall your boyhood spent in our midst and feel that you are one of us. Some here today were not privileged to know you in your earlier years, but by your courtesy, fairness and faithfulness in the discharge of your duties, which were at times very trying, and by your genial open-hearted sociability in your private relationships, you have found a place in all our affections, and we esteem you as a true christian gentleman. We feel confident that it is due to your untiring efforts, prompted by your earnest patriotism, that D Company of the 160th Bruce Batt occupies such a high and enviable position to-day. We congratulate you upon the result of your efforts in this direction, and feel sure that under your leadership the company shall yet be heard of bringing honor to you as well as to themselves. We ask you to accept this pair of field glasses as a slight token of the warm affection and sincere good wishes of the citizens of your native village for you, and we pray God that you may be guided and guarded throughout all the coming days of conflict and anxiety, and that we may be permitted at no very far distant date to prepare a welcome for you and your company, with none missing, when the war is over and the dove of peace broods over all.

Signed on behalf of your friends, the citizens of Glamis.

MR S STEVENSON
MRS (REV.) P REITH
LILA CUNNINGHAM
D A C MCLENNAN

Glamis, Aug 7th, 1916

The address was read by Mrs (Rev.) Reith, and the presentation was made by Mr D A C McLennan. Although taken very much by surprise, Capt. McKay made a fitting response.

Glamis school trustees have engaged Miss Retta McKinnon as teacher for the ensuing year. Miss Flossie McLennan will have charge of McGregor's school, 6th Bruce, and Miss Bell Shipley will preside at S.S. No. 11, Kincardine Tp.

SECOND CON ELDERSLIE

Master Leonard Lamont of Owen Sound is spending vacation with his sister, Mrs Geo Addison.

Miss Amy Marwood of Toronto is visiting for a few weeks with her grandmother, Mrs D Allan.

Pete Catto has sunk an artisian well this summer.

Mrs Blaine Fortune is at present under the Dr's care suffering from a severe cold.

Pte A Lillico is home from Petawawa camp to recuperate after an attack of mumps.

Mrs J McDonald and Hector Bell of Cantire visited friends here on Sunday.

While sitting at the breakfast table last Tuesday morning Mrs Robert Jefkins accidentally tipped the teapot over, the contents coming down on her right arm and side which is badly scalded. At time of writing she is progressing favorably.

Mrs D Allen is spending a week with Cantire friends.

Pte Barnes Bowie, of 160th Batt, who has been laid off with an attack of appendicitis, was calling on friends here prior to his return to London Camp on Thursday next.

Miss Aggie Pepper spent Sunday with her sister here, Mrs T Patterson.

Mrs W McHeath spent last week with her cousin, Mrs Robt Jefkins.

The harvesting operations are in full swing in this section. The crops are light and the straw short in comparison to last year.

Mr J Bell and Miss Sara Bell of Bruce Tp. were calling on friends here last week.

EDEN GROVE

The weatherman has provided fine cool weather, still our young ladies seem to let the wedding bell stop ringing.

Mrs Seiler, sr, and Miss Frankis Seiler were visiting Mildmay friends over the week end.

The Missies McCurdy enjoyed the week end with Walkerton friends.

Mrs O'Hagan and Mrs McGlyn visited at the home of Mr and Mrs Cassidy, King st west, over Sunday.

Misses May and Jane Reid spent a few days with Paisley friends.

Mrs Reynolds returned to London Wednesday after enjoying a week's visit with her brother-in-law at "sunny station."

Misses Ella Ledgerwood and Olive Watson were week end visitors with Southampton friends.

Misses Katie and Ruth Pye, of Walkerton, are guests of the Misses O'Reilly this week.

We will soon have enough retired firemen in town to start a hook and ladder company.

Mr Cunningham, of Glamis, was a business visitor in town Tuesday.

Mrs McColl and son, of Spokane, Wash, are enjoying a week's visit at the home of Mr and Mrs H Pearson, cor King st and Railroad ave.

Miss Lily Alexander is visiting friends in Guelph and other southern cities.

Mr Wilbur Donnelly, of His Majesty's mail service, London, called on friends in town this week.

Mr and Mrs Rosseau and Mr and Mrs McKeeman motored to Elmwood and Chesley Sunday.

Miss Mabel Subject, of Elmwood, was the guest of her sister in town on Friday.

Mr Rosseau with his fine Chevrolet car, which was nicely decorated for the occasion, had the honor of conveying the bridal party to the depot last Wednesday.

Mr J Kerry spent Tuesday in Walkerton.

Yes, Sarah Jane, it was too bad to waste so much rice, but then it might be a long while before it happens again.

Mr O'Reilly shipped a car of lambs Tuesday. Mr Clark, representative of the Bradley Lumber Co, shipped a car load of rock elm logs to Quebec on Monday.

PINKERTON

Miss Alma Reid returned from Kincardine this week.

Miss Aileen Pinkerton is visiting friends in Berlin.

Rev and Mrs Gale and Miss Gladys spent a few days at Inverhuron.

Miss Adeline Reid, of Kentucky, is visiting her father, Mr W T Reid.

Miss Mary Garland, of St Louis, is visiting friends here.

Miss Sadie Colwell, spent Sunday in Glamis.

Mildred and Robbie Irving, of Paisley, spent a few days at Mrs S Garland's.

BRANT TP. COUNCIL

The Brant Municipal council met at the Tp. Hall on Monday the 7th day of August 1916. Members all present. Minutes of last meeting of Council read and adopted.

Weir—Gregg — That this council do now go into a committee of the whole with the Reeve in the chair to strike the rates for Township and county purposes for the current year.—Carried.

Rowand — Johnston — That the clerk prepare a By-law to provide for the levies agreed upon in committee, viz: For Township purposes the sum of $8,865 60 at the rate of 3 and five-tenth mills on the dollar and for county purposes the of $11,571.87 at the rate of 4 and six-tenth mills on the dollar, in addition to the sums required for Public and Roman Catholic Schools and other necessary rates.—Carried.

By-law No 86 providing for the levies, was read the usual number of times passed, signed and sealed, and then Council resumed for general business.

Weir—Rowand—That the clerk prepare a By-law to be passed at the next meeting of council making it compulsory for all rates levied in this Municipality to be paid on or before the 15th day of December, 1916, and in default of payment on or before that date a penalty of 1 per cent straight shall be added to the taxes up to and including 22nd of December and five per cent straight shall be added after the 22nd of December, 1916.—Carried.

On motion of Johnston and Rowand, the clerk was instructed to advertise for a collector of rates for the current year. Tax notices to be served to the ratepayers according to statue. Arrangement may be made by the collector with the banks to receive payment of taxes. Salary $100, to include postage.

Weir—Rowand—That the clerk be authorized to have a solicitor prepare a by-law to empower the corporation of Brant Township to enter into a contract with the Hydro Electric Power commission to issue debentures to cover cost of installing the same.—Carried.

Rowand—Johnston— That the Reeve and deputy-Reeve be a committee to procure plans and estimates for fitting the Township buildings for use as a Hall and report at next meeting of council.—Carried.

Johnston—Rowand—That a grant of $10 be given to the Richardson family, Cargill, cheque to the issued to C W Keeling.—Carried.

Johnston—Rowand—That a grant of $25 00 be made to the Northern Exhibition, Walkerton.—Carried.

Weir—Rowand—That the clerk write H H Miller re the roadway of Chas Maurer at 12th con River bridge.—Carried.

Rowand—Johnston—That the Reeve and clerk issue orders on the treasurer for all accounts passed at this meeting of council.—Carried

Most Eminent Medical Authorities Endorse It.

Dr. Elsohn and Dr. Braithwaite as well as **Dr. Simon**—all distinguished authors—agree that whatever may be the disease, the urine seldom fails in furnishing us with a clue to the principles upon which it is to be treated, and accurate knowledge concerning the nature of disease can thus be obtained. If backache, scalding urine or frequent urination bother or distress you, or if uric acid in the blood has caused rheumatism, gout or sciatica or you suspect kidney or bladder trouble just write Dr. Pierce at the Surgical Institute, Buffalo, N.Y.; send a sample of urine and describe symptoms. You will receive free medical advice after Dr. Pierce's chemist has examined the urine—this will be carefully done without charge, and you will be under no obligation. Dr. Pierce during many years of experimentation has discovered a new remedy which he finds is thirty-seven times more powerful than lithia in removing uric acid from the system. If you are suffering from backache or the pains of rheumatism, go to your best druggist and ask for a 50-cent box of "Anuric" put up by Dr. Pierce. Dr. Pierce's Favorite Prescription for weak women and Dr. Pierce's Golden Medical Discovery for the blood have been favorably known for the past forty years and more. They are standard remedies to-day—as well as Doctor Pierce's Pleasant Pellets for the liver and bowels. You can get a large trial package for 10c. of any one of these remedies by writing Dr. Pierce.

Doctor Pierce's Pellets are unequaled as a Liver Pill. *One tiner, Sugar-coated Pellet a Dose.* Cure Sick Headache, Bilious Headache, Dizziness, Constipation, Indigestion, Bilious Attacks, and all derangements of the Liver, Stomach and Bowels.

FOR FLETCHER'S
CASTORIA

THE WESTERN FAIR

The management of the Western Fair Association have placed an order for a complete new outfit of the latest and most up-to-date self registering coin turnstiles for both Dundas Street and King Street entrances. This year instead of the public having to crowd for the purchase of tickets all that will be necessary is to provide yourself with a few Canadian coin and pass through the turnstile. Instead of ticket sellers at the gates there will be a change booth for the accommodation of those requiring the necessary silver quarter as that is the only coin that will operate the machine.

The management hope by this new arrangement to save annoyance to their visitors which usually occurs in the crowding for tickets. There will be a separate gate provided for children and those holding admission tickets of any kind.

The dates for the big Exhibition this year are Sept 8th to 16th. Arrangements for space or concessions of any kind should be made with the Secretary at the general offices, rooms 217-218 Dominion Savings Building, at as early a date as possible.

Why perspire and tire yourself over a hot stove and before a hot oven when we are so willing to save you? We realize that HOME-made baking is very good, but for a month or two we think you could enjoy our mixtures. We would appreciate a trial order.

Have you ever figured out what your recipes cost you? Some morning have a piece of paper handy when you are baking and find out what it cost to bake that delicious cake. You will be surprised and wonder why we can make our pastry as cheap as we do.

We have added a new line to our Ice Cream Department, in the form of the Vortex Sanitary Parafine Paper Soda and Sunday Cups and Holders to eliminate the work of dish-washing.

Do not forget we are always in the market for fresh Fruits in season and always fresh Groceries. Farm produce taken.

—No trouble to drop in to our new store in the old woolen mills and examine our stock of new goods at right prices. Fit and workmanship guaranteed. G B Irwin, tailor.

—Pure Roses, Rainbow, Purity, Cream of the West, and Stark's high-grade flours, also Bran and Shorts. Blatchford's Sugar and Flax, Caldwell's Molasses Meal, and full line of Poultry Foods and Tonics. Always in the market for coarse grains. E. G. ECKEL.

—Homeseekers' excursions, all fall, every Tuesday, and via boat Owen Sound every Wednesday up to end of October, to all points in Canadian north-west. For tickets, maps and all information call at the old reliable C.P.R. agency, McFarlane's old stand, Paisley.

—We now have in use in our dairy a Champion Cooler, with which we cool all milk to 40 degrees before bottling. This kills all animal heat quickly and aereates all milk thus improving the flavor and keeping qualities. We deliver twice a day during the summer. J. Millar, Paisley Dairy.

—Tara juvenile lacrosse team has won the championship of the district. They meet St Mary's first in the semi-finals.

Card of Thanks

The total proceeds of the Patriotic Field Day amounted to $345, and after expenses are all paid there will be a nice balance for Red Cross and patriotic purposes. The Women's Patriotic League desire to thank all who assisted in any way to make the day such a success.

—Mrs M Daniel is visiting in Owen Sound.

—Paisley schools will re-open on Tuesday, Sept 5th.

—Miss Sadie Jack is visiting her sister at Alma and Elora.

—Mr Hugh McKerracher is away to the west on a trip.

—Pte Pte Hepburn is home from Camp Pardee for a few days.

—Miss Helen Oliver, of Glamis, went to Edmonton last week.

—Mrs Geo Welsford was visiting friends in Walkerton last week.

—Miss Blanche Collins has returned from a visit to Toronto friends.

—Mrs Porteous, of Toronto, was the guest of Mrs Jas Coulter last week.

—Miss Lottie Walker has gone to visit friends in the west for a few weeks.

—Mrs D Forrester and children were visiting Port Elgin friends last week.

—Mr and Mrs G R Irwin have gone to Toronto for a couple of weeks' holidays.

—Miss Wilkie, of Toronto, was in town on Tuesday, the guest of Mrs (Dr) Allen.

—Miss Mary Downey, of Kincardine, is a visitor at Mr D A McIntyre's, Elderslie.

—Mrs J Brackie, of Fergus, is visiting her old friends in Greenock and Paisley.

—Mr Wm Lamb and daughter, of Greenock, left last week on a trip to the west.

—Mrs. Augus McLean, of Toronto, is in town for a few days, the guest of Mrs Jas Coulter.

—The Misses McLean, of Chesley, are visiting at the home of their aunt, Mrs J A Rivers.

—Mrs Bartrop and son, of Hanover, were over in Paisley visiting Mr Bartrop for a few days.

—Mrs McAllister, of Owen Sound, is visiting at the home of her grandmother, Mrs Wm McBeath.

—Mr Neil Boston and daughter, Miss Rachel, are here from Chicago on a visit to relatives and friends.

—Miss Florrie Jenkins, of London, is visiting at the home of Mr and Mrs Wm Nicholls, 16th Greenock.

—Mrs Brenniman and family, of Detroit, are visitors at the home of her sister, Mrs Jas Brown, Goldie St.

—Mrs Kelly, of Philadelphia, Miss Phoebe Rusk, of New York, are visiting their sister, Mrs G L Carter.

—Ellis' barber shop is now located in the woolen mill building, the outfit being removed to the new stand this week.

—Miss C McLaren spent a few days visiting in Port Elgin, and was accompanied home by Mrs Hendy of that town.

—Miss Bert Mooney is up from Toronto renewing old friendships. She is the guest of Miss Fletcher, Inkerman St.

—Miss Alice Thompson attended a meeting of the district executive of the E.L.C.E. held at Elmwood last week.

—Miss Smith, of Ottawa, who is visiting friends in Sargeen, was in Paisley over Sunday at the home of Mrs McMillan.

—Mr and Mrs H F Felker, of Olds, Alta, arrived Tuesday on a visit at the home of the latter's mother, Mrs A McKenzie.

—Mrs Wanamaker, of Niagara Falls, who was visiting her parents, Mr and Mrs Ed Greaves, returned to her home on Saturday.

—Mrs Hector Cowan and the Misses Cowan, of Edmonton, are visiting friends in Ontario, and spent a few days in Paisley last week.

—Messrs Geo Last and D Darroch, of Elderslie, are two more farmers who are now driving motor cars, also contractor J S Dewar, of town.

—The annual convention of the E.L.C.E. of the Walkerton district will be held in the Paisley Methodist church on Labor Day, Sept 4th.

—Rev M Neilson, who has been spending holidays at Leith with his family, will resume his duties as pastor of the Baptist church here and at Williscroft next Sunday.

—In our report of the Centre Bruce garden party last week the names of three of those who took part in the programme were unintentionally omitted—Ettie and Lillie Brown, who sang a duet, and Mc-McLean Young, who contributed a solo.

To Relieve Fire Sufferers

The Women's Missionary Auxiliary of the Methodist church will meet at the home of Mrs Jas B Fleming on Thursday afternoon at 2 o'clock, to prepare a box of quilts and clothing for the fire sufferers of Northern Ontario.

—The small fruit crop was a failure and disappointment this year. We are promised a plentitude of plums from the fruit district, and peaches promise well also.

Coal Freight Rate Up

The Dominion Railway Commission has approved an increase of approximately 10 per cent in freight rates on anthracite coal shipped to stations in this part of Ontario after Sept 15th.

The Coming Fair

The Paisley Fair prize list is out, and if you haven't received a copy the secretary, Mr Barnett, will be pleased to furnish you with one on request. This is a year with many exceptional peculiarities against which the tiller of the soil had to contend, and it will be a benefit to all to see an extensive exhibit of the district's growth at the fair. By comparison one could judge whether his methods produced as good results as others' methods. Do your bit by becoming a member of the Paisley Fair, and bringing out a list of exhibits in live stock or products of the soil.

THE EARL'S SECRET

Or, a Martyr to Circumstances.

CHAPTER III.—(Cont'd).

And, with this figurative conclusion, the captain rose and walked to the bureau to turn over the leaves of the Battle of Prague, with which the vicar's wife was about to favor the company.

Leicester Dodson dropped into the vacant seat, Violet drawing her skirts out of the way of his long legs.

"And have you not played yet?" he asked.

Violet woke from her absent fit and shook her head.

"Not yet," she said. "I am not fond of my own music. You will play or sing, will you not?"

"I can do neither," he said. "I have a voice that would shame a crow."

Violet laughed her full, sweet, mirthful laugh.

"I am so sorry, because now you will have to play whist. Look, the vicar is shuffling the cards and looking round for the victims already."

"Shall I hide behind you?" said Leicester, in a low whisper.

"Indeed, no; you shall do your duty!" And, catching the vicar's blinking eyes, she beckoned to him.

"Here is Mr. Leicester for one corner. He doesn't sing or play!"

Leicester looked fierce and nodded at his father.

"You will have enough without me, I think," he said, and the vicar, more nervous than ever but quite as serious for his rubber shuffled over to Mr. Dodson, who with his benevolent, expressionless face well elevated, was beating time with his first finger to the "Battle."

So the vicar seized upon him, Mrs. Dodson and Mr. Giles, and was soon in his play.

"I've escaped you see," said Leicester, with his grim smile.

"Only out of one danger into another," said Violet, maliciously. The Battle of Prague' will be fought out directly, and then you will have to go over the large scrapbook of Swiss views and tell Miss Tomson which of the places you have seen."

"Thank you," said Leicester. "If that is a necessary part of the program I am prepared to perform it without a change of audience. If you will allow me, Miss Mildmay, I'll go over the scrapbook with you."

With two long strides, he seized the book and opened it.

"I knew you would be very much bored," said Violet. "I told you so before you came."

"And I assure you that you were wrong, which you are. I was never further from being bored in my life. That's a fine view. I climbed that on the coldest day in winter and had to have my fingers thawed in the shed at the top."

"And you learned cliff climbing in Switzerland, of course?" said Violet, naively. "Do you know, you frightened me so this morning? I was afraid you would fall over and be killed?"

Leicester's eyes—they were dark and deep and somewhat stern for so young a man—brightened.

"Should you have been so sorry?" he asked.

"Of course. How stupid a question!" laughed Violet, wickedly. "Cannot you surmise the consequences? I might have been accused of throwing you over, tried and condemned."

"But the motive," said Leicester, entering into the jest. "What motive could they have found?"

"Oh," said Violet, "people are always ready to find motives for other people; they would have said I resented your appearance as an interruption to a train of poetic thoughts; in fact, they would have been sure to find a motive."

"That is a pretty plain hint that I am to avoid that favorite walk of yours for the future, and beware how I interrupt your cliff reveries."

Violet flushed.

"Indeed, no. It is not a favorite walk—at least, not particularly so—and I am sure you are welcome to come. What nonsense. It is as much yours as mine, and I seem to be making you a present of it," and she laughed.

Then the "Battle of Prague" came to an end, and the captain led Mrs. Tomson to a seat with profuse compliments upon her style and touch.

"Are you fond of music, Captain Murpoint?" asked Violet.

"I adore it," said the captain, seating himself by her side, and looking, with a smile, at Leicester who regarded him with his usual grim reserve. "Music is the language of women and angels. Are you not going to sing?"

Violet shook her head at first.

"Will you not?" said Leicester, earnestly, bending the regard of his dark eyes on her.

Then she changed her mind, and, placing her hand upon the captain's arm, allowed him to take her to the piano.

Leicester remained where he was, and, thrusting his hands into his pockets, stretched out his long legs, and watched her beneath his dark, heavy eyebrows.

The song finished, there arose a commotion at the whist table.

The vicar, in nervous, jerky sentences, was calling Mr. Dodson over the coals for bad play.

Mr. Dodson, with a bewildered air, was vainly endeavoring to explain, and at last managed to persuade the captain, who had stood smilingly listening to the dispute, to take his place.

The captain sat down, asserting, with a good-natured shrug of his shoulders, that he had not taken a hand at whist for a twelvemonth—which was indeed solemn truth—and the game commenced, the vicar and Mrs. Giles being partners against the captain and Mrs. Dodson.

"What are the stakes?" said the captain.

"E—ey—" stammered the vicar, in his shrill falsetto, "what you please."

"Half-crown points?" said the captain, carelessly, and the rest agreeing, the captain and Mrs. Dodson lost the first game.

Now the vicar was fond of cards, and was still more fond of winning a little money at them. The captain made one or two gross blunders, and clearly proved that he was out of practice. The vicar was but human and suggested that they should raise the stakes.

Alas, the next game was scored to the captain's side. So also was the next, and Mrs. Dodson, with many blushes and exclamations of comic alarm at the amount, shared ten pounds with her lucky partner.

Then the party broke up.

CHAPTER IV.

Mildmay Park—or The Park, as it was more generally called—was peculiarly placed on the slope of a hill climbing toward the cliff.

The lower part of the building was that remnant of the old abbey of which Violet had spoken to Captain Murpoint. The upper part was the modern luxurious mansion in which the wealthy merchant prince, John Mildmay, had lived.

Money can command all things in the way of architecture for a marquis, to say nothing of an East Indian merchant.

Having passed so much of his time in the crowded, bustling streets of hemispheres, it was only natural that Violet's father should choose a quiet resting place.

Penruddie was quiet enough to suit an Anglican monk.

Beside the Cedars there was no other house on the cliff, and the village in the valley was so small as to scarcely be deserving of the name. A few fishermen's cottages, a general shop, and an inn, picturesque and inviting, comprised it.

The fishermen were simple people, who looked upon The Park and its inmates as a place and people to worship from afar; the general shop a little more elevated in its notions, prided itself upon the custom of the "gentry," and the inn—well, the inn deserves something more than a statistical mention.

It was a pretty little place, midway in the single street, overgrown with ivy, from which its windows peered like so many eyes struggling to catch a glimpse of the glittering sign board through their lids of leaves.

This sign board was a wonder. In Martha Pettingall's opinion there had never been, or ever would be, a work of art to compare with it. It bore on its crimson back-ground a lion so blue, so fierce and in attitude so wickedly and preposterously unnatural that, perhaps, Martha's pride was, after all, excusable. Certainly, there was some truth in her assertion that there was "ne'er a lion in the whole world like it."

Martha Pettingall was a thin old lady, with sharp eyes and a mysterious complaint. This disease—it was painless—attacked her whenever the wind was in the East, her customers troublesome, and her niece, pretty Polly Pettingall, aggravating. It proclaimed itself by sharp tones and a yellow bandanna.

The sharp tones were freely employed to all about her, and the fishermen knew when to expect them by the appearance of the yellow flag tied tightly round Martha's head and face.

At such times it was astonishing how quiet the gruff, hard-voiced man became, and how early they left the little taproom and departed to their by no means soft couches.

The day after the captain's arrival Martha appeared in the bar with the yellow handanna and the vinegarish tones in full battle array.

Polly—light-hearted, slippery-fingered Polly—had dropped and broken one of the best jugs, one of that precious set which the late Joe Pettingall had presented to her aunt as a wedding gift, and there was wrath in the hostess' bosom and fierce ire in the bandanna.

Polly was red and flushed about the neighborhood of the eyes, and her pretty lips were fixed in a sullen, ear-threatening pout.

It was a quarter to eleven, the men had just come in from a mackerel haul and were inclined to be jovial.

"Where's the missus?" inquired Willie Sanderson, as, followed by a dozen of his mates, young and old, he trudged into the barroom. "Well, Polly, my lass, thee's as fresh as a herrin' this morn'n! There's a mack'rel for ye, the biggest I've seen this season."

And Willie, a great, strapping giant with a good-natured face and a pair of dark, wide-awake eyes, threw an enormous fish upon the polished counter.

"Thank you, Willie," said Polly, with a dolorous sniggle.

"What's it to be, lads?" he continued, looking around.

"Ye'll get nothing but ale so early as this," declared Martha, decisively, and so, fully aware that any opposite opinion, however firmly delivered, would be of no avail, the "boys" nodded good-naturedly, and the shrewish hostess left the room for the ale.

Four huge tankards were soon foaming at the mouth, and Polly was bearing them into the room on a tray when the low-browed door swung open and the well-built dapper form of Mr. Starling entered.

(To be continued).

THE EASIEST WAY TO SEAL PRESERVES

Is the best way, and the best way is the Parowax way. Jellies and preserves that are sealed with

Parowax

PURE REFINED PARAFFINE

keep their luscious flavor. They never mold or ferment. They are as good when you want to eat them as they were the day you sealed the jars.

Just pour melted Parowax over the tops of jelly tumblers. It keeps out all dust and germs. It keeps the preserves air-tight.

FOR THE LAUNDRY—See directions on Parowax labels for its use in valuable service in washing.

ON THE FARM

After-Harvest Cultivation.

By the time the last cultivation has been given the corn and root fields there is usually one of more fields on the farm from which the season's harvest has been gathered. The aim on many farms is to give such fields, as are not seeded down, some form of tillage during the early fall. This used to be the general practice, but of late years it appears to be going out of vogue. Scarcity of labor is one reason why the amount of early fall cultivation is decreasing. The acreage devoted to corn has increased greatly of recent years, and the harvesting of this important crop commences soon after the grain crop is garnered and encroaches somewhat on the time previously used in stirring the surface soil.

Cultivation at the right time is one of the most effective means of keeping noxious weeds in check and when the surface soil is loosened the evaporation of moisture is reduced to a minimum. By capillary action of the soil, moisture is being continually drawn from the great reservoir to the surface for the use of growing crops. The plants shade the ground and there is very little moisture lost by direct evaporation, but so soon as the crop is harvested there is nothing to check the escape of water from the soil unless a dust mulch is made by some means of cultivation. It may seem absurd to commence in August to save moisture for the following season's crops. However, in the average season it is necessary, as only about one-half the amount of moisture required to grow and mature a crop falls during the growing season. The fall, winter and spring rains must be depended upon to fill the soil with moisture to furnish the crop with a drink when it most requires it. The soil should be looked upon as a great reservoir, that not only contains plant food, but also holds vast quantities of water. Without water the plant food does not become readily available and the plant soon wilts. It is the duty of the tiller of the soil to make conditions right for the filling of this reservoir with water as well as plant food, and late summer or early fall is not too soon to commence. A hard, compact surface soil does not absorb the rains that come as readily as a soil with good tilth. Of course, a soil covered with a luxurian growth of clover or other growing crop, that completely covers the surface, is in a condition to make the best use of the water that falls. The bare stubble field requires to be gone over with plow, cultivator or disk.

Then, there is the weed problem. Many annual weeds ripen their seeds before the grain is harvested. These seeds fall to the ground, and if the soil is stirred many will germinate and then be destroyed with later cultivation. There are also varieties of weeds that appear to grow up and produce seed after the crop is harvested. Ragweed is a representative of this class. Many of the perennial weeds as twitch grass, sow thistle and bladder campion can be materially checked in their growth if not entirely eradicated by thorough after-harvest cultivation. Usually there are several weeks of dry, hot weather at this season which soon destroys any roots exposed to the surface. More fall cultivation would aid in lessening the numbers of weeds and with many soils would tend to increase the crop yields.

Time to Cultivate.

It is important that the work be done as soon as possible after the crop is removed from the field. On some farms this phase of the season's work is considered to be so important that the binder is followed with the disc or cultivator. This is not practicable on most farms owing to the lack of sufficient horse power and men. However, the work should be done soon after the crop is removed from the field. It is not uncommon, especially in a catchy season, to see the cultivator or plow being used between the rows of stooks. The sooner the work is done the greater the opportunity of conserving soil moisture and of destroying weeds.

Methods of Cultivation Followed.

The gang plow is the implement most generally used, it can be set to cut and turn a shallow furrow. If carefully handled every weed will be cut and turned under, thus exposing the roots to the hot rays of the sun. This is an advantage when it is desirous of destroying weeds with running root stocks. The plowed land should be harrowed a couple of times to form a mulch. Where weeds are bad, a broad-share cultivator can be effectively used. If time will permit, a cultivation every week should be given a weed infested field that has been gang plowed. Careless plowing and failure to cultivate will not tend to eradicate weeds.

Where it is not thought advisable to use the plow, two or three times over the field with a sharp disk will pulverize the soil and put it in a condition so that moisture will be absorbed and retained and weeds will commence growth. The spring or stiff-toothed cultivator has also been used to good advantage on the bare stubble field. If a month or more elapses between breaking the crust and deep fall plowing there will likely be a crop growing which will indicate the number of weed seeds which have started growth only to be destroyed before they have an opportunity of reproducing themselves. Without cultivation many of these seeds would never have germinated until the following spring when, under shelter of the growing crop they would have a better opportunity to complete their life cycle. Fields not in clover, grass or other crop are benefitted by fall cultivation.

Invariably the fields that have been cultivated plow easier in the fall, especially when the weather sets in dry. True, it may be a slight disadvantage in a wet season as it is possible for a field to be too wet to plow, but this is the exception, not the rule. Too few plowmen use a "jointer" or "skimmer" on their plow when giving a field its final plowing for the season. By its use all growth is turned under and not only does the furrow have a better appearance, but weeds and grass are completely buried. Without the light few plants survive long. A more general use of this small attachment to the plow would aid in keeping the fields freer from plants, which may be termed soil-robbers.

In some sections, after-harvest cultivation consists in plowing deep, and following up with surface cultivation until winter sets in. Sod, as well as stubble fields, are treated this way. As soon as time will permit after the hay or grain is removed the fields up be broken up in the fall are plowed the usual depth, varying from five to seven or eight inches, depending on the nature of subsoil. It is essential that a skimmer be used on the plow. These fields are gone over with the cultivator or disc and harrows several times during the fall. No growth is allowed to get a start and many weeds are destroyed. This method has proved quite effective in dealing with sow thistle. Sod has a better chance to rot than if plowed late and it is usually easier to prepare for spring seeding. The wide-shared cultivator may be used effectively on either deep or shallow plowing. Few weeds escape if the teeth are kept sharp. Many use it late in the fall and the soil is left in shallow ridges, which gives the frost a better opportunity to do its beneficial work than if the surface is left flat. Some method of thoroughly loosening and stirring the soil, to be sown to spring crops, that will destroy weeds and keep a dust mulch will be a step towards heavier yields. Plan to cultivate as soon as possible after the crops are harvested.—The Farmers' Advocate.

Signs of the Times.

"Flubdub's home seems badly neglected."

"Well, his wife is interested in prison reform, better roads, pure politics and clean plays."

Chortles—"Say, old boy, are you fond of moving pictures?" His friend—"Well, I should say so." Chortles—"Then come round to our house next Tuesday and give us a hand. We're moving that day."

"What did papa say, George?" "He said it was too late to talk nonsense." "But did he know that you wanted to marry me?" "I think he did." "And didn't he encourage you to proceed?" "Yes, he held the door open for me."

"Silver Gloss"

Canada's finest Laundry Starch

Three generations of Canadian housewives have used "Silver Gloss" for all their home laundry work. They know that "Silver Gloss" always gives the best results. At your grocer's.

USEFUL PRESERVING HINTS

Here's the Way to Succeed in Jam or Jelly Making.

1o—Use ripe—but not over-ripe fruit.

2o—Buy St. Lawrence Red Diamond Extra Granulated Sugar. It is guaranteed pure Sugar Cane Sugar, and free from foreign substances which might prevent jellies from setting and later on cause preserves to ferment.

3o—Cook well.

4o—Clean, and then by boiling at least 10 minutes, sterilize your jars perfectly before pouring in the preserves or jelly.

Success will surely follow the use of all these hints.

We advise purchasing the Red Diamond Extra Granulated in the 100 lb. bags which as a rule is the most economical way and assures absolutely correct weight.

FOR PRESERVING USE ONLY
ST. LAWRENCE
RED DIAMOND
SUGAR

Dealers can supply the Red Diamond in either fine, medium, or coarse grain, at your choice.

Many other handy refinery sealed packages to choose from.

St. Lawrence Sugar Refineries, Limited, Montreal

A Story of The War

It was Colonel Shaw himself who first told Mrs. Saunderson the story of how her boy had died in Flanders. That was just six months after the death of her husband. Of course she had received the official notification, but not until the Colonel was invalided home, and she heard the story from his own lips, did she learn that her boy had fallen while saving that gallant officer's life.

Naturally the story told by the Colonel went a long way toward softening the mother's grief. "Had he lived," the Colonel concluded, "I would have made him independent." But the Colonel did not confine himself now to verbal praise and promises; he went further and showed his gratitude by presenting Mrs. Sanderson with the title deed of a house, a portion of which was available for rent. Thus he provided bread and butter for the family. Before the war she had been almost a stranger in the city. Her Scottish nature kept her aloof, consequently her friends had been few. But now it was different. The story of Private Sanderson's heroic death was published in the newspapers and she became quite popular, especially in military circles.

The khaki was the open sesame to the Sanderson home. Every returned soldier was welcome there. Often in the cosy parlor the family and their friends would gather and listen to the tales told by the remnants of the "Fighting 14th." But of all the tales that were told there was one of interest to the grief-stricken mother. Nothing pleased her better than to hear the story of how Bob had saved the Colonel, except it was repeating of it when she could find a listener.

There was one constant visitor to that bereft home who did not wear the khaki, but often wished she could. Irene Johnson never missed a Sunday. As the clocks were striking three she was in the parlor. There mother and girl would sit and talk—one to mourn a son, the other to mourn a lover. They met and mingled their tears to soften their sorrow. Irene would read the newspaper clippings telling of Bob's death, while the elder woman would sit and listen. This was repeated every Sunday, and now they had every one of them off by heart. They had read them so often they could repeat them in the dark.

One Sunday, just before dusk, the two women were together as usual. The regular routine had been gone through. Scarcely a word had been spoken for nearly an hour. None but the afflicted knew the solace or consolation these women found in this silent converse—the converse of the heart.

Their reverie was disturbed by the entrance of a tall young stranger clad in well-worn khaki, whose empty sleeve and scarred face told a tale of bloody battlefields. His bronzed face, partly covered with a thick black beard, plainly showed traces of suffering, giving him an appearance of age far beyond his years.

"I came expecting to meet Sergeant Robertson," he explained as Mrs. Sanderson placed a chair for him.

"He'll likely be here later," she replied. "It's hardly his time yet."

Irene moved her chair to obtain a better view of the stranger as he replied to a query from the elder woman.

"I belong to the Victs. I went with the first contingent."

"Oh, then, you knew my son who was killed at St. Julien?"

"Rob Sanderson; of course I knew him, but I did not know that he was dead."

"Yes, he's dead. He was killed while saving Colonel Shaw's life. Didn't you hear about it?"

"Well, I remember something of it, but just about that time I was wounded and left for dead on the field. When I regained consciousness it was dark. I crawled along the ground, but unfortunately I went in the wrong direction and was taken prisoner. I spent the next six months in German hospitals. Then at the end of that time I was strong enough to get around, and being no more use as a soldier" (here he pointed to the empty sleeve), "they allowed me to go. And now to cut a long story short it has taken me just five months to reach Montreal."

"Poor fellow. You've certainly had your share of it," said Irene.

"Are your folks in the city?" Mrs. Sanderson asked.

"Yes, my mother is a widow. I don't want her to know I'm back. I was a bad boy before I went to the war—all the time in trouble. Then you see they think that I am dead. Anyhow she'd never know me. This is a new face I've got, my old one was blown off by a bursting shell, and my voice changed by the gas. So even my own mother wouldn't know me."

No, no," he said as Mrs. Saunderson attempted to expostulate. "I would only be a burden upon my poor old mother. It is better as it is. I'll go to-morrow and see the Colonel; maybe he'll find something for me to do."

"If you were only Bob," said Mrs. Saunderson, "you'd be all right. The Colonel said if he'd been spared he would have made Bob a partner in the business. What do you think of that?" Then she went on to tell all that had been done for her.

Asking Irene to light the gas she went to the desk and brought out her favorite clipping.

"This is the one the Colonel likes best; I'm sure you'll like it," she said, addressing the soldier. "Now listen while Irene reads it."

"Maybe he'd prefer reading it himself," Irene suggested.

"No, no. I'd much rather you'd read it," he hastily replied. "My eyes are bad, that's why, when the gas is lit. I moved over to this corner."

As Irene commenced to read he became visibly affected. The fingers of his only hand worked convulsively, then as she proceeded he became violently agitated. Continuing, she read—

"When Colonel Shaw fell Private Saunderson leaped over his prostrate body and felled an assailant about to bayonet the fallen officer. Then two more went down before his rifle fire. But now another was upon him, a wound in the arm caused him to drop his rifle. Dashing to evade a bayonet thrust he seized the officer's sword and plunged it into his adversary."

Here the soldier jumped to his feet, frantically shouting and waving his arm. "Yes, yes: I remember now. I remember it all now. He got the Colonel over his shoulder and tried to get back; then a shell burst in front of them and down they went together. The Colonel was picked up but Rob was left for dead."

He seemed calmer now but continued standing. There was dead silence for a moment, then with a smile he said, "but Rob ain't dead; he was taken prisoner."

"Not dead!" said Mrs. Saunderson, rushing forward and grasping the hand of the soldier, and speaking with an eagerness bordering on hysteria, "O, man, tell me, tell me how it is possible? Don't deceive, man, don't deceive me, as you expect to meet your Maker, don't deceive a poor heartbroken mother. But tell me, shall I see my boy again?"

"No, no," said Irene, rising from her seat, "he does not deceive us; that's Rob himself; I know him. I know him."

"Mother, mother!" the soldier cried, "don't you know me? Don't you know me? Even if my face and voice are changed, my heart is still the same for you."—James F. Napier, Montreal, in Scottish American.

NEW HEALING METHOD.

Salt Water Treatment for Wounded Soldiers.

Surgical dressings, says the London Lancet, are now things of the past. Wounded soldiers' in military hospitals are being treated by "saline irrigation," as the doctors call it, recently invented by Sir Almroth Wright.

This saline irrigation consists of a solution of warm water with from five to ten per cent. of salt in it. It can be kept at anormal standard of warmth in an ordinary Thermos flask, suspended above the bed with rubber tube, conveying the fluid to a small glass tube.

Thus the new means of wound-healing. Here is what a doctor has to say on its application:

"We on no account apply a dressing. Surgical dressings—lint, bandage and wool—are not being used except, of course, during the transportation of a wounded soldier from the field of battle, when his wound must be covered up in the old way with lint and antiseptics.

"Take for instance, the case I have here of a soldier who has a severe shrapnel wound on the knee. You see that while the bedclothes are arranged in the usual way over the upper part of his body, a sort of 'cradle' is formed over the lower part, so as to keep the wound quite clear from any possibility of contact with the coverings. Here the salt water is trickling down all the time drop by drop from the glass tube on to the wound, running day and night without intermission and carrying off the poison from the wound and helping to clean and heal it."

The "Saline Irrigation" undertakes to clean up and heal most septic wounds in three or four days. The salt penetrates the seat of the poisoning and carries it off.

Sir Almroth Wright says of it:—"The salt draws out from the infected tissues the lymph, which has spent all its power of resistance, to the poisonous bacteria; while it draws into the tissue from the blood stream the lymph which is the enemy of the microbe."

On the other hand, Sir. Almroth argues, that the ordinary dressing incases to become a barrier to the free discharge of lymph from the wound, though it is contrary to truth to say that nurses allow dressings to stick and cause bleeding on removal.

"As regards burns," the doctor says, "the French have discovered a most efficacious method of spraying severe burning with paraffin."

CROWNS WORN IN WAR.

King of Italy Dons His When He Reviews His Troops.

Monarchs no longer ride forth crowned to battle, as did Richard III to his fatal fight on Bosworth Field. Nevertheless, even to-day crowns figure in the spectacular side of war more often than is generally supposed. The King of Italy, for instance, although he does not of course always wear it, carries his crown with him wherever he goes, and frequently dons it when he reviews his troops on ceremonial parades.

This is in accordance with the custom and tradition of his house. The crown is supposed to render its wearer immune from harm, because inclosed within the gold is a tiny circlet of iron, said to have been made from a nail out of the true cross.

The aged King Peter of Serbia has twice during the present war appeared robed and crowned before his armies on the battlefield.

King Ferdinand of Roumania—who must not be confounded with the ruler of Bulgaria, who is also named Ferdinand—will probably go crowned to war, if he goes at all; precisely as did his two predecessors, Prince Alexander Couza, and his uncle, King Charles I. But then the royal crown of Roumania is unique, in so far as it forms a genuine badge of the nation's freedom from alien tyranny. It is made from the metal of Turkish cannon captured at Plevna by the Roumanians in 1877, and in shape and appearance it suggests the helmet of a soldier rather than a diadem.

Official Picture of Mametz After Capture by British.

CANADIAN AXEMEN IN ENGLAND

THEIR SPEED AMAZES ENGLISH OBSERVERS.

Historic English Forest Being Converted Into Railway Sleepers and Boards.

If you would know the lumberman of Canada and how he works, says a writer in the London Times, go to the edge of Windsor Great Park, where the cross-road from Virginia Water Station strikes the main road between Egham and Sunningdale. There, on the Clock Case Plantation, you will see over 150 men of the 224th Canadian Forestry Battalion converting trees into railway sleepers and boards at the rate of anything from 15,000 to 20,000 board feet a day.

The plantation, which forms part of the lands owned by the Crown and administered by the Commissioners of Woods and Forests, included a considerable area covered with spruce, fir, Scots pine, and larch, with an undergrowth of chestnut. Not very long ago a party of experts looked at the trees with the dispassionate measuring eye of the undertaker, and gave it as their opinion that from this wood it was possible to get 3,000,000 board feet of timber. To-day whole tracts of it have been swept clear by the axe, and the quaint square tower of the old royal lodge, which stands deep-set in the wood, and which, so the story goes, by its resemblance to the case of a grandfather's clock gave the plantation its curious name, is visible from the roadway for the first time, perhaps, in a hundred years. And still the Canadian woodsmen go on, eating their way through the wood with a thoroughness that knows no mercy.

Camp All Canadian.

The lumber camp is all Canadian—men, machinery, and methods. The men, who are drawn from all parts of the Dominion, have the bronzed, healthy look, and the easy confident swing which we have learned to look for in Canadians. The khaki under their blue overalls proclaims them soldiers; they draw military pay and they know the rudiments of military drill, but first and last they are woodsmen, with their craft at their fingertips. Every man knows his task and does it with an enviable independence of orders or instructions; yet from the first stage to the last the work proceeds smoothly and harmoniously. Let us follow the process, under the guidance of the officer in charge and the sergeant who is "foreman of the "bush."

Facing the main road stands the mill—"home" the men generally call it—flanked on the one side by piles of logs and on the other by stacks of sawn timber. Walk along the winding track of a light railway, not yet completed, which passes behind the mill, until you come to a clearing, where burning heaps of "brush" lopped from the tops of the fallen trees are filling th air with th refreshing scent of the pine. Here and there through the blue smoke you catch a glimpse of a lumberman in a picturesque slouch hat. A little further and you are among a gang of "fallers." Watch how they fell a tree, 70 inches or more thick at the base.

The Felling of a Tree.

A man with an axe kneels at its foot and with a few dexterous strokes cuts a deep notch in the trunk a few inches from the ground. Two others with a cross-cut saw cut through the stem on the opposite side. In half a minute the tree begins to lean and there is a warning shout. A second or two later, with a loud cracking and rending sound, it topples and crashes to the ground. Without any apparent effort, the "fallers" have controlled the direction of its fall almost to a foot.

Next, without any ado, half a dozen "swampers" set to work with the axe, clearing the limbs and straightening up the tree. Simultaneously a "fitter" with a wooden rod, divides the stem in suitable lengths marking the cutting points with a notch, while two other men, one carrying a paint pot, measure the tree, enter the size in a book, and mark the stump and the butt of the severed trunk with a blob of red paint to show that their work is done. Sawyers then cut the stem according to the "fitter's" marking, and the sections are ready to go to the mill. They are dragged there by horses over deeply-scored "trails" and "sloopways," and take their turn to come under the saw.

The Keeper's Daughter Wept.

The mill itself is a stoutly-built structure, made of timber cut and prepared on the spot, the saws and engines coming from Canada. It is practically a raised platform covered by an iron roof, but open at the sides. A log to be sawn is rolled into position on a "carriage," which moves backwards and forwards to carry it through a circular saw. Two men, standing on the carriage, control its movements and the position of the log by a number of levers. Opposite them stands the most important man of all, the "sawyer," whose trained eye sees at a glance what can be made of this or that log. The hum of the engine and the screech of the saw would drown his voice, so he gives his decisions by signs. As the carriage brings a log back through the saw with the bark removed, he will hold up one finger or two, and the "setter" on the carriage, by the movement of a lever, adjusts the log so that the next cut shall be one inch or two inches thick.

It is all done without a pause. For hours the saw screeches and throws off a spray of sawdust as it slices up the logs that a short while before were splendid living trees, and all the while other saws, trimming the edges of the boards and cutting off the ends, join in the chorus. Is it surprising that the daughter of the keeper of the wood was reduced to tears when she stood by the mill?

FRENCH SHOW HEROISM.

Soldiers and Officers Brave Death Daily Before Verdun.

Examples of the heroism displayed by French soldiers of all ranks in the tremendous attack upon Verdun occur in every corner of the battlefield, not as anything exceptional, but every day and every hour.

Lieut. G., although badly wounded in the thigh, remained at the head of his company for three whole days and was carried into the thick of the fighting on a stretcher, directing his men, keeping tab on the munition supply and even writing a letter to his Colonel telling how he and his men had resisted five attacks in four days without giving way a single inch.

Another Lieutenant, in civil life inspector of an insurance company, seeing a hostile machine gun taking position in a French trench, asked his Colonel's permission to attack, although it meant certain death. With a pipe in his mouth and swinging a little cane he led the onset, calling out, "Come on, boys, let's charge like muaketeers." Six bullets found lodgment in his body before the trench was reached. The trench was taken and the machine gun destroyed.

Lieut. T. joined in a counter attack which succeeded in driving the enemy out of a trench he had captured. The retiring Germans took with them eight men of Lieut. T.'s company as prisoners. That would not do for Lieut. T., who with a single sergeant jumped out of the regained trench, peppered the Germans with his revolver and brought back his eight men. For this act of bravery he was promoted Captain.

FREIGHT TIEUP RELIEVED.

Russia Sending 200 Cars Daily Over Siberia Route.

Two hundred cars are leaving Vladivostok daily for Siberia and Russia with the result that the freight congestion has been relieved. Private cargo as well as Government supplies is now moving. Recently there has been a slackness in Government supplies. Consequently the goods of commercial concerns have moved with considerable freedom.

Many additional slips for ships have been arranged in the harbor, but this has not increased the capacity of the port for general trade to any considerable extent, as heavy railroad supplies coming from the United States monopolize the quays much of the time.

PROUD OF THE FRENCH

British Officer Writes of Army's Determination to "See This Trough."

The dogged characteristics of the British are vividly in a letter from a British officer, and which has just been received in New York. This officer is attached to one of the Headquarters Divisions in France, and the interest attached to what he writes lies in the fact that it reflects unquestionably the atmosphere of thought and sentiment along the firing line. The officer is a man of wide experience in European affairs, and one thoroughly acquainted with German methods. He writes in part:—

"As you can imagine, I rejoined the army immediately war was declared, and have been at the front since the early days of 1914. I was about sixteen months with the artillery, but latterly have been attached to Headquarters of my division. It has seemed strange in some instances where I have entered towns here in France as a soldier that the last time I was there on business for you. But what a change. Nothing but battered ruins remain of what previously were flourishing towns.

The machine shops of course have been shelled to bits and it is painful to see the scrap heaps of what were once fine machine tools. But such is war in these days and it certainly pays no respect to property. Anyway, we shall see this stunt through right up to the jag end and you can take it from me that someone will pay and pay dearly, before we are through with it. The thought of poor little Belgium and the atrocities committed there, are quite sufficient for us and we shall wipe it out in our own good time. All peace bladder is idiotic until that has been done and most decidedly the British army will not have any of it, and I know I can say the same of our allies.

"The French army has ought magnificently under prodigious disadvantages and it is a pleasure to fight along side it. As regards the Russians, you know as much about them as I do, for I have read only the newspaper reports.

"I saw American ambulances, a whole convoy of them, sometime ago and they were doing great work with the stars and stripes flying in front. Sure it did gladden our hearts to see them. I remember them also at the battle of Neuve Chappelle last year and the bravery of their men in coming up to the line during heavy bombardments, was superb. They didn't waver one instant and were as cool as cucumbers. I should like to have shaken their hands."

JOYS OF STARVATION.

Double Chins and "Corporations" Are Disappearing.

The London Daily Mail quotes the Cologne Gazette as saying that the food restrictions in Germany have brought many benefits in their train: that double chins and "corporations" have disappeared from Germany, and it has been noticed that the popular health is rapidly improving.

A well-known surgeon, Prof. Kuttner, writes in the German Review that appendicitis is disappearing as a result of the severe plainness of Germany's war diet, and other ailments and ills are also decreasing as a result of abstinence from rich food.

What Happens to All the Pins?

Scientific curiosity has led a French investigator to look into the old question of the fate of the ordinary brass pin. By a series of experiments conducted on his own estate he discovered that pins, like human beings, go their way and are resolved into dust. Hairpins, which the experimenter observed for 154 days, disappeared at the end of that period, having been converted into a ferrous oxide, a brownish dust, which was blown away by the winds. Bright pins took nearly eighteen months to disappear; polished steel needles nearly two and one-half years; brass pins had but little endurance.

MAILED FIST VS. NAILED HAND

BISHOP OF LONDON DISCUSSES WAR AND RELIGION.

Great Britain Is the Instrument of God in This Great Struggle.

Undoubtedly the most picturesque non-military figure in England during these war days is a distinguished clergyman, the Right Rev. A. F. Winnington Ingram, Bishop of London, says Edward Marshal, an American writer. He is the church militant incarnate, and has been ever since the war began. A great novelist might make him the venerable hero of one of the most fascinating psychological studies of war-born emotion ever written.

He has stirred the clergy of the Empire to the fighting pitch, sending hundreds of them, most of them as fighters, to the front. All creeds and decent classes love him; sham, clerical or otherwise, intensely fears him.

One sentence, as he spoke it to me in his plain residence, still rings in my ears, more because of the manner of its speaking than because of its impressiveness of wording. He did not cast it fiercely at me as he sometimes throws his words at listening soldiers, but thrust it at me very grimly, very solemnly, as if it might be somewhat of the nature of a new declaration of faith, made necessary by unprecedented times.

For Freedom of the World.

"I believe that God is on the side of the allies and that our struggle is a holy one.

"We are fighting, not for our own profit, not for the extension of the British Empire or of the French Republic or the Russian domain or for augmented power or territory for any one of our Governments, but for the freedom of the world.

"At this late day I cannot discuss the causes of the war's beginnings," he went on. "The reasons which keep us thrust into it, determined upon victory, no matter what the cost may be, are so very clear to me that I cannot think that any intelligent American can fail to understand them.

"In the minds of many thousand Englishmen is the conviction that our nation now is being used as a weapon in God's hands. These men and women know that the nations which sank the Lusitania, which betrayed and ravaged Belgium and stood by while 350,000 Armenians were done to death, would not have done these things had they not lost their fear of and their faith in God. To those who think this out faith becomes more desirable than ever.

"I," said he, "a man of peace and a Bishop of the God of Peace, regard this war as worthy and as necessary.

"The man who long has been a Christian and suddenly starts out to fight a righteous battle, feeling that he is a weapon in God's hands, will not become irreligious; the nation as a whole has felt a mighty spiritual uplift which must help it, not degrade it. War never emphasizes the forms of religion; to warriors fighting for the right the substance of religion must inevitably be emphasized. No; the war will not weaken the religion of Great Britain; it will strengthen it.

"To use the words of a Scotch preacher we are fighting for the 'nailed hand against the mailed fist.'

"The mere fact that we engage in such a battle, raising for the task a volunteer army representing, I believe, a greater proportion of our male population of fighting age than ever was represented before by volunteer fighters (save, perhaps, in the two armies of your North and South in the days of your Civil War, before you found it necessary to introduce the draft), is, I think, proof positive that we are not morally deteriorating through the effects of war."

STRANGE FACTS OF SCIENCE.

Between them Spain and Portugal produce 70 per cent. of the world's cork.

Turning the knob even a trifle rings a bell in a new lock for residence doors.

A Frenchman has developed a method for obtaining casein from milk by electrolysis.

An adjustable attachment for a baby's chair to hold a nursing bottle has been patented.

Experiments have indicated to Honduras that it may become an important cotton-raising nation.

The Moscow Museum of Agriculture the oldest in Europe, has celebrated its fiftieth anniversary.

Glass forks have been invented for handling pickles to avoid imparting a metallic taste to them.

A Vermont inventor has patented blankets for cattle that cannot be dislodged by animals rolling.

To judge horse races a Frenchman has invented a camera that is operated by a winning horse breaking a thread.

A waterfall in Norway will be harnessed and made to provide 125,000 horse power for smelting and refining zinc ore.

For Shipping poultry a crate has been invented that folds to a quarter of its extended size when empty for convenience in handling.

Pretty nearly every man remembers that he was once a boy. The trouble is that so few of us recall the kind of boys we were.

The Paisley Advocate

PAISLEY, AUG. 23rd, 1916

—To meet the problem of reconstruction after the war, when the British Trade Union meets next month, resolutions will be offered for compulsory trade union membership, 48-hour week for all, minimum wage of 30 shillings for all adult workers and a state employment wage system for everybody. To meet the cost of war, a heavier graduated taxation on large incomes is suggested; special tax on land values; increase of duties on States; graduated taxation on capital, nationalization of railways, mines, shipping, banking, insurance and the conscription of wealth.

—Southwest Toronto bye-election resulted in the return of Mr H H Dewart, the Liberal candidate who considered the prohibition question settled and out of politics. His majority was 643 over the Conservative candidate. This is the first time in 26 years that the voters of a Toronto riding have made the choice of a Liberal for the Legislature. Mr Dewart should be a decidedly strong acquisition to the Opposition ranks. He is a son of the late Rev Dr Dewart, former editor of the Christian Guardian, and is a man of both force and ability. As a legal practitioner he has attained a prominent position in the profession. What effect his election will have upon prohibition altogether depends upon what stand he takes as a member of the Legislature, and it is not expected that he will be a friend of the liquor interests at all.

—The new recruiting campaign for 700 more men from Bruce Co is reported to be on now. We haven't seen anything of it in Paisley yet. It is quite probable the campaign will be conducted on somewhat different lines than those on which the 160th was recruited. So far as this village is concerned, it is acknowledged that we did our share in filling up the ranks of the Bruce Battalion. It has many times been remarked that the recruiting here was successful in the face of many unfavorable conditions that were rather forced upon us by those in charge of the campaign. It is safe to say that our citizens will not tolerate methods such as were in vogue here last winter. Young officers who can't be more reasonably discreet in their actions and conduct than some of those who have been here, may expect to be severely wounded in feelings at least by Paisleyites.

—Local option seems to be working out as well in Manitoba as in other parts of the world. The Stratford Herald interviewed the president of the board of trade in that city after his return from a recent business trip to Winnipeg. "How is local option working in Manitoba?" Mr McCully was asked. "Why, you never saw anything like it," was the reply. "I talked with men who were strongly opposed to the prohibition measure but now they are "tickled to death" about it. They wish they had seen it ten years ago, and the only regret of hotelkeepers is that the measure was not introduced three years ago before they installed such elaborate bar fixtures and made such extensive improvements. The effect on the commercial life of the province is wonderful. People are paying their bills now who never seemed to get caught up before. Men who used to loiter and spend their money over the bar are now seeing something of their families and taking an interest in their homes. The effect is everywhere felt, and Winnipeg would not go back to the old license system for anything." "Go back and say that Premier Hearst knows what he is doing if the rest of you people in Ontario don't," was the request Mr McCully had thrown at him more than once from men on both sides of politics.

—Sydney, the largest city on the Australian continent, and the capital of New South Wales, has decided to impose all its taxation on the value of land apart from all improvements. This had been discussed in the city for years and at the recent City Council elections a majority was elected in favor of it. In the forty suburban municipalities surrounding the city with a population of three quarters of a million the land value is set down at over two hundred and fifty million dollars, and in all of this area with exception of a couple of the suburban areas the whole of the municipal taxation will be drawn from land values. Sydney and the district surrounding it now show the most striking example of the application of this and other principles of Henry George.

Munition making has turned out to be one of the most profitable industrial ventures for factory and foundry concerns in the U. S. and Canada. Thousands of speculators in the republic became rich through purchasing shares in new syndicates and companies that were formed on very limited capital foundation but were sure of profits after securing munition contracts. In Canada the firms entrusted with contracts were principally well established, and it seems the majority of them have found the business a better paying one than the original lines of manufacture. So large was the margin of profit that the Dominion Government placed a tax of one-quarter of all the profits above seven per cent. Now it would seem that this tax is not as large as the Government might be warranted in exacting. The following from the Montreal Gazette shows how much some of the big iron companies are realizing:

"The Montreal ammunition company this week paid another of its now famous 100 per cent dividends, making a total of 350 per cent that has been paid to shareholders, all within a space of considerably less than a year. As the Dominion Bridge Company is understood to own 51 per cent of the company's $300,000 capital stock, the parent company has already benefitted from subsidiary dividends to the extent of about $1,125,000. Within the next month or so it is probable that the Ammunition Company's dividends will pass the 900 per cent mark, in which event the dividends received by the parent bridge company will exceed $3,300,000 which it is distributing to its own shareholders this year in dividends and bonuses. That will leave the large earnings of the bridge company itself as a clear surplus."

A Hamilton manufacturer, Mr F W Bailie, had an order for a million shells, for which he voluntarily returned to the Imperial Munitions Board $758,000 profits, feeling that it was his patriotic duty to make this return. Should all others follow his example the aggregate would be astounding.

DATES OF FALL FAIRS, 1916

Tiverton	Oct 3

Not His Fault

A negro with a bad cut on his head came to a doctor. The doctor fixed him up, and as the man was about to depart, the physician said: "That's a pretty bad cut on your head, Henry. Why don't you profit by this lesson and keep out of bad company in the future. "Well, I'd like to, doctor," replied Henry, sadly, "but I ain't got no money to get er dis'voice, you see."

A Man Came in

A Week or, Two Ago Frankly Skeptical

"I've been reading your ads," he said, "and I'm going to let you make me a suit. But I'll tell you in advance, I'm hard to fit. The tailors 'fall down' when it comes to giving me what I call a good fit. Now, go to it."

Well, we "went to it" and put in our best efforts. The man was hard to fit. We admitted it. Anything short of long experienced, expert tailoring skill would have fallen down on his contract once more. But we fitted him. FITTED, that's the word. Now he's a regular customer—just like you will be after you get your first suit. Glad to see you this week.

Suits, $18 to $32

MISERABLE FROM STOMACH TROUBLE

Felt Wretched Until He Started To Take "Fruit-a-tives"

594 CHAMPLAIN ST., MONTREAL.

"For 160 years, I was a miserable sufferer from *Rheumatism and Stomach Trouble*. I had frequent *Dizzy Spells*, and when I took food, felt wretched and sleepy. I suffered from Rheumatism dreadfully, with pains in my back and joints, and my hands swelled.

A friend advised "Fruit-a-tives" and from the outset, they did me good. *After the first box, I felt I was getting well* and I can truthfully say that "Fruit-a-tives" is the only medicine that helped me". LOUIS LABBIE.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

A THOUGHTFUL GIFT

Send THE ADVOCATE to the absent members of the family or to the distant friend. It is as good as a letter from home and is a weekly visitor. You can better imagine how the home paper is appreciated when you are absent yourself and a copy is forwarded to you.

LOCAL AND DISTRICT NEWS

The Hog Market

Local dealers paid $12 per cwt. for hogs on Tuesday, and there was quite a large delivery by farmers. The scales at the station are out of commission at present, and it looked like old times to see the weighing being done on the market square.

On Western Harvest Excursion

Among those who left for the west on Saturday's harvest excursion were the following who bought C P R tickets from the Paisley agent, W H McFarlane: Rich George, Paisley; Lawrence Manley, Arch Bell, N McLeod, Jas McKenzie, Bildon McGillivray and Hilker Brown of Bruce Tp; Mrs John Reid and son Clarence, of Greenock; M Oldriere and O Oldriere, of Arran.

Home Destroyed by Fire

On Tuesday last the home of Mrs T Kelly, township Saugeen and Bruce, was burned to the ground by a blaze that started from a stovepipe from the kitchen stove while the dinner was being prepared. With the help of neighbors who were quickly on the spot, all other buildings were saved. The loss is covered by a small insurance of $450 on house and $250 on contents. A portion of the furniture was saved. There is another small house on the place which the family can occupy temporarily.

An Interesting Visitor

Many residents of the city must have observed a tall and commanding figure, like that of an old Highland chief, on some of the streets during the past week. The old county of Bruce sent of her best sons to the Pacific coast and many of them hold high and responsible positions in public life, to most of them Dr McCrimmon, who over 40 years was president of the Caledonian sports held in Lucknow, will be known by reputation. Never before had he been west even as far as Winnipeg, though all eastern Canada and large portions of the Old Country are familiar grounds to him. It is, however, when he speaks of the mountains that the Celtic spark takes fire. Gaelic book in hand, he had followed the route discovered by another man from Glengarry, and the beauty and grandeur of it has cast a spell over him much greater than upon the ordinary traveller. "You would enjoy the Rockies," remarked an old acquaintance upon whom he called. With enthusiasm he replied: "The mountains! the mountains!. I ask in all reverence why did the Almighty place them there? Was it to develop the ingenuity of man?"—Vancouver World.

Summer Visitors at Port Elgin

We learn from various sources that Port Elgin is beginning to come into its own as a summer resort. The hotels have been crowded with visitors during the hot spell, and many islanders are buying lots on the beach and will build cottages there for summer occupation. The beach is an ideal one as a holiday, rest and recreation resort. The beautiful sand bottom to the lake there slopes very gradually to a long distance, which affords the safest and most delightful bathing facilities, as well as boating in small skiffs by people who don't want to venture out in the open except in larger craft. Instead of being unable deep in dry sand there is a strip of the beach that is always sufficiently moist along a great part of the way to make walking a pleasure. Were the summer resorters of Central Ontario acquainted with Port Elgin beach there is no doubt there would soon be quite a colony there every year for the vacation season.

—A subscriber once received a dun through the postoffice, and it made him mad. He went to see the editor about it, and the editor showed him a few duns of his own, one for paper one for type, one for fuel and several others. "Now," said the editor, "didn't get mad when these came because I knew that all I had to do was to ask several reliable gentlemen like you to come and help me out, and then I could settle all of them." When the subscriber saw how it was he relented, paid up, and renewed for another year.

—The Queen's Hotel, Port Elgin, was struck by lightning during the storm on Saturday afternoon. A bedroom was damaged and one of the telephones put out of business.

BORN

HOPE—At Paisley, on Aug 11th, to Mr and Mrs Jas Hope, a daughter.

MCGILLIVRAY—In Bruce Tp, on Aug. 18th, to Mr and Mrs A B McGillivray, a son.

RESOLVED, BOYS:
THAT IF YOU WANT A NEW SUIT OF CLOTHES, THE WAY TO GET IT IS TO ASK YOUR MOTHER AND FATHER FOR IT, AND KEEP ON ASKING FOR IT UNTIL THEY BRING YOU OR SEND YOU DOWN TO OUR STORE TO GET IT.

ASK THEM FOR A NEW SUIT TO-DAY.

Are the Boys Ready for School?

If not, bring them in before it starts, and get them fixed up in a new outfit. They will feel better, look better and work better.

Don't Forget the Girls!

We have a number of Girls' Wash Dresses, all sizes, from two years up, which we are clearing very cheap. They are just the thing to save both work and worry.

BOWLING ON THE GREEN

The spirit of rivalry and competition is primitive instinct in mankind. The desire to demonstrate ability and compete in tests of brain and brawn was as marked in the nature of the people of the south whose deeds fill the earliest pages of history as it is in the present twentieth-century man. Long centuries ago it was the custom of the early Greeks and Romans to set apart an annual holiday season, at which time athletes, poets, artists, musicians and men who excelled in any walk of life assembled in great numbers to win the plaudits of the multitude by their deeds of strength, ability and skill. Then in the days of Norman rule in England, the days of knighthood, chivalry and romance, the public were periodically entertained at what was often called "a joust of arms. At these tournaments the knights competed in fierce rivalry in such exciting sports as fencing, archery and tilting in the ring. Since those stentorous days, however, there seems to be, as a great writer says, a physical and chivalrous decline in character of the Anglo-Saxon, and to day Canada's brave and romantic sportsmen are content to be merely knights of the bowling green.

There are many reasons why a man should learn to bowl. In the first place it is a most healthful exercise. A prominent Canadian physician recommends bowling as being the most beneficial, physically, of all sports. Any form of exercise which does not entertain the the mind, or which the individual does not enjoy, is practically useless. Forced recreation fails in its purpose. The interest in this game is keen and it develops the judgment and self-control of the player. Then, again, it is a gentleman's game. Profanity, wrangling and the todent conduct which mar the enjoyment forget their differences in the general enjoyment. Financial and other worries are thrown aside and for the time dull care loses its effect.

Probably the observer is most struck by the optimistic spirit which prevails at the tournament. The participants in the game have an almost frantic desire to be agreeable. For instance, a bowl intended to be lodged somewhere near the kitty, comes wobbling down the green. "Well," yells the skip, "you're about ten feet short, pretty narrow and with the wrong draw. Outside of that, though, its a pretty fair bowl." A minute later a bowl comes whizzing down the green, misses the kitty by seven feet, bumps into the ridge at the end of the lawn and over it, crashes through the fence and goes completely out of the premises. "Little strong, but a good back bowl," shouts the skip again, undismayed. Just at this moment a sensational shot is made by an artist on a neighboring rink. A coterie of ladies and their admirers sitting close by show their appreciation of this good work by a hearty outburst of hand-clapping. The gentleman who has just delivered the "good back bowl" naturally thinking the applause is for himself, recognizes it by lifting his hat. Another player complains that "his bowls don't always bowl the same," and receives immediate sympathy. It is always the same thing—optimism rules.

Professionalism to-day is creeping into all branches of sport. Ty Cobb, the Detroit ball player, has enriched his management and himself by his ability on the diamond. Similarly Willie Hoppe, the New York billiard expert, has made thousands of dollars by giving exhibitions of his skill with the cue. Personally, though, we wouldn't advise any of the Lucknow bowlers to give up their present occupations to get rich giving bowling exhibitions. We're afraid they would soon be home again looking for their old jobs back at a reduced salary.—I. S. N., in Lucknow Sentinel.

—YOUNG WOMEN "DO THEIR BIT"—One of the ways in which women can "do their bit" is by assisting in keeping the wheels of commerce in motion by taking the place of office men who are going to the front. Training in bookkeeping, stenography and other branches of business is necessary. The Can. be obtained without delay at the Northern Business College, Owen Sound, which has special courses of study designed for preparing young people quickly for war time office work. Fall term begins Sept 5th. Catalogue free.

A man's worst difficulties begin when he is able to do as he likes.

Old Sight and Old Age.

Old age is a matter of years.
Old sight is a question of glasses
If you find difficulty in reading, while for distance your sight is good you require old sight glasses.
Old sight shows itself at about forty
A competent optician should be consulted.
We examine eyes free and guarantee satisfaction.

A STOPPED WATCH

—one that will not go AT ALL—does not cause as much bother as one that runs now fast, now slow, in an erratic fashion.

The first you don't pretend to depend upon—the other is a constant source of annoyance.

Most people can afford a watch, but no one can afford an uncertain fast and slow one.

And when our Repair Department is so close at hand there is really no excuse for carrying anything but an accurate time-piece, no matter what the first cost was.

Consult us about any watch troubles that may arise.

I. SHOEMAKER

Jeweler and Optician

PERSONALS.

Well-known Woman.

Chatham, Ont.—"I was sick for about four years. Got very weak, could not eat to amount to anything. I got very thin and had no strength at all. I was very much discouraged at times—thought I was never going to get better. I could not walk a block without feeling all tired-out. I took different medicines but did not get the help I needed. A friend of mine advised me to try Dr. Pierce's Favorite Prescription. I began to take it with the 'Pleasant Pellets' and by the time I had taken two bottles I was well on the road to recovery, and in six months I was entirely well. My appetite came back and I gained in flesh. Now I am as strong and healthy as any one could wish to be. I owe it all to Dr. Pierce's medicines and I am glad of the opportunity to give testimony in their favor; they have done wonders for me."—MISS THELMA PARKER, 141 E. King St.

Chatham, Ont.—"I have taken Dr. Pierce's medicine with good results. I was weak and run down, lost my appetite and got very thin. I took 'Favorite Prescription' and 'Pleasant Pellets' and these two medicines built me up in a very short space of time so that I felt as well as ever. I found them to be all that is recommended of them; they are good."—Mrs. Wm. Wanss, Cor. Taylor & Grand Ave., E., Chatham, Ont.

Every woman who has backache, headache, low spirits, sleepless nights, owes it to herself to speedily overcome the trouble before a life is thrown across precipitous.

Dr. Pierce's Favorite Prescription is a non-alcoholic remedy that any ailing woman can safely take because it is prepared from roots and herbs with pure glycerine, containing basic properties.

—THE ADVOCATE office has a splendid stock of wedding stationery and calling cards on hand, also the most beautiful styles of type, so we are able to turn out the finest lines of wedding invitations, announcements, cards, etc. We can do work fit to invite the best of people to a wedding, so why pay two or three times as much to city printers or engravers?

worked both Ways

A Scottish minister was one day talking to one of his parishioners, who ventured the opinion that ministers ought to be better paid.

"I am glad to hear you say that," said the minister. "I'm pleased that you think so much of the clergy. And so you think we should have larger pay?"

"Aye," said the old man; "then we'd get a better class o' men."

What He Cut Out

A man took the following telegram to a telegraph office: "Mrs. Brown, Centre street—I announce with grief the death of Uncle James. Come quickly to read the will. I believe we are his heirs."—John Blank.

The telegraph clerk, having counted the words, said: "There are two words too many, sir."

"Cut out 'with grief,'" was the reply.

—"Advertising is the education of the public as to what you are, where you are, and what you have to offer in the way of skill, talent and commodity. The only man who should not advertise is the man who has nothing to offer the world in the way of commodity or service."—Elbert Hubbard.

HORSES TO BE SCARCE.

British Farmers Told Wastage Gives Them Opportunity

The wastage of the war will mean a scarcity of horses for years to come. The deficiency will not be confined to this country nor to the belligerent nations, but will be general in all horse using countries. Even if it were to end at once, the war would already have decimated the studs of the world, for the neutral, as well as the combatant territories, have been drained to an extent unparalled since the breeding of horses became an organised industry. This aspect of the war has a direct and double bearing upon farming. It has already reduced the supply of animals of all types below normal requirements and further reductions are threatened, and will undoubtedly occur, if hostilities be prolonged.

Up to the Farmer

Farming perhaps feels the lack of horses more acutely than any other industry, now that motor vehicles have acquired the ascendancy on the streets and roads; but the farmer has left to him the comforting knowledge that he alone can restore the supply to the normal level. No one can deprive him of the advantages of a market, the requirements of which will be insufficiently supplied for some years to come. The existing dearth of horses will no doubt give an impetus to the process of substituting motor for horse power, but when full allowance is made for the diminished needs of the future there remains a bright prospect for the man who breeds a class of animal serviceable either for draught or saddle purposes.

The farmer was never presented with a better opportunity for turning the mares in his working teams to good account, alike to himself and to the nation. Every mare of a suitable type should be put to the stud this year, says the London Times, and there is evidence of such an intention in the high prices that were paid for working mares at the Islington and other sales in the early spring. Horse breeding brings a slow return to those who rear the young stock to maturity, but it is not necessarily exacting either in capital or in labor.

Outlook is Bright

There might be some hesitation in advocating the breeding of horses on an extended scale if it were conducted as a separate enterprise, but managed as an adjunct to other pursuits, as it usually is, it offers exceedingly liberal prospects for those who produce a useful type of animal. As far as the market is concerned, it seems to matter little whether the farmer breeds for the collar or the saddle. The supply of riding horses has been the more severely depleted, and a rich reward will await the man who can help in replenishing the hunting stables; but the outlook is bright for draught animals also, and the farmer may consider himself fortunate who includes in his working teams a class of mare which, when suitably mated, will be capable of breeding a type of foal for which the market will be impatient long before it has attained maturity.

ODD SUPERSTITIONS

If you shiver, someone is walking over your future grave.

When your nose itches something will soon happen to vex you.

When your right eye itches it is a sign of good luck; when your left eye, of bad luck.

When rooks desert a rookery it forebodes the downfall of the family on whose property it is.

A spider descending upon you from the roof is a token that you will soon have a legacy from a friend.

Candles and other lights are supposed to burn blue and dim when invisible beings are present, especially if they be evil spirits.

If you have any white marks on your nails, commonly called "gifts," you may expect to get as many presents as there are marks, as soon as these get up to the nail ends, in the course of their natural growth.

If you see the new moon through glass you will have ill luck through the month. If you see it in the open and turn the silver upside down in your pocket you will be wealthy for the month.

Don't be afraid of overfeeding ducks. They should be fed four or five times daily.

"Writes His Own Plays

EDWIN AUGUST

Edwin August's experience in motion pictures dates back to the day when he played leads opposite Blanche Sweet and Little Mary Pickford. He later organized a company of his own. In addition to writing and producing the pictures in which he appears, he supervises the production of other comedy and dramatic companies.

NO ONE NEIGHBORS WITH THIS QUEER BIRD

The pondicherry is not a pretty bird to look at, but his manners are worse than his looks. Even the natives of East India which is the home of the pondicherry avoid the place where the ugly creature builds its nest. The East Indian's sense of smell is far from delicate, but even so he draws the line on the pondicherry.

Besides living in so unclean a way that both man and birds keep him at a distance this ill-mannered bird has a hateful trick of hissing. There's no melody in his throat at all, no one ever heard him sing, but when he takes to fight he makes a horrible hissing noise like an angry snake.

ASSORTED PARAGRAPHS

The people most addicted to wasting time are those whose time is not their own.

A spendthrift is a person who saves his money for a rainy day, and then prays for rain.

When a woman pauses for reflection look for the mirror.

In travelling the road to success some people always want to cut across lots.

You never can tell. A man may be perfectly honest and still have a different umbrella every time it rains.

Behind the darkest cloud the sun is shining, but that beautiful thought won't keep you dry if you have been caught out in the rain without an umbrella.

An ounce of prevention is worth a pound of cure, but a pound o' cure is worth a ton of I-told-you-so.

When a woman switches on her batteries of wrath, some men wilt, and others work.

Casting sheep's eyes at a man is one way a girl has of pulling the wool over his eyes.

The great trouble about lending a man money to tide him over is that he doesn't always come up with the tide.

All men are born equal, but the equality is apt to end right there.

NAMED AFTER MARTYR

Mount Cavell Not the Only Peak so Honored

The fact that a high peak in the Canadian Rockies, is to be called Mount Cavell, as an eternal monument to the martyred nurse, recalls the fact that there is a Mont Jeanne d'Arc in France; while a curious sugar loaf shaped eminence in Quebec has been christened locally "Joan of Arc's Tower." Mount Rijshart, in Tibet, commemorates the sad fate of the martyred Dutch missionary so named, who, many years ago, conceived the wholly impracticable plan of travelling on foot amongst the Tibetan nomads inhabiting the almost inaccessible and desolate plateau north of Lhassa. He took with him his wife and child. For several months nothing was heard of the party. Then one day a dying woman staggered into the frontier town of Sechuan. It was Mme. Rijshart. Her husband, it transpired, had been murdered by the the savages he had come to convert. Her babe had been frozen to death at her breast. She herself died a few days later.

Castles in the Air

"A castle in the air is a refuge from the present," said Tennyson. He was quite right. There are some people to whom the present is all-sufficing; they are happy enough—or ought to be so—for it not to be necessary for them to dream of either the past or the future. I remember Toole relating how he advised a friend of his who was getting married never to fall into the mistake —he had a habit that way—of saying to his wife while they were on their honeymoon, "I remember a time years ago"—here came in a sight—"when I was as happy, as happy as I could possibly be." Toole said his wife would not like it. Another friend he warned upon a similar occasion, not to suggest to the lady that he was looking for supreme happiness in the future.

Save Your Paper

Save your old paper and rags! By so doing, according to the Department of Commerce, Washington, you not only will be enriching yourself to a certain extent, but will be aiding paper manufacturers' to solve what promises to become a very serious problem—the shortage of raw materials. The Department is sending broadcast letters to business firms urging them to conserve their old paper. Something like 15,000 tons of paper are manufactured every day in the United States and a large proportion of this, after being used, is thrown away or burned, with the result that just so much raw material must be obtained. Most of this paper can be used again in the manufacture of a slightly inferior grade.

In point of size the finest of bullies comes from North America.

It is called the flat opaca. Trees of fifty feet are common. Others rise to the towering height of eighty feet.

ELLIOTT Business College

Yonge and Charles Sts., Toronto

Make this remarkable attorney record for the last three months. We were called to fill more than thirty times as many positions as we had graduates. The business world calls you; prepare here and meet splendid opportunities; good salaries. All who are anxious for a successful start in life should arrange now to enter this popular school.

W. J. ELLIOTT, Principal

The Housewife's Corner

Dainty Dishes.

Pepper Hash.—One dozen red peppers. One dozen green peppers. Three or four large onions. Two cups granulated sugar. Three tablespoons salt. Three cups vinegar. Remove the seeds from the peppers and put both peppers and onions through the food chopper. Cover with boiling water, let stand ten minutes and drain. Cover again with boiling water, let come to the boiling point and stand again for ten minutes. Drain, add the sugar, salt and vinegar, and cook fifteen minutes, seal in jars. It is well to wear rubber gloves when preparing the peppers for they sometimes burn the hands.

Pineapple Orange Marmalade.—Take six well ripened pineapples and six tart oranges. Put both through a food chopper and mix together. For every cup of the pulp take one cup of sugar. Cook until the thickness of ordinary jam, pour into glasses and let cool.

Apple Conserve.—Ingredients: Two quarts apples cut in small pieces; two quarts sugar, one cup vinegar, one cup raisins, one cup walnut meats. Boil sugar and vinegar, add the fruits and cook until clear and tender. Put in jelly glasses and seal. Use Whitney crabs if obtainable.

California Jam.—Grapes will soon be ripe and this delicious jam may be made now or later in the fall, as one wishes. The basket of grapes or a little less than ingredients are as follows: One a peck, three oranges, two lemons, one pound seeded raisins, one-half pound English walnuts. Stew the grapes and rub through wire sieve. Wash and dry oranges and lemons. Remove seeds and put them, with the raisins and nuts, through the food grinder. Mix together all ingredients and after adding an equal amount of sugar boil thirty minutes. Should not be too thick when sealed, add a little boiling water if necessary.

Corn Relish.—Take twelve ears of tender corn, one quart cucumbers, four large onions, two quarts ripe tomatoes two green peppers, three red peppers and two large stalks of celery. Cut the corn from the cob. Peel and chop the cucumbers; peel and cut the tomatoes in small pieces. Chop the onions, celery and peppers fine. Add one quart vinegar, one and a half cups sugar, one tablespoonful each of salt, dry mustard and turmeric powder. Mix thoroughly and cook for forty-five minutes. Seal while hot. This quantity makes about eight pints.

Pineapple Marmalade.—Run pineapple through food chopper, saving all the juices for refreshing drinks or by adding a cupful sugar to every pint of juice and making a fruit syrup. For marmalade take equal quanties of sugar and shredded pineapple; let it stand until sugar dissolve; boil fifteen minutes and skim next day bring to boil for ten minutes more, put in glass and seal.

Mixed Pickles.—Three quarts green tomatoes. Three quarts small onions. Two quarts string beans (cut in halves). Three quarts cucumbers (cub in slices). Two good-sized heads of cauliflower. Four large green peppers. Four red peppers. Make a brine of one cup of salt to one gallon of water. Put all the vegetables together except beans and cover all with the brine, beans by themselves, and let stand overnight. In the morning bring all to boiling point in the brine except beans, which must boil a triffle longer. Then drain. Take one pint of vinegar, add two tablespoons of whole cloves and four sticks of cinnamon. Let boil ten minutes, strain, and add to vinegar one cup of flour, six tablespoons of mustard which has previously been rubbed to a paste with a little vinegar, then add three cups of sugar, two and one-half quarts of vinegar and two tablespoons of celery seed. Pour over vegetables and boil fifteen minutes, then remove from fire and add two tablespoons of turmeric powder dissolved in a little hot water. Seal up hot.

Rhubarb Fig Relish.—One pint dried figs. Two quarts fresh rhubarb. One-half pint blanched almonds. Three pints sugar. One-sixteenth teaspoonful each of cloves, cinnamon, allspice and nutmegs. Stew figs in pint of water and cook until tender. Drain off any liquid and mash. Stew rhubarb after skinning and breaking into small pieces in a pint of water until tender. Drain off any liquid, mash and mix in the figs, sugar and spices. Cook two hours on low flame or on back of cook stove. Place asbestos mat underneath pan to prevent scorching; also stir often. Add broken nuts ten minutes before taking from fire. Place in jars hot and seal. This is delicious with fowl and meats.

Tomato Preserve.—Pare tomatoes—Cut in half crosswise, take a half in each hand and squeeze out all the juice and seeds you can without loosing the pulp. Put on slow fire, and do not add a drop of water. As the juice comes out of the tomatoes turn it off until you see you would loose pulp by turning off any more. Boil down as close as you dare by careful watching. Add two-thirds as much sugar as you have tomato. Cook until they are thick but not so thick that they are not quite liquid. About twenty minutes before they are done add one lemon cut in very thin slices. Put in self-sealers and eat when jack frost is in the air.

Household Hints.

Summer squash may be fried exactly like eggplant.

An egg becomes a complete food if rice is added to it.

Dried figs are more nourishing than an equal weight of bread.

Half a pint of milk and half a pound of dates form a perfect meal.

A red hot iron will soften old putty so that it can be easily removed.

Water can be softened by boiling. A little borax or baking soda added to the water will also soften it.

If a soft piece of home-made bread is rubbed on a scorch on woollen goods it will remove it entirely.

If labels won't stick on your glass fruit jars, scratch the metal tops of the jars and paste the labels there.

When it is difficult to turn ice cream out of its can, allow cold water to run over the outside of the can.

A piece of cloth dipped in spirits of wine and rubbed upon soiled leather will remove every spot on it.

A little water in the wash-tub after using will keep it from drying out when it is set away for the week.

When shoes are too large at the heel and slip up and down fit a piece of velvet in the heel and glue it there.

Home-made cottage cheese and good bread and butter make a sandwich fit for a king. Just right for picnics.

If the screen door bangs too hard fasten a thin strip of felt or woollen cloth on the door-frame for it to strike against.

Never forget that the foremost consideration in the feeding of infants and young children is pure milk.

Always turn off the current whenever you stop ironing with an electric iron, even if it is but for a moment.

The value of vegetables lies in their mineral salts. Vegetables should be steamed, not boiled, or the salts are lost.

Always bake the pastry of a custard pie before putting the custard in; put it in the oven again until the custard is brown.

If rice is cooked in water it will absorb about three times its measure. If it is cooked in milk at least half as much liquid will be necessary.

A fish that is to be boiled will be improved if it is placed in a dish containing melted butter, and allowed to stand for an hour before boiling.

Instead of mixing cocoa with boiling water to dissolve it, try mixing it with an equal amount of granulated sugar and then pouring it into the boiling water or milk in the pot, stirring all the time.

FEAR BRITISH WILL LAND.

Marine Corps Reenforced on the Flemish Coast.

Now that the Entente Allies have taken the offensive on all fronts the Germans are more than ever reckoning with the possibility of an attempt to land British troops on the Flemish coast, according to a frontier correspondent of the Amsterdam Telegraaf. The marine corps has been reinforced, while a whole army of military workmen has been seen at the port of Zeebrugge.

Recently an alarm was sounded at 10.30 at night and the garrison there hurried to their posts. It turned out that no attack threatened, but the whole affair was a rehearsal of the operations for repelling a landing. The coastal guns suddenly belched forth, while the rattle of the mitrailleuses could be heard at Flushing. The entire manœuvre lasted about half an hour.

Soldiers' Smiles in Death.

On many a killed soldiers' face I have seen the sweet smile of a contented painless death, writes a motor-ambulance driver from the French front to The Autocar. The fearful expression of "kill" leaves the countenance of the suddenly smitten fighter, and he seems to "pass west" happy and gentle. Of course, those whose death ensues after bouts of fearful pain record their sufferings, but it is remarkable that the most animal of man's emotions seems to evanate at the instant the soul leaves the body, and as a last act of grace erase itself from the features of the dead man.

Matches Are Re-dipped.

Matches which have once been partly used are carefully gathered in Japan and redipped in phosphorus. The industry has grown to such magnitude that a large proportion of matches now sold have been lighted at least once. Recovering them from streets and eating houses is an industry of the poor.

Tough on Brown.

Binks—Was the loss on Brown's dwelling total?

Jinks—Yes, the neighbors saved six umbrellas, but recognized them all.

Questionable Taste.

Jack (inspecting ship's stores): 'Ere, Ginger, just taste this stuff and see what you make of it. I believe it's rat poison?—London Sketch.

THE SUNDAY SCHOOL

INTERNATIONAL LESSON AUGUST 27.

Lesson IX.—Journeying to Jerusalem—Acts 20, 16-38. Golden Text—Acts 20. 32.

Verse 16. The decision to take a ship that would not touch at Ephesus illustrates the immense importance Paul attached to his offering the gifts of the Gentile Christians at the time when there would be a large concourse of Jewish Christians in the Holy City. Still keeping up the practice of coming to worship at one of the great feasts, if no more, they naturally chose Pentecost, the church's birthday.

17. Miletus—Some thirty miles south of Ephesus, and in early history much more important. The elders or presbyters (margin), who in verse 28 are called bishops. In the first century the names were interchangeable, denoting the same work from different point of view; indeed, they are hardly technical titles at all yet. Those who "watched on behalf of souls" were called variously superintendents (bishops), seniors (presbyters), servants (deacons), or leaders. A stereotyped constitution, with a monarchical "bishop" set above his "fellow elders" (compare 1 Peter 5. 1), is a development of the second century. Providence ordained that the authoritive books should have no fixed form of church government, so that ages might be free to determine his purely administrative matter in their own way.

19. Lowliness—Till Christ made this a virtue, the word suggested only "meanness, grovelling." Tears—Of joy and sorrow and anxiety, the natural self-expression of an Easterner's emotions. We are by temperament less demonstrative.

21. Testifying—This recurrent word describes an appeal based upon the deepest personal conviction. It must be carefully distinguished from the similar word bead witness of what one had seen or hear. Repentance—"Change of mind," which brings to God one formerly at war with him.

22. Bound in the spirit—Compare Matt. 5. 3, etc. The "poor in spirit" may have outward wealth, but lives as if he had none. The "bound in spirit" wears no chains, but acts as if a prisoner already. The spirit is that part of man in which the Holy Spirit has his throne.

24. Course, or race, Paul's favorite figure (compare especially 2 Tim. 4.7). One of many links between the Epistles and this report of Paul's great Apologia, which they authenticate.

25. Luke obviously knows of no happy reversal of this strong presentiment, and unless Acts was really written immediately after the "two years (compare Acts 28. 30) and prior to a release and new travels, (compare 2 Tim. 4. 20), we may be sure there was none.

26. Probably Paul was thinking most of the solemn passage in Ezekiel (33. 1-9) where the "watchman's" responsibility is enforced.

27. The whole—Warnings as well as blessings, irksome duties as well as privileges. "His will is our peace," if we accept it all.

A sergeant was entering a new enlister into his book. "And where do you hail from, Angus Macdonald?—England, Scotland or Ireland?"—he asked with a sarcastic smile at the six-foot brawny giant. "Nane o' them," was the ready answer. "Do ye ken whaur Aberdeen is? Well, I come frae Aberdeen."

"SEND MUNITIONS."

For God's Sake Be Sure You Send Us Enough."

The point of view of the soldier in the trenches is very plainly stated in the following appeal to munition workers and all others engaged more directly in the production of material for the Army, submitted by a wounded Tommy at Southampton. He was formerly a reporter, and on the way over in the steamer he wrote this moving message:—

"All I want to say to the people at home is this:—You can never eat your dinner, or smoke a pipe, or read a newspaper, or go to 'the pictures,' but what, while you are getting through with it, some scores of your own country men are knocked out by Boche bullets and shells. There's not the slightest need for you to be depressed about this. Go ahead with the dinner, and the pipe, and the 'pictures,' and the rest of it as much as ever you like. We're not giving away a drop of your countrymen's blood; not this year. It's all being sold on a good business basis and fetching an excellent price, thank you; a better price it may be than it ever fetched before in all the history of the Empire. So don't grieve after us. Our High Commands know what they're doing, and Master Boche's doom is set; and he knows it, and we know it. We're doing our bit all right. Are you?

"I'm pretty sure you are by the way our heavies have been talking in the last fortnight. Keep it up. We've got a hundred miles front out there, and as far as I can make out we're pressing Master Boche pretty hard over every yard of it. It's the only way to end the war; and as for the time it will take, I reckon that's largely in your hands now. Our part of the machinery is all right, and I don't think you'll find any failure there. For God's sake, don't you fail us.

"Everybody will know what I mean won't they? It boils down to munitions of war—that's all, munitions of war. You can't send us too much. For God's sake be sure you send us enough. You can measure the blood we've got to pay before it's over by the guns and shells and cartridges you send out. The more you send the less we'll have to pay. Send plenty. My countrymen and countrywomen, send plenty."

HATRED IN WAR'S WAKE.

German Clergymen Foresee Bitterness Among Nations.

Little hope of peace and quietness for the belligerent nations after the war is held out by the ministers of the Evangelical Church in Germany, according to reports of recent sermons delivered by them appearing in the London press. One Prussian clergyman, the Rev. Schiller, is quoted as writing on this subject as follows:

"It will be a hard and iron time, a time of tension, a time of trained armaments and readiness. Is the world to wake up after this war more gentle and more harmless? How can that be? Are the peoples to throw off hatred and bitterness as actors throw off their masks? Does anybody believe that treaties will bind them? No, when the peoples wake after this war they will find themselves separated by mountains of corpses, by desolate lands, by cities in ruins, by an impoverished world.

"However complete the victory may be, another and an equally hard struggle will then begin. Nothing can help us but the utmost strain and effort and the strictest holding together of the strength and efficiency of the people."

Unanimous.

"Say, old man, I wish I had that $10 you owe me."

"Not any more than I do. I'm as hard up I'd like to borrow it again."

The AUTOMOBILE

The Storage Battery.

Every few days we receive an inquiry or two attacking our position on the matter of running engines having electric generators in connection with the storage battery is disconnected or removed from the car, says Motor Age. We have repeatedly explained that doing this is apt to burn out the windings, but a great many will not believe it. One man even went so far as to say that his garage man told him it would not hurt the generator in the least to run without the battery, and further that when the battery was off the car, he even started the engine straight off the generator, requiring no battery at all.

This merely goes to show how very little a great many owners really know about the electrical system, for common sense ought to tell that it would have been absolutely impossible to do any such thing. It is just like saying that he ran a steam engine without a boiler or other source of steam supply. To start the engine you must draw the current from the battery in order to send it to the starting motor. If there is no battery you have no starting current.

So much for that. As regards running without the battery, let us say plainly once more—do not do it. Most generators, are of the shunt-wound type, and being of that type of high voltage is built up when there is no provision for using or taking off the current that is produced. Suppose you were to take a water pump and stop the outlet so that no water could be let out. Now, if you pumped water from the well by working the handle you would be drawing it into the pump, and pretty soon something would have to break if there were no way for this water to get out.

So with the generation. The battery is there to receive the current generated and when it is not in connection you are stopping the electrical outlet without stopping the inlet if the engine is running. There are several ways you can overcome this, if absolutely necessary to operate the car when there is no battery. One is to lift the brushes free of the commutator, and another to disconnect the generator drive so that the unit is not running when the engine is operated. Either is a troublesome and inadvisable thing to do unless absolutely necessary.

Watch Batteries.

An over-heated battery is one of the worst things that can happen to a car owner because it may incapacitate his entire electrical system. It is well therefore, to observe closely the condition of the storage battery before starting on a tour, as well as to test it occasionally enroute.

Over-heating may be caused by several things. Two of the most common causes are lack of water or over charging from the generator.

A battery kept full of pure distilled water is not nearly so apt to become over-heated as one in which the solution has been allowed to reach a level lower than the top of the plates. When these plates are exposed to the air, the oxidation which goes on bulges and warps them, causing short-circuits and considerable damage to the entire battery. This often results in the entire starting, lighting and ignition system being put out of condition.

Before starting on a trip, the generator should be adjusted to supply the battery with the proper amount of current at high speed, inasmuch as the driving is generally faster when touring. If the generator is not furnishing current properly, it should not be experimented with, but examined by someone who is competent to make the proper adjustment. Only a thorough electrician should be given a job of this kind, and for that reason the Willard Company insists that their Service Stations be conducted only by experts who thoroughly understand electrical systems from start to finish.

ALL BRITAIN IS NOW WORKING

4,000 PLANTS ARE BUSY MAKING MUNITIONS.

War Supplies Produced Monthly as Great as Was Turned Out First Year of War.

When the British forces in France began their great offensive bombardment on June 27 and for days hurled into the German lines such an avalanche of steel and lead as the world had never known before, even the people of England expressed wonder that it should have been possible to assemble so vast a store of munitions. The story of how these supplies were created constitutes one of the most important chapters in the history of British achievement during the war.

At the outbreak of hostilities two years ago there were only three important Government munitions factories in the British Isles. To-day some four thousand Government-controlled firms, employing more than 2,000,000 workers, are turning out virtually all of the tremendous amount of war materials which have gone to equip the five million British soldiers in the field.

The organization of this great industry has been accomplished in a little more than one year by the Ministry of Munitions, which was established in May, 1915, under the leadership of David Lloyd George. In that time every available resource of the country has been built for the production of munitions.

Not Dependent on U.S.

A staff of 5,000 people has been required to supervise the work. At the head of this staff and responsible only to the Minister of Munitions has been a man whose organizing ability has been accorded wide-spread recognition. He is Dr. Christopher Addison, internationally known for his medical research work. Dr. Addison, during an interview with a representative of The Associated Press, told as much of the story of the creation of this industry as could be made public at this time.

At the outset he disposed of the statement which has been made in America to the effect that if it were not for the munitions furnished by the United States Great Britain would have to quit the war.

"I have heard that statement made," said Dr. Addison, "and it is preposterous, of course. The United States has furnished and is furnishing many raw materials which we are anxious to get for the manufacture of munitions, but so far as the actual production of shells goes, America has provided us with only a very small percentage of those which we have used."

Turning to the manufacturing of munitions in this country, he continued:

Every Town Helps.

"At the beginning of the war there were only three important munitions factories in the United Kingdom. In addition, there were a number of large private munitions and armament firms. At the start reliance was placed mainly in these national factories and experienced firms, and at that time they were full of orders.

"In the early stages of the conflict more attention was paid to field guns and their equipment than to heavy guns, but as time went on the requirements for heavy shells greatly increased. In June, 1915, we made an inventory of all the available machinery in the country and it was evident that it was entirely inadequate to meet the demands. There were, however, a great many private firms which could be brought in to make munitions and it was decided to mobilize them for national service. In order to do this we created an organization embracing the entire country. Thousands of firms have been brought in, many of which had never seen a shell body, or a fuse, or a grenade, or a bomb, before, much less than made them. Now munition making in some form or other has extended well nigh to every considerable town—indeed to large numbers of villages.

Could Have Weekly Battle.

"We can now produce in less than a month as many of the lighter shells as could have been turned out in the whole year of 1914-15. In less than a fortnight we can make more heavy shells than we could have done in the year 1914-15. We can soon turn out in a week far more shells, filled and complete, than were used in the whole battle of Loos, which extended over a fortnight, and they had been saving ammunition for that battle for a month. We could have a battle of Loos every week now, and it wouldn't touch the shell reserve stock.

"Regarding our present capacity for gun production as compared with the capacity of June, 1914, before the war, we are now making in the case of the lightest guns, over ten times what we were then, in the case of medium weight guns over 20 times, and in the case of heavy guns more than 50 times.

"The production of trench warfare supplies has meant the creation of an industry, of which there was practically no experience in this country. Now grenades are being made in backyards and in all sorts of small shops, as well as in the big factories, and hundreds of thousands are being produced weekly.

Labor Problem Hard.

"One of the most anxious problems has been the supply and the distribution of skilled labor. There was not enough skilled labor to go round. This fact was recognized by the trades unions, and the Government has received their hearty assistance throughout in the distribution of skilled labor, and in the dilution of skilled labor with unskilled. The production of munitions on any large scale in the field of skilled labor is a sacrifice of skilled labor, to which no too high tribute can be paid. Skilled men have trained and instructed unskilled workers, and in thousands of cases have willingly been moved from place work to easy wages, with the result that they earned smaller wages than the people they had trained have received at piece work.

"This position was rendered more difficult by the fact that many skilled workmen crowded into the army. More than 42,000 highly skilled workmen have since been withdrawn for munitions work."

Mistress—"Did you manage to find the basket of eggs that was on the pantry floor, Bridget?"

"Oh, yes, mum, I found it tripped on it."

A Great Opportunity

WIRELESS OPERATORS

In order to meet a wide-spread demand the Marconi Company has decided to open a

SCHOOL OF INSTRUCTION

at its Head Office, 187 McGill Street, Montreal, under its immediate and authoritative control, the first of its kind in Canada. Unrivalled opportunities for travel are offered to young men with ambition and energy sufficient to adopt Wireless Operating as a profession.

An experienced Instructor is in charge of the School and a Standard Marconi Ship Set is in use for practical instruction. Day and evening classes. Enrol immediately for the Fall Session. Write for prospectus.

MARCONI WIRELESS TELEGRAPH CO. OF CANADA LIMITED

MONTREAL

RUSSIA IN THE SUMMER TIME

VERY MUCH HOTTER THAN IT IS IN ENGLAND.

Russians All Live Free-and-Easy Outdoor Lives in Warm Weather.

I suppose it will surprise many people to learn that Russia has a hot summer, hotter than the usual summer in England, more sunshine, bluer skies. It is this which explains the rush of townsfolk every end of May to the country writes Hamilton Fyfe from Petrograd.

They will no stay in the towns. They say it is unhealthy. They speak as if all the plagues raged during the hot weather which is not, you must understand, so hot as all that! Still, it is detestably dusty and the Petrograd canals smell worse than usual, and for all reasons it is pleasanter to be in the country. So off go all who can to their "datchas" (summer homes) to enjoy the sunshine and the clear sky and the soft, warm airs that are blown from the sun-baked south.

It takes a long time to get rid of winter. Well into April, sometimes into May, he keeps his grip on the rivers, the earth is still under snow. Gradually the snow melts, the ice breaks up and floats away. The dark earth appears and very quickly looks as if it had been lightly dusted over with a green powder. It recovers quickly, for the snow has kept it warm. The trees are not so soon themselves again. They have been exposed to the cruel winds, the savage, silent, paralyzing frosts. For a month after winter has gone they are black and bare. Life comes back to them only when they have been well warmed by the sun. Last year they were not in leaf until June.

Much Outdoor Life.

There is a passion in the summer here. One only feels this in countries which have a long, hard winter. The earth seems to rejoice in its freedom. There is a luxuriance of growth which is scarcely known in England, a sudden rush of life, a glory of light and warmth and splendor. Ask any Russian living abroad what he most misses and he will tell you "The White Nights." All through June, with a little overlapping on either side of it, sunset and sunrise are so near together that there is no darkness. Last night I was sitting out of doors reading at eleven o'clock. We dine at half-past eight, and after strolling about the garden, or watching the after-glow flame in the sky and reflect its glory in the Gulf of Finland, we say, "It must be getting late." Someone looks at a watch. It is midnight! Who could have guessed it? We go reluctantly to bed, our rooms quite light still, until with hesitating hand we draw curtains over the windows. It seems a shame to shut out those wonderful "White Nights."

It is a happy life, that of the Russian "datchnik" ("datcha" dweller). Very simple and primitive, utterly different from English country-house life. To begin with "datchas" as a rule are wooden houses, only meant for summer habitation. All winter most of them stand empty. When they are to be occupied again servants go down, light fires, clean them up. Then the furniture is sent by road, piled up on carts. Not too much of it. Just enough for comfort. Appearances are not considered.

No Formality.

There is no state or ceremony. One lives out of doors as much as possible or on glassed-in balconies which are but one slight remove from the open air. Outside every "datcha" are set benches, both in the garden, if there is one, and in the road. Upon these it is customary to sit and talk for hours. Dress is sketchy, and often scanty. Meals are at odd times, and can be prolonged or cut short at will. For example, a Russian hostess will say to the parlor maid "See if the cook has anything else to give us," or it may be, "Never mind about the chickens and the souffle, Masha. Just bring us tea. We have had enough to eat."

Most English people, accustomed to the formality and state of our country houses (delightful also in their way), would be revolted by the go-as-you-please life of the "datcha." But it is of a piece with everything else. With the wild gardens, growing as they please, letting nature be their gardener. With the sergeants so smiling and friendly and cheerful, but, judged by our standards, so incompetent. With the free-and-easy manners of the "datchniki," determined to make their summer as complete a contrast as possible to their winter existence in town. From September to May they live in almost hermetically sealed houses. They take no exercise, breathe as little fresh air as they can. Their complexions grow wax-like, their eyes dull. From May till August they get as near nature as they can. Instantly their appearance alters. They look healthy and strong. They feel vigorous and normal. All the result of fresh air.

BUSH FIRES IN ONTARIO.

What the Canadian Forestry Association Says About Them.

The frightful loss of life and property from forest fires in Northern Ontario need not be accepted by the people of the province as wholly due to unavoidable causes. Evidence thus far received indicates that the huge conflagration had its beginning in "slash" fires started by settlers for the purpose of clearing their lands.

For many years the menace of settlers' fires during excessively hot spells has been increasing, largely for the reason that no machinery of any sort existed whereby a settler's so-called "liberty" of burning down lives and property could be curtailed.

Investigation shows that both in Ontario and Quebec, the settler and not the railways primarily, must shoulder a very large part of the responsibility for annual forest fires, with a considerable contribution also from campers, fishermen, prospectors, etc.

The laws of Quebec, British Columbia and Nova Scotia place heavy penalties of fine or imprisonment upon any settler who starts a fire during the season of danger, April to November 15, without a written permit from a qualified forest ranger. This places no unreasonable hardship on the settler and, on the other hand, is a necessary guarantee for the safety of lives and immensely valuable timber in his neighborhood.

What is the situation in Ontario? There is neither law nor regulation to prevent a settler letting loose conflagrations in any way and at any time he may select. No ranger has authority to advise or interfere with a settler in the employment of fire.

Under a watchful and modern forest administration, the recent period of abnormal drought would have found every settler under a prohibition to set out fires of any sort. There was no such prohibition. Settlers' fires were started at the heigh of the danger season. Hundreds of lives, entire towns, and incalculable amount of growing crops and timber growth have been swept away and the whole Claybelt seriously set back in its development.

The real business of forest rangers and the Governments responsible for them, is to stop fires from starting. Ontario, particularly in the Northern clay belt section, now so severely devastated, has practically no real ranger patrol carries on no preventive campaign, and offers no opposition to the wholesale use of fire by settlers for stripping their soil of tree growth.

In th Spring of this very year, the Canadian Forestry Association, through their Secretary, met the Associated Boards of Trade of the Temiskaming District at a meeting in Haileybury and asked that joint action be taken to stop the extravagant and dangerous burning of the northern forest areas by settlers. Some of the members of the Associated Boards frankly opposed any interference, asserting that many of the settlers favored free-running fires, and would not support such a measure as was proposed. Other members of the Board took a more favorable point of view, but no joint action was taken.

From February to June, 1916, through the representations of this Association, twenty-two of the leading Boards of Trade of Ontario asked the Ontario Government to bring legislation to control settlers' fires and also to reorganize the entire forest protection service of the province. The reply of the Minister of Lands and Forests to these communications was to the effect that the matter would be considered. But it is being considered too late.

Ontario forest protection service stands urgently in need of three main reforms, which, year after year, have been urged upon the Governments by the Canadian Forestry Association, the Commission of Conservation and other bodies.

1. Remodelling of the ranger service so as to give real protection to the forest wealth of the province and supply a fair return in service rendered for the money spent thereon. Ontario's system is recognized generally as out-of-date and inefficient.

2. Employment of inspectors in the ratio of at least one inspector to ten rangers, so as to get the maximum degree of actual forest protection. Over an area of 161 million acres of timber lands under license, Ontario has just eight supervisors, each being required to manage, on an average, 30 men, an impossible task.

3. Sufficient rangers must be provided to competently patrol the Clay-belt region, most of which is now under tree growth, and these rangers must have authority to control the burning operations of settlers so that holocausts, such as that of recent date, shall have less opportunity to recur.

SUMMER COMPLAINTS KILL LITTLE ONES.

At the first sign of illness during the hot weather give the little ones Baby's Own Tablets, or in a few hours he may be beyond cure. These Tablets will prevent summer complaints if given occasionally to the well child and will promptly cure these troubles if they come on suddenly. Baby's Own Tablets should always be kept in every home where there are young children. There is no other medicine as good and the mother has the guarantee of a government analyst that they are absolutely safe. The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

SNEEZING SUPERSTITIONS.

Strange Beliefs and Customs of the Long Ago.

Sneezing, from very remote times, has been held ominous.

Our forefathers went to bed again again if they sneezed while putting on their shoes! A sneeze to the right was deemed lucky; to the left, of evil portent. To sneeze near a burial place was very unlucky.

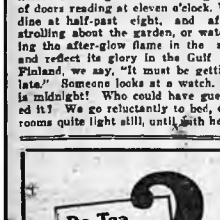
Tradition has it that sneezing was at first a fatal sign—every human being sneezed but once, and then died—but Jacob petitioned the Creator to remove the sneezing ban, and succeeded.

Thence arose the once universal custom of saluting a sneezer with "God bless you!" or "May you live long!" The custom still obtains in some parts of the Continent.

In England not only was a sneezer blessed, but friends raised their hats to him as well! In an old book, "The Code of Conduct," it was directed that "if his lordship sneezes ye are not to bowl out 'God bless you!' but bow to him handsomely." All over the world the sneeze was recognized. Whole nations were under orders to make exclamations when their king sneezed.

Sneezing was believed to be a sure cure for hiccough, and was also looked upon as a sign of sanity. If ancient and universal belief goes for anything, it is good to sneeze.

Shape Didn't Matter.



Butcher—Will you have a round steak, ma'am?

Mrs. Youngbride—I don't care what shape it is so it's tender.

Are You For "Preparedness"? The best preparedness for man or woman is the preparedness that comes from living in harmony with law. In Summer cut out the heavy foods that tax bodily strength and vigor. Eat Shredded Wheat Biscuit, the food that contains all the body-building material in the whole wheat grain in a digestible form. For breakfast or luncheon with berries or other fruits.

Made in Canada

Great Luck.

"Here you are, sir," cried the hawker, extending a bouquet. "Buy some beautiful flowers for your sweetheart." "Nothing doing," responded the young man. "I haven't got a sweetheart." "I see," was the prompt rejoinder of the hawker. "Buy some flowers for your wife?" "Wrong again! I am not married." "Well, then, guv'nor," exclaimed the resourceful hawker, "buy the lot to celebrate your luck!"

Minard's Liniment Lumberman's Friend

Many Shots Needed.

A girl who had just become engaged to a young "sub." was telling her best friend that he'd threatened to shoot anyone who dared to kiss her. "He'll need a machine gun, won't he dear," was the rather pointed comment.

Sore Eyes Granulated Eyelids, Eyes inflamed by exposure to Sun, Dust and Wind quickly relieved by Murine Eye Remedy. No Smarting, Just Eye Comfort. At Your Druggist's 50c per Bottle. Murine Eye Salve in Tubes 25c. For Book of the Eye free ask Druggists or Murine Eye Remedy Co., Chicago

Sure Scheme.

Young Wife—"I am determined to learn at what hour my husband comes home at night. Yes, do what I will, I cannot keep awake, and he is always careful not to make a particle of noise. Is there any drug which produces wakefulness?"

Old Wife—"No used to buy drugs. Sprinkle the floor with tacks."

Keep Minard's Liniment in the house

He Won.

A Scottish minister once noticed a crowd of urchins clustered around a dog of doubtful pedigree. "What are you doing, my little boys?" he asked with fatherly interest. "Swappin' lies," volunteered one of the boys. "The fellow thas tells the biggest one gets the pup." "Shocking!" exclaimed the minister. "Why, when I was your age I never even thought of telling an untruth." "You win," chorused the urchins. "The dog's yours, mister."

Minard's Liniment Co., Limited.

Gentlemen,—I have used MINARD'S LINIMENT on my vessel and in my family for years and for the every-day ills and accidents of life I consider it has no equal. I would not start on a voyage without it, if it cost a dollar a bottle.

CAPT. F. R. DESJARDIN.
Schr. Storke, St. Andre, Kamouraska.

Saving His Dignity.

Mr. Peewee—Madam, your children laugh at me every time I pass.

Mrs. Kidmore—You mustn't mind those silly children. They giggle at every foolish little thing they see.

The title "Canadian National Exhibition" was adopted by the Exhibition Association in 1904. Previous to that time it had been known as the "Industrial Exhibition."

Ask for Minard's and take no other

Has Curious History.

Edwardes Square, in London, which is among the first of the western squares to be opened for the use of wounded soldiers, had a curiously warlike origin. Leigh Hunt, who lived in the square for many years, asserted that it was built by a far-sighted Frenchman at the time of the threatened Napoleonic invasion, and that he adapted the large square and small cheap house to the pre-menading tastes and poorly furnished pockets of Napoleon's officers, who, according to his speculation, would certainly be on the look-out for some such place when the conquering army entered London!

An Imputation Scorned.

"I believe you're afraid of work!" "Afraid of it!" replied Plodding Pete. "I ain't even acquainted with it."

HITTING THE TRAIL.

Rarest of Sport in the Rockies or Selkirks.

Canada is a land of trails.

Trails over mountains and hills, across prairies and through forests, by the banks of rivers beyond number and across country toward a distant sky line. Trails made by red men, and by nature.

But the mountain trails are the most alluring of them all, and hitting trails is the rarest of sport in Rockies or Selkirks, all the way from the Kananaskasis Pass on the east to the Yale gateway on the west.

Hundreds of miles of excellent trails have been made in the Canadian mountain ranges by the Canadian Pacific Railway and the National Parks department of the Canadian Government. Most of them are made for pony use, and mounted on one of these sure-footed little beasties of the west, you can be an explorer of the wilds and revel in the experience. Every mile of the devious way is a way of varying charm, every turn of the trail reveals new wonders.

Many trail trips are now made in loops. There is the one from Glacier station up the Cougar Valley to the caves and back by a loop route and over a pass that brings to view some of the sublimest scenery in the Selkirks. The literal ups and downs of this unique scenic route, as the railways would say, add to the interest, now in the bed of the valley, closed in by trees and huge plants like the Devil's Club, now climbing a thousand feet from which superb views are had of the kingly peaks like Sir Donald.

The trail traveller will find another region of infinite variety and attractiveness in the series of trails radiating from Field and leading up the Yoho Valley to the Yoho Glacier field as its upper end.

Lake Louise will also provide delectable trail paths, especially that leading to Paradise Valley and its circle of giant summits, and Sentinel Pass, leading to the valley of the Ten Peaks, while in the Rocky Mountain Park and Banff, the routes are multiplying year by year.

Yes, trail hitting is rare sport, I repeat, and no country in the world affords greater facilities for its enjoyment than our own Canadian mountains.—F. Y.

ALLIES' POWER EVIDENT.

Those Who Know Most Fear Least, Says Lloyd George.

Lloyd George has sent the Liverpool Post and Mercury the following message:

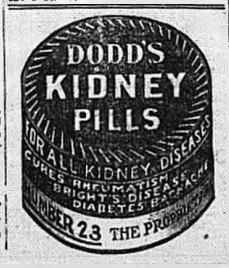
"The beginning of the third year of the war opens out a prospect which was not visible except to those of strongest faith a year ago.

"In August, 1915, those who knew the difficulties and the means at the command of the allies to surmount them had grave apprehensions as to the course of the war in the coming months. Now those who know the most fear the least.

"We have now the equipment for victory in men and material. The great battle of July has demonstrated that our armament is, to say the least, equal to the best our foe can command, and that our men are better than the best he can put into the battle line. Each month sees our armament increasing and our men improving.

"Let the nation be of good heart. Its sacrifices for humanity are great, but its services for humanity are greater."

The Canadian National Exhibition was opened on one occasion by a woman, Lady Kirkpatrick performing that function in 1897.



Minard's Liniment used by Physicians

Camel-Like.

Out on Egypt's sands the Territorials were camped. The captain of the company was all that a captain should not be. He was short and stout and round of shoulder. Needless to say, among his men he was known as "Humphy." One night, on returning to camp, the sentry let him go unchallenged, and so roused his military wrath. "What the Blue Alsatian mountains do you mean?" he snapped out. "Why didn't you demand the countersign?" The sentry trembled with fear so badly that his wits got shaken. "Badad, sir," he stammered, "I thought you was a c-c-c-camel."

A man can drink himself tighter than a woman can lace herself.

The grouch is a barnacle on health and happiness. If you would advance at your full rate of speed scrape off the barnacles.

ROYAL YEAST
MAKES PERFECT BREAD

An Object Lesson.

Mrs. Saft came in from a chat over the fence with her neighbor, and her face was hard and red.

"Come here, Tommy!" she commanded her young son. "I am going to punish you, but open the windows first!"

"What for?" said Tommy, beginning to weep.

"Well, I have just heard that that cat across the road said I have no authority over you, and I want her to hear you getting a whipping. Come here, sir!"

GRESHAM

The Misses Aitchison, of Clifford, were spending part of their summer vacation at the home of Mrs A Wood here.

Mrs Clark, accompanied by her daughter Miss Prudence, were guests of late at the home of Mrs Geo Fullerton.

Mr A McDougal of Hamilton is visiting his parents and other relatives here.

Quite a number took in the Underwood garden party on Wednesday evening. All report a good time.

Mr J F Hall of Detroit is a guest at Young's at present.

Mrs McCullum, of Toronto, is spending vacation at the home of her sister, Mrs W Parker.

Mr and Mrs Wm Young visited friends in Glamis this week.

Mr Jack Rose made a business trip to the townline last week.

Mr Robt Mewhinney, of the 6th con, was successful in capturing a young (dear) last week.

Mrs J B Cottril of Port Elgin accompanied by her sons were callers at the home of J Young last week.

Miss Stella Sinclair, of Toronto, is at present holidaying at her home on the roth con.

Mr Lawrence Mewhinney left for the west on Saturday morning.

Mr and Mrs Geo Fullerton and family intend leaving our burg shortly to take up their residence in Paisley. We are sorry to lose such good citizens.

EDEN GROVE

Mack Scott was busy with his outfit Monday and Tuesday threshing for Mike Connors. We notice Mike had to get on the water wagon before Sept 16th.

Miss Lily Alexander returned Saturday after spending a delightful couple of weeks with southern friends.

Miss Pearson, of Toronto, is the guest of Mr and Mrs H Pearson this week.

Miss Flossie McLennan, of Glamis, called on friends in town Friday.

Messrs Pat Desmond and Abbie Seiler left Saturday for the west on the harvesters' excursion. We wish them all kinds of luck.

Mr Fred Fair, of Palmerston, is spending a few days at his home here.

It was reported that one of our fair maidens had embarked last Wednesday in a canoe just built for two, but it was a false alarm. No fire. They apparently didn't strike a match.

Mr and Mrs Rosseau, Mr and Mrs McKeeman motored to Southampton Sunday and enjoyed the day at the lake.

Between the rain and the tears the station platform certainly got a good soaking Saturday morning. Don't worry, girls. They will come back.

Mrs Tennant, Misses Mae and Martha Fordyce visited Paisley friends last week.

Saturday was a busy day in the Grove. The streets looked like a fair day. The hotel stables and sheds were all filled.

Misses Storer and Beirworth, of Elmwood, visited friends in the Grove Friday.

Mrs Pye and family, of Walkerton, spent the week end at the home of Mr and Mrs P O'Reilly, King St east.

Mrs S A King with her son and daughter, of Chicago, were the guests of Mrs Connors on Friday.

Mr John Desmond has secured a position as G T R fireman between Palmerston and Southampton.

Sunny Jim called on Walkerton friends Wednesday.

In this kind of weather you often see a pair under the old apple tree.

Children Cry
FOR FLETCHER'S
CASTORIA

ELORA ROAD NORTH

Messrs. Duncan McNeil, Isaac Beech and Donald Armstrong left for the west on Saturday morning.

Mr Thos Irwin is away to Saskatoon with a car load of horses.

Miss Daisy Ewing spent the week end with friends in Desboro.

Miss Agnes McCready of Harriston is spending the holidays with her aunt Mrs Thos Irwin.

Miss Lillie Thornburn of Port Elgin is visiting at Mr John McDougall's.

Mrs Andrew Miller spent a few days at the lakeshore last week.

Mr Neil McArthur, jr., was at Dobbinton last week helping his brother-in-law Mr Robert McKinnon with the harvest.

Children Cry
FOR FLETCHER'S
CASTORIA

Politics is a good game, but miserably poor business.

CANTIRE

Unclassified for Last Week

Haying operations have been wound up and hay stacks loom up in every direction, which shows the farmers have had a busy month. The harvest, however, will be the lightest for a number of years. Corn and roots will also be below the average.

Mr A D McKay left on Saturday for Toronto with a fine load of butcher cattle. As A D is an A1 feeder and raises the right kind, we expect he would top the market.

Miss Mary Aitkin, of the Toronto General Hospital staff, spent a couple of weeks with her sister, Mrs Neil Reid, who has been laid up with heart trouble. We are glad to report Mrs Reid's condition is improving.

Miss Sarah Eason, who has spent the past three months at the home of her brother, Dr Eason, V S, of Lanigan, Sask, and other friends in the west, arrived home on Friday. Miss Eason was delighted with her trip, and spoke in glowing terms of western hospitality.

It's an ill wind blows nobody good, and well drillers seem to profit by the dry weather. Mr Jas Muir struck an abundant supply of water at a depth of 80 feet. Mr Angus Bell, who lives just across the road, had to go 215 feet. At this depth a fine flow was struck in the rock that rose to within eight feet of the top of the well. Blackburn Bros have not yet been successful.

Mr and Mrs McIntosh, of Tiverton, were guests at Mr Geo Somerville's on Sunday last.

Mr Maurice Crawford and daughter Vera, of Arkwright, were week end visitors at J A McIntyre's.

Mrs Peter Reid, who has spent the past six months with members of her family at Hannah, N D, returned on Friday last. She reports great damage to the wheat crop in that section owing to black rust.

Miss Tena Walpole, of Willis-croft, is a visitor at Mr Don Reid's.

CASTORIA

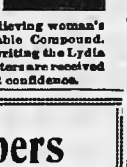
—Kincardine town council have struck this year's tax rate at 38 8-10 mills on the dollar. Walkerton council expect to be able to finance the year on a rate of 28 mills, which is 4 mills less than in 1916.

—The home of Wm. Cobean, chief of the Kincardine fire brigade, was destroyed by fire on Tuesday of last week. The fire was caused from a coal oil stove in the kitchen.

A Woman's Problem



How to Feel Well During Middle Life Told by Three Women Who Learned from Experience.

The Change of Life is a most critical period of a woman's existence, and neglect of health at this time invites disease and pain. Women everywhere should remember that there is no other remedy known to medicine that will so successfully carry women through this trying period as Lydia E. Pinkham's Vegetable Compound, made from native roots and herbs. Read these letters:—

Philadelphia, Pa.—"I started the Change of Life five years ago. I always had a headache and backache with bearing down pains and I would have heat flashes very bad at times with dizzy spells and nervous feelings. After taking Lydia E. Pinkham's Vegetable Compound I feel like a new person and am in better health and no more troubled with the aches and pains I had before I took your wonderful remedy. I recommend it to my friends for I cannot praise it enough."—Mrs. Margaret Grassman, 759 N. Ringgold St., Philadelphia, Pa.

Beverly, Mass.—"I took Lydia E. Pinkham's Vegetable Compound, for nervousness and dyspepsia, when I was going through the Change of Life. I found it very helpful and I have always spoken of it to other women who suffer as I did and have had them try it and they also have received good results from it."—Mrs. George A. Dunbar, 17 Roundy St., Beverly, Mass.

Erie, Pa.—"I was in poor health when the Change of Life started with me and I took Lydia E. Pinkham's Vegetable Compound, or I think I should not have got over it as easy as I did. Even now if I do not feel good I take the Compound and it restores me in a short time. I will praise your remedies to every woman for it may help them as it has me."—Mrs. E. Kiselino, 931 East 24th St., Erie, Pa.

No other medicine has been so successful in relieving woman's suffering as has Lydia E. Pinkham's Vegetable Compound. Women may receive free and helpful advice by writing the Lydia E. Pinkham Medicine Co., Lynn, Mass. Such letters are received and answered by women only and held in strict confidence.

PETER McKINNON, Agt., Paisley
Ross Street

WALKERTON

Dr Smirle Lawson, formerly of this section, and who left with a Canadian hospital staff for overseas duty, is being transferred from the Orpington military hospital, south of England, to the British military base at Salonika.

While drawing in a load of oats at his home on Gibson street here on Monday last, Mr Jos Batte, sr, met with a painful mishap by jabbing the prong of a pitchfork into his right leg above the ankle, and penetrating the flesh down to the top of his foot. It took a lot of nerve and a strong pull to get the fork out of his foot.

It's a long way to Salonika, as Mr C W Cryderman learned last week when he undertook to wire to the Canadian military hospital there regarding the condition of his son, Sergt Wilbur Cryderman, who is seriously ill with cholera. It just cost Mr Cryderman 36c a word or about $7 for the message, but considering that the distance covered is nearly half-way round the world the charge is not too exorbitant. It is questionable if a longer distance despatch has ever gone out of Walkerton. After eight days a reply came back announcing that Wilbur was out of danger, a fact that banished anxiety and lifted a load from his parents here.

Rev F S Rupert, M A, who was pastor of the Walkerton Methodist church about thirty years ago, died on Friday last in Toronto at the home of his son, William, who periodically visits Walkerton as a commercial traveller. The deceased, who was in his 81st year, had been in the active ministry for over forty years, and had charge at Walkerton, Paisley and other places. His wife predeceased him some years ago. Besides the son mentioned above he leaves one daughter, Mrs Balfour, wife of the Rev Geo C Balfour, pastor of Yonge St Methodist Church, Toronto.

A sad fatality occurred at the home of Mr and Mrs John Beckberger, 1½ miles from Cargill, on Monday noon when their three-year-old daughter Margaret fell into an open cistern and was drowned. Just how long the child was in the water is unknown, as no one saw the mishap. The mother, who is a cousin of Messrs John and Geo Bruder of Walkerton, had, it seems, been washing and after drawing water had failed to put the cover on the cistern again. The little girl was playing about, and when she failed to appear for dinner a search was made, and after about half an hour's hunt Mr Paul Beckberger, uncle of the drowned girl, found her body floating in the well. On being removed, life was already extinct. Mr Beckberger, father of the child, is mail-carrier over the Cargill route, and was away on his trip when the mishap occurred. The parents came into prominence about five years ago by the arrival of triplets at their home. Monday's tragedy has cast a gloom over that neighborhood and much sorrow is felt for the bereaved family. The remains of the child were interred in the Chepstowe R C cemetery on Tuesday.

Mr Charles Peltzchau, Waterloo's giant and the pride of weinerwurst settlement, motored to Walkerton on Saturday with Messrs. Jacob Schnitzler and Henry Arnold of that town. Measuring some seven feet in height and weighing about 350 lbs., the visitor was the biggest attraction on the street here, Sunday. Finding the awnings in front of the Walkerton stores too low and remembering Ben Franklin's famous teaching to "stoop as you go through the world and you will miss many a hard knock," he decked his bean and saved many a bad dent on the peak of his dome. His extreme length is too much for the average hotel bed and blankets, with the result that in the severe weather he keeps his socks on for reasons best known to himself. If he were suddenly wrecked on a South Sea Island and thrown among the savages he would be proclaimed king three minutes after landing. The natives who are crazy on size, would like one of his stature to lead them around the jungle. Although no hunter, lard-pail for lid, yet he fills out his clothes well and as the high cost of living is getting the best of most of us, it must strain the banks some keeping the big Waterloo meat plant up.—Herald and Times.

Sheep Ditched Car

A motor car driven by Miss Cargill, of Cargill, was ditched and badly damaged on the Elora road north of Middlebro last Friday. A flock of sheep which had been pasturing along the road wandered into Alex Fischer's lane, and Mr Fischer drove the animals out just as the motor car came along. One sheep ran directly in front of the car and was killed and another had its leg broken and a couple were injured. Miss Cargill was taken unawares, but clung bravely to the wheel, and the wonder is that greater damage was not done. The car had to be repaired before proceeding further.

—Southampton Beacon: After due consideration we have decided to extend congratulations to Mr and Mrs Ed Hart on the arrival at their house last Monday morning of twin boys. No doubt sometimes these boys will require more attention than is forthcoming, but all balanced up the parents will continue to be glad they arrived. Probably if they had been born in Germany Kaiser Bill would be giving a bonus to the parents, but there is lots of room for boys in this country also.

I. S. CRUICKSHANK

—Mrs Lemle and daughter, of Hendred, Virginia, are visiting at the home of her mother, Mrs Fraser, Queen St north.

—The annual convention of the Women's Missionary Society of the Walkerton district of the Methodist church will be held at Elmwood, on Thursday, Sept 7.

—Robert Cochrane, who died at his home in Durham on Aug 18th, at the age of 85 years, was a man known to many of the older residents of Paisley and vicinity. He was born at Eggleshaw, Scotland, and after emigrating to Canada with his parents, he found his way to the bush country around Paisley. For a few years he did pioneer farm work in this locality and then went to Varney, Grey county, where his parents had settled. He lived in Durham for 19 years prior to his death. While at Paisley he married a daughter of the late Alex Hunter of Durham, who predeceased him by 15 years. He is survived by one son Alexander, for many years in the west, and three daughters—Mrs Robt Grey, Fort William; Mrs S F Morlock and Miss Kate, in Durham.

ADVERTISING RATES

Subscription Price—$1.50 per annum in advance. To United States subscribers $1.50 per year in advance.

Advertising Rates—Legal and other casual advertisements 8c per nonpariel line for first insertion, 3c per line for each subsequent insertion. This includes business cards for churches or school entertainments, garden parties, &c. No notice less than 25c. Regular advertisers 5c per line, no ads. less than 15c. Set in black faced type price and one-half.

Advertisements of Strayed, Farms for Sale or to Rent, and similar, $1 for first three weeks and 25c for each subsequent insertion.

Advertisements without specific directions will be inserted till forbidden and charged according to. Transient display ads. charged by the inch. Rates on application.

—Farm for Sale. Apply to J N Collins, Paisley

—Ten young pigs for sale. Apply to J. MAURER.

—Private funds and loans on farm property. T H George

—TO RENT—House on Goldie St. J. C. Gibson.

—Kodaks, Films and supplies at More's Drug Store.

—Marriage licenses issued and money to loan. T. H. GEORGE.

—50 baskets good ripe tomatoes, 60c a basket. Ballachey, Laidlaw & Co

—FOR SALE—House and 5 acres of land on Dundas St. T. Brown, Paisley.

—Timothy Seed for sale. S. Rae, Elora Road North, R. R. No 3. Paisley P O.

—Full lines of fine engagement and wedding rings at I. Shoemaker's jewellery store.

—Highest prices paid for hides and sheepskins. H. E. McGregor, Butcher, Steele Block.

—SHINGLES—Carload of British Columbia XXX shingles just to hand. J. S. DEWAR.

—Parties requiring jepsies for the Mel'ottie cream seperator may obtain them at Fisher's Door Mill.

—FOR SALE—A Goldie & McCulloch steel fire proof safe, good size, and a bargain. Apply to A. J. Sinclair.

—Highest price for beefhides, horse hides, calfskins, sheepskins, tallow, &c. P. OLTSHER, Paisley Meat Market.

—Exhibitors and visitors to Toronto Fair, book your rooms in advance. Convenient to all cars. 75 Pembroke St.

—FOR SALE—The McGill properties in town, house and business place. Apply to J M Hopper, executor, or D Forrester, Retreater.

—FOR SALE—New timothy seed, also a quantity of mixed alsike and timothy. W Pearce, Elora road north, Paisley P O, R R No 3.

—Get a new coat for the Exhibition. We will be pleased to show you our assortment. Styles are right. Ballachey, Laidlaw & Co

—Fine clover honey for sale, thick and delicious. Western orders, large or small, receive special attention. H. B. McCulloch, North Bruce P O, R R A.

—No trouble to drop in to our new store in the old woolen mills and examine our stock of new goods at right prices. Fit and workmanship guaranteed. G B Irwin, tailor.

—Miss Kerr, our milliner, is again back on the job. She has attended the millinery openings in London and Detroit, and is well prepared to look after customers' needs. Rush orders promptly attended to. Ballachey, Laidlaw & Co.

—Dunblane Presbyterian Garden Party, on Friday, Sept 1st, at the residence of Mr G Christie. Good program, with Kincardine pipe band in attendance. Admission 25c, children 15c. The last and best of the season. Come and enjoy it.

—Five Roses, Rainbow, Purity, Cream of the West, and Stark's high-grade flours, also Bran and Shorts, Blatchford's Sugar and Flax, Caldwell's Molasses Meal, and full line of Poultry Foods and Tonics. Always in the market for coarse grains. E. G. ECKEL.

—Homeseekers' excursions, all rail, every Tuesday, and via boat Owen Sound every Wednesday up to and of October, to all points in Canadian north-west. For tickets, maps and all information call at the old reliable C P R. agency, McFarlane's old stand, Paisley.

—We now have in use in our dairy a Champion Cooler, with which we cool all milk to 40 degrees before bottling. This kills all animal heat quickly and aerates all milk thus improving the flavor and keeping qualities. We deliver twice a day during the summer. J. Miller, Paisley Dairy.

—Miss Bessie Laidlaw is visiting friends at Llouiseal.

—Mr Geo Welsford was visiting friends in Toronto for a week.

—Mrs H McKerracher and Miss Jevs are visiting Toronto friends.

—Miss Pearl Switzer, of Saugeen, has gone to Toronto to take a position.

—Mr H G Potts of Tara, was in town on Tuesday, calling on old friends.

—Mr Duncan McGregor, of Sudbury, is spending vacation at his home here.

—Mrs Eby and children, of Chippewa, are visitors at the home of her sister, Mrs W Towle.

—Mrs R McNeill was visiting at the home of her brother, Mr John Coulter, Port Elgin.

—Miss Sayers, from Ireland, arrived recently and is at the home of her aunt, Mrs Jas Koplen.

—Mrs S Pavison, of Greenock, was visiting her parents, Mr and Mrs Rushton, near Port Elgin.

—Rev Geo Mitchell, of Roslyn, is here spending vacation at the home of his parents on Rosa St.

—Mrs Harry Wagner and son Willie, of Newton, are here on a visit to her mother, Mrs Stortie.

—Mr and Mrs Alex Barclay, of Toledo, Ohio, were here over Sunday visiting his mother, Mrs A Blue.

—Mrs I. R Puttnut has gone on a visit to her parents, Rev J Bland Mrs McLaren of Shoal Lake, Man.

—Miss Alice Thompson has returned from spending holidays at her brother's home in Southampton.

—Mr Wm Watson, of Chicago, was here visiting his father, Mr Wm Watson, Albert St, for a few days.

—Mr John A McGillivray, of Detroit, is spending holidays at the home of his mother, Mrs A McGillivray.

—Mr and Mrs Wm Jacques, of Arran, are visiting at the home of his brother, Mr J J Jacques, for a few days.

—Dr Kele, Mrs Kele and children, of Orangeville, are visiting her sisters, Mrs I Shoemaker and Mrs D Forrester.

—The Public Library will be closed for two weeks from Saturday, Sept 2nd, while the librarian is taking her vacation.

—Pte Jas Forrester, Bert Tooke and Bandsman Gladstone McGregor were home from London for the week end.

—Miss Stella Sinclair of Toronto is spending vacation with her parents Mr and Mrs Archie Sinclair, 10th Bruce.

—Two sinks of bowlers went to Hanover on Thursday and played a friendly game with the trundlers of the factory town.

—Miss Emma Nicholls, Mrs Sargent and two children, have been visiting at the home of the former's brother, Mr Wm Nicholls, Greenock.

—Mr John Thompson of Brandon, and Miss Tess Thompson of Bowmanville were visiting at the home of their father, Mr D Thompson, last week.

—The Women's Institute meet in Putnam's hall on Thursday, Sept 7th, at 2.30 p m. Full attendance requested. Topic —"Women's Exhibits at Fall Fairs."

—Artilleryman Gerald Flood, who has been training at Petawawa camp with the 60th Battery, is another old Paisley boy, a son of Mr and Mrs W Flood, of Regina.

—The School Board have decided to re-engage Mr J McPhail as caretaker at the salary of $35 per month for school months and $10 for the summer holidays.

—Mrs Alex Stewart and daughters Misses Eleanor and Annie of Winnipeg, and Mr Andrew McLean of Walkerton spent Sunday at Mr Hugh Mitchell's, Elderslie.

—A company has taken an option on the farm of Wm Watson, just outside the village of Teeswater, with the intention of erecting a $35,000 plant for the manufacture of lime.

—Write it "Kitchener" now instead of Berlin, when you want to communicate with the capital of Waterloo county. The official order for the change of name was issued on Thursday last.

—Rev Geo Evans and wife, of Detroit, Miss Evans of Winnipeg, Mr and Mrs Alex Rowe, of Tiverton, motored over from Tiverton on Wednesday to visit Mr and Mrs Robt Burns at Lockerby for the day.

COPY for change of advertisements should be left at this office by Monday of each week at 6 p m to ensure insertion in the next issue of The Advocate. We desire to give business men the best service possible by having their advs. before our readers by the first mail after Wednesday noon, but are frequently delayed by late arrival of copy.

—The W. C. T. U. will meet in Putman's hall on Friday evening at 7.30 o'clock.

—Rev J B Kennedy will preach in the Methodist church on Sunday morning in the interests of the Dominion Alliance.

—Artilleryman Wm Johnston, son of Mr and Mrs D Johnston, con A, Elderslie, was home for a couple of days on last leave.

—Probably the oldest person in Bruce county is Mrs Donald McDonald, of Kincardine, who is in her one hundredth year.

—Some items of printer's paper have recently doubled in price. Black printer's ink has doubled in price. Some coloured inks are almost unobtainable at any figure.

—By means of the penny bank system the children of Canada now have $300,000 invested with the Government. The system was inaugurated some 20 years ago in Galt Public Schools, under the supervision of Mr F J Jarvis, manager of the Merchants' Bank there, retired last year.

—Special Labor Day services will be held in Knox church on Sunday.

—Misses Mary and Margaret Munn, of Devlin, Rainy River, were here last week, guests at the home of their cousin, Mrs T F Pearce. They are daughters of Mr and Mrs Geo Munn, formerly of Paisley.

—Miss Nellie Grant and Miss Emma McNeill are here from New York city, spending vacation at the home of the former's father, Mr Geo Grant, Victoria St. Miss Hunter, of Oakville, a niece of Mr Grant, is also a visitor.

—Mr A J Edwards, of Peterboro, is visiting his brother and friends in Elderslie. Mr Edwards is baggageman at the C P R station at Peterboro, and he informs us that the U. S. traffic is very large in that part of the province this season.

—Mr Oscar McLean was fortunate enough to escape without broken bones on Friday when he fell from the front of his wagon, which was loaded with gravel, and the wheels ran over his legs. He is obliged to use crutches for a few days.

The AUTOMOBILE

Care of the Tires.

In very hot, as well as in extremely cold weather, the radiator should be given constant attention. Heavy trips on the road during these warm, humid days frequently boil the water used for the cooling of the engine. Never start away on a trip unless you are positive that the radiator is filled to the top of the over-flow pipe, and if there is the slightest hissing sound allow the engine to rest. Many people do not take this latter precaution, but those who are wise enough to practice it, save the motor to no inconsiderable extent. Should it be necessary, however, to force the car along until the water is steaming, you should make sure to seek the first chance for a stop and after removing the radiator cap, allow the steam to escape. Do not immediately pour in cold water as the reaction is not good for any kind of metal. Your best policy will be to clean the radiator by running the water off through the drain cock. After the engine is cooled, you can introduce a new supply. If, however, it is imperative that you should rush upon your way, refill the radiator with warm water. The cylinder jackets can always be drained by removing the pipe plugs in the bottom. No bad disaster can occur from using soiled or dirty water, but those who have the best interests of their motor at heart, will use clean, soft water on every possible occasion. Almost once or twice a year it is well to run a saturated solution of common soda through the radiator. Such a compound will remove all scale and sediment. After this operation, rinse out the radiator carefully with clean water before filling it again for a trip.

Summertime brings a certain amount of annoyance through tire troubles. Of course you will realize that punctures cannot be prevented. Sooner or later you will have one, and it is just possible that it may occur at a point on the road where the sun is blazing overtime and the dust flying in clouds. With such a puncture in mind, you will welcome a suggestion or two regarding tire maintenance. You will lessen the liability of accidents by keeping plenty of air in your tubes. A tire that is not heavily inflated is more likely to attack a sharp object than a casing which is perfectly round under top load. Never go on a trip without carrying a reliable air-pressure gauge and do not fail to make constant use of it. You may kick or rock or examine the point of contact in connection with tires, but this system will not give an accurate idea of the pounds of air contained therein. The gauge is the one method to pursue. Whenever a cut or bruise appears on a tire, do not console yourself with the idea that this point will never strike a sharp object. Fill the hollow or abrasion with cement and thus prevent sand, grit and dirt from enlarging the blemish. If you discover a large cut, rush the tire to a vulcanizing plant and have it attended to without delay. A "sand boil" is easily recognizable as a lump caused by dirt or sand forcing its way between the rubber tread and fabric. Puncture this swelling immediately, cut away all portions of the tread thus indicate wear, wash the hole with gasoline, and vulcanize at the earliest possible moment. It is well in avoiding the troubles to know that wheels out of alignment cause tremendous friction on tire treads. The back wheels seldom run out of true but the front wheels are subject to it. Do not fail to check the latter up frequently or otherwise you may find your front casings going bad before their time. If during the holidays you decide to lay up your car, do not fail to remove the tires. They should also be washed with soap and water, and later on wrapped in strips of paper or cloth. A dark, cool place is proper storage. Figure that by reversing the positions you can prolong the lives of your carriers. It is also well to change the front and rear tires as the last named carry more than half the weight of the car, and consequently do the bulk of the hard driving. Now-a-days practically every machine has an extra tire for emergency cases. In carrying this fifth casing and tube remember that sunlight has an injurious effect on rubber and that the purchase of a cover will amply repay you for the small expense incurred.—"Auto", in Farmer's Advocate.

MUNITION WOMEN OF ENGLAND

SHOPS WHERE SCARCELY A MAN IS TO BE SEEN.

Every Precaution Is Taken by Those in Charge to Prevent Accidents.

A lady representative of the Press Association writes: Somewhere in the centre of England, where last summer there were poppies in the fields of ripening corn, stands "The Women's Factory." I call it this because when I visited it the other day by permission of the Ministry of Munitions and under the guidance of an old official, it was the predominance of women that was the first feature to strike me. In most of the shops there was scarcely a man to be seen; just lines of the girls at the benches, young and girlish most of them, in their khaki or dark blue overalls, with faces smiling and merry, looking up at you from under the quaint mob caps.

"This is the factory that turns out the best fuses and has the most rapid output in the country," said the officer in charge of our party as we entered the shop. "And it is because the workers are so well looked after. We have been running six months and we have not yet had a single fuse or anything turned out in the factory rejected.

"We employ fifteen hundred women to-day, and when extensions are complete we are going to have twelve thousand

In the Danger Zone.

Fuse making and filling is the chief branch of munition work here, and the women are engaged in all the processes of filling the 100 "graze" fuse, and in many of those for making the 18 "time" fuse. Presumably because women excel in branches of work that require great accuracy and delicate deftness of touch, the filling of the fuses and the making of the detonators has been left in their hands entirely. This work entails the handling of high explosives, though if one had not to leave all handbags and umbrellas outside these shops and slip on goloshes, one would hardly realize it. The girls handle without a trace of nervousness the deadly T. N. T., and the even more deadly fulminate of mercury, displaying a steadiness of hand and smoothness of movement that showed how each one realized the vital importance of the full concentration of every sense upon the operation in hand. The shops I saw where these important processes were carried on were small, each occupied by only three or four girls—this to localize any explosion—and each room has doors open to the fresh air at either end, so that the atmosphere should not become poisoned by the chemicals.

The Safety-Gig.

Indeed, every possible precaution one could think of to eliminate danger was taken; for the processes, such as the screwing up of the finished fuse, where the chance of an explosion must be risked a machine called a safety-gig invented by one of the owners of the factory is in use. It is a globe of hardened metal, into which the fuse is inserted for tightening, so that if any explosion takes place it is inside the globe, which is strong enough to resist it, and the operator also goes unharmed. To mention all the processes performed in these workshops would involve unnecessary detail, but they range from the "breaking down" and examining of every separate part of a single fuse to the filling of the detonator, that hollowed tube no longer than the first joint of the little finger, which, when filled with four grains of fulminate of mercury, and four and a half grains of pistol powder, can fire a shell of practically any size.

The Output is Very High.

A standard of high efficiency both in speed and accuracy is maintained in these shops. One girl charging detonators declared that recently, in her corridor—there are on average about fifteen rooms to a corridor—they were turning out 4,000 a day. Another girl, whose work required the utmost care, for the dropping of a grain or two of the chemical would mean a dangerous explosion, said she filled as a regular thing between fifteen and sixteen hundred detonators a day, while a third, whose work was to measure the length of powder pellets, claimed fifteen hundred a day as her average output.

Working With T.N.T.

One interesting process to watch was the making of the tetriol (T.N.T.) powder into pellets. One girl carefully wipes and polishes the mould, a second measures the powder and pours it in, and the third, the girl on the press, completes the process. All the workers engaged in handling explosives wear masks and shields for the eyes, and their hands and faces are stained with yellow, but not to a marked extent, owing to the precautions taken.

"We are going to try and adapt the gas helmet used in the trenches for the use of the girls."

If a wise man is too kind to think, his talk is apt to sound foolish.

Polish is not necessary to enable a man to shine in society—if he has the coin.

STRANGE SEIZURES BY SHERIFFS

TRAINS CHAINED TO THE RAILS WORKHOUSES "HELD UP."

To Satisfy Judgments of the Courts Some Strange Means Are Adopted.

Sheriff's officers in this country occasionally make strange seizures, as evidenced by their once taking possession of a railway-engine at Preston.

But only in America would they go the length of holding up a whole train. This happened in Norman County, Oklahoma, where the Atchison Railroad Company refused to pay taxes claimed by the local authorities, says London Answers.

The Gentle Tax-Gatherer.

At the head of an armed company of police, the sheriff stopped a passenger and two freight trains, and placed them under arrest. He chained the locomotive to the rails, and intimated that no traffic would be allowed to pass until his demand had been met.

This was a sum of $3,000, alleged to be due for school taxes, liability for which the railroad company disputed. In the result the matter was compromised, the drastic action of the sheriff speedily bringing the dispute to a head.

In much the same manner, a workhouse-ambulance, with its horse and driver, was seized by the sheriff at Kilrush, in Ireland. The vehicle had left the institution to call for a patient, when it was pounced on by the sheriff's officer and his merry men, and horse, driver, and all were conveyed to the local pound.

There it was detained until an official from the workhouse arrived on the scene and by payment of £50 released the ambulance, horse, and driver. For this amount a decree had been obtained in the local court, but the unprecedented seizure amazed the whole town.

But even that performance was eclipsed on one occasion at Kenmare, where the sheriff's men actually seized the workhouse itself. A judgment for £447.06 and £66.23 costs had been obtained against the guardians by a Belfast firm of seed merchants.

A Confiscated Chapel.

This not having been satisfied, the sheriff's men entered into possession of the workhouse and the premises thereunto belonging. There they remained until the matter was arranged, the townspeople meanwhile being much amused at the workhouse being in possession of bailiffs.

A chapel has shared the same fate. Some time ago the warrant officer of the Wandsworth County Court was called on to take possession of such a place in his district. This was at the instance of the London, Chatham and Dover Railway, to whom a debt was owing.

To satisfy the judgment they carried off the contents of the building, which were sold by auction in due course. Included were the pews, forms, preacher's platform, Bibles, hymn-books, Communion-plate, tea-services used for tea-meetings, and a number of banners bearing more or less interesting pictures.

Then there was the sheriff's officer who seized a balloon. The owner was much chagrined at this action, for he was relying on the balloon to lift him beyond the reach of the sheriff's officers and court bailiffs. As the balloon was worth a good deal more than the amount for which it had been seized, the debtor raised enough money among his friends to meet the claim.

All About a Stick.

There was an amusing sequel to a no less amusing seizure at Wood Green. A bailiff was summoned for detaining a walking-stick under the following circumstances: For several days he had been endeavoring to enter the complainant's house, but found it too well barricaded.

The besieged debtor amused himself by climbing out through an upper window and laughing defiance at the baffled officer. It was during one such incident that the stick was captured, on hearing which the magistrates dismissed the case.

A deputy sheriff at Fall River, Mass., amongst the goods and chattels of an undertaker, took possession of a coffin containing the remains of a baby, entrusted to the undertaker for interment.

Six days had elapsed when the mother succeeded in tracing the coffin to an auction sale room. After the interment she commenced proceedings against the deputy-sheriff to recover $10,000 for illegal seizure.

Conditional Forgiveness.

Harry and James, brothers, were in their playroom for a little recreation after supper. Harry hit James, and in the midst of the quarrel the nurse happened in with the news that it was time for them to retire. James was put to bed first. The nurse said:

"You must forgive your brother before you go to bed. You might die in the night."

After a few minutes elapsed James replied:

"Well, I'll forgive him to-night, but if I don't die he'd better look out in the morning."

THE PRESIDENTIAL ELECTION

IT IS AN EXTREMELY COSTLY BUSINESS.

Expenses Run Into the Millions—All Contributions Are Voluntary.

The United States Presidential Election is in full blast, and till polling day in November the mighty dollar will be talking," and so will the American "spell-binders," as the professional orators are called, says London Answers.

A Presidential election is a costly event, which, however, happens only once in four years. It runs into millions, but the exact figure is never known, except by the party managers and one or two others. One of the great parties once spent five million dollars, and that is probably not far off the average. At the 1900 elections the Republicans were credited with having disbursed the huge sum of $15,165,000; that may be regarded as the high-water mark of electioneering extravagance.

Hanna, the Hustler.

The only source of revenue are the voluntary contributions from persons and corporations interested in the success of the one party or the other. A shrewd campaign manager can always put his hand on the dollars.

Sixteen years ago Mr. Hanna—perhaps the ablest campaigner America has ever had—said the men who had property or who represented property must pay to have Mr. Bryan beaten, just as they would pay to save the nation from plague or war, or their city from pillage or conflagration.

So he started a golden stream flowing into the coffers. He made out lists of what this corporation and that, and firms, and banks, and railroads should pay, and sent men round to gather in the cheques. In a great many cases the "assessment" was met without a word of demur. Single contributions as high as $50,000 were common; the largest, which came from from an insurance company, was a cheque for $100,000.

Hanna made "no bones" about his methods; but while he spent money lavishly, he did it with good judgment. He always wanted something to show for it.

He put nearly a million dollars into the treasury of the Palmer-Buckner party in 1896. He spent another million for printing, for that was the greatest educational campaign on record. The postage bill of the Republican Committee that year was close to $400,000.

Raking in the Silver Bullets.

In the first Bryan campaign the Democrats had about $1,750,000, or one-fourth as much as their enemy. Most of this came from silver-mine owners in the West and from other men in that part of the country. One mine-owner gave $50,000, and another half as much.

That year the Democrats appealed to the newspapers to beg small subscriptions from the people, and during the last thirty days of the battle the Democrat machine was oiled solely by the stream of dollar, half-dollar and quarter-dollar offerings that poured in from the admirers of Bryan.

Take the election of Dr. Woodrow Wilson as the latest example of the enormous labor and expense entailed upon the Democrat Party. The different bureaux necessary for carrying on the strenuous election work included finance, organization, publicity, special, foreign, negro, labor, and tariff exhibits, and business men's leagues, with various sub-divisions of each.

The expenses were met by the contribution of $1,100,000 by over 100,000 persons; while 26,000,000 pamphlets were issued from the New York headquarters alone—1,202,000 in Italian, 1,700,000 in German, 40,000 in Greek, 55,000 in Spanish, and 452,000 in Hebrew. Buttons bearing portraits of Dr. Wilson were distributed to the number of 6,378,950, at a cost of $7,800.

$1,000 for a Speech.

The correspondence required 2,500,000 letterheads and envelopes, dealt with by 150 typists, and 19,900 telegrams were sent out and as many received by eleven telegraph operators employed at headquarters. About 1,500 lithographs of Dr. Wilson and his running mate were also distributed. The pay-roll of the New York headquarters was $78,695, and the rent amounted to another $8,625 for some 20,000 square feet of space.

The "spell-binder" is the principal speaker at all sorts of meetings, and if he is master of all the platform devices with which the American politicians enliven an appeal to the country, he is not unlikely to receive as high a fee as $1,000!

TOO MUCH FOR "JIM" HILL.

How the Section Boss "Got By" the Railway Magnate.

The late James J. Hill, like other men of unusual personality, was the source of unending anecdote.

According to a writer in the New York Sun, who describes the interesting characteristics of the man, one of his exertions was a locked desk. He thought that men who worked for him had no right to bring their secrets to his office. One morning he had occasion to look for a paper in the desk of an official of his company, and found the desk locked. When the official arrived he found the top of the desk wrenched off. A sign upon the wreckage called the attention of the office force to the rule about locked desks, and that desk remained on exhibition as a mute object lesson.

He watched the Great Northern Railway with microscopic care. Woe to the section hand who allowed anything to lie round his right of way, or to the station master who showed carelessness about his station. Once, in making an inspection, Mr. Hill found a perfectly good railway spike lying by the side of the track. He sought out the section boss with fire in his eyes and showed him the spike. The section boss had a quick wit, however, and before the rebuke broke upon him he exclaimed:

"My goodness, Mr. Hill, I'm glad you found that spike! I've been looking for it for nearly three weeks."

It is said that he "got by" without the expected "blowing up," and that even the "old man" had to smile.

BOYS' FARMS IN ITALY.

Government Provides for Future Tilling of Country's Soil.

Boys' farm colonies, as one means of providing for the future cultivation of Italy's soil, and for the employment of the orphans of farmer-soldiers killed in war, are being established throughout the country districts of Italy.

The colonies are being organized by a society founded especially for this purpose under a plan drawn up by the National Institution of Agricultural Mutual Insurance. No fewer that twelve such colonies are now being founded.

Boys from the ages of 7 to 15 years are being taken in these schools, where they will be kept at an annual expenditure each of $100, the funds to be furnished in part by the districts where the farms are maintained.

The plan is to keep the boys on the farms until 21 years of age. They will be taught cattle raising, breeding of silk worms, rotation of crops, treatment of the soil, and use of modern agricultural machinery of the American type.

After the age of 21, it is planned to set up the boys as independent farmers by the sale of lands and equipment to them on favorable terms.

AMERICANS WITH THE COLORS

They Have Lavishly Assisted the Allies With Men and Money.

The interest of Americans in the war is deeper and more intimate than many people realize. Their contributions to war charities have been lavish. Up to the present the amount subscribed exceeds fifty million dollars, of which by far the largest share has gone to Belgium, Poland, Armenia, and the Allies. Splendid as this is it by no means completes the task of the Allies to America. Four thousand Americans are fighting or training with the Canadians, and 10,000 are with the French Army, in addition to many hundreds of doctors, nurses and hospital assistants who are doing heroic work under the Red Cross. The figures were quoted by Mr. James M. Beck, former Assistant Attorney-General of the United States, at a luncheon given in his honor by the Pilgrims' Society in London recently. Mr. Beck wrote one of the most damaging indictments of Germany yet published, "The Evidence in the Case." In appreciation of his services many eminent people including Viscount Bryce, Lord Robert Cecil, Sir Arthur Conan Doyle, Sir Wm. Robertson, Mr. Lewis Harcourt and Mr. Joseph Pease attended the luncheon.

A Modern Test.

"Are they influential?"

"Hardly. Their automobile is last year's model."

TIME FOR USE OF MOUNTED TROOPS

FRENCH HORSEMEN ON WESTERN FRONT.

General de Lacroix Points the Advantages of Employing Cavalry.

"The hour for the cavalry will come one of these days in France, as it has come on the banks of the Pruth and the Strips," declared General de Lacroix, a military critic, in the Paris Temps.

"I am revealing no secret," he adds, "in saying that measures recently have been taken to provide for the use of French cavalry on the western front. The units of foot soldiers destined to serve as support for our troops on horseback have been reinforced, brought up to full strength and powerfully armed—forming, in fact, a select corps fitted for the most daring expeditions. The proportion of mitrailleuses and automatic guns has been very largely increased, and our horsemen are to-day provided with the use of these weapons, from which they are drawing additional strength and confidence."

Capture Prisoners.

It is to the action of cavalry that General de Lacroix attributes the large number of prisoners captured on the Russian front. He thinks it contributed to the lightning-like rapidity of General Brusiloff's operations and to the extent of the results achieved. If the Russian offensive had been restricted to the use of the other arms of the service the pursuit of the Teutons and the complete accomplishment of a victory would be necessarily limited. At such times the attacking infantry, exhausted by the effort it has made, must call upon troops necessarily remote from the positions won. Artillery cannot be thrust forward without being supported by other troops, and, although modern guns of long range can pursue with fire a retreating enemy for a long time, they are, on the other hand, much slower to be moved to new positions when the foe is out of range.

Put Finishing Touch.

"Cavalry then, together with bomb-dropping air craft," says General de Lacroix, "constitute the indispensable element for putting the finishing touches to a victory. Alone, it may be used to follow up the enemy, to dog his heels and to increase the depression of his spirit and the disorganization of his equipment. But, if retreating body knows that the opposing infantry is marching no faster than itself, and that it will soon be out of reach of artillery attacks. But when its ranks are invaded and its men scattered and dispersed by a cloud of horsemen descending with the enthusiasm of victory, it knows that is hopelessly lost and that it cannot escape disaster."

Imitate Russian Tactics.

To the objection that the nature of the ground in France differs from that in Russia, being more broken and offering less facility for cavalry raids than the Galician plains, General de Lacroix replies that the network of roads is much better in France than in Russia, and that batteries, mitrailleuses and automobile guns can be moved much more easily, adding the power of gun fire to that of cold steel. These aids, he says, are becoming more and more important in such operations, and it is essential that each cavalry unit be provided with them.

"Infantry units transported in automobiles, perfectly trained and familiar with their duties," he declares, "ought to aid with their offensive along the principal routes of approach, break down obstacles and attack rear guards at close quarters, while cavalry squadrons, turning around impediments in order to reach the vital parts of the enemy, would dash into the midst of the disorganized troops, causing disorder and panic."

GRAINS OF GOLD.

A man can't be too careful in the choice of his enemies.—Wilde.

The great principle of human satisfaction is engagement.—Paley.

We have now become almost hardened to grief by constant deeds of horror.—Lord Rosebery.

Life is not service. Life is struggle alone, struggle together. Life is war.—Dr. John H. Finley.

We shall fight, and fight, and fight until we have established that truth is right, and that great nations have got to deal justly with nations less powerful than themselves.—Mr. M'Kenna.

We are afraid of responsibility, afraid of what people will say of us, afraid of being alone in doing right; in short, Christian courage, as it may be called—is in all ages and among all people one of the rarest possessions.—Sir Arthur Helps.

AN ANXIOUS TIME FOR ALL PARENTS

Children Often Seem to Pine Away and Ordinary Medicine Does Not Help Them.

The health of children between the ages of twelve and eighteen years, particularly in the case of girls, is a source of serious worry to nearly every mother. The growth and development takes so much of their strength that in many cases they actually seem to be going into a decline. The appetite is fickle, brightness gives way to depression, there are headaches, fits of dizziness, palpitation of the heart at the least exertion, and sometimes fainting. The blood has become thin and watery and the sufferer must have something that will bring back the blood to its normal condition. At this stage no other medicine can equal Dr. Williams' Pink Pills. Their whole mission is to make new, rich blood, which reaches every part of the body, bringing back health, strength and energy. Miss Helena Taylor, West Toronto, says: "Two years ago I was so badly run down with anaemia that some of my friends did not believe I would get better. I could not go upstairs without stopping to rest, suffered from headaches, loss of appetite, and for two months of the time was confined to the house. I was under the care of a doctor, but the medicine I took did not help me in the least. A friend advised my mother to give me Dr. Williams' Pink Pills, and although I did not expect they would help me after the doctor's medicine had failed, I thought they might be worth trying. After taking two boxes there was such a marked change for the better that people asked me if I had changed doctors, and I readily told them the medicine that was helping me. I continued taking the pills until I had used eight boxes, when my health was fully restored, and I have since enjoyed the best of health. I hope my experience may be the means of convincing some sickly person that Dr. Williams' Pink Pills can restore them to health."

You can get these pills through any dealer in medicine, or by mail, post paid, at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

PRISONERS IN NEED OF FOOD.

Russians in Germany Complain to Red Cross Workers.

Russian prisoners in Germany are among the greatest sufferers from the food shortage prevailing in that country, according to reports made by some of the sisters of the Russian Red Cross upon their return from a visit to the German prison camps. These charges are contained in copies of Russian newspapers that reached Switzerland in July and are being reprinted by many Swiss papers. The following is part of a report appearing in the Russky Wjedomosty of Moscow of an address delivered in the ancient Russian capital by Miss N. Orsschevskaya, a member of the Russian Red Cross.

"Externally the camps are ideally arranged. They are almost all of the same type; barracks built upon a broad, entirely open plain. They have electric lighting, sewer systems, and disinfecting rooms. On the sanitary side they are faultless; there are no epidemics at all. All the prisoners are vaccinated against smallpox, typhus, and cholera. Most of the medical service is done by Russian physicians. There is a noticeable shortage of medicines. The German doctors are kind in their treatment of the prisoners.

"The thing that filled the sister with horror, however, when she went through the camp was the selfsame complaint that she heard everywhere: 'We are hungry; we shall yet die of hunger here.' This complaint dogged her footsteps through all the camps in South Germany. The rations are insufficient. The soldiers are supposed to get 300 grams (about 10½ ounces) of bread a day, but in reality they receive less. Everywhere the prisoners refuse to do work that might be used for military purposes, something which has a sharper regime as a consequence, such as punishment by imprisonment and being bound to a stake. The application of the last named punishment was justified by the commandant of a camp through the lack of jail space and also because it was customary punishment in the German army. The prisoners are paid from 6 to 24 cents for their work. With these earnings they are able to improve their food."

Lack of Preparedness.

"Pop, what is free speech?"

"Free speech, my son, is merely saying what we please to fellows we know we can lick."

To Mazzy Chamberlain's Widow

REV. WM. HARTLEY CARNEGIE, rector of St. Margaret's and canon of Westminster, London, who it has been announced will soon wed Mrs. Joseph Chamberlain, widow of Joseph Chamberlain, British statesman. Mrs. Joseph Chamberlain was formerly Miss Mary Endicott, of Boston. Her father was William Endicott, Secretary of War in President Cleveland's first Administration.

ROADS AND THE MOTORIST.

Penny Wise and Pound Foolish to Neglect Improved Roads.

By Philip P. Sharples.

Roads and the farmer, until recently, was quite a different problem from roads and the motorist. Gradually as the farmer, through the agent of popular priced cars, has come to consider an automobile part of the farm equipment, the two problems have become more and more amalgamated.

The farmer is longer feels that the city auto owner is trying to put something over in the good roads movement. Driving an automobile has convinced him, as nothing else could, that a mud road, impassable after every rain and for two or three months in the spring, is not the kind of road on which he wishes his farm situated.

Ten years ago, before the advent of the automobile in numbers, the type of road to be built in country districts would have admitted no question. Macadam would have been specified.

Macadam properly built still has its place. Macadam must be distinguished from the apologies for stone roads so often seen. Stone dumped on an old road, with no proper drainage or grading, and without the use of a roller, does not resemble a macadam road any more than a pile of loose bricks resembles a house. The macadam must be well built from the bottom up. If the automobile traffic becomes excessive, the surface can be protected by surface coatings of bituminous materials. In the bituminous macadam the bond between the stone is reinforced by some form of bitumen, either asphalt or refined tar.

The bituminous macadam, where a suitable stone is obtainable, forms a very attractive road proposition. Its cost is not greatly in excess of plain macadam, which has been a standard for country road work. Automobile traffic cannot injure it, the surface produced is suitable and comfortable for horse-drawn traffic, while last, but not least, the surface is easily maintained through a term of years at a low annual cost.

Bituminous macadam is built by two methods—the penetration and the mixed method. The penetration method is especially applicable to country road work. When refined tar is used as a binder, the work may be done for 10c. to 20c. a square yard less than the mixed method, and the results, if the work has been well done, are not inferior for country road traffic.

The building of a penetration macadam is in itself not a difficult matter. At the same time, to bring in play all the skill and knowledge required to build a first-class macadam, and, in addition, a knowledge of the properties and methods of handling the binder. Like other road work, the best results can only be obtained when men of experience and training are employed in supervising and building the roads. The manufacturers of standard binders can be depended upon to furnish the special apparatus and knowledge required to handle the binder.

The maintenance of roads already built is as important as building new ones. The tendency in this country is to neglect roads already built. This is the utmost folly. A good road is a capital asset to the community. Not maintaining it up to its original standard is to allow the impairment of the investment. No one would dream of allowing a building on which he held a mortgage to fall to pieces for lack of repairing the roof or a coat of paint. A community should not dream of neglecting its improved roads. Enough money must be appropriated each year to maintain them in a condition at least equal to their state on completion. To do less is penny wise and pound foolish. The plain macadam and the bituminous macadam are both easily kept in order and even improved in condition by application of cold refined tar. Modern spraying machines, both horse-drawn and motor driven, have been invented, which reduce the costs to a minimum. The process repeated when necessary preserves the road with little depreciation.

Pa's Horrible Anger.

"Ma annoyed Pa terribly last night."

"That so?"

"Yes, he lost his temper absolutely."

"Did he strike her?"

"No, but he got so mad he forgot himself entirely; and even threatened to join the troops and go to war."

BRIGGS' FLY MATS PRICE 5¢ ARE CLEAN NO STICKINESS ALL DEALERS G.C. Briggs & Sons HAMILTON

THE SITUATION IN GERMANY.

By Chas M. Bice, Denver, Colorado.

Much depends upon the outcome of the "great drive" now in progress on the various war fronts, not only as concerns the German military force, but in the political affairs of Germany.

It is difficult for any people at war to cope with politics and the ambitions of the diplomatic forces, and we find that Germany is now divided in her foreign policies.

If reports are true that escape the German censors, there is formed in that country an alliance between Liberals, Socialists and Catholics for the first time in history. These are supporting Chancellor Hollweg in his opposition to the submarine naval policy, formerly pursued by Admiral von Tirpitz, backed by Conservative-Agrarian element which demands that aggressive submarine warfare to be Germany's only hope to win. Of course, this policy would annul the Teuton promise to the United States and would doubtless embroil the republic in the European conflict. But what is that to a nation that can disregard treaties when they stand in the way of what she considers her military necessities?

As an excuse for this policy of piracy it is urged that Germany made the promise to the U. S. to cease this barbarous form of warfare only upon the condition that the U. S. should exact the recognition of international law and rights of Great Britain on the seas, which it is claimed has not been done.

The leader of the Conservative-Agrarian element is former Admiral von Tirpitz, who resigned his position when forced by Hollweg to submit to the American demand.

The strenuousness of the situation has forced Hollweg to organize a publicity campaign in which he is to go through the principal cities of Germany personally and explain his policy. It is claimed that this has been made necessary especially since the defeat of the German navy in the North Sea battle—the truth of which is just becoming known to the people.

The Chancellor's attitude towards peace and its essentials will be fully explained to the people in this whirlwind speech-making campaign.

Of course, he expects Germany to win, or at least he will pretend to believe it, for any other attitude would menace his office as Chancellor, which is the next highest official position to that of the Kaiser.

But he is opposed to any notion of territorial aggrandizement at the expense of either France, Belgium or Russia; and the strangest thing about his policy is that he is desirous of retaining British friendship after the war.

He is antagonistic to any proposal that would interfere with such an understanding with Great Britain, for he has in view a fraternal combination or working agreement between Germany, Britain and the United States, and this is why he has worked so persistently to avoid a break with Washington.

We all recognize his position of Chancellor as one of supreme importance, carrying with it responsibility for imperial acts and policies to a large extent, and it has been surmised that possibly the Kaiser himself is back of the course he is pursuing.

His prerogatives are so far reaching that a change in the Chancellor at this time would be interpreted by the German people as a rebuff to the Kaiser, and might involve radical changes not only in the foreign office, but in every department of administration of internal affairs, so that any new incumbent of the office would mean opposition to the wishes of the Kaiser himself.

If the allies should continue to win, as they have since "the drive" began, the Chancellor may find it hard to make any impression favorable to his policies, upon the German people, and a crisis is liable to be precipitated in Germany similar to that which France witnessed in 1871.

The Entente powers are watching events with keen interest, and stand to gain in any event.

Everybody needs it—stored for emergency in a well-developed, well-preserved, well-nourished body and brain.

Grape-Nuts food stands preeminent as a builder of this kind of energy. It is made of the entire nutriment of whole wheat and barley, two of the richest sources of food strength.

Grape-Nuts also includes the vital mineral elements of the grain, so much emphasized in these days of investigation of real food values.

Crisp, ready to eat, easy to digest, wonderfully nourishing and delicious.

KAMLOOPS AND IRRIGATION.

The Leading Inland City of British Columbia.

The Western Canada Irrigation Association held its Tenth Annual Convention at the City of Kamloops the last week in July. The picturesque little city takes its name from the Indian equivalent "Meeting of the Waters," where the sun shines every day and good fellowship, health and happiness radiate from all, and opens wide in hospitality its doors to you. Away back over a hundred years ago the North West Fur Trading Co., with keen appreciation of the advantages of the location, established a post on the present site of Kamloops —the junction of the now called North and South Thompson Rivers. Its excellent water communications; its central position in a wide open stretch of splendid grazing country and its healthy, growing climate, attracted Indians and traders from all parts, and soon the little trading-post grew in importance and population. Seventy-five years afterwards the Canadian Pacific Railway thrust its steel rails through the main street of the aspiring little community, and it was but an endorsement of the opinion of the old trading company, that Kamloops was indeed, "The Place in the Sun."

There are irrefutable reasons why Kamloops claims the distinction of being the leading inland city of the Province of British Columbia. Its geographical position marks it as serving a very large area; 250 miles from Vancouver, 200 miles from Calgary and 140 from Edmonton, it sees no possible rival. With a population of some 5,000, it points with pardonable pride to its splendid streets and pavements, to its modern electric lights, power, water and telephone systems, and to its uninterrupted steady progress. With abundance of water, continuous bright sunshine and undisputed soil-fertility, it contains all the attributes necessary to future commercial and agricultural developments.

PERILOUS NAPS.

Some Men Take Their Snooze in Dangerous Places.

A short time ago a man was discovered in his lunch-hour fast asleep on a plank. His arms were hanging down, one on each side of the board, which was about a foot wide. He was snoring gloriously, and quite careless, whether awake or asleep, that if he turned over for greater comfort he would "tumble out of bed" one hundred and twenty feet, for that plank was part of the scaffolding erected for the repair of a church spire!

A similar disregard for danger was reported lately during the erection of some electrical works. One of the men engaged on the tall chimney, missing his mate at the lunch-hour, went up the half-finished chimney to find him. He discovered him fast asleep on a projection of brick inside the shaft, a fall from which meant a drop of eighty feet.

The other week a circus arrived in a certain town, not a hundred miles from London, at an early hour after a long journey and a performance the previous night, says London Answers. As a consequence few of the company got any sleep. That day there was the usual procession and the afternoon performance. The lion tamer had had a very rough time because of the illness of one of his beasts.

The evening performance arrived, and this man had to pretend to go to sleep with his head on the body of a couchant lion, finishing up the performance by springing up and putting his head in another lion's mouth.

But when, after jumping-up time came a gentle snore was heard. The man was fast asleep with his head pillowed on a lion!

The Canadian National Exhibition pays an annual surplus to the City of Toronto of $25,000 to $30,000. Last year the dividend was $45,000.

Trouble Enough.

Madge—Am I the first girl you ever loved?

Ted—No, my dear; but I hope you'll be the last.

Minard's Liniment Lumberman's Friend

General Judenitch.

General Judenitch, who has commanded the Russian army against Turkey from the beginning, and to whom may be given the credit for the fall of Erzerum and Bitlis, belongs to the younger school of Russian commanders, though he had experience in the Japanese War, where he was colonel of a guards regiment, and took part in the abortive attempt at relieving Port Arthur.

Lachute, Que., 25th Sept., 1908.
Minard's Liniment Co., Limited.

Gentlemen, — Ever since coming home from the Boer war I have been bothered with running fever sores on my legs. I tried many salves and liniments; also doctored continuously for the blood, but got no permanent relief, till last winter when my mother got me to try MINARD'S LINIMENT. The effect of which was almost magical. Two bottles completely cured me and I have worked every working day since.

Yours gratefully,
JOHN WALSH.

Attractions All Gone.

He—You used to say there was something about me you liked.

She—Yes, but you've spent it all now.

Canadian National Exhibition attendance record: 1909, 752,000; 1910, 837,000; 1911, 926,000; 1912, 962,000; 1913, 1,009,000; 1914, 762,000, 1915, 864,000.

The Vegetarian.

A senior pupil teacher, who was noted for his dilatory habits and slovenly appearance, was one day instructing his class in the art of economy.

"Boys," he said, extending his not over-clean fingers in the direction of the class—"boys, in addition to being a total abstainer and non-smoker, I am a vegetarian. Now Johnny Brown, tell me, what is a vegetarian?"

"If you please, sir," answered Johnny Brown, glancing toward the extended fingers, "it must be a man who don't use soap."

The man who knows the least is often in the biggest hurry to tell it.

Your "Get-Away" Power in Summer is low. Summer brings mental and physical lassitude. The spirit is languid, the liver is lazy. Nature is trying to unload the toxins that come from heavy foods and lack of outdoor exercise. Help Nature to restore natural vigor and vim. Get an eight-cylinder stamina by eating **Shredded Wheat Biscuit** with fresh fruits and green vegetables. Cut out meat and potatoes—eat these delicious, nourishing little loaves of baked whole wheat and be cool, contented and happy. For breakfast with milk or cream; for luncheon with berries or other fruits.

Made in Canada

His Wish Satisfied.

The peddler knocked timidly on the kitchen door. A stout Irish woman, angry at being, interrupted in her work, pulled open the door and glowered at him.

"Did yez wish to see me?" she demanded in threatening tones.

"Well, I did," he assured her with an apologetic grin. "I got my wish, thank you." And he went.

The Manufacturers' Building at the Canadian National Exhibition has 72,500 square feet of exhibit space and the Annex 73,000 square feet.

Keep Minard's Liniment in the house

There are 73 buildings, large and small, used for exhibit purposes at the Canadian National.

DODD'S KIDNEY PILLS

The Paisley Advocate

PAISLEY, AUG. 30th, 1916

—The Russians have taken Mush. That's more than the Germans get for breakfast now-a-days, according to reports.

—The Bulgars have taken Kastoria. That's easy enough, but they'll have to take a lot of strong iron pills before they're cured of what ails them.

—Motorists, beware of the stop watch in Paisley. A thought in time will save you nine—dollars, or more, maybe. Drivers take some of the corners at rather high speed, too, and without sounding the horn. They should not be allowed to continue the habit, as there's danger of an accident every time it's done.

Educational Buncombe

It is true this country spends five hundred million dollars a year on the public schools, which is much more than any other country spends; but there is nothing to brag about in that. Congress hands out seven hundred millions for army and navy in a year, and the general verdict is that we can afford it; but over great areas of the national domain every additional thousand dollars for public education comes with groans.

We should be ashamed of our support of public schools instead of congratulating ourselves about it. There are over two hundred thousand one-room, one-teacher rural district schools where, on the whole, we are working a great confidence game on some millions of helpless minors by taking their time and giving them a bogus article of education.

These one-room ungraded schools belong to the pioneer era when farmers reaped wheat with a scythe, threshed it with a flail, and hauled it twenty miles to market through mud halfway to the wagon hubs; when building a barn involved getting half of the male inhabitants of the township together to raise the frame.

Grown-up people plow and reap with tractors, thresh with steam, go to town in fifteen minutes in an automobile and talk over the telephone; but the youngsters are still back in the thirties of the last century.—Saturday Evening Post.

SHORTAGE OF WHEAT

Regarding crop conditions and wheat prices in the west and in Chicago, respectively, the North Battleford News has the following to say:

The rapid rise of wheat prices in the United States and Canada has been attributed in some quarters to a big gamble in Chicago, but there are substantial reasons for the increase. The United States department of agriculture forecasts a crop of 654,000,000 bushels, or 358,000,000 bushels less than the immense yield of last year. It compares with a five year average of 728,000,000 bushels and has been exceeded eleven times in the last 15 years.

The normal requirements of the United States are calculated at 5.3 bushels per capita, plus about 75,000,000 bushels for seed. In years when wheat is scarce the consumption falls to as low as 5.0 bushels per capita, and when plentiful increases to 5.5 per capita.

On the basis of 5.3 bushels, the total requirement of the United States the coming season would be about 620,000,000 bushels which, with a production of 654,000,000 bushels, would allow only 34,000,000 bushels for export. The carry-over of old wheat was unusually large, however, some 75,000,000 bushels larger than the average carry-over of the preceding five years.

The exports of the last year were about 250,000,000 bushels, the year before that 333,000,000, but the average of the preceding five years was only about 125,000,000 bushels.

Last year the world's wheat crop was unusually large; this year's crop promises to be much smaller, as its harvest has been disappointing, and exporting countries are to be called upon to make up the deficit.

The shortage in the United States has of course immediately influenced Canadian prices. The reports of damage of rust, hail and frost have also had a bullish effect on the market. It is estimated that the Canadian crop will be about 203,000,000 bushels. While this is greatly below the miraculous yield of last year, it is above the average of the five years previous to 1915. The best year prior to last year was 1913, when the crop was 209,362,000. But the money returns from this year's harvest will be much greater than from that of three years ago.

LOCAL AND DISTRICT NEWS

Red Cross Supplies

The Red Cross Society of U S S No 11, Bruce, contributed in July the following articles: 27 surgical shirts, 14 flannel shirts, 33 large sheets, 1 small sheet, 28 towels, 2 doz bandages.

Sunday Mass Meeting

On Sunday next, Sept 3rd, a mass meeting will be held in the town hall at 1.15 p m, under the auspices of the Dominion Alliance. An address will be delivered by Mr F S Spence, and solos rendered by Mr. Wm H Norris, bass.

Firemen's Race

In the firemen's race on Monday night the team captained by Jas Cavill won the cup, beating their opponents' time by five seconds. In a practice run later, however, R Skinner's team reduced the winners' record by another five seconds. The scores were: Cavill team, 43 secs., Skinner team 48 secs. and 38 secs.

Seriously Hurt

Mr John Rushton, of Saugeen, fell from the mow in his barn on Tuesday of last week, and had his leg broken just below the hip, his left wrist and arm badly sprained, a nasty bruise on the side of his head and some injuries to his back. Mr Rushton was unconscious for several hours, but revived, and although badly hurt he is doing nicely.

Short Weight Bread

The local baker paid a fine this week for turning out bread that was light in weight when tested by the inspector. The loaves were full weight when baked, but were reduced by evaporation afterwards. Bakers have grounds for protest against the statutory regulations which do not definitely state when the loaves should register full weight, as it is natural that they will grow lighter each day after coming from the oven.

Port Elgin Fair

The supporters of Port Elgin Fair, which this year is to be held on Sept 21st and 22nd, have provided a liberal list of specials to be added to the regular prize list. Everything is being done to make the show better than ever, and arrangements are being made for holding speeding events on the second day. W W Elliott, the secretary, will be pleased to send a prize list to any address. Keep the date in mind and plan to be there.

Honey a Good Crop

With prices of all foods soaring, housewives will be pleased to learn that there is plenty of honey and that the prices will not be advanced. A large crop of light honey has been secured this season. The quality is unsurpassed, being light in color, heavy body and a very good flavor. The beekeepers have decided not to raise the prices this year, and are putting the honey on the markets at same figures as in 1915.

Prices Take a Drop

There has been a general slump in farmers' market during the past few days. The shrinkage in cattle prices have been followed by decided drop in hogs, the latter having receded over a dollar per hundred. Wheat has been soaring in the speculative market, but got a set back on the news that Roumania was lining her army up with Allies on the Balkan front. The probability is that the top notches have been touched for all these commodities, for the present year at last.

AUTOINTOXICATION OR SELF-POISONING

The Dangerous Condition Which Produces Many Well Known Diseases.

HOW TO GUARD AGAINST THIS TROUBLE

"FRUIT-A-TIVES" — The Wonderful Fruit Medicine — will Protect You

Autointoxication means self-poisoning, caused by continuous or partial constipation, or insufficient action of the bowels.

Instead of the refuse matter passing daily from the body, it is absorbed by the blood. As a result, *the Kidneys and Skin are overworked*, in their efforts to rid the blood of this poisoning.

Poisoning of the blood in this way often causes Indigestion, Loss of Appetite and Disturbed Stomach. It may produce Headaches and Sleeplessness. *It may irritate the Kidneys* and bring on Pain in the Back, Rheumatism, Gout, and Rheumatic Pains. It is the chief cause of Eczema—and *keeps the whole system unhealthy* by the constant absorption into the blood of this refuse matter.

"Fruit-a-tives" will always cure Autointoxication or self-poisoning—as "Fruit-a-tives" acts gently on bowels, kidneys and skin, strengthens the bowels and tones up the nervous system.

50c. a box; 6 for $2.50, trial size, 25c. At all dealers or sent postpaid on receipt of price by Fruit-a-tives Limited, Ottawa.

Burnt Out by Big Bush Fire

Mr Henry Hyde, of Monteith, returned to that northern town on Tuesday after spending a month with his friends in Bruce Tp. He came down just before the fire swept over that country, intending to remain only a few days, but when he learned by the reports that his interests were totally consumed by the hallocaust he decided to stay longer. He has a farm about 1½ miles from Monteith, which was so well cleared of the bush that it will be easily made ready for cropping. His half interest in the Monteith livery stable business is the loss he sustained, the fire destroying that part of the village in which the barn was located. All of the eight horses, together with the whole equipment, went to ashes. Mr Hyde's partner and the latter's family just managed to reach the station in time to catch the relief train as it was pulling out. The men intend starting up in business again.

From Los Angeles, Cal.

In a letter to THE ADVOCATE editor, Mrs Mary J B Wylie writes from Los Angeles, Cal: "The whole family enjoys THE ADVOCATE. We get some Canadian news from it. I still have a very warm heart for Paisley and vicinity and the dear old settlers.

"Dreams of youth come back again—
Low murmurs of the summer rain,
That fall upon the ripened grain
As once upon the flowers."

We enjoy California very much. We live on the side of one of the Edendale hills, and have a pretty little bungalow home buried in roses and other flowering shrubs. We invite pedestrians to "have a look" at the flowers and request them to pick a bouquet for themselves. We have fruit trees, too, and expect the citrus to bear next year—third year. Last year when we were at Long Beach we had the pleasure of meeting and visiting Miss Nixon, and the tea actually had the Paisley aroma."

Lived Over 90 Years

John McKay, probably the oldest man in Bruce Tp, passed away on Thursday last, at the age of over ninety years. The deceased was a native of Argyleshire, and emigrated to Canada when a young man, about the year 1846. He learned the trade of boilermaker in a Galt foundry and later worked in Goderich. In 1853 or 1855 Mr McKay decided to try homesteading, and came to Bruce Tp, where he took up lot 29, con 7. His was one of the first clearings on that line, although the dense wooded solitude of the region was soon broken by the advent of a little army of sturdy pioneers who came and took possession of the land farm by farm and formed an active, happy and sociable community. Mr McKay married Henrietta McLeod, who predeceased him by 34 years. Three of their family are living—Mrs Geo Lewis, of Vancouver, B C, who has been home for some time; John A, on the homestead, and Robert A, of Detroit, who came home for a few days after his father died. The deceased was a Presbyterian in religion and Liberal in politics. The funeral took place on Saturday, Rev A MacNab conducting the service. Interment was made in the Lovat cemetery.

Motorist Fined for Fast Driving

An auto liveryman from a neighboring town was recently fined $5 and costs for exceeding the speed limit while driving a car through Paisley streets. Constable Leitch caught him with the stop watch, and estimated the speed at over 25 miles an hour. Court was held on the bread before Magistrates Gibson, Ballachey and George. The driver of the car, also the three passengers, claimed that they were not going over 12 miles an hour, and lawyer Klein counsel for defendant, argued that a stop watch is not reliable, but the bench accepted the evidence for prosecution, and imposed the fine. Counsel asked for delay of payment for a few days, to consider whether appeal would be made. At time of writing the money has not been forthcoming, nor any notice regarding appeal given. The constable timed some other autos since being armed with the stop watch, and more prosecutions may follow. It will be wisdom on the part of all auto drivers to make no further attempts to fly through this town. Keep on the ground, so to speak, as aeroplaning is considered inimical to public safety.

WE LIKE TO HAVE WOMEN WHO KNOW STYLE, QUALITY AND VALUE COME IN AND EXAMINE OUR GOODS.
ONE EXPERIENCED WOMAN LIKE THIS WILL SEND US A DOZEN OF HER FRIENDS.
OUR NEW YARD GOODS ARE NOW IN. COME IN AND PICK OUT THE MATERIALS FOR YOUR NEW DRESSES BEFORE THE VERY THING YOU MAY WANT IS GONE.

The Advocate Office

Eye Aid.

Just how much is required must be accurately measured. Too little would only partly relieve the trouble. Too much would injure the eyes. We use the best modern optical appliances, absolutely correcting optical defects and guarantee satisfaction.

A STOPPED WATCH

—one that will not go AT ALL,—does not cause as much bother as one that runs now fast, now slow, in an erratic fashion.

The first you don't pretend to depend upon—the other is a constant source of annoyance.

Most people can afford a watch, but no one can afford an uncertain fast and slow one.

And when our Repair Department is so close at hand there is really no excuse for carrying anything but an accurate time-piece, no matter what the first cost was.

Consult us about any watch troubles that may arise.

I. SHOEMAKER

Jeweler and Optician

Why "Anuric" is an INSURANCE Against Sudden Death.

Before an Insurance Company will take a risk on your life the examining physician will test the urine and report whether you are a good risk. When your kidneys get sluggish and clog, you suffer from backache, sick-headache, dizzy spells, or the twinges and pains of lumbago, rheumatism and gout. The urine is often cloudy, full of sediment; channels often get sore and sleep is disturbed two or three times a night. This is the time you should consult some physician of wide experience—such as Dr. Pierce of the Invalids' Hotel and Surgical Institute, Buffalo, N. Y. Send him 10 cents for sample package of his new discovery, "Anuric." Write him your symptoms and send a sample of urine for test. Experience has taught Dr. Pierce that "Anuric" is the most powerful agent in dissolving uric acid, as hot water melts sugar; besides being absolutely harmless it is endowed with other properties, for it preserves the kidneys in a healthy condition by thoroughly cleansing them. Being so many times more active than lithia, it clears the heart valves of any sandy substances which may clog them and checks the degeneration of the blood-vessels, as well as regulating blood pressure. "Anuric" is a regular insurance and life-saver for all big meat eaters and those who deposit lime-salts in their joints. Ask the druggist for "Anuric" put up by Dr. Pierce, in 50-cent packages.

STRENGTH AND BEAUTY

Come with Dr. Pierce's Golden Medical Discovery. This is a blood cleanser and alterative that starts the liver and stomach into vigorous action. It thus assists the body to manufacture rich red blood which feeds the heart, nerves, brain and organs of the body. The organs work smoothly like machinery running in oil. You feel clean, strong and strenuous instead of tired, weak and faint.

Paisley Fair

Make up your mind to be in it with the directors in helping along your local fair for 1916. All the allied interests are required to make it the success it ought to be—farmers and townspeople should be shoulder to shoulder on the job, one supporting the other at every turn.

Keep Name on Mail Box

Mail box owners on the rural delivery routes are reminded that they should keep their names plainly painted on the boxes. This helps the mail carriers to do their work with despatch and accuracy. Also for the convenience of all who wish to know where a farmer lives, let your name shine on the mail box.

Died in the West

Mr Arch Pollock, one of the last of the pioneers of Saugeen Tp, died at the home of a son in the Peace River country on Aug 24th. He went west about the middle of July and had been at Regina and other points, where he appeared to be in the best of health. Last week word was received from his son James that the aged father was ill and not likely to recover. Mr Pollock was one of the most active men in this part of the country. The strenuous work of early pioneer days did not seem to have drained his vitality, as in later life he could still take long journeys on foot. After he became an octogenarian he did more walking than most of men do in the best years of their lives. Mr Pollock was born in Lanarkshire, Scotland, and after coming to Canada, followed the bush to the Queen's bush, arriving in Bruce County in the early fifties of last century. He wielded the axe on the trees that stood along where Walkerton main street now is. In 1851 he had settled on a farm in Saugeen, and began testing the fertility of the soil after making a clearing in the bush. In the subsequent years he made a success of farming, raised a large family of children, and in the daily strivings of life did his part in such a way as to win the esteem and respect of his fellows. For a number of years Mr Pollock was collector of taxes for the township. In religion he was a Methodist, and was one of the organizers of the church of that denomination at Aberdeen. In politics he was a Liberal. He married Jane Swinton, who predeceased him many years. The family consisted of seven sons and five daughters, of whom the following are living: John, Archie, Robert and Herbert, in Saugeen; Andrew, at Gladstone, Man; James, in Peace River; Mrs J Black, of Neepawa, Man. One brother is still living at Peterboro, and his only sister is Mrs R B Fleming, of Paisley. The remains of deceased are on the way east for burial at Port Elgin, and are expected to arrive by Friday or Saturday. The deceased was in his 89th year.

A Man Came in

A Week or Two Ago Frankly Skeptical

"I've been reading your ads," he said, "and I'm going to let you make me a suit. But I'll tell you in advance, I'm hard to fit. The tailors 'fall down' when it comes to giving me what I call a good fit. Now, go to it."

Well, we "went to it" and put in our best efforts. The man WAS hard to fit. We admitted it. Anything short of long experienced, expert tailoring skill would have fallen down on his contract once more. But we fitted him. FITTED, that's the word. Now he's a regular customer—just like you will be after you get your first suit. Glad to see you this week.

Suits, $18 to $32

160th Has Higher Canadian Showing Than Other Units

Bruce Battalion Most Representative in Training

83 PER CENT. CANUCKS

Class of Men, Too, Shows a Wider Representation Than Average C.E.F. Command

Bruce County has raised what is claimed to be the most representative Canadian battalion organized since the war began.

Out of a total present strength of 1,145 men, 950 claim Canada as their place of birth. This is almost 83 per cent. of the total, before we take into account the men discharged or transferred to other units. It is claimed that if these were reckoned in the percentage would be even greater.

English born are second on the list with 124 men, and other nationalities follow with lesser numbers each.

This large percentage of Canadians is claimed to be unique, and is taken as an evidence of the fuller appreciation of the gravity of the war situation by the native-born youth of Canada. The percentage of Canadians in the battalions of the first contingent was undoubtedly small, but the showing of the 160th and other later units is making up for that.

The men from Bruce are a representative bunch in more ways than one. Their average stature is undoubtedly high. The number of "six footers" one sees in the lines is remarkable. Also there are an unusual number of men whose weight is well over two hundred pounds. A great many people are of the opinion that the 160th would look well in kilts, but that possibility is considered as remote.

As an evidence of the class of men who have enlisted from Bruce the following little story serves as apt illustration:

About a month ago, when harvest leave was being granted, an officer had occasion to speak to a bandsman, just a private.

"Are you going on harvest furlough?" asked the officer.

"Oh, yes," drawled the bandsman.

"I suppose you know someone to work for?"

"I have a bit of a place of my own," confessed the man of music.

"Oh, I suppose you have a little hay to get in?" ventured the man in the "Sam Brown."

"Yes, a little," returned the private, "about three hundred acres this spring."

"Great Scott!" yelled the officer, "how much land have you there, anyway?"

"Oh, not much," was the modest reply. "About 1,200 acres, I think."

And this is the type of man who is volunteering to fight under Lieut-Col Weir for $1.10 a day.

Bruce county is justifiably proud of its battalion. An excellent spirit prevails among the men and fine good fellowship between the higher and lower ranks.

The unit has been unfortunate in many ways. For weeks it was in quarantine through mumps and measles, and then harvest furlough came along and scattered it for another month. Now, however, it is once more concentrated, and with the move to Carling Camp in view a period of hard training is in prospect, and the coming weeks will see a splendid lot of men in readiness for the "big trip" overseas.—London Advertiser.

Wild West Show at the Exhibition

Pawnee Bill to Produce "Pioneer Days" — Many Indians and Champion Cowboys and Girls

Pawnee Bill, the millionaire banker, and one of the few remaining members of the old western pioneers, is bringing his big wild west production of "Pioneer Days" to the Canadian National Exhibition this year. Pawnee Bill's last appearance at the Exhibition was in 1893, when he had a very small show. In his present production he has over fifty head of stock, and there are 85 people in his company, including some world's champion horsemen, rifle shots and toppers. He will appear on the Midway, and in addition will present each afternoon and evening in front of the grand stand a half dozen of his best acts.

A Dangerous Proceeding

Three Walkertonians who went on a fishing expedition down the Saugeen on Saturday in a boat, encountered wires in two places near the 8th concession stretched across the river, and in an effort to get past them one of the party had a close call from going overboard into the moisture. A short time previous two lads who had slipped away from home and drifted in a scow down the stream, encountered these wires and came back as well, with the result that their fond father, for fear their blood might be chilled by the accident, gave them both an enormous thrashing with the dry end of a rope just to restore circulation; and his exertions, had they been witnessed would have charmed the Humane Society. But not every boy who strikes these wires may come back to get a licking, and hence they should be removed before the line lining and silver handles are needed for the victims. The wire stretching ordinance is no doubt done for the purpose of keeping some farmer's cattle from going down the stream, but as it is illegal as well as dangerous, to thus interfere with the passage of others on a public stream, somebody may have to go deep into his trouser pockets if a serious mishap occurs. This was demonstrated a few years ago when Major Henderson of Walkerton was upset out of a canoe by a wire across the stream near Paisley, and resulted in the farmer who owned the wire having to re-imburse the Major for a lost watch and settle the attendant law costs. The lesson would seem to have been lost on others, as the two wire obstructions on the river near the eighth reveal.—Herald and Times.

A peculiar and distressing case of insanity developed in Normanby tp this past week. Tom McGauchie, aged 23 years, son of Mr William McGauchie, became violently insane as a result, it is supposed, of working in the hot sun. He was brought to Hanover and placed in the lockup for safe keeping until arrangements are completed for sending him to the asylum at Hamilton. Tom is highly spoken of and his many friends in the vicinity trust that he may recover.—Hanover Post.

CORBETT NO MANAGER; TALES OF THE RING

Double-crossed and Tricks Were Many Many in the Good Old Days—Ask Tommy Ryan

Talk of sharp practice recalls the memorable scrap between Kid McCoy and Tommy Ryan at Maspeth, L.I., in 1896. McCoy, a novice in experience, was Ryan's sparring partner when they saw a chance to get a bunch of the long green. They had a fake quarrel and McCoy issued a challenge. Ryan accepted it and the late Jamie C. Kennedy made the match. McCoy privately informed Ryan that he was in poor health and could do no hard work for the fight. As a result Ryan, taking the wily Kid at his word, did not train at all. McCoy, however, went to a quiet resort and put himself in splendid condition.

Kid McCoy's Start

When the men climbed into the ring, therefore, Ryan quickly saw that he had been "double crossed," but it was too late to back out. McCoy then proceeded to give a masterly exhibition of science, out-boxing and out-punching Ryan all the way to the fifteenth round, when the latter was put to sleep. A fortune was cleaned up on McCoy's victory by a few wise gamblers who were in the know and McCoy promptly began his climb up the ladder. Ryan issued another challenge, which resulted in a second battle, but after five rounds the bout was stopped and the decision was a draw. McCoy and Ryan never patched up their differences.

Picked Many Losers

When Jack Dillon knocked out Tom Cowler, Jim Corbett admitted that he never had been a successful manager of pugilists. Corbett's first attempt in this line was the handling of the good natured Steve O'Donnell, an Australian heavyweight, later boxing instructor at Harvard University. Corbett really believed that O'Donnell was a world beater and he was prepared to hand over his title and retire from the ring if O'Donnell defeated Peter Maher at Maspeth in 1896. But Mahar settled O'Donnell with a couple of well directed blows on the chin and Corbett decided to remain the champion. It was in 1900 that Corbett assumed the management of Gus Ruhlin and matched him with Bob Fitzsimmons. The fight took place in the Garden and during the first five rounds Ruhlin did so much good work that Corbett, who wanted to see Old Fitz whipped, almost lost his senses. But in the sixth round Fitz drove his mighty left into the pit of Ruhlin's stomach and the big German was taken to a hospital in a serious condition. Corbett took several other fighters under his wing, but they amounted to nothing.

WHY CITIES HEALTHIER

Child Welfare Better Regarded Than in the Country

In an impartial effort to ascertain the causes of present-day country life, so far as health and welfare are concerned, this fact must not be overlooked: Artificial selection, during the last half century especially, has drawn much of the best human stock from the country to the cities. Before that time the tide in the movement of population apparently carried more good human material to the rural regions than away from them. Another reason for the physical inferiority of country school children and of country people in general is that the science and art of human living, of conserving and improving human health and general human welfare, have advanced much more rapidly in the cities than in the country districts. The problems of safety and comfort as affected by congestion of population and many other conditions of urban life have thrust themselves upon human attention and have received much consideration.

The art of human care has progressed much more slowly in the country. The father in the city spends, on the average, a larger percentage of his income for the welfare of his children than does the father on the farm. The farmer, relatively, raises everything else more carefully and, as a rule, more successfully, than his children. Still another condition which helps to explain this astonishing inferiority of the country child is the environment. The country home and the country school are, on the average, less sanitary and healthful than the city home and the city school.

QUEER PSYCHIC PARTIES

Jester Has Fun Over All Sorts of Seances

There is a craze for psychic parties. A psychic party is any old thing in the way of palmistry, crystal-gazing, thought-reading, or spirit manifestation, played equally well with a couple or a quantity. The medium is nearly always a "she," and nine times out of ten a nice looking one at that. Hence the popularity of seances with my unworthy sex, writes the jester. I personally have no objection to something really pretty diving down into the depths of my vest—always provided that there is no one else there who can use it in evidence against me. Most men things want little quiet diversions, and there is something undoubtedly soothing in seances—at any rate. Any pretty girl who desires to hold my hand and read the future from it has never to ask twice, as far as I am concerned.

There are times when I hope that one of these days I thought reading will become generally successful. It would save an infinite amount of trouble. On the other hand, there are moments when if everyone in the room got a direct line on what you were thinking about, you would precipitate a catastrophe. No! Taking it all round, I hope it does not become an art that can be practised by everyone.

King George's chief valet is the inventor of a first-rate polish for brown boots.

OFFICE—TOWN HALL, PAISLEY

MEDICAL

DR. H. E. GAGE, Physician, Surgeon and Accoucheur. Specialist in Diseases of the Eye, Ear, Nose and Throat. Late house surgeon Kingston General Hospital. Office hours—10 to 11 a.m., 1 to 4 p.m. Successor to Dr. O'Neill.

DR. C. J. F. HOURTON, Honor Graduate of Toronto University Licentiate of the Royal College of Physicians and Surgeons of Edinburgh and Glasgow, post graduate Coombe Lyingin Hospital, Dublin, late assistant Edinburgh Eye Infirmary. SPECIALTY—Diseases of the Eye, Ear, Nose and Throat. Successor to Dr. Morrison.

DENTAL

DR. A. H ALLEN
DENTIST, formerly of Toronto.
Graduate of the Royal College of Dental Surgeons of Ontario. Honor Graduate of Toronto University Dental Department. Master of Dental Surgery, Graduate of the Dr. Meyer Post Graduate School of Prosthetic Dentistry, New York. Office over Morse's Drug Store, opposite the Post Office.

VETERINARY

R. B. GRANT, V. S., Graduate of Ontario Veterinary College, Toronto. Government Inspector of contagious diseases and apply Tuberculin test in cattle. Also in spavin, export stock and issue certificates for same. Oxygen gas treatment for milk fever. Office and residence opposite the old Northern Hotel.

Sign and Carriage Painting, House-Decorating and Wall Papering

The undersigned is prepared to do all classes of work in the most stylish, neat and satisfactory manner. Orders executed promptly. Will be glad to receive your patronage, whether in town or country.

W. H. BAKER, Paisley

NORTHERN Business College
OWEN SOUND, ONTARIO

For 35 years the standard institution of business education. Thorough training for every hour spent. Actual practice in required duties. Business, Shorthand and Preparatory Courses open all the year. Enter any day.

Fall Term Begins Sept. 4

Fall Term Opens Aug. 28th

ELLIOTT Business College

Yonge and Charles Sts., Toronto

Made this remarkable average record for the last three months: We were asked to fill more than thirty times as many positions as we had graduates. The business world calls you: prepare here and now: splendid opportunities; good salaries. All who are anxious for a successful start in life should arrange now to enter this popular school.

W. J. ELLIOTT, Principal

Railways to Avoid Last year's Mistake

Rates to the Canadian National Will Extend Over the Full Two Weeks Period

A year ago all over the Province there was great disappointment among the people coming to the Exhibition the last couple of days to learn that the rates on the railroads had expired. It was too late then to have the matter rectified, but the Exhibition management took the matter up with the railroads and found that there had been a mistake in the circular sent out to their agents the results being that on the closing days people going to Toronto had to pay full fare. This year the Exhibition has the assurance that there will be no repetition of last year's trouble. The rates extend over the full two weeks.

—"Advertising is the education of the public as to what you are, where you are, and what you have to offer in the way of skill, talent and commodity. The only man who should not advertise is the man who has nothing to offer the world in the way of commodity or service." —Elbert Hubbard.

About the House

Useful Hints and General Information for the Busy Housewife

Miscellaneous Recipes.

For a new dessert, try this: Take sponge cake and cut it into squares. Pare, halve and core some large pears. Boil in a syrup colored with half a cupful of cranberry or other red fruit juice. When tender remove from the syrup and place one of the halves on each sponge square. Decorate with cranberry jelly and serve with plain or whipped cream or with a sauce.

Here is a Belgian recipe for vegetable soup: Take four celeries, four leeks, two turnips, a cabbage, two onions, a few bones, pepper and salt and five quarts of water. Boil for about three hours keeping the vegetable always well covered with the water. Take up and rub the vegetable through a sieve or cloth and let them boil again for at least an hour.

White Ginger Bread.—One pound dry, sifted flour, one-half pound fresh butter, one-half pound granulated sugar, grated rind of one lemon, one ounce new ground ginger root, one-half grated nutmeg, one-half teaspoon soda, one gill milk. Rub flour and butter together, add sugar, lemon rind, ginger and nutmeg. Warm milk slightly, stir in soda and mix to smooth paste. Shape according to fancy and bake fifteen minutes.

To make croquettes of boiled meat, mince your meat and put it into a thick, white sauce well spiced with pepper, salt and nutmeg, and let it remain for two hours. Then prepare your croquettes by rolling the mixture in white of egg and fine bread crumbs. Put a piece of butter in the saucepan, sufficient to take all the croquettes, and let them brown in it for about 10 minutes. A white sauce served with them is a good addition.

Egg Salad.—Cover the eggs with boiling water and reduce the heat at once, cooking the eggs slowly from 25 to 28 minutes over the simmer burner of the gas stove. When the eggs are done, cover them with cold water. Prepare mayonnaise, when thick, add four or five sardines that have been skinned, boned and pounded to a paste. Cut the egg lengthwise, lay on chilled lettuce and serve the dressing.

Pickling Brine.—A "universal" pickle—that is, a pickling liquid that may be used with nearly all kinds of vegetables and fruits—is made like this: A cupful of sugar added to four quarts of vinegar, two dozen whole black peppers and a handful of cloves, a few blades of mace and 18 whole allspice. Boil all the ingredients for five minutes and pour over the fruit.

Cream of Spinach Soup.—Two quarts spinach, six cupfuls cold water, two cupfuls milk, one clove garlic or two tablespoonfuls chopped onion, bit of bay leaf, one teaspoonful salt, cayenne pepper and celery salt, three tablespoonfuls each butter and flour, one-half cupful cream. Cook spinach in water thirty minutes. Press through sieve, scald milk with onion and bay leaf, add butter and flour, cooked together, strain, add seasonings and spinach mixture. Cook five minutes, and serve, garnished with beaten cream.

Baked Apple Pudding.—Butter an agate baking dish. Slice into this tart apples enough to fill the dish; sprinkle with salt and pour in two or three tablespoonfuls of water. Sift together a cup and a half of flour, three teaspoonfuls of baking powder and one-fourth teaspoonful of salt. Into this work with the tips of the fingers three tablespoonfuls of butter. Beat an egg, add three-fourths of a cup of milk (scant measure), and stir into the dry ingredients. When thoroughly mixed spread over the apples. Bake in a quick oven about 25 minutes. Invert the dish so as to have the apples on the top. Serve hot with butter and sugar or syrup.

Mixed Conserve.—Six pounds of the large blue plums, measured after the pits are removed and the plums halved. Four pounds of granulated sugar. Two pounds of chopped raisins. Half a pound of English walnut meats, chopped fine. Juice of one orange. Skins of four oranges, chipped and parboiled fifteen to twenty minutes. Pour boiling water on the raisins and let stand two minutes. Mix all the ingredients and let simmer fifteen minutes. Add sugar and cook ten minutes in double boiler or until jelly-like. Pour into hot sterilized jars and when cool cover with paraffin. Do not peel the plums, as the skins give the conserve a pretty color. Do not stir the plums to pieces; keep them in halves. When done the mixture will thicken on a cold plate.

Beef Stew.—Use two pounds of round steak cut from one to one and a half inches thick. The steak may be left whole or cut into pieces two inches square. Heat an iron frying pan, rub over the surface with a bit of fat from the meat, put in the steak and cook, first on one side, then on the other, to harden the meat on the outside and thus keep in the juices. Put the meat into the casserole with a dozen and a half pieces each of carrot and turnip, cut in similar shaped slices, cubes or triangles. Add a dozen very small peeled onions, one tablespoonful kitchen bouquet and a generous pint of brown stock or boiling water. Cover and let cook gently in the oven about an hour and a half. After cooking an hour add salt and more stock, if needed. Serve from the casserole. The vegetables may be browned in one-fourth cupful of drippings before being put into the casserole. For this style of cooking round steak gives a richer dish than does a sirloin steak.

Useful Hints.

Celery and pineapple make a delicious salad.

It is better to cook carrots whole and then skin them.

After a whiskbroom has become ragged, trim off evenly and use as a sink brush.

Prick the small end of a potato before putting it in the oven and it will not burst.

A salad of onions, sardines, tomatoes and peppers is properly served with brown bread.

Never hoard old clothing or household articles—give them to somebody who can use them.

Yellow will light up the gloomiest of rooms, just as green will cool and soften the most garish.

Skim milk used instead of water in the cooking of cereals adds to their nutritive value.

Pushing screws in common soap before using will cause them to enter the wood more easily.

It's always more economical to measure materials in cooking than it is to guess at them.

It is the greatest economy to purchase the best spices; poor ones are usually adulterated.

If a small piece of velvet is glued inside the heel of a shoe, stockings will not wear out so fast.

Split a clothespin down the centre, and you have a good tool for scraping pans and kettles.

Always rinse black stockings in blue water, and they will keep a good color right on to the end.

If sugar is too high-priced to preserve fruit, then dry it. You can't starve to death very well on dried fruit.

Before cleaning knives on a knife-board, dump them slightly. They clean more quickly and gain a better polish.

A few drops of ammonia in the water in which silver is washed will keep it bright for a long time without cleaning.

To prevent carpet from unravelling, when cut, run two rows of machine stitching with the machine where it is to be cut.

Grind a handful of sunflower seeds and give them to the canary. The birds relish the little tender pieces that are found among the seeds.

Stains in table linen are easily removed by plunging the articles in pure boiling water. The addition of soap or soda would have the effect of fixing the stain.

If new enamel pans are placed in a pan of water and allowed to come to the boil and then cool, they will be found to last much longer without burning or cracking.

Watering Boston ferns with weak tea instead of water will cause them to thrive wonderfully. When tea appears on ferns, stick some sulphur matches head down in soil.

For waterproofing boots and shoes, equal quantities of white wax, olive oil, and dectified lard, melted down make an excellent mixture but a little oil of turpentine should also be added.

To wash brushes and combs, put a teaspoonful of ammonia into a basin of hot water and dip the brush up and down in it letting the comb remain in the water for a few minutes. Afterward rinse in cold water.

REMARKABLE CONSCIENCE.

Memory of Stealing an Apple Anything But Pleasant.

A little knowledge, one recalls, is a dangerous thing. So, too, may be an apple which you may have innocently purloined in your earliest years. It may cause you to feel the prick of conscience for many decades. That, at least, has been the experience of an Edinburgh denizen. Once, in the remote and shadowy past, he took that which was not his—to wit, one apple—from a stand in the Cowgate. The fruit was enjoyed, but the memory of the furtive meal proved to be anything but pleasant. The consumer left the Scottish capital and in time Fate carried him across the Atlantic. Fresh scenes and activities engaged him, but the thought of that apple dogged him everywhere. He might have been a second Eve. At last his overloaded conscience could bear the strain no longer. Nothing short of written confession to the Lord Provost of Edinburgh would appease the gnawing at his heart. So —40 years after the dark deed had been done—the letter was written and conscience money to the extent of one dollar paid.

A Slight Matter.

"I don't see you at Miss Golder's receptions any more, old man."

"No; she and I had a little difference of opinion."

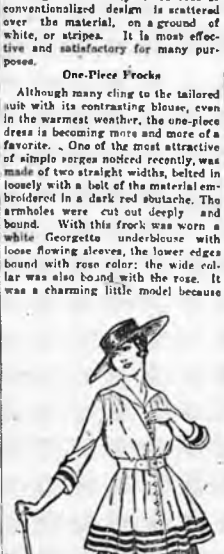
"Nothing serious, I hope."

"Oh, no; only I thought I was the man she ought to marry and she thought I wasn't."

Prince Henry Sees His School Win.

Prince Henry of England watching a match between Eton and Harrow held recently. The match was won by Eton. The picture is interesting in that it indicates that despite the war, sport in England is still not without Royal patronage.

THE FASHIONS



Popularity of Georgette Frocks

The white Russian frock of Georgette, with perhaps a touch of contrasting color on cuffs or collar, is one of the favored designs for afternoon and evening wear. Georgette is delightfully cool and graceful and lends itself particularly well to the season's styles, both for daytime and for evening wear. It is one of the sheer materials which really washes and wears very well, making it practical for the modish transparent sleeve, the costume blouse and the dance dress.

For dance dresses, the printed Georgettes are youthful and pretty; some of these have printed borders, and plain white or colored grounds, and then again the softly tinted rose or conventionalized design is scattered over the material, on a ground of white, or stripes. It is most effective and satisfactory for many purposes.

One-Piece Frocks

Although many cling to the tailored suit with its contrasting blouse, even in the warmest weather, the one-piece dress is becoming more and more of a favorite. One of the most attractive of simple serges noticed recently, was made of two straight widths, belted in loosely with a belt of the material embroidered in a dark red shutache. The armholes were cut out deeply and bound. With this frock was worn a white Georgette underblouse with loose flowing sleeves, the lower edges bound with rose color; the wide collar was also bound with the rose. It was a charming little model because

7141

Russian Blouse Costume.

of its simplicity, and very youthful in its straight lines.

The heavy linens, too, are effective for street wear. Ivory white, French blue, the soft pale grays, and cool looking greens are among the favored shades in these linens. Many of them are cut along the straight lines of the serges being pleated often on to a shoulder yoke, and belted in loosely with a belt or sash of the same material as the frock. An especially pretty white linen on this order was made with a touch of black on the collar and sash.

The sash is quite smart just now on all types of dresses, from the simple serge to the afternoon taffeta or pongee. It is usually narrow, and made of the material of the dress, or of satin, when the frock is serge; generally a motif is embroidered on the ends, in colored beads or wool.

Many of these sashes cross in front and are knotted in the back loosely and gracefully.

Serge and Silk Combinations

Many of the favored silk frocks are combined effectively with a wool material, serge, gabardine or cloth. This is an idea which appeals to many and which is being used considerably

7256

Smart Flowered Voile

in the ready-made garments. The lower portion of the skirt, the sleeveless jumper, wide cuffs and collar are generally made of the serge, and the body of the frock of the silk, taffeta, satin, or one of the Japanese silks, as the case may be.

These patterns may be obtained from your local McCall Dealer or from The McCall Co., 70 Bond Street, Toronto, Ontario.

BY WAY OF ILLUSTRATION.

Defendant Shows How He Pushed Complainant.

It happened in the court room during the trial of a husky young man who was charged with assault and battery.

Throughout an especially severe cross-examination the defendant stoutly maintained that he had merely pushed the plaintiff "a little bit."

"Well, about how hard?" queried the prosecutor.

"Oh, just a little bit," responded the defendant.

"Now," said the attorney, "for the benefit of the Judge and the jury, you will please step down here and, with me for the subject, illustrate just how hard you mean."

Owing to the unmerciful badgering which the witness had just been given the prosecutor thought that the young man would perhaps overdo the matter, to get back at him, and thus incriminate himself.

The defendant descended as per schedule and approached the waiting attorney. When he reached him the spectators were astonished to see him slap the lawyer in the face, kick him in the shins, seize him bodily, and, finally, with a supreme effort, lift him from the floor and hurl him prostrate across a table.

Turning from the bewildered prosecutor, he faced the court and exclaimed mildly:

"Your honor and gentlemen, about one-tenth that hard!"

In the case of a photographer success depends on his ability to take things as they come.

CHRIST IN FLANDERS

We had forgotten You or very nearly,
You did not seem to touch us very nearly.
Of course we thought about You now and then,
Especially in any time of trouble,
We knew that You were good in time of trouble,
But we are very ordinary men.

And there were always other things to think of;
There's lots of things a man has got to think of—
His work, his home, his pleasure, and his wife;
And so we only thought of You on Sunday,
Sometimes, perhaps, not even on a Sunday,
Because there's always lots to fill one's life.

And all the while, in street or lane or byway,
In country lane, in city street or byway,
You walked among us and we did not see.
Your feet were bleeding as You walked our pavements.
How did we miss Your footprints on our pavements?
Can there be other folk as blind as we?

Now we remember over here in Flanders
(It isn't strange to think of You in Flanders);
This hideous warfare seems to make things clear.
We never thought about You much in England,
But now that we are far away from England
We have no doubts, we know that You are here.

You helped us pass the test along the trenches,
Where in cold blood we waited in the trenches
You touched its ribaldry and made it fine.
You stood beside us in our pain and weakness,
We're glad to think You understand our weakness,
Somehow it seems to help us not to whine.

We think about You kneeling in the garden,
Ah, God! the agony of that dread garden;
We know You prayed for us upon the cross;
If anything could make us glad to bear it,
'Twould be the knowledge that You willed to bear it,
Pain—death—the uttermost of human loss.

Though we forgot You, You will not forget us;
We feel so sure that You will not forget us,
But stay with us until this dream is past;
And as we ask for courage, strength, and pardon,
Especially, I think, we ask for pardon,
And that You'll stand beside us to the last.

—London Spectator.

GREAT BRITAIN IS A VAST ARSENAL

THERE ARE 4,000 CONTROLLED MUNITION PLANTS.

High Tide of Output For War Purposes Not Yet Reached.

The enormous stride made by Great Britain toward solving the problem of munitions was made clear in the course of a speech recently delivered by F. Kellaway, Parliamentary secretary to Dr. Addison (Parliamentary Secretary to the Ministry of Munitions). Mr. Kellaway said the most prominent fact of the war was that the price of victory was unlimited munitions, says a London correspondent.

"The British army in the early days," he said, "was so out-munitioned that the British soldier ought to have been beaten before the fighting began. But he proved that he was a better fighting man than the German. What he lacked in munitions he made up in devil, in initiative, and in endurance.

"I do not think anything that Germany has ever done equals the work this country has accomplished in the way of industrial organization during the last twelve months. Great Britain, which has throughout been the treasury of the Allies, has now become their armory. There are now scattered up and down the country some 4,000 controlled firms producing munitions of war.

"The vast majority of these previous to the war never produced a gun, a shell or a cartridge; yet in ten months the Ministry of Munitions has obtained from these firms a number of shells greater than the total production of all the Government arsenals and great armament shops in existence at the commencement of the war.

Increase of Arsenals.

"Speaking in the House of Commons last year Mr. Lloyd George startled the country by saying that eleven new arsenals had been provided. To-day, not eleven, but ninety arsenals have been built or adapted. Our weekly output of 303 cartridge is greater by millions than our annual output before the war. There is a certain machine gun being produced by the hundred every week in a factory ordered, planned and built during the past twelve months. The output of guns and howitzers has increased by several hundred per cent.

"We are not yet at the full flood of our output of guns and shell. If the Germans cannot be driven home otherwise, our army will have such a supply of guns that the limbers will touch each other in a continuous line from the Somme to the sea. France, Russia and Italy have been supplied by or through Great Britain with many of the most important munitions of war. Many thousands of tons of steel have been and are being sent to France.

"Our Contribution toward the equipment of the Belgian army has been continuous, and the Serbian army has been reequipped and restored to a magnificient fighting force very largely by the workshops and workers of the United Kingdom.

"The labor situation has been to a considerable extent saved by our women. There were 184,000 women engaged in war industries in 1914. To-day there are 643,000. The total number of war workers in 1914 was 1,195,-600. It has now increased to 3,600,000. There are 471 different munition processes upon which women are now engaged. The women of France are doing wonders in munition making, but our women munition workers beat the world."

Work of the Scientists.

Referring to glass Mr. Kellaway said:

"The problem facing the Government is, first, to discover the formula of glasses, and having discovered it, to establish the industry. It is fortunate that in this crisis we have available a few scientific men who have been working for years almost without recognition, and we have also institutions such as the Imperial College at South Kensington and the National Physical Laboratory at Teddington. The Government went to these men and asked them to discover the formula used by the Germans in their production of optical and chemical glass.

"These British scientists, after a few weeks' experiments, discovered many of the formulae, and it then became possible to begin manufacture on a commercial scale. The result was that within a year after the outbreak of the war the output of optical glass in this country was multiplied four and a half times. It has now increased to fourteen times the output previous to the war, and there is good ground for saying that by the end of the year it will have multiplied twenty-five.

"The Ministry of Munitions has built or is building, housing accommodations for 60,000 persons, and canteens and mess rooms in munition works now provide decent accommodation, where 500,000 workers take their meals every day.

"For a long time our anti-aircraft gunners have been crying out for an improved height finder for Zeppelins, the existing height finders being slow, clumsy and having a margin of error of hundreds of feet. You will realize how that handicapped our gunners in their attempt to bring down Zeppelins.

"Three men set to work on the problem, and in two or three months they produced a height finder which gave rapidly and exactly the height of a Zeppelin. It is an important discovery, but the problem is only one of hundreds which are continually cropping up."

A FAMOUS ROAD.

It Runs Fourteen Hundred Miles Through India.

Everyone who has read "Kim" will agree with the New York Sun that the Grand Trunk Road of India is by all means the most romantic highway in the world. That paper says of it:

A stately avenue of three roads in one—the centre of hard metal, the roads on each side ankle-deep in silvery dust—fringed by double rows of trees, it runs for fourteen hundred miles through the vast northern plain that skirts the Himalayas, from Calcutta to far Peshawar, which keeps sentinel at the gate of Afghanistan.

From horizon to horizon it stretches like a broad white ribbon, as straight as if traced by a gigantic ruler. And dotted along the entire length are hundreds of serais (wayside rest houses), each with its arched and turreted gateway, its spacious inclosure, where humans share shelter with oxen, camels and goats, and its central well of sparkling water.

For three thousand years the Himalayas have looked down on this road, and have seen it as they see it to-day. It has seen a hundred generations of men come and go; a score of dynasties rise and fall. And yet to-day it is to the eye exactly the same as in the long-gone time when Nineveh was a proud city, and our ancestors gnawed bones in their caves.

Two Anglers.

A barefoot boy,
A white birch pole;
A can of worms,
A swimmin' hole,
A baited hook,
A tug and swish;
A steady haul,
A string of fish.

A white duck suit,
A canvas boat;
A costly rod,
A patent float,
A gaudy fly,
A cash and swish;
A pretty sight,
But lazy fish!

THE EARL'S SECRET

Or, a Martyr to Circumstances.

CHAPTER IV.—(Cont'd).

"'evens, what a sight!" he exclaimed, throwing himself into an elaborate pose of ecstatic admiration and arresting Polly's progress thereby. "It's a study of Michael Hangelo," and he clasped his hands with an artistic enthusiasm.

Pretty Polly threw up her head with a pert smile and a side glance at the stranger.

"Oh, indeed!" she said, "pray who's Mr. Hangelo? And who's a sight, I should like to know?"

"You're a sight, my dear," retorted Mr. Starling, who, however deferential and meek he might be in his master's presence was thoroughly at home and at his ease in a public house "You're a sight beautiful enough to gladden any hartist's eyes."

"Nonsense!" said Polly, tripping into the taproom.

Mr. Starling, with a cast of his sharp eyes in that direction, strolled up to the bar and bowed with proper respect to the landlady.

"Good morning, ma'am. I hope I see you well. Beautiful morning for the hay——"

"Do you want anything to drink?" interrupted Martha.

Not at all discomposed, Mr. Starling intimated that he should feel obliged if the lady would favor him with a glass of her very best ale, and draw it mild.

Perfectly unmoved by his grand manner and repeated bows, Martha drew the glass of ale and flung the two-pence with a crash into the large pocket at her side.

Mr. Starling winked at the ceiling, chuckled noiselessly, and disposed of the ale with a peculiar drawing in of the breath and turn of the little finger.

"That's good tackle," he said.

"Ye asked for the best," said Martha, who was not to be conciliated.

"And I've got it; and I'll have another," said Mr. Starling.

This glass he dealt with more mercifully, and after taking a draught carried the remainder to the taproom door.

The sunburnt faces and bright eyes of the lads were lifted as he appeared, and Willie's sharp gray orbs seemed to take an inventory of his every inch, as Mr. Starling with a nod and a smile said:

"Good morning. Any fish this morning?"

"Ay, lots," said Willie, curtly.

"Ah, glad to hear it," said Mr. Starling, edging a little further into the room. "I'm very fond of fishing—allus was. Used to catch bats with a umbrella handle and a bent pin when I was so high," and he put his hand about five inches from the floor.

"Oh, we don't fish with that tackle in these parts," said Willie, quietly. "Won't ye come in?" and he raised his tankard.

Mr. Starling responded candidly, and was soon seated beside the huge fisherman and discussing a fresh tankard, produced at his expense.

Mr. Starling was a convivial turn, and the little parlor was soon echoing with short, sharp laughter and snatches of rough wit, all of which, however, did not prevent a sharp scrutiny which Big Willie was continually trying to bear upon the stranger.

Once or twice he raised his eyes and glanced significantly at an old man who had entered after Starling and was seated near the door, but the old fisherman shook his head in response to the look of inquiry, and Big Willie grew more silent and serious. At last he said, in one of the pauses of conversation:

"You seem to have traveled a main. Where be ye bound for?"

Mr. Starling nodded up toward the ceiling and jerked his thumb over his shoulder.

"I'm staying at The Park," he said. "Come along with Captain Murpoint."

"You're his servant," said Willie.

"Yes, I'm his servant," said Mr. Starling, looking into the bottom of his quart pot with one eye closed.

"Oh," said the fisherman, with an air almost of relief. "Oh, that's it, is it?" he said. 'I thought perhaps ye were loafing round a bit."

Mr. Starling grinned.

"I can do a bit at that trade," he said, with a wink that elicited guffaw.

"No doubt," said Willie. "An' what sort of a man is the captain?" he asked.

"What sort?" said Mr. Starling. "A good sort, or he wouldn't be my master."

"And where do ye come from?"

"India."

Willie shook his head.

"Ay, that's where Master John coom from."

"Just so," said Mr. Starling. "They were sworn friends—what you may call brothers with two mothers. My guv'nor was Mr. Mildmay's particular pal, thick as thieves, and—come, what do you say to another wet?"

"No more," said Willie, answering for himself and the rest of the company."

"Well, if you won't I'll see about climbing," said Mr. Starling. "It's a rum thing to build a house on a hilly 'ill's awkward for a gentleman after he's took his evening's glass at the pub. Now, if it was me I should 'a' built it down here in the village, just next door to the 'Blue Lion,'" and with a wink he struck his hat well on the side of his head and walked toward the door.

At that moment, however, Martha entered, and, looking round, said, sharply:

"Are you going to sit here all day, Willie Sanderson, with all them fish to send off to Lunnon? Are ye daft, man?"

Willie Sanderson rose and looked at her, raising his hand and scratching first his right, then his left ear.

Mr. Starling, who happened to turn at the doorway to observe how the customers would take such summary ejections, noticed the action, and was somewhat struck to observe Mrs. Martha's sharp tone dropped considerably, and with a quick pursing of the lips she raised her hand and scratched her own ears, first her right then her left.

Now, Mr. Starling, who knew something of signs and countersigns, and had occasion during his rather adventurous life to avail himself of such devices, instantly decided that there was some secret understanding between the hostess of the "Blue Lion" and the burly fisherman, and was confirmed in his suspicions by the silent and immediate obedience of the lads, who, at a toss of the head from their leader, rose quietly and left the house, giving Mr. Starling a gruff good-day as they strolled past.

Mr. Starling looked after them, then turned on his heel, stuck his hands into the mysterious depths of his light trousers, and commenced his climb.

Halfway up the hill, however, he stopped abruptly and swinging round smacked his leg with an emphatic thwack, muttering:

"Hang me if I can make it out. What the Vilikins and his Dinah does the landlady of a village inn wants a making signs with a wooden-headed fisherman?"

Mr. Starling's wits would have been still farther sharpened could he have followed Willie Sanderson down the village and watched him unseen.

The lads, once clear of the "Blue Lion," turned swiftly to the left and ran down to the beach, where, in a cofuse'd heap, were the recently taken fish and the baskets in which they were to be packed.

Willie Sanderson, however, after a word or two with the old fisherman, turned to the right and walked slowly toward the end of the village.

As he neared the row of cottages he saw, coming toward him on the road that led by many of weary mile to London, a smart tax cart.

Willie's eyes were sharp and though the little white-covered cart apparently differed in nothing from it-kindred, he knew it at a glance, and, drawing a little aside he sat down on a heap of empty baskets to wait patiently.

Presently the cart came up, and the driver, a little thick set man, dressed in an ordinary guernsey, and thick, white trousers peculiar to the seacoast, and wearing a patch over his left eye, shot a sharp glance from the right one at the recumbent figure of the fisherman and gruffly gave him "Good-morning."

"Good morning, Job, lad," replied Willie, and with a smile he repeated the action which had surprised Mr. Starling.

In an instant the old fellow's hand went up to his ears, and, with a reflection of Willie Sanderson's smile, he "ticked" to the horse and passed on.

Beyond the salutation not a word had passed, but Willie Sanderson rose to his feet and set off toward the beach, whistling with the satisfaction of a man who has ardoitly accomplishment a difficult and dangerous undertaking.

CHAPTER V.

To the unsophisticated inhabitants of the little seacoast village the Mildmays of the Park, and the Dodsons of the Cedars, were very great folk, indeed, but we have now to do with far greater, with no less a personage and family, indeed, than the well-known Earl of Lackland and his children.

A very great man was the Earl of Lackland. His ancestors had fought at Cressy, and at Hastings.

Lackland Hall was an immense place in the Midlands, a grand old house, with famous associations. You could not turn a page of English history without coming directly, or indirectly, upon the deeds and doings of the Lacklands.

It was a question with some politicians whether if by some dreadful chance the house of Lacklands had been extinguished, the history of England could have been written at all!

There were men who, when they wanted to illustrate the grandeur, the nobility, the importance of England, would point the admiring finger at Lacklands and exclaim:

"There is one type! Look at Lacklands and see epitomized the glory of our land!"

Certainly the Earl of Lackland was a most important individual.

Besides the great Lackland Hall there were also the great mansion in Grosvenor Square, the castle in Scotland, the villa on the banks of the Arno, and the fishing boxes in Ireland and Wales.

The present earl and countess was blessed, in addition to the places of residence above enumerated, with a son and daughter.

The former, Lord Fitz Plantagenet Bolsdale, was a young man just passed his majority. Fair—insipid he would have been called had he not been heir to Lackland—somewhat simple-minded, certainly not clever, and extremely fond of dress, billiards, his betting-book, and his cigar.

Lady Ethel Bolsdale, his sister, presented a marked contrast to him.

She was tall, dark, by no means insipid, and if not positively clever, certainly possessed of the average quantity of brains.

To say in what direction her taste inclined would be perhaps at present rather premature.

(To be continued).

For Preserving, Use

LILY WHITE CORN SYRUP

One-third "Lily White" to two-thirds Sugar, by weight.

"Lily White" Corn Syrup prevents fermentation and mold—brings out the natural flavour of fruits and berries—and makes much more delicious Preserves, Jams and Jellies than you can make with all sugar.

In 2, 5, 10 and 20 pound tins

THE CANADA STARCH CO. LIMITED, MONTREAL. 278

TORN FROM THEIR HOMES.

Inhabitants of Northern France Deported to Germany.

Poignant details of the deportation at an hour and a half's notice of 25,000 citizens from the French towns of Lille, Roubaix and Tourcoing by the Germans last Easter, are given in a French Yellow Book.

The Germans' orders were for the people in certain districts of these towns to assemble in readiness for departure at their front doors, and none was to leave the house before 8 a.m. The orders stated that "all protests will be useless and any one trying to evade deportation will be pitilessly punished."

The victims in all cases were chosen arbitrarily by the officer in charge of the deporting party.

The Yellow Book continues:

"The measure caused the greatest anguish and despair among the population of the unhappy districts, while in some cases it led to madness.

"Men especially suffered torture at seeing their wives daughters and children of both sexes over the age of fourteen led away.

"The protests of mayors and other officials went unheeded.

"At Roubaix the Prussian Guard refused to participate in the raids and the work had to be done by the Sixty-Fourth Regiment from Verdun.

"A large proportion of the young women taken belonged to the servant class. When those deported were conveyed to the railway station and loaded into the cattle trucks they kept crying: 'Vive la France,' and singing the 'Marseillaise.'"

The Paris Temps affirms in substance that it is now up to the neutrals to insist upon the observance of the conventions signed by them and by the belligerents.

A change of pasture is good for both the pasture and the stock.

Keep the calves in at least during the day time. If they must be out, let them have the run of a grass paddock at night. Nothing will retard the growth of the young calves more than fighting flies in the hot sun.—The Farmer's Advocate.

A little grain and a little summer silage would not come amiss now on most farms. Grain-fed stock usually produces more milk and better gains when the pasture begins to dwindle.

Don't forget to keep the watering trough well filled. An animal will do better with a comparatively short pasture and an abundance of water than with plenty of pasture and a poor supply of this necessity.

Many a girl has given up an easy job at a good salary for the sake of working all the rest of her life for her board and clothes.

The average amount of milk supplied to calves at this season is by no means enough to quench their thirst. See that they get water besides.

ON THE FARM

Spraying Stables.

Even in Summer there is a certain amount of disease in herds of cattle, and oftentimes contagious diseases have to be overcome, which renders it essential that stables be sterilized. To secure reliable results, the work must be done throughly, as half measures are of no use. The following method, given in the Cape Times (S. A.), should prove effective in most cases:—

In the first place, remove all manure, litter, loose, rotten boards and other things, and scrape the floor clean. Sweep the ceilings and boards and walls free from cobwebs, dust and dirt. Wash the feed boxes, mangers, halls and partitions with hot water containing enough lye or washing powder to move the dirt. Scrub all these places vigorously with a stiff brush.

Then spray the walls, ceilings and floors with bichloride of mercury solution (1-1,000) or 5 per cent. carbolic solution (not crude). Flush the floors with a saturated solution of iron sulphate or a solution of chloride of lime (1 lb. to 3 gallons of water).

Spray the interior of the feed boxes mangers, halls and partitions with the 5 per cent. solution of carbolic acid. This is done for the reason that there is danger of poisoning the animal if the bichloride of mercury is used for a spray upon those structures which the animals can lick with their tongues. The carbolic acid is absolutely harmless if used in a 5 per cent. solution.

A whitewash applied to walls, ceilings and partitions, will add to the cleanliness of the shed. To make a 5 per cent. solution of carbolic acid use one part by weight of pure carbolic acid to 20 parts of water. Add the carbolic acid to a gallon of moderately warm water, stir vigorously, then, add enough more warm water to make up the amount. The solution can be applied by spray pumps, sprinkling cans, or with a brush.

In the mixing and application of bichloride of mercury, it must be remembered that this disinfectant is extremely poisonous when taken internally, not only to cattle, but also to man. All of the buckets, tubs, pumps, etc., which have been used in applying the solution should be thoroughly scrubbed with soap and rinsed with clean water before being used for any other purpose.

The mercury solution must be used with caution about the feed boxes, mangers and stanchions for fear of the cattle contracting mercurial poisoning by licking the spots covered with it. For this reason it is advisable to use the carbolic acid solution on the feed boxes and mangers and the bichloride of mercury for the walls and ceilings.

To make up the bichloride of mercury solution (1-1,000), use one-eighth of an ounce of corrosive sublimate to a gallon of water, or one half ounce to four gallons. The addition of a small amount of sal-ammoniac will cause the corrosive sublimate to about one gallon of moderate sublimate to dissolve more easily. It is advisable also to add the corrosive sublimate to about one gallon of moderately warm water containing the sal-ammoniac. Stir thoroughly, and after all the particles have been dissolved, add enough clear water to make the required amount.

To make a saturated solution of iron sulphate, as much of the sulphate should be dissolved in the water as possible. The copperas should be put in a barrel or some such thing, the water poured on and the solution allowed to stand for a day. The liquid above the sulphate of iron will be the saturated solution, which is to be used on the floors and gutters.

Chloride of lime solution is used in the proportion of one pound of lime to three gallons of water. It is a very good disinfectant for floors, gutters and partitions and can be applied with a brush, sprinkling can or bucket.

Directions for Using Pepsin.

Two drachms of Soluble powdered Pepsin (1 to 3,000 test) are sufficient to coagulate 1,000 pounds of milk. Dissolve the pepsin in water in the proportion of three ounces of water for each two drachms of pepsin, using preferably a round-bottomed cup or bowl as a container. The water must be at a temperature of 105 degrees F. When the water is added it must be stirred immediately and continuously, or it will become a sticky mass, very difficult to dissolve. After being thoroughly stirred it is well to pour the liquid from one vessel to another so as that there is no undissolved pepsin adhering to the vessel. It is a good plan to add at first only enough of the water to make a creamy paste. Stir until smooth and then add the full amount of water. A few drops of hydrochloric acid added to the water helps to dissolve the pepsin. Dilute the above in the same quantity of water as is used with rennet extract before adding it to the milk. It is advisable to dissolve the pepsin at least half an hour before using. The acidity and temperature of the milk should be the same as when rennet extract is used. If rennet extract is available it is recommended to use half the usual quantity with half the above quantity of pepsin, mixing the pepsin before diluting with water.

Scala Pepsin of the same strength (1 to 3,000) may be used according to these directions, and in the same proportion. If either Soluble Powdered Pepsin or Scala Pepsin is of different strength the quantity used must be varied accordingly. For instance, if the strength is 1 to 6,000, only half the quantity should be used.

Great care must be observed to keep the stock of pepsin from the slightest dampness. Store in a dry place and keep tightly covered. If it gets damp it will cake and become insoluble and useless.—Dairy Division, Ottawa.

Live Stock Notes.

If you want to make porkcheaply make use of plenty of clover, alfalfa, rape, or some other form of green feed.

Beef raising has come back to its own and the dairyman is not the only man who can show a profit from his farming operations.

This is an opportune time to keep all the good females for breeding purposes. The outlook for live-stock husbandry never was brighter.

The man, or group of men, not showing enough interest in good stock to purchase and look after a good pure-bred sire will not likely make the best of a sire given to them for nothing.

Where sufficient feed is assured for winter it might be better to keep the stock up in condition by pasturing the second crop of clover on one field rather than let them down to save the crop for later use.

Win Against the Hessian Fly

TO Escape the Main Attack of the Fly—sow your wheat late. The early brood is most destructive to young wheat and provides for future broods. Your own Experiment Station will tell you this.

THE Best Wheat Yields come from plants that enter the winter strong and vigorous. Your own experience will tell you this.

TO Win Against the Fly, seed late, feed the crop with available fertilizers which will hasten growth to overcome the late start, and secure vigor with consequent resistance to later broods. Use 200 to 400 pounds per acre containing at least 2 per cent. of ammonia. Acid phosphate alone does not give the necessary quick growth and resistance to the fly.

In Farmers' Bulletin No. 640, U. S. Department of Agriculture, fertilizers are recommended to give vigor to late sown crops and resistance to the Hessian Fly.

Write for our map showing best dates for sowing wheat in your locality; also our Bulletin, "WHEAT PRODUCTION," both mailed free.

USEFUL PRESERVING HINTS

Here's the Way to Succeed in Jam or Jelly Making.

1o—Use ripe—but not overripe fruit.

2o—Buy St. Lawrence Red Diamond Extra Granulated Sugar. It is guaranteed pure Sugar Cane Sugar, and free from foreign substances which might prevent jellies from setting and later on cause preserves to ferment.

3o—Cook well.

4o—Clean, and then by boiling at least 10 minutes, sterilize your jars perfectly before pouring in the preserves or jelly.

Success will surely follow the use of all these hints.

We advise purchasing the Red Diamond Extra Granulated in the 100 lb. bags which as a rule is the most economical way and assures absolutely correct weight.

FOR PRESERVING USE ONLY ST. LAWRENCE RED DIAMOND SUGAR

Dealers can supply the Red Diamond in either fine, medium, or coarse grain, at your choice.

Many other handy refinery sealed packages to choose from.

St. Lawrence Sugar Refineries, Limited, Montreal.

GLAMIS

Miss Sara Beere and Miss Burns, of Hamilton, who have been visiting at Jos Cunningham's, left for their homes last week.

Miss Helen Oliver left on Wednesday for an extended trip to the west. She will visit in Fort William, Winnipeg, Calgary and Edmonton before returning.

Miss Dora Oliver, of Winnipeg, is spending a few weeks at the home of her grandparents, Mr and Mrs MacIntyre.

Miss Margaret McLennan spent a week at the lake, a guest in the MacIntyre cottage.

Mrs John Howson, of West Toronto, Mrs Ruddel, of Georgetown, and Miss Edith Howson, of Clifford, spent some time with the Misses Howson.

Mrs Jas Stewart and Mrs McPherson, of Kincardine, spent Tuesday of last week at the home of Mr J C McIntyre.

Mrs Wood and family, of St Paul, are visiting her parents Mr and Mrs Kenneth McLennan.

Rev Donald MacIntyre and family, of Toronto, are visiting his parents, Mr and Mrs J C MacIntyre. The rev gentleman took the services in the Baptist church on Sunday night.

Rev Mr DeMille attended conference in Galt last week, and the camp meetings were conducted here by Rev Mr Ecker.

Miss Marion McKenzie, of Winnipeg, is visiting her parents, Mr and Mrs Murd McKenzie.

Miss Jennie Stanley and Mrs Pollock, of Grand Bend, Ont. have been visiting at the parental home, both Kincardine.

Miss Martha Pickard, of Guelph, has been visiting old friends in Glamis and vicinity.

EDEN GROVE

Miss Pickney, of Walkerton, is enjoying a week in town, the guest of Misses Lily and Jessie Alexander.

Messrs Abbie Seiler and Pat have arrived safe in the west and are busy in the harvest field. They say threshers get $6 a day. That's about what my school marm got a week, and she was a good thresher at that.

Our town looked like a summer resort on Sunday, Pat taking the lead. The following were Sunday visitors at the home of Mr and Mrs Pat O'Reilly: Rev Father Goodlow, of Chepstowe; Mr Thos Pye and daughter Ruth, Mrs McGarrity and son Peter, of Walkerton; A Hanmore, of Vesta; Mr Wm Desmond, Mr and Mrs John Desmond, of Pinkerton; Mr and Mrs Thos Desmond, cor King and 12th Sts.

As the council apparently could not afford to put down a cement walk to the school, they plowed up a furrow so the kiddies wouldn't get into the road and be run over by the street cars.

Friday is an unlucky day, alright. One of our local autos struck a man near Chepstow, and the other threw a wheel near Dunkeld, damaging the axle. Fortunately nobody was injured. Another auto was secured from Cargill and brought the party home towards morning.

Mr Alex McLean and son John of Paisley, were the guests of Mrs Tennant on Sunday.

John Seiler left Monday morning with a large load of furniture on a 14-mile trip.

Miss Jennie Acton, of Brant, was a Sunday visitor at the home of Mr Angus Blue.

School opens Tuesday morning, with Miss Blanche Powell at the desk.

Mr and Mrs Thos Snaith and Miss Jackson, of Chesley, visited at the home of Mr Wm Fair on Sunday.

We notice the young men were not backward in bringing the young ladies forward Saturday evening. Wonder how they knew there was no ice cream.

Mr and Mrs G Campbell, of Leamington, and Mr and Mrs Robt Perdue spent Sunday at the home of Mr Emery.

Misses Gertrude and Winnie O'Reilly visited Walkerton friends this week.

Quite a number are taking in Toronto exhibition this week.

Misses Lyla and Laura Cunningham, of Glamis, called on their Grove friends Thursday.

Mr and Mrs Cassidy spent Sunday with Dunkeld friends.

John Desmond, of Palmerston, Sundayed at his home here.

Monday being Labor Day, the store will be closed, also the post office except at mail times. Cheap fares on railway to all points.

Miss Hattie Stevens, of Paris, is the guest of Mrs W Todd.

Never mind where Toney is going after the 16th. Where are you going yourself?

Mr Tolton, from the northwest, was the guest of his friend at the home of Mr and Mrs Watson last week.

Mr Herb Allen spent Tuesday with Palmerston friends.

Mrs Fair is visiting Palmerston friends this week.

Philip and Jim Sperling, of Cargill, visited friends in the Grove on Friday, and took in the social evening and dance in the Masonic hall.

Mr and Mrs Cruickshank (nee Mabel Watson) are spending a short time at the home of Mr and Mrs Jas Watson, Fairview Farm, before taking up their new home in Detroit.

The Misses Reid, after enjoying a couple of months with friends in this vicinity, left Friday for their home in the west.

Mr and Mrs Rosseau and Mr and Mrs A McKeeman enjoyed a few hours Friday evening the guests of the Cheverlot, near Dunkeld.

SECOND CON ELDERSLIE

Allan Vancise and Edna Allen are spending this week with Bervie friends.

Mrs T Nicholl is at present under the doctor's care, suffering from nerve trouble.

Miss Mary Green has returned from a six weeks' visit in Toronto, Brampton and other points.

Miss Lamont, of Owen Sound, recently visited her sister, Mrs Geo Addison.

The school at S S No 12 has been re-painted and walls kalsomined and everything put in tip-top shape for the little pickaninnies to resume their studies next week.

Thos Smith, sr, left on Tuesday morning on a trip to the west. His many friends here wish him a safe journey and a pleasant visit.

The hum of the threshing machine is again heard in this section, reminding us that the harvest is over. Rich Jefkins is the first to be threshed out. The crops are so light that threshing this season will be like play to the farmers as compared to last year.

Mr and Mrs W E Lubbock, of Mimico, spent last week at the home of J B Allen.

Mrs H McKindless had the misfortune last week to fall and sprain her ankle.

R Begg, of Port Elgin, has the contract of re-building Dawson's mill dam, and there is a gang of men out at present. Owing to the water being high they are finding it a difficult job to build a coffer dam.

Mr and Mrs A McCulloch, of Queen Hill, spent Sunday with friends here.

J McKindless has been poorly for the past week suffering from the intense heat.

Mr and Mrs A Robertson, Mrs McLean and Miss Jane Robertson, of Stayner, Rev and Mrs F Brown and son Edwar of Keady, Mr and Mrs H Ferrier and family, of Bervie, all attended the funeral of the late Mrs Jas Allen on Saturday last.

Mrs T Wright, of Waskeda, Man, who has been visiting friends here for the past two months, left on Tuesday for Toronto and Peterboro to call on friends there before returning west. Last week she received word that their crops at Waskeda had been completely destroyed by hail.

Mrs J B Allen, Mrs W Lubbock and Miss M Burrell visited Paisley friends one day last week.

Alex Anderson of Scone, has received official notice that his son, Pte Duncan Anderson, was seriously wounded, also another son Jack, who is still in England, has been laid off with an attack of pleurisy.

After an illness extending over six months, Mrs Jas Allen passed peacefully away on the evening of Aug 23rd, in the 80th year of her age. Mrs Allen, whose maiden name was Catherine Robertson, was born in Middleville, New York, in the year 1836. When a child she came with her parents to Nottawasaga, Ont, where she resided until she was married to Jas Allen about 57 years ago. They made their home in Stayner for a short time and then came to the 2nd con Elderslie, where they resided for two years and then went to the United States where they lived for six years. During the civil war their property was completely destroyed so they came back to Elderslie, and with other pioneers of this township took up the hardships and labors of farm life that converted the forest into the cultivated and well equipped farms of the present day. They lived to enjoy the comforts of a good home in old age, her husband having predeceased her only six years. Grandma Allen, as she was commonly called by those who knew her best, was loved by all and her demise is deeply lamented. She will be much missed in the neighborhood, especially in the home circle among the grandchildren. But as the reapers were busy gathering in the golden grain, the angel reaper called at her earthly home and garnered in the sheaf that was ripe for the heavenly harvest. She leaves to mourn her loss one brother, Andrew Robertson, of Stayner, three sons and three daughters, namely: Mrs Geo Weir, of Gore Bay; Thomas, of Barrie Island; Mrs Jas Vancise, and con Elderslie; Wm John, on the homestead; Mrs Henry Ferrier, of Bervie, and Robert, at Peace River, Alta. The remains were laid away on Saturday afternoon in the family plot, Chesley cemetery. Rev Mr Hall, of Sarnia, assisted by Rev F Brown, of Keady, conducted the service. The sympathy of this community is extended to friends and relatives.

ELORA ROAD NORTH

Pte John McArthur was home from Camp Borden for the week end.

Miss Florence Sponge of Ellengowan spent last week at Mr John McDougall's.

Mr Ed Collins is putting a cement wall under his barn.

Mrs Wm Beech has been at Burgoyne for few weeks with her mother, Mrs Miller, who is very ill.

Mr Andrew Miller was up to his ranch at Sauble Fall.

PINKERTON

A very successful lawn social, under the auspices of the Y P S was held at the home of Mr D Pinkerton on Wednesday evening of last week, when a large crowd of young people spent a very pleasant evening playing games on the lawn.

Miss Mary Desmond nurse at St Michaels Hospital, Toronto, is spending holidays at her home here.

Miss McLean is visiting her sister, Mrs Fitzsimmons.

Mr Fred and Miss Ellen Gibb spent a few days at Inverhuron.

Pte Edgar Garland of the 209th Battalion, in training at Camp Hughes, Saskatchewan, visited his home here for a few days. Edgar looks well in his uniform and expects to go over seas this fall.

Miss Aileen Pinkerton returned from Kitchener on Tuesday.

GIRL COULD NOT WORK

How She Was Relieved from Pain by Lydia E. Pinkham's Vegetable Compound.

Taunton, Mass.—"I had pains in both sides and when my periods came I had to stay at home from work and suffer a long time. One day a woman came to our house and asked my mother why I was suffering. Mother told her that I suffered every month and she said, 'Why don't you buy a bottle of Lydia E. Pinkham's Vegetable Compound?' My mother bought it and the next month I was so well that I worked all the month without staying at home a day. I am in good health now and have told lots of girls about it."—Miss CLARICE MORIN, 22 Russell Street, Taunton, Mass.

Thousands of girls suffer in silence every month rather than consult a physician. If girls who are troubled with painful or irregular periods, backache, headache, dragging-down sensations, fainting spells or indigestion would take Lydia E. Pinkham's Vegetable Compound, a safe and pure remedy made from roots and herbs, much suffering might be avoided.

Write to Lydia E. Pinkham Medicine Co., Lynn, Mass. (confidential) for free advice which will prove helpful.

LOVAT

Mrs Wilson, of Davidson, Sask, is down on a visit at the home of her mother, Mrs J Barrie.

Mr and Mrs John Metcalf were visiting at Paisley for a few days.

Mr Brownscombe has been installing some new machinery at the brick and tile yards.

Miss Maggie Mills is visiting her parents.

The new bridge on the Teeswater river on the townline Brant will be built by contractor Jas McKinnon.

Miss Grainger, of Cargill, was a guest of her friend, Mrs E Brownscombe.

CHESLEY

The Chesley Public School Board has turned down a request from the Canadian Defence League to petition the Minister of Education to establish cadet training in our public schools. Evidently the members of the Board considers there is enough military training going on in this country.

David McGill of Saskatoon, Sask., is visiting his parents, Mr and Mrs Dan McGill of and con. Elderslie, after an absence of 13 years. He has been an inspector for damages by hail for the past four years and he says the damages by hail will be greater this year than for the last three years. He came through a portion of U S on his way home and says from 30 miles west of Winnipeg and to Minnesota and North Dakota the hot weather is fully played havoc with the crops. Then came the heavy rains which battered down the crops making them almost impossible to harvest. Owners of threshing machines are demanding $200 per day. In Saskatchewan where the crops have been destroyed by hail they are fairly good. Mr McGill expects to visit here for a couple of week.—Enterprise.

Smut in Wheat

In treating seed winter wheat for smut the best results have been obtained by immersing the grain for twenty minutes in a solution made by adding one pint of formalin to forty-two gallons of water. This treatment is simple, cheap and effectual. Other experiments show the great importance of using large, plump, sound, well matured seed of strong vitality.

The Bread that is Making Paisley Famous

Why perspire and fire yourself over a hot stove and before a hot oven when we are so willing to save you? We realize that HOME-made baking is very good, but for a month or two we think you could enjoy our mixtures. We would appreciate a trial order.

Have you ever figured out what your recipes cost you? Some morning have a piece of paper handy when you are baking and find out what it cost to bake that delicious cake. You will be surprised and wonder why we can make our pastry as cheap as we do.

We have added a new line to our Ice Cream Department, in the form of the Vortex Sanitary Paraffine Paper Soda and Sunday Cups and Holders to eliminate the work of dish-washing.

Do not forget we are always in the market for fresh Fruits in season and always fresh Groceries. Farm produce taken.

—Homeseekers' excursions, all rail, every Tuesday, and via boat Owen Sound every Wednesday up to end of October, to all points in Canada's north-west. For tickets, maps and all information call at the old reliable C.P.R. agency, McFarlane's old stand. Paisley.

—We now have in use in our dairy a Champion Cooler, with which we cool all milk to 40 degrees before bottling. This kills all animal heat quickly and aerates all milk thus improving the flavor and keeping quantities. We deliver twice a day during the summer. J. Milne, Paisley Dairy.

—Have you seen the list of special prizes offered at Port Elgin Fair on Sept 21 and 22? Drop a card to the secretary Port Elgin, and you will receive a prize list free. The list contains a larger number of prizes this year than in the past, and prospects are that the fair will be better than ever.

A New Suit for Paisley Fair

Over one hundred different patterns to choose from. Blue and black all guaranteed. A beautiful line of black and blue serges for ladies' suits, and latest styles to choose from. Prices to suit everybody. Fit and workmanship is our hobby. G. B. IRWIN.

—Mr Mel McArthur was home from Guelph over Labor Day.

—Mrs Bain and Mrs A Sinclair were down to Clifford on Monday.

—Mr Sargent of Hamilton is visiting at Mr Wm Nichols', Greenock.

—The Misses McLeod, of Detroit, are visiting their sister, Mrs Geo Craig.

—Miss Mitchell of Toronto is a visitor at the home of her aunt, Mrs Thos. Johnston.

—Mr Wilfrid Tanner, of Elderslie, has gone to take charge of a school near Hepworth.

—Mr Douglas Aspland is a visitor at the home of his grandmother, Miss McNiven, Albert St.

—Miss May Warren will teach in a school near Chatsworth, and left for there on Monday.

—Mrs I A Hubbell and children, of Windsor, are visiting her mother, Mrs D McGillivray, 12th Bruce.

—The Red Cross workers of S S No 15, Bruce, shipped this week—25 pairs socks, 22 flannel shirts, 6 pillows.

—Miss Erma Porter has returned from Southampton Beach, accompanied by her aunt, Mrs Stauffer of Walkerton.

—Mr Peter Hargreaves and Miss Beula Hargreaves are visitors at the home of their grandmother, Mrs Robt Fleming.

—Mrs H Wade and son have left for their home in Regina, accompanied by her mother, Mrs Arch Sinclair, 10th Bruce, as far as Toronto.

—Miss Povey and daughter, Miss Povey, of Mely, were visiting at the home of the former's brother, Mr R C Pearce, Lockerby, over the holiday.

—Don't wait until all the cars in this section have all the passengers they can carry before you make arrangements to attend Port Elgin fair on Sept 22nd.

—Mr and Mrs John Hargreaves, Mr and Mrs W A Hargreaves and son Ivan motored up from Toronto and spent Sunday visiting Paisley and Elderslie friends.

—Mr and Mrs Mickle of Gravenhurst, Mr and Mrs Cane and son of Newmarket motored to Paisley last week. They were guests of Mr Putnam and Mr Fleming.

—There was a good fall show at Port Elgin last year and there are more members this year than ever. If you miss it you will miss one of the best local fairs.

—Walkerton council calculated to get along with a 28 mill tax rate for 1916, but finding they could not make the financial grade on that gear, decided to strike the rate at 41 mills, which is one mill less than in 1915.

—Mr Wm Thornburn, barrister, of Winnipeg, is here on a visit to his mother and friends. Mr Thornburn has acquired a large practice in the western metropolis and was a delegate to the Dominion Bar Association meeting held in Toronto this year.

—Mr Jas Sparrow is over from the U S on a visit to relatives and friends here, a guest at the home of his cousin, Mr Wm Sparrow, Goldie St. The visitor spent part of his boyhood days in Paisley, and learned the trade of blacksmith with the late Jos McDonald, so is something of an old-timer in this settlement. He left here in 1865 and went to Minnesota. Since then he has worked and lived in every State in the Union.

Soldiers Home

Bandsman Harry Jack, Sergt Wilmer Sparrow, Sergt W Woodcock, Pte Louis Grant, of the 164th, from London; Signallers Stewart Dewar and Harold Blue, from Toronto.

Has Gunshot Wound

Mr Rich Christie, of 10th Bruce, wrote to British headquarters inquiring as to the welfare of Pte Geo Kempster, and a reply was received by cable that the soldier was suffering from a gunshot wound in the leg, and is progressing favorably.

Would Take a Good Dog

A party of autoists going southwards picked up a sleek looking bull terrier they spied on the Elora road north, and were taking him along as a prize. The owners were advised of the sudden departure of their valued canine by a bright young lad who had noticed the "lift," and the party were intercepted at Paisley and relieved of their spoil.

We Want to See You

At Paisley Fair. This fair is representative of this region's agricultural, horticultural, industrial and mechanical progress. It is here you will learn new wrinkels—imbibe new ideas—see new things—that will pay you well, aside from the pleasant time that you'll have. The directors have tried to make it interesting, attractive and instructive all through, and invite you to enjoy the exhibits outside and inside on fair day.

INSECTICIDES!

Church's Bug Finish, Bug Death, Paris Green, Arsenate of Lead, Hellebore, Insect Powder, Hess' Instant Louse Killer, Hess Dip and Disinfectant for flies, Eureka Fly Killer, Zenoleum, pheno, Chloro.

Won Bowling Prizes

A rink from Paisley club, composed of Messrs L C Spofford, Geo Craig, Wm Rae and I Shoemaker (sk) won second place in the Association event at Hanover bowling tournament this week. They played eleven games, losing only two. The prizes are four fumed oak book cases. The trophy winners were a Clifford rink skipped by Dr Black.

Red Cross Supplies are Appreciated

The following supplies were sent out in the September shipment by Paisley Woman's Patriotic League: 49 pairs socks, 36 flannel shirts, 4 suits pyjamas, 2 nightshirts, 21 personal property bags, 36 Turkish towels, 12 huckabeck towels, 24 pillow cases, 6 rolls bandages. Donations of jam, honey or jelly will be received any time in September, to be left at McArthur's bookstore. One of the most generous contributors of money and articles is Mrs Wm Rose, of 8th con Bruce. Last year she sent in two dozen sealers of jam, upon which she placed a label with her name and address. Not only Mrs Rose, but every other lady connected with the League will be gratified upon reading the following letter received from one of the consumers of that jam:

Moore Barracks Canadian Hospital,
Shorncliffe, Kent,
August 1st, 1916.

DEAR MADAM—The boys of Ward 15 thank you very much for your contribution of excellent jam. Such thoughtfulness on your part is greatly appreciated. Thanking you very sincerely,

PTE HARRY DUNSTONE,
48th Canadians.

Smaller in Size and Higher in Price

—All over the continent the movement to reduce the size of newspapers because of advancing paper prices and the scarcity of newsprint makes headway. Toronto morning papers at three dollars a year will soon be in a class by themselves. Many not so good now cost five and six dollars a year across the border.—Toronto Globe.

THE EARL'S SECRET

Or. a Martyr to Circumstances.

CHAPTER V.—(Cont'd).

It is difficult to analyze the lady's disposition, and probably the reader at some future time might be dissatisfied and inclined to pooh, pooh our opinion of Lady Ethel if we pronounced it thus early. Suffice it to say she was fond of reading, was deeply attached to her brother, and would have been equally so to her parents had they encouraged or even permitted her to be so.

Perhaps such great personages as the Earl and Countess of Lackland were too exalted to possess those emotions of affection and tenderness which wail to the lot of commoner people.

If they did not possess them they managed to conceal them with infinite art, and no one could accuse them of the common folly of wearing their hearts upon their sleeves.

Assuredly Lady Ethel must have had a warm heart and a generous nature or the coldness of her exalted parents would have chilled her and rendered her cold likewise.

That she was not, the reader will soon perceive.

Thousands of persons envied my Lord and Lady Lackland. Never did their carriage roll through the streets or their names appear in the paper among the fashionable intelligence but hundreds exclaimed:

"I wish I were a Lackland."

But not one of the envious many knew what they were really envying.

There is a skeleton in every house; there was one ever present in all the great and small houses of Lackland. Sometimes he kept discreetly to his cupboard; at others he stepped boldly out and rattled his bones, and grinned in a manner horrible to see.

Oh, yes, reader, other people besides yourself have a skeleton, and there are some persons unfortunate enough to have two.

If we entered the Grosvenor Square mansion, say on the morning after that memorable little dinner party at Mildmay Park far away in Penruddle, we might perhaps have caught a glimpse of that skeleton starting out of the cupboard.

Lord Lackland was seated at the morocco-lined writing table in his own room, with a few newspapers, a decanter of light wine, and a box of biscuits before him.

The door opened, and a young man, no other than Lord Fitz Plantagenet Boisdale, entered.

There was a flush on his fair face, and a look of doubt and distrustful nervousness in his rather simple blue eyes.

"Good-morning, sir," he said, holding out his hand.

"Good-morning, Fitz," said the earl, extending two fingers and glancing coldly at a chair which stood near the table ready for any visitor on business. "You are ten minutes behind your time."

"I am very sorry, sir," said the boy, for he was little more in years or appearance, "but I'd promised to ride with Ethel this morning, and I forgot it until after I left you, so I went down to the stable to tell Markham to saddle the two bays, and he kept me to talk about that chestnut— —"

The earl interrupted what promised to be a lengthy explanatory excuse with his cold, little bow, and glanced at the ormulu timepiece on the table.

"It is of little consequence to me; I am obliged to leave at the half hour to meet an appointment, therefore I shall only be able to give you the time I promised to give you. You wished to speak to me."

"Yes sir," said Lord Fitz, looking down at his boots nervously, and then up at the ceiling. "I wanted to ask you if you could let me have a couple of hundred pounds beyond my allowance to—to—pay a few debts, which —which, of course, I could not help running into while I was in Paris."

Lord Lackland walked to the bureau, and took out a bundle—a very small —of banknotes; from this he counted out a hundred pounds' worth, and, holding them in his hand, said:

"Here are a hundred pounds; I cannot give you any more, for a very good reason, I cannot afford to do so."

Lord Fitz looked up with a simple stare which extended his mouth as well as his eyes.

"I cannot afford to do so," said the metallic voice. "It is quite time that you should be placed in possession of the truth as regards my—I may say our—pecuniary position. I ought, perhaps, to have informed you of the condition of my affairs long earlier, but consideration for your feelings deterred me. Fitz, the estates in London, in Italy, in England, are mortgaged to their fullest extent. The revenue is nearly swallowed up by the interest, and there is so little ready money in the house that if the servants were to demand their wages I should not be in a position to pay them."

Lord Fitz stared, pale and aghast.

The skeleton was out grimly walking before him. For the first time Lord Boisdale learned that he was heir to a rich crop of embarrassments, and that the great Earl of Lackland, his father, was a poor man.

"Great Heaven!" he exclaimed. "You don't mean to say that, sir!" unlike his father, showing emotion unmistakably.

"I have said it," replied the earl, "and now you know my—our—real position, Credit, Fitz, has kept our heads above water for a great many years—credit alone. How much longer it may do so I cannot say, but I can estimate if your bills for necessaries amount to the sums which they here represent."

"What—what's to be done?" asked Lord Fitz, staring at his calm parent with bewildered horror. "We must sell some of the places, the horses, the diamonds, by jingo!—the —the—everything!"

"We cannot sell what is sold or out of our hands already. You do not understand business matters, unfortunately, or you would at once comprehend that the houses, the land, being mortgaged, and the diamonds at the —ahem—pawnbroker's, it is simply impossible to make further money of them."

The young man jumped up and took three paces up and down.

"But," said he, suddenly, and with incredulity upon his face, "I saw my mother wear the diamonds at the last drawing-room."

"Not exactly," said the earl, "paste imitations only; the real are in the possession of a pawnbroker. But if you have any taste or inclination for an investigation or examination of our finances, you have my permission to examine the documents which you will find in this case— —"

"Great Heaven, no!" said young Fitz. "I don't doubt your word, my lord; I'm only stunned, knocked all of a heap as one may say. It seems so incredible! Why, by jingo, the fellows are always asking me to lend them money—and—and saying how rich we are; and you say that— —"

"That I cannot afford to let you have the other hundred pounds," said the earl, replacing the bundle in the bureau. "While we are upon the subject, which is too painful to be renewed, I will remind you that you are heir to the estate, and that it is in your power to clear it of the encumbrances."

"In mine!" exclaimed Lord Fitz.

"Exactly," said the earl. "By a judicious marriage. You must marry an heiress, Fitz. There are a number of them to be met with; and a great many are extremely anxious to purchase position with their money. I speak plainly because the matter is too serious for mere insinuation. You must marry well, and—ahem—so, of course, must your sister."

He glanced as the timepiece significantly.

The young lad rose at the hint and took up his hat.

"I won't detain you any longer, sir," he said. "I am very much obliged for —for the money, and, of course, I'm very sorry to hear such a bad account of the estate."

"Exactly," said the earl, with a cold smile, looking out of the window. "You are riding that bay, I see, and I trust you will take care of it. I had to pay a heavy bill for the mare whose knees you cut last month. Let me beg of you to be careful with the bay."

"Certainly, sir," said Lord Boisdale, and with a very uncomfortable air he left the room.

As he passed into the corridor a sweet, clear voice rose from the hall.

"Fitz, are you coming?"

Fitz smothered a sigh, and as cheerfully as he could, replied:

"All right; here I am," and ran down the stairs.

In the hall stood Lady Ethel Boisdale.

"How long you have been!" she said, with a smile. "Are you not ashamed to keep a lady waiting? Well I think brothers imagine they are privileged to take advantage of a sister."

As she spoke her eyes noted the disappointment and embarrassment on his countenance, and when they were mounted and turning out of the square she said:

"What is the matter, Fitz? Will not papa give you the money?"

"No," said Fitz, with an uncomfortable laugh. "no; and supplies an excellent reason for not complying with my modest request. Oh, dear me, I'm very miserable. There! don't ask me what about, because I shan't tell you. It would only worry you, and you're too good a fellow—I mean girl—to be worried. Let's put these lazy animals into something sharper; I hate this square and these streets."

Lady Ethel touched her horse gently, and in silence they cantered into the park.

"Look," said Ethel, presently, "who is that lifting his hat?"

"Eh? where?" said Lord Fitz. "Oh, it's Bertie Fairfax and Leicester Dodson—capital fellow, Bertie. Let's pull up a minute, Ethel."

And with a smile of welcome he steered his horse near the rails, upon which the two gentlemen who had raised their hats were leaning.

One of them, Leicester Dodson, we know, the other was a tall, splendidly built fellow, with a frank, genial face and a noble yet peculiarly free and graceful bearing.

"Hello, Bertie! Good-morning, Mr. Dodson. Delighted to see you, Ethel. you will let me introduce my friends, Mr. Dodson, Mr. Bertie Fairfax. Bertie, Mr. Dodson, this is my sister, Lady Ethel Boisdale."

Both the gentlemen raised their hats; Lady Ethel bent her beautiful head with her rare smile.

She always liked to know any friends of her brother whom he chose to introduce, for with all his simplicity he was too wise to all into the mistake of showing her any but the most unexceptionable of them.

Bertie Fairfax looked up at the lady and then at the horse. He was a connoisseur of both.

"It is a beautiful day," he said, opening the conversation with the usual weatherwise remark. "Your horse looks as if he enjoyed it."

"Which he does," said Ethel. "I am sure I do. It is delightful—walking or riding."

"I should prefer the latter," said Bertie Fairfax, "but my horse is lamed temporarily and I am compelled to pedestrianize."

"What a pity," said Ethel, adding, with her sweet smile, "Perhaps the change will be good for you."

Bertie Fairfax looked up at her with his frank eyes to see if she was quizzing him, then laughed musically.

"Perhaps he thought so and tumbled down on purpose. It doesn't much matter—I like walking, but not here; I like more room. My friend, Mr. Dodson, however, insisted upon this promenade. He is an observer of human nature—a cynic, I regret to say—and finds material for bitter and scornful reflection in the gay and thoughtless crowd. Are you going to Lady Dacefield's ball to-night?"

(To be continued).

GETS BIG FAMILY PRIZE.

Paris Woman Raises 19 Children—Seven Boys at Front.

Etienne Lamy, member of the French Academy, has recently given $100,000 to found prizes for the largest families among the peasants of France. He has suffered more criticism for limiting his prizes to Catholic families than praise for his generosity. As long ago as 1841, a philanthropist, M. de Heredy, founded a prize, $600 every second year, to be given to the most deserving family in the city of Paris.

This prize has just been awarded to Mme. Devierey, a widow, aged 66, who has raised a family of fifteen (eight boys and seven girls) out of the nineteen born to her. She has provided for their needs by selling vegetables from a pushcart.

Mme. Devierey was born in Paris and her husband, a mason, died soon after the birth of her nineteenth child. One of her boys is paralyzed, but the other seven are at the front, as are two of her sons-in-law. The youngest, belonging to the class of 1916, has just been invalided from Verdun. He has been at the front fourteen months and has been cited in the order of the day. Another son has also been cited and a third was wounded. The prize winner has already twenty-eight grandchildren, one of her sons having supplied fourteen.

Of Course.

"I am going to name my new store 'the Vortex.'"

"Why that?"

"People will just naturally be drawn into it."

Whipping does not always separate a boy from his bad habits.

A gentleman is one who does not discriminate in his courtesy.

ON THE FARM

Growing Buckwheat.

Buckwheat is the least common of the grains. Probably because of the fact that it has been overshadowed by other crops more universally grown, buckwheat has, until recently, been given but little attention by experiment stations and consequently the crop has been quite frequently grown in a very haphazard way. Buckwheat has been called a "poor land" crop. It is true that buckwheat will frequently produce a profitable crop on land too poor to produce either oats or rye profitably, but it will do still better if given good treatment. In fact, the New York Experiment Station finds that "buckwheat when grown on poor land responds well to moderate dressings of even low grade fertilizer and many farmers who do not use fertilizer on other crops find it profitable to purchase it for buckwheat."

Soil Requirements.

Buckwheat is well suited to light well-drained soils, such as sandy and silt loams. It needs but little lime, growing well in acid soils without lime, where alfalfa and red clover could not succeed. The plant seems unusually active in taking plantfood from poor and rocky soils. It needs a larger proportion of phosphoric acid and potash than of nitrogen, since large growth of straw is not desired so much as profuse bloom and early filling of seeds.

When to Plant.

Under the most favorable conditions, buckwheat will mature in 10 weeks, but the average time is about 12 weeks. It does best when seeded late, but is very sensitive to cold and is killed by the first heavy frost. The aim should be to bring the crop to maturity just before frost. In the latitude of southern New York this means that the crop should be planted about the first week in July.

Buckwheat should be sown on land prepared as for corn. It is an excellent crop to sow where corn has been planted, but where a stand has not been secured. Best results are obtained where the land is plowed early, but fairly good results can be obtained by sowing immediately after plowing if the land is well prepared.

Buckwheat is usually seeded at the rate of three to five pecks per acre. If a drill is used and the seed is of good vitality, as little as three pecks may be sufficient if the soil is fertile. It is best to use a grain drill, but good results can be secured by broadcasting the seed and harrowing it in.

Three varieties of buckwheat are commonly grown—Japanese, Silver Hull and Common Grey, the first two being the most generally used. Japanese has a dark-colored seed, while the Silver Hull has a smaller seed, glossy or silvery in appearance. These two varieties are of about equal value, when yields are considered.

Because of its plantfood requirements and the exceedingly short season of growth, manure has not been found satisfactory as a fertilizer for buckwheat. Fresh manure contains a larger percentage of nitrogen than it does of phosphoric acid, just the reverse of what buckwheat needs.

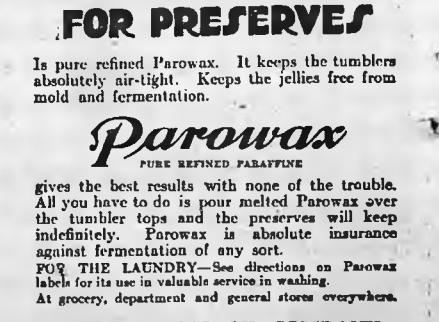
For most profitable results on stony and sandy soils under normal conditions about 200 to 300 pounds of a fertilizer containing one to two per cent ammonia, ten to twelve per cent phosphoric acid and two to four per cent potash should be applied at time of seeding. On loam or other soils rich in organic matter, use less ammonia. Buckwheat, unlike other grains never straightens up after it once falls. Potash makes the stalks strong and prevents lodging. Under present abnormal conditions a fertilizer analyzing about one percent of ammonia, eight percent phosphoric acid and one percent potash may be substituted or the potash may be omitted entirely in which case the phosphoric acid should be increased somewhat.

One grower says, "I like to raise buckwheat because it is the only grain for which I can buy fertilizer on a 90-day note and pay for it out of the crop it makes."

Buckwheat blooms for three weeks or longer and the grain ripens unevenly. This often causes quite a loss during a wet harvest season or from early frosts. Phosphoric acid causes grain to form and hastens maturity, hence an available supply of this plantfood hastens ripening, thus preventing loss from early frosts and exposure ordinarily caused during wet seasons while waiting for all the grain to ripen.

The farmer does not need expensive machinery for harvesting the buckwheat crop. An old-fashioned cradle, although it requires hard labor, does the harvesting well. The drop reaper, however, is one of the most satisfactory machines for harvesting. Cutting is begun as soon as the first blossoms have disappeared, or often just before the first frost is expected. Buckwheat will mature its seed in a few days, if, after cutting, the crop is left in loose bundles where they are dropped from the cradle or reaper. It should then be set up in small shocks and tied near the top with some strands of the straw bent upward from the sides of the shock. The cut buckwheat is usually left in the field in the shocks until threshing time, when it is drawn in and threshed either with the flail or by machinery.

The farmer need generally have no fear of this crop being damaged by either insect enemies or fungous diseases, as the buckwheat plant is but little affected by either. It is an excellent crop for destroying weeds and for renovating and putting the soil in fine mellow condition, and when properly handled could be grown with profit on many more farms.



Hot Weather Rules.

1. Lead lightly, and drive slowly.
2. Stop in the shade if possible.
3. Water your horse as often as possible. So long as a horse is working, water in small quantities will not hurt him. But let him drink only a few swallows if he is going to stand still. Do not fail to water him at night after he has eaten his hay.
4. When he comes in after work, sponge off the harness marks and sweat, his eyes, his nose and mouth, and the dock. Wash his feet but not his legs.
5. If the thermometer is 75 degrees or higher, wipe him all over with a damp sponge. Use vinegar water if possible. Do not turn the hose on him.
6. Saturday night, give a bran mash, lukewarm; and add a tablespoonful of saltpeter.
7. Do not use a horse-hat, unless it is a canopy-top hat. The ordinary ball-shaped hat does more harm than good.
8. A sponge on top of the head, or even a cloth, is good if kept wet. If dry it is worse than nothing.
9. If the horse is overcome by heat, get him into the shade, remove harness and bridle, wash out his mouth, sponge him all over, shower his legs, and give him two ounces of aromatic spirits of ammonia or two ounces of sweet spirits of nitre, in a pint of water; or give him a pint of coffee warm. Cool his head at once, using cold water, or, if necessary, chopped ice, wrapped in a cloth.
10. If the horse is off his feet, try him with two quarts of oats mixed with bran, and a little water; and add a little salt or sugar. Or give him oatmeal gruel or barley water to drink

"SILVER GLOSS"
(EDWARDSBURG)
"Silver Gloss" has been doing perfect starching in Canadian homes, for nearly 60 years. In one pound packages and six pound fancy enamelled tins.

MORE MUNITIONS WORKERS.

"The deliveries of munitions from Ontario are running far behind the quantities promised, and we are seriously apprehensive if the existing conditions cannot be bettered."

Such is the statement of the Imperial Munitions Board to the Provincial Organization of Resources Committee which has been conducting a preliminary investigation int labor conditions in munitions plants in Toronto, Hamilton and other Ontario cities.

This shortage in production has been largely due to the fact that there has been a very inadequate supply of labor sufficiently skilled to make deliveries effective. This has hampered factories turning out steel forgings and component parts, which, in turn, have adversely affected operations at the machining and assembling plants. But these, also, have been unable to make deliveries as scheduled, even when they are fully supplied with forgings and component parts, largely owing to the shortage of labor.

The Provincial Committee, therefore, in bringing these facts to the attention of the public, desires:

1. To call the attention of all those engaged in the munitions and allied industries to the importance of their service and the great responsibility resting upon them as individuals to co-operate and do all in their power to secure a steady and increased supply of munitions for our forces at the front.

2. To urge upon all those who are ineligible for overseas service and who are anxious to voluntarily do their best in this great struggle, (especially those now engaged in non-productive work or in the prorduction of commodities which are luxuries more or less,) to consider employment on munitions as their next best service to going overseas;

3. To urge Women's Emergency Corps to register women for munition work or for work which will release men for the munitions industry.

There is no need to emphasize the importance of the highest possible production of munitions. The lives of our boys and the success of their endeavors depends upon it. Statements from the highest authorities in Great Britain and from the front bear no small tribute to the part that munition workers are playing in bringing the war to a successful conclusion.

The Officer Commanding a brigade of Canadian artillery, who returned from the front last week, said: "The Germans will never break through now. Before, they had munitions, guns, equipment—everything but the "nerve". All we had was "nerve". But now we have good guns and plenty of good ammunition. Whereas formerly we were limited to 10 to 15 rounds a gun a day, now we use 500 to 1,000 a gun, and one week lately we kept going all week night and day. It's all important that the supply of munitions be kept up and increased."

Efforts to use women in munition plants are meeting with good success. In a number of places women have registered, and are waiting to be called to work as soon as necessary arrangements can be made. In Welland, for instance, 95 woman responded last week to the call of a factory there which needs 150 to 200 women. Fifty per cent. of those who answered the call had never been in regular employment before.

Wages in munitions plants should be such as to attract a large number of workers. Four to seven, and even ten dollars a day is not uncommon, for men employed on the piece-work basis.

"If you can't be the man behind the gun, be the man behind the man behind the gun."

ABSORPTION OF HOLLAND.

The German Wolf and the Dutch Red Riding Hood.

How comes it that the best cartoons drawn against the Germans are the work of a "neutral"—Louis Raemaekers, the Netherlander? Perhaps geography enters into the answer of this question. Holland borders both on Germany and Belgium. Hollanders and Belgians have sometimes disliked one another, yet they are, after all, alike in a good many respects, and Holland has ministered to many suffering Belgians, and there is no way of transmitting distrust into sympathy like doing one's one-time enemy a considerable service.

Obviously, what Germany did to Belgium she might still do to Holland even though the likelihood of that catastrophe diminishes as German strength is gradually diffused. The possibility of a clash between Holland and Germany, says the New York Tribune, seemed greater in the spring of 1916, and especially in the second month of the great Verdun attack, than at any earlier stage of the war, and the Netherlanders (mobilized from the outset) suddenly adopted extra precautions on the coast, and, more especially, on the Schleswig-Holstein frontier.

German manufacturers would naturally profit enormously by an arrangement bringing within their tariff walls one large section of agricultural Europe. The Dutch are persuaded that if Germany ever swallows them she will find the dish decidedly indigestible. Moreover, the independence of Holland during the present war has been an advantage to Germany in at least two ways. Supplies have been brought into the partially blockaded empire through Holland as well as through neutral Denmark; Rumania and via Scandinavia. Mr. W. C. Bullin argues that Holland has also been worth four army corps to Germany, giving as she does a perfect protection to Germany's right flank. Neutral nations have their uses, even from the Teuton standpoint.

Germany has invented a curious fusion of sentimental, racial, geographic and economic arguments for establishment of a European hegemony of non-Germanic nationalities. This clap-trap has excited, but has not imposed upon, European intelligence. Already Holland has paid part of the price of proximity to Germany. During the first year of the war she spent $10,000,000 for "extraordinary requirements." At the present time more than 250,000 Dutchmen are under arms, and the national debt has been raised nearly one-half by reason of military and naval expenditure, loss of trade, Belgian relief and the destruction of shipping. Since the opening of hostilities on Germany's part between two and three hundred vessels belonging to Holland and the Scandinavian neutrals have been sunk by the Germans in the North Sea.

BABY'S GREAT DANGER DURING HOT WEATHER

More little ones die during the hot weather than at any other time of the year. Diarrhoea, dysentery, cholera infantum and stomach troubles come without warning, and when a medicine is not at hand to give promptly the short delay too frequently means that the child has passed beyond all aid. Baby's Own Tablets should always be kept in homes where there are young children. An occasional dose of the Tablets will prevent stomach and bowel troubles, or if the trouble comes suddenly the prompt use of the Tablets will cure the baby. The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

INFANTILE PARALYSIS.

By Chas. M. Bice, Denver, Colo.

The present epidemic of Infantile Paralysis in New York, Montreal, and other Eastern Cities, and its liability to spread, for it is very contagious, brings us face to face with one of the most mysterious plagues of childhood the world has ever seen.

Science seems powerless before it, and so far, has found no certain remedy. Closely allied with the terrible plague, is the ever-present pest of the common fly, chiefly concerned in spreading the contagion.

Dr. Simon Flexner, of the Rockefeller Institute, in his advice about protecting children from this dreadful disease, called medically polioneyelities, directly charges the fly with carrying the virus of the disease on its hairy legs and feet. He also says that the disease is conveyed by the bite of the common stable fly.

In fantile paralysis is caused by a virus which will pass through the finest filter without leaving a germ behind such is its minuteness. No bacillus can be detected in this. The virus blows about in the dust, and is after scattered about by coughing and sneezing, besides being carried by flies. Hence the necessity of protecting foods of all kinds from exposure, and keeping every thing perfectly clean with which children come in contact.

Dr. Flexner first demonstrated the existence of this virus by inflecting monkeys with portions of the spinal cord of children who had died from the disease, and he is preparing an antitoxin for it, but so far, has not been successful.

He found that the virus makes its way through the mucous membrance of the nose to the brain following the olfactory nerve which is descends to the spinal column, setting up an inflammation in the "anterior horns" of the spinal cord which is the specific cause of the disease.

It is not fatal in the majority of cases, but except where the patients receive the best skilful treatment, it produces most cruel deformities including extreme curvature of the spine, and twisted and useless limbs.

It starts with a peculiar drowsiness and duliness quite unnatural in children. This first stage lasts usually three days and is accompanied by high fever.

It sometimes passes off doing no harm but often it increases and runs into a mildly stuporous condition, with final onset of the acute stage, which is followed in a day or so by paralysis.

By this time the child may be found lying on its back, with the head usually to one side—the eyes entirely closed, and having on its face a tired wilted expression. From this condition the child can be aroused suddenly, by a gentle touch of an extremity. If the leg be lifted only a little, the child will show an expression of annoyance, rather than distress, and if the leg be the paralyzed one, the child often tries to free it from the examiner's hands by twisting the shoulders. This procedure, we are told by the Drs. is surprisingly common, and is often accompanied by a bored look and a sorief whine, and when left alone the patient at once lapses into the drowsy state.

Paralysis comes on unheraled; in the morning a child can move its arms freely—a few hours later it is found lying quietly, as before, but when it rolls over one arm falls back limp.

No one can tell just when the paralysis is going to strike—sometimes it seems to prefer an arm, but often it strikes in one or both of the lower limbs, or even in the face, if the injury be in the brain. The eye muscle is sometimes attacked, depending upon which part of the brain is injured.

A sore throat may indicate this dreaded diseases, though mistaken as the result of a cold.

When death occurs in these cases, it is generally caused by the failure of the muscles that control the act of breathing. These muscles are the diaphragm and the intercostal attached to the ribs. If only one set is paralyzed the child may live, but if both are involved breathing ceases and death occurs. The average mortality of this disease varies from 10 to 20 per cent.

So little is known of the disease, that even when paralysis has set in, it is impossible to tell whether it will progress to the point of causing death, or merely of making a cripple, or will pass off leaving the child uninjured.

The Drs. admit they have discovered no specific form of therapy by which paralysis can be prevented, as the inflammatory process may be hastened. Hence, about the only way is to prevent the spread of the disease to other persons, and by giving such remedies as are known to procure relief, and that often restore muscular power in other afflictions, preventing deformities.

The general treatment is similar to that of other infections, such as scarlet fever and the like.

Wrapping the affected limb in cotton wool blankets, and hot water bags is a great comfort. If deformities make their appearance, then a mechanical treatment, or massage is helpful, and muscle training is essential. Children should be quarantined for safety.

Healthy children are more liable to the disease than feeble children.

When a man is down his enemies stop kicking him and his friends begin.

Freak Fashion Seen in London

One of the latest and most odd of the freak fashions that have appeared on London's society promenades is this "cap and bells" hat which suggests a Robin Hood effect. Hanging from the rear of the hat is a streamer of graduated plush balls.

Made in Canada

On the Safe Side.

Mother—If I give you a dime, Charlie, will you keep it to put in the plate Sunday or spend it selfishly on yourself?

Charlie—I will let you know, mamma, after you have given it to me.

Nearly everything that Canada makes, mines or grows is exhibited each year at the Canadian National Exhibition.

Suspicious.

Laura (as her lover is about to start on a tour around the world)—My dear Robert, promise that you will write to me from every town you visit.

Robert—Laura, is it love that prompts you to say that, or are you merely collecting postage stamps?

Minard's Liniment Cures Diphtheria.

His Patient.

The young doctor and his friend, the drug clerk, were sitting at the club window when a richly dressed woman passed.

"There goes the only woman I ever loved," the young M. D. sighed.

"So?" the other asked. "Then why don't you marry her?"

"Can't afford it," the doctor replied; "she's my best patient."

Sore Eyes Granulated Eyelids, Eyes inflamed by exposure to Sun, Dust and Wind quickly relieved by Murine Eye Remedy. No Smarting, Just Eye Comfort. At Your Druggist's 50c per Bottle. Murine Eye Salve in Tubes 25c. For Book in the Eye free ask Druggists or Murine Eye Remedy Co., Chicago

Sour Dinner.

"Was it much of a dinner?"

"I should say it was. There were seven different kinds of forks at each plate."

Minard's Liniment for sale everywhere.

Railway Mileage Increasing.

The increase of railway mileage in Canada for the year ending June 30, 1915, was 4,787 miles, bringing the total railway mileage of the Dominion up to 35,582 miles. The increase during the last twelve years has been 87 per cent. In addition to the lines completed there were, on June 30, 1915, 1,161 miles of railway contracted for and 432 miles completed, but not yet classified as under operation.

St. Isidore, P.Q., Aug. 18, 1894.
Minard's Liniment Co., Limited.
Gentlemen,—I have frequently used MINARD'S LINIMENT and also prescribe it for my patients always with the most gratifying results, and I consider it the best all-round Liniment extant.
Yours truly,
DR. JOS. AUG. SIROIS.

The Period of Adjustment.

"Why do they say that the first year of married life is almost the most difficult?"

"Because that's the time she has to get used to the fact that he isn't making all the money in the world and he has to adjust himself to the discovery that his little angel has a temper and uses it at times."

Minard's Liniment Relieves Neuralgia.

Home Privileges.

In one of the hotels where non-residents are admitted to the table d'hote luncheon and dinner a man and a woman sat at a little table in a corner. He had a meek look and such sad eyes, while she had a vituperous tongue, which she was using ably.

When their quarreling had disturbed every other diner in the room the manager approached them.

"Pardon me, madam," he said to the lady, who was obviously the senior partner in the combine. "I must beg of you to be more restrained. If you what to continue your—or—discussion please do it outside."

"Rubbish!" snapped the lady tartly. "You advertise this as a family hotel, don't you?"

SAVE THE WESTERN CROP.

No Lack of Men to Gather in Canada's Greatest Asset.

Statistics from the Government authorities show that the wheat crop this year promises to be greater than ever but the problem that is troubling the minds of the farmers in Western Canada is how can the crop, be harvested? That is the predominant problem of to-day in Canada apart from recruiting for overseas. The railways are providing special excursions to carry the men to their destinations but the effort will almost be fruitless if the labor does not come forward for the work in view. There is no disguising the seriousness of the situation this year as many men having gone to the front or are on their way. Despite this fact, however, there should be no lack of men to gather in Canada's greatest asset if the country is to still continue the good work of the past two years in helping the Mother Country in the greatest war the world has ever known. While Canada has sent some hundred thousand men to the war there are still hundreds of thousands more-left who have not enlisted and who are not assisting in the making of munitions. These have now an excellent opportunity of doing a little bit at home to help the war abroad. Canada's crop is of vital necessity to Great Britain and her Allies so that everyone who helps in gathering in the harvest will in some measure be assisting in carrying on the war to a successful issue. The effort will not only be a health giver but give excellent remuneration.

You who are not helping your country directly are invited to take the trip West for a couple of months and not only earn three dollars a day and board but also feel that you are helping the powers to end the war successfully for our side. Any railway agent will furnish you with all the information to enable you to go to Western Canada and do your little "bit" by helping the farmers to harvest the great crop on which so much depends.

Minard's Liniment Cures Burns, Etc.

LORD KITCHENER'S RELIGION.

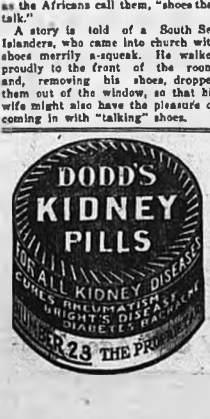
His Conduct at Cairo Proved a Real Tonic to That City.

Rev. J. H. Molesworth, late incumbent of All Saints', Cairo, writes as follows on Lord Kitchener's religion:

"No one could be long in his company without realising that he was a man who viewed life seriously. I may illustrate this from the effect he produced on society in Cairo, when he went there to take up his position as British Agent and Consul General. Cosmopolitan places like the capital of Egypt, which are largely the haunts of pleasure, are often given over to a frivolity which is not seen in cities of commerce and business. There is frequently a relaxing of morals beyond what is witnessed elsewhere, and a general air of undiscipline, and it goes without saying that in such places Sunday and Sunday worship are at a discount.

"It would be foolish to assert that Cairo was free from these vices. But the coming of Lord Kitchener instantaneously wrought a change. He was known to be a man of unswerving devotion to duty, of disciplined life, of resolute purpose. Instinctively we all braced ourselves up, and it was as though a tonic had been administered to the place. So far as his work permitted, Lord Kitchener was regular and punctual in his church attendance, and this at once told beneficially upon the Sunday habits of the community.

"He was president of All Saints' Church committee, and I never remember his omitting to take the chair, even when hard pressed by State business.



"Earl Kitchener was indeed a type of that simple, manly, straightforward Christianity which we associate with the best English laity, which does not trouble itself indeed about subtle questions and controversies, but rests on the broad facts of revelation, and in simplicity practises its tenets."

SHARED UP TALKING SHOES.

Unlike Us, the South Sea Islanders Like a Squeaky Shoe.

Like the native Africans, the South Sea Islanders are very proud if they can get hold of a pair of European shoes. They are especially gratified if they acquire a pair that squeak, or, as the Africans call them, "shoes that talk."

A story is told of a South Sea Islanders, who came into church with shoes merrily a-squeak. He walked proudly to the front of the room, and, removing his shoes, dropped them out of the window, so that his wife might also have the pleasure of coming in with "talking" shoes.

PAISLEY, SEPT. 6th, 1916

LOCAL AND DISTRICT NEWS

Near Death's Door

Our townsman R R Grant, V S, has been lying in a very critical condition since Saturday last when the surgeon's knife disclosed the fact that he is afflicted with cancer of the liver in so malignant a form that a remedial operation could not be performed. For some time past Dr Grant had been failing away from his usual robust state of health and toward the end of last week his condition became so serious that after a consultation the local doctors decided to call Dr Lovey of Guelph. Although the conclusion arrived at was that the patient could not possibly pull through, yet so long as life remains there is hope entertained that a turn may come for the better, and all sincerely join in that hope. The two absent sons, Austin and Harry, are expected home from Edmonton by Wednesday night.

Epworth League Convention

The annual convention of the Epworth League of the Walkerton District was held in the Methodist church here on Monday, and was attended by quite a large number of delegates. Three sessions were held and numerous addresses given on various subjects. In the evening a very interesting address was given by E N Manner, returned missionary from China. The following are the officers appointed for the ensuing year:

President, Rev W W C Almack, Cargill
1st Vice-Pres, Mr R Lockhart, Hanover
2nd " Alice Thompson, Paisley
3rd " Clara Stroud, Eden Grove
4th " Mr Cadwallader, Southampton
5th " Mrs J Busby, Port Elgin
Sec'y, Miss Williamson, Chesley
Treas, Miss Flossie Cowens, Walkerton
Conference Rep., Jas Thompson, Paisley

Special Prizes for Paisley Fair

HORSES

By W H Davison—for road gelding or mare 3 yrs old in single harness to buggy, 1st $3, 2nd $2.

DONATIONS

R R Truax, M P, $5 00
Wm McDonald, M P P, $5 00
John Purvis, $5

BORN

JARVIS—At Grace Hospital, Toronto, on Aug 25th, to Mr and Mrs Chas Jarvis (nee Miss Margaret Shouldice), a son.

Logie—Gwynne

Mr John Logie, manager of the Paisley Creamery and one of our most popular bachelor citizens, has finally decided that it is not the whole of life to travel the whole journey through alone and this week took unto himself a helpmeet and companion, in the person of Miss Jessie Gwynne, formerly of Walkerton. Their marriage, which took place on Tuesday, is the culmination of a nice little up-to-date romance, they having first met in Guelph hospital a few years ago, when Mr Logie entered the institution as a typhoid fever patient and Miss Gwynne was a nurse. The wedding took place on Tuesday and was a quiet one. THE ADVOCATE joins heartily in the congratulations.

Labor Day Sermon

In Knox church on Sunday morning Rev Mr Little preached sermons bearing upon the relation of the church to the labor problem. His text in the morning was taken from Christ's first sermon in the synagogue, as given in Luke 4: 18, 19: "The spi it of the Lord is upon me, because he hath anointed me to preach to the poor; he hath sent me to heal the broken-hearted, to preach deliverance to the captives, and recovering sight to the blind, to set at liberty them that are bruised, to preach the acceptable year of the Lord." This, said the speaker, was Christ's programme, the platform upon which he was prepared to stand before the people. Christ was not a revolutionist in the popular sense of the term. He was never found starting an agitation against the government, but his work had a tendency to revolutionize the whole position of the human race, for the benefit of the toiling classes, the poor, the oppressed, the broken-hearted, the imprisoned, the bound. These are all identified as the laboring classes, not only in Christ's time, but to-day. In a community such as Paisley there are no threatening problems of labor. If there is any need of reform it is in the late hours in our stores, especially on Saturday nights, which is due to the lack of consideration on the part of the public, as the purchasing could just as well be done earlier in the day. The great problems of the world have largely arisen out of the labor question. With the gr at factory systems that has arisen there are the sweating shops, where hundreds of thousands of women and children are drawn into the maelstrom of toil and long hours by which they earn only a mere pittance in wages. The consequence is the problem of childhood sinned against. The children become old men and women before their time, because the burdens of old age are cast upon young shoulders. Competition is brutless, and greedy corporations do not protect lives of workers as they should. Workmen cannot afford the protection of life insurance, and when one meets with sudden death in the factory those who were dependent upon his wages must go into the factory to earn. The General Assembly's social reform is recognizing the work to be done in influencing a movement for healthier conditions for working people, &c. Political partisanship flutters away many to farms, as the party men will not change their vote for anything. When the cast iron voting system is broken down then will members begin to think the voter must be business, and realize that their tenure of office does not altogether depend upon the party support. They who work either by hand or by head are after all the lords of creation, inasmuch as those who have fallen into wealth by inheritance or good fortune. The workers are God's nobility. Christ taught socialism, which is just another word for world brotherhood. The duty of the church is not only to look after the spiritual salvation of the individual, but also to change his earthly environment. The social service of the church aims to carry out the whole programme of Christ, to give men a chance to live, and to eliminate the curses by which the workingman is beset. One of the greatest burdens of the workingmen of the world has been the drinking custom, and this is now nearly done away with. Another intolerable burden has been graft and greed, and it is the producer—the toiler—who has to pay for graft. Were the patronage system cut out it would help to starve out the dragon of greed and graft. It is the duty of the church to stand shoulder to shoulder with the laboring man for higher wage, an honest wage and for shorter hours. He has the right to have books, papers and leisure hours to spend with his family. Christ sympathizes with the workingmen because he knew what it was to work with hand and head and mind. There is nothing too good for the working man. He should have the richest blessings that our glorious civilization can provide, and we should have a share in providing them for him. Labor organizations sometimes feel that the church stands aloof from the workingman instead of being his friend. Militarism, that hideous thing that has soaked the world in blood, should be buried so deep that it will never rise again. To be armed does not insure peace, else we would not now have the greatest war in the history of the world. Neither does commercialism make peace. The only foundation of lasting peace is the brotherhood of Christ becoming general, and when it has spread over all nations, then will the toilers' burden be lifted.

HIS HEART BADLY AFFECTED

"Fruit-a-tives" Soon Relieved This Dangerous Condition

682 GERRARD ST. EAST, TORONTO.

"For two years, I was a victim of Acute Indigestion and Gas In The Stomach. It afterwards *attacked my Heart* and I had pains all over my body, so that I could hardly move around. I tried all kinds of Medicine but none of them did me any good. At last, I decided to try "Fruit-a-tives". I bought the first box last June, and now I am well, *after using only three boxes*. I recommend "Fruit-a-tives" to anyone suffering from Indigestion".

FRED J. CAVEEN.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

Dominion Alliance Meeting

Sunday last was Field Day in Bruce County for the Dominion Alliance, when speakers addressed meetings in every town or village and occupied many pulpits at church services. Rev Mr Bell held forth in the Methodist church in the forenoon, and in the afternoon a mass meeting in the town hall was addressed by Mr F S Spence, the Toronto Alderman who is widely known as a temperance orator. Mr Spence said that this is a wonderful age in which we are living, for great things are being accomplished that will be talked of for centuries to come. Every age has its great events. Over 1900 years ago Christ gave himself for the redemption of sin, and to-day hundreds of thousands of men are giving themselves for the advancement of their fellowmen. The speaker took his hearers back to a time in the existence of man before history began to be written, when might was right, and things accomplished as they liked, and followed customs that have since been swept away as great wrongs. Slowly the idea has evolved that man ought to do what he can for his fellowman, and this has become the dominating principle of society, also that no man should do that which would wrong his fellows. Across the water in Britain there is to be found the greatest aggregation of statesmen the world has ever seen who are devoting their efforts to making it better for the other fellows. To attain such an end it was necessary to veritably break the neck of the House of Lords. Tradition, Water-loo and all other declaiming episodes in the field of war were the conclusions of other struggles for the same object. The present war is a world-wide conflict between the selfishness that would do as it likes and the unselfish section of humanity which would do what they can for their fellows. In the homes of our own communities there are empty chairs that will never be filled, because there is in the red blood of our people that which impels some to go forth to fight and sacrifice their lives that none may do that which wrongs their fellowmen. Naturism and the liquor traffic are twin brothers, and both are due to be driven off the earth. The fight against the liquor traffic makes the most wonderful story of progress that has ever been told. Temperance reform has taken hold of the hearts of the people of the whole world. In 1832 the first total abstinence pledge was framed and the first teetotallers' society organized. The liquor traffic then had a great hold upon the people. For some time after it was considered an unsafe risk to insure the life of a man who would drink only cold water, or a crank who would have nothing to do with strong drink. The temperance movement made slow progress until at last the church woke up to the fact that it was her war. The speaker then traced the line-up as it formed against the liquor evil, up to the entry of Russia and Italy, considered the most uncivilized, most barbarous and most drunken nation—into the ranks of those who opposed the traffic. The Greek church in that country woke up and organized such an effective campaign that by the time the war broke out the Czar was ready to sign a proclamation against selling strong drink. The progress on this continent has been marvellous. In 1827 there were only three prohibition States in the U S, and to-day there are nineteen in which the manufacture as well as the sale is prohibited. More than sixty million citizens of the Union are now living under prohibition laws. Statistics show that last year the consumption of liquor in Canada was at the rate of gallons per head, in the U S 22 gallons, and Britain 40 gallons, and in Belgium 57 gallons per head. In 1914 the total quantity consumed in Canada was 67 million gallons and in 1915 less than 57 million gallons. To-day Nova Scotia and New Brunswick are wholly dry. In French Quebec there are 1158 municipalities, and in 975 of these prohibition is carried. Ontario closes its bars and liquor stores on Sept 16. We should be thankful that there is man at the head of the Provincial Government who is big enough to take the problem in hand, and that he is backed up by the other side of politics. Manitoba, Saskatchewan and Alberta have now no licensed bars. British Columbia votes on the question on Dec 14th, and it is possible that before the end of 1917 the last bar in Canada may be closed. Reviewing the local situation, Mr Spence recalled that in Bruce Co there were at one time 205 licensed places, while to-day there are but 29. Grey county had 135 and now but 18. To-day some might say that the job is done, we have prohibition here. But he voiced the warning that while prohibition is here to stay until June, 1919, it might thereafter be defeated, not by the strength of the liquor party, but by the failure of the temperance people to do their duty. Refusing to the work of the Dominion Alliance, Mr Spence said the organization held 2,800 services like this last year, and the expense of carrying on the work was $80,000. More than $70,000 would be required this year again. Mr Spence has few equals as a platform speaker, and his address received very close attention from the audience. Mr Norris, bass soloist of Toronto, sang two numbers in excellent style, Miss Nettie Trelford playing the accompaniment. The chair was occupied by Mr H B Putnam.

FALL OPENING OF

COME TO OUR FALL OPENING AND LET US SHOW YOU THE NEW FALL STYLES.

OUR STORE IS A "FASHION CENTRE." WHEN YOU BUY YOUR THINGS FROM US YOU CAN DEPEND UPON THEIR BEING CORRECT IN SHADE, STYLISH IN DESIGN, HIGH QUALITY.

OUR STORE IS ALSO AN "ECONOMY CENTRE." ALTHOUGH OUR GOODS ARE THE "UP-GRADE" ONLY, WE KEEP OUR PRICES DOWN. RATHER THAN DO A LITTLE VOLUME OF BUSINESS AT BIG PRICES, WE WANT TO DO A BIG BUSINESS AT LITTLE PRICES.

Only a Few of the Many New Goods:

Raincoats for Ladies

Dark Plaid Raincoat, in ¾ length, set in sleeve, with belt, price $12.00

PURDY'S LIVERY

Rates Reasonable, and every effort made to satisfy

F. PURDY

A PROMINENT NURSE SPEAKS.

Many Nurses in Canada and Elsewhere Say the Same.

Chatham, Ont.—"Being a nurse I have had occasion to use Dr. Pierce's Favorite Prescription quite a lot. I always recommend it to my patients and it has been a wonderful help to many of them. I never knew of a case where it failed. I have a patient who is using it now and she is doing fine since taking it. I have taken it myself and got the very best results. I consider it the best medicine there is to-day for women who are ailing."—Mrs. Edith Moore, 30 Degree St., Chatham, Ont.

THAT WEAK BACK

Accompanied by pain here and there—extreme nervousness—sleeplessness—may be faint spells, chills or spasms—all are signals of distress for a woman. She may be growing from girlhood into womanhood—passing from womanhood to motherhood—or later suffering during middle life, which leaves so many wrecks of women. At any or all of these periods of a woman's life she should take a tonic and nervine prescribed for just such cases by a physician of vast experience in the diseases from which women suffer.

Dr. Pierce's Favorite Prescription has successfully treated more cases in the past 50 years than any other known remedy. It can now be had in sugar-coated tablet form as well as in the liquid. Sold by medicine dealers or trial box by mail on receipt of 50 cents in stamps. Dr. Pierce, Invalids' Hotel, Buffalo, N. Y.

Dr. Pierce's Pleasant Pellets clear the complexion.

These Spex have overcome the misty vision that creeps on with the advance of years, and now I am the most pleased man I know."

A pleased patron is the best advertisement.

We give free tests and guarantee satisfaction.

A STOPPED WATCH

—one that will not go AT ALL—does not cause as much bother as one that runs now fast, now slow, in an erratic fashion.

The first you don't pretend to depend upon—the other is a constant source of annoyance.

Most people can afford a watch, but no one can afford an uncertain fast and slow one.

And when our Repair Department is so close at hand there is really no excuse for carrying anything but an accurate time-piece, no matter what the first cost was.

Consult us about any watch troubles that may arise.

I. SHOEMAKER

Jeweler and Optician

When the War is Over

The country that will recover most quickly from the effects of the war is the one that will produce the largest quantity of the best quality. Agricultural societies are working this fine and fall fairs are one of the methods used. You will be helping a good cause by sending the membership fee of $1.00 to F W Elliott, Sec'y of Port Elgin Fair, and in return you will receive two free tickets to the fair and the chance to secure some of the large number of prizes offered.

Children Cry FOR FLETCHER'S CASTORIA

Bad State of Roads

The condition of the roads in the rural sections is causing more criticism than has been heard for years. The roads in Arran Twp are in a lamentable state and very little has been done this year to improve them. Some grading has been done but what is mostly needed is gravel. Nets and pitch-holes are so frequent that outside of the temperature one would imagine he was travelling on a drifted road in the winter. It is really too bad that a fine township like Arran should neglect the important factor of good roads. Arran has not got the proper system of making good roads. Statute labor should be done away with and road making given over to men who make a business of that work. Derby Tp has abolished statute labor several years and to-day that township possesses some of the finest roads in the province.—Tara Leader.

A THOUGHTFUL GIFT

Send THE ADVOCATE to the absent member of the family or to the distant friend. It is as good as a letter from home and is a weekly visitor. You can better imagine how the home paper is appreciated when you are absent yourself and a copy is forwarded to you.

—"Advertising is the education of the public as to what you are, where you are, and what you have to offer in the way of skill, talent and commodity. The only man who should not advertise is the man who has nothing to offer the world in the way of commodity or service." - Elbert Hubbard.

Better to Bear the Ills we Have

A Missourian from the Ozarks recently went to the city to see the sights. He had never been in a big city before. He walked down the street, looking in the windows and enjoying himself hugely. At one place he saw a sign reading "Woman's Exchange." The Mountaineer hurried into the store, which was filled with various specimens of feminine handicrafts.

"Is this the Woman's Exchange?" he said.

"It is," answered a very tall, very gaunt and very spinster-like person behind the counter.

"Be you the woman?" and eyed her keenly.

"I guess I am."

"Wal, I guess I'll keep Sal," he said, apologetically, hurrying out.

—THE ADVOCATE office has a splendid stock of wedding stationery and calling cards on hand, also the most beautiful styles of type, so we are able to turn out the finest lines of wedding invitations, announcements, cards, etc. We can do work fit to invite the best of people to a wedding, so why pay two or three times as much to city printers or engravers?

"THERE ALL◆THE HONOR LIES."

There is as much honor in being able to lay off a straight row, use the hoe dexterously and operate the mower or the binder correctly as to be a mechanic, a carpenter, a lawyer, a doctor or a merchant. It is not the kind of work one does, but the manner in which the work is done, that makes character.—Kansas Farmer.

WORK OF SHEEP SHARPS.

They Fool You Sometimes by the Way the Animal Is Trimmed.

Preparing sheep for the show ring is the work of an expert. The skilful shepherd can hide the defects of his sheep so that they are not apparent to the eye, and only the experienced judge can discover them. Sheep cannot be judged without feeling of them. The judge must use his hands far more than his eyes. The novice is often deceived by the way the sheep is trimmed. Often the sheep appears to be fat when it is thin.

After the sheep have been trimmed they usually are blanketed. The blankets keep them clean and prevent them from rubbing their wool, which

Photograph by Oregon Agricultural college.

JUDGING SHEEP AT AGRICULTURAL COLLEGE.

would undo all the work of the shepherd. They also prevent the pulling of the wool by thoughtless persons. Persons who are ignorant of the effect upon the sheep and also on the temper of the shepherd delight to bury their fingers in the soft wool and then pull it. Wherever they poke their fingers into the wool a hole is left which is very hard to fill up. The wool is pulled out and gives the fleece a frazed appearance. The worst thing, however, is the large bruised spot which is made where the wool is pulled.—Kansas Industrialist.

Cowpeas and Hogs.

Cowpeas sown in corn and the entire crop pastured down by hogs gives one of the very best returns that can be secured from the land.

through three wrecks, a holdup and a fire. Well, one day Jim was a little behind his schedule and made like anything for the next stop. There was a crossing right in front of him. He saw that everything was clear, as he thought, and went right ahead, when all at once out of a clump of trees there ran a little golden haired fairy right in front of the engine. It was all over in one instant, and when the train stopped Jim dropped like a log. It was two months before he crept back again to work. But he could never come to that crossing but he saw the little girl with her hair fluttering in the wind coming out from the trees. And one day he just got off his engine, turned it over to the second man and walked away, never to be seen again until his body was found in the river."—Leslie's Weekly.

An Unspoken Hint.

"Most insulting man I ever knew," exclaimed the man with the breezy personality. "I'm never going to have anything to do with him."

"What has he been saying to you?"

"Nothing."

"What has he been saying behind your back?"

"Nothing. Every time I start to tell him a funny story he looks up at the clock."—Washington Star.

On the Risks.

First Actor (much elated)—Did you see what the critic of The Planet said—that such acting as mine has seldom been seen?

Second Ditto—Essentially that is what The Dayglean says, only it does not go quite so far. The Dayglean says it was the worst he ever saw.—Boston Transcript.

TOWNSHIP OF BRUCE, ONT.

5½% Telephone Debentures

Due 1st June, 1916-1940 as below. Each debenture has interest coupons attached, payable 1st June and Dec.

Assessed value for taxation $1,366,758
Total debenture debt 73,375

Due.	Amount.	Due.	Amount.
1916	$ 659.18	1923	$ 881.14
1919	907.43	1924	908.52
1920	753.43	1929	958.32
1921	775.97	1936	1,011.34
1922	816.53		

Any one or more of the above amounts may be purchased.

The Township of Bruce is located in one of the richest agricultural districts in Ontario. Its finances are in excellent shape.

Such township debentures are regarded as one of the safest and most attractive investments.

DR. A. H ALLEN
DENTIST, formerly of Toronto.
Graduate of the Royal College of Dental Surgeons of Ontario. Honor Graduate of Toronto University Dental Department. Master of Dental Surgery. Graduate of the Dr. Morgans' Post Graduate School of Prosthetic Dentistry, New York. Office over Moore's Drug store, opposite the Post Office.

VETERINARY

R. S. GRANT, V. S., Graduate of Ontario Veterinary College, Toronto. Government Inspector of contagious diseases and apply Tuberculin test in cattle. Also inspect export stock and issue certificates for same. Operates for sominant for milk fever. Office and residence opposite the old Northern Hotel.

GIRLS WANTED

For office work to fill the places of men who have gone or are going to the front. Young women can render the country real service by preparing to take positions in banks and business offices.

Special courses of training in Bookkeeping, Shorthand and all other commercial subjects now in progress. Students admitted any time. Illustrated catalogue free.

NORTHERN Business College
OWEN SOUND, ONTARIO
C. A. FLEMING, Prin.

Sign and Carriage Painting, House-Decorating and Wall Papering

The undersigned is prepared to do all classes of work in the most stylish, neat and satisfactory manner. Orders executed promptly. Will be glad to receive your patronage, whether in town or country.

W. H. BAKER, Paisley

Court Saugeen, C.O.F. No. 88

MEETS in Oddfellows' Hall on the second Wednesday evening of each month, at 8 o'clock. Sojourning brethren welcome.

A. E. ARCHER, R.S.
W. ARCHER, C.R.

REMARKABLE RECORDS

that were recently made in

ELLIOTT Business College

Yonge and Charles Sts., Toronto

This College was asked to fill 126 positions in July and 117 in in August. The demand will be equally as great this month. Write to-day for our catalogue, which explains the unsurpassed advantages offered here. Students admitted at any time.

W. J. ELLIOTT, Principal

No Room For Neutrals

That pale word, "neutral" sits becomingly on the lips of weaklings,
But to the men whose brains
Find fuel in their blood, the men whose minds
Hold sympathetic converse with their hearts,
Such men are never neutral.
That word stands
Unsexed and impotent wreakers of speech.
When mighty problems face a startled world.
No virile man is central; right or wrong.
His thoughts go forth, assertive, unafraid.
To stand by his convictions and to do
Their part in shaping issues to an end.
Silence may guard the door of useless words,
At dictation of discretion; but to stand
Without opinion is a world which needs
Constructive thinking, is a coward's part.
—Ella Wheeler Wilcox.

—The trouble most auto owners have to keep their cars going. Yesterday we passed of a farmer several miles from here who purchased a car and took it home. In the evening he decided to give it a trial in a 35-acre field. He got it started alright, and after going for a time he endeavored to stop it, but couldn't remember what to do. He continued round and round the field all night until the five gallons of gasoline were used up and the car stopped. It was some joy ride alright. - Fergus News Record.

The Housewife's Corner

Tested Recipes

Pickled Walnuts.—One hundred walnuts, salt and water. To each quart of vinegar allow two ounces of whole black peper, one ounce of allspice, one ounce of bruised ginger. Prick each walnut with a fork. Prepare a strong brine of salt and water, four pounds of salt to each gallon of water, into which put the walnuts, letting them stand nine days, changing the brine every third day. Drain them off, put them on a tin plate in the sun until they become perfectly black, which will be in two or three days. Have ready dry jars, into which place the walnuts, and do not quite fill the jars. Boil sufficient vinegar to cover them, for ten minutes, with spices in the above proportions, and pour it hot over the walnuts, which must be quite covered with the pickle, and tie down and keep in a dry place. They will be fit for use a month and will keep good two or three years.

Watermelon Preserves.—Rind of one large melon. One cup of unslacked lime. Two lemons. Ten cups sugar. Peel the rind and cut in squares, oblongs or any fancy shape. Put the lime in a jar with a gallon of water or sufficient to cover thoroughly. Soak two hours. Wash and drain. Boil the sugar with three cups of water. Slice the lemons thin and drop in the syrup with the rind. Boil until transparent. Fill into jars and pour over the remaining liquid and seal while hot.

"Whole Ripe Tomato Pickles."—Secure large ripe tomatoes, whole, solid and smooth. Pick with a fork in several places; lay in a tub of salt brine strong enough to bear up an egg. When they taste of salt (this usually requires two day's time) lay on a board to drain over night. Next morning put in a tub or other large receptacle, pour enough vinegar over them to cover. Leave in this about three days. Put a layer of tomatoes in a big stone jar; then a layer of sliced onion, alternately, until the jar is nearly full. Heat one-half gallon of good cider vinegar with a bag of all kinds of whole spices in it; lay bag of spices on top of jar; pour the hot vinegar over contents of jar, as far as it will go; then fill up the remainder of jar with cold vinegar. Tie a good thick cloth over top and set in cellar. If at any time the vinegar gets white, turn off and put on fresh vinegar.

Fig Marmalade.—To two pounds of fresh figs add one and one-half pounds of sugar and the juice and grated rind of three oranges and three lemons. Cook until smooth (about three-quarters of an hour), stirring constantly to prevent burning. Figs should be peeled. This recipe will prove a delightful surprise to those who have never tried it. A delicious fig pickle is made by washing and draining figs and cooking till tender in a syrup made from one quart vinegar, one quart sugar boiled with whole cinnamon and cloves fifteen minutes.

Plum Conserve.—Select one basket blue plums and cut into small pieces. Take three oranges, cut the skin into tiny rice and the pulp up into pieces. Add one-half cup chopped walnuts, and one-half cup chopped raisins. Parboil orange peel in a little water. Add to plums, nuts and raisins. Cook until plums are tender, add an equal quantity of sugar and cook until it thickens.

Economy Peach Jell.—After canning peaches take all the parings and pits and put in stewing pan on stove and cover with water and boil till mushy; drain off juice, and to each cup of juice add one cup of sugar. Place in kettle again and boil until it is of proper consistency to set firm. While the juice is boiling take out from time to time three or four tablespoonfuls and place on saucer in cool place, preferably on ice, to cool. If it does not set firmly at the first test, repeat until sample shows the desired thickness. If you desire a tart jell you can add the meats of about twelve peach stones to every quart of juice, the meats to be boiled with the juice.

Canned Vegetables for Soup.—One peck of ripe tomatoes, two heads of cabbage, one dozen carrots (medium size), one bunch of parsley, one-half peck of onions, three stalks of celery, one dozen ears of corn. Scald, peel and mash the tomatoes, chop the cabbage, parsley, onions and celery fine, scrape the carrots and slice crosswise. Boil the corn on the cob for ten minutes, then cut off and scrape. Mix all together, add a small handful of salt to each gallon. If the mixture seems dry add water as necessary. Boil until the carrots are thoroughly cooked, then seal while hot. Add this to soup stock in the winter and it is fine.

Green Tomato Sweet Pickles.—Cut up a little more than a gallon of green tomatoes, place in a stone jar and sprinkle all through with a half-cup of salt. Let stand twelve hours, then drain off the brine. Make a syrup of four pounds of sugar, water enough to moisten and a pint of good vinegar. Spice with a teaspoonful each of cloves, allspice, mace; add several sticks of cinnamon and a pound of raisins. Add raisins to syrup when it thickens and let cook until they look plump; then add tomatoes and cook only a few minutes. Take out and put into glass jars and cover with boiling syrup.

Hospital Grapejuice.—Put grapes over the fire, with just enough water to cover them. Heat slowly until the juice oozes out and the fruit becomes soft. Takes two or three hours. Turn the fruit into a pointed jelly bag and hang it up to drain. To the juice add one-fourth its measure of sugar, and heat it until quite hot for one hour or more, without boiling. Seal in cans. For a drink, dilute one-half with water and serve ice cold.

Small Imperfect Fruit.—When preserving peaches there will always be found small or slightly imperfect ones which do not look as fine as the rest of the fruit. Set these aside for sweet pickle. Scald out a fruit jar; wipe the peaches carefully, do not skin them; then stick into each peach whole cloves, four or five to a small peach. Pack the fruit as tightly as possible in the jars. Then in an enameled ware preserving kettle put on the fire either cider or white wine vinegar with sugar in the proportion of a pound of sugar to a quart of vinegar. Be sure to use an enameled ware kettle, as any other metal will darken the vinegar. Let it boil up hard and skim carefully. Then add a stick of cinnamon and a little mace. Pour over the fruit in the jars and screw on the tops at once. At the end of a fortnight open the jars, pour off the vinegar and scald again. This time there will be a good deal of scum, which must be carefully removed with an enameled-ware skimmer. Let the vinegar boil up once after it has been thoroughly cleared. Pour back on the fruit, screwing down the tops of the jars very tightly.

Things to Remember.

Serve fish for dinner twice a week in place of meat.

Lemon will remove match scratches from paint.

A little green sage placed in the pantry will keep out red ants.

A bit of alum will keep starch fresh for use for several days.

The finest cider vinegar should be chosen for all sorts of pickles.

To clean mirrors, dip a bit of soft cloth into alcohol and rub lightly.

If eggs that are to be boiled are first wet in cold water they will not crack.

Borax will remove the leather stains made by shoes on light colored stockings.

Cleansing with mustard is said to remove the smell of fish from cooking utensils.

Remember there is a wide range of food, as yet inexpensive, from which to choose the daily menu.

A cloth dipped into soda and water will quickly remove all stains from tinware and brighten it.

Add a little salt to gasoline before using it to clean spots on fabrics and no ring will remain around the spot.

When boiling rice add a little lemon juice to the water. This makes the rice white and separates the grains.

Never leave the lettuce leaves soaking in cold water. If the leaves are young this process makes them flabby and tasteless.

Cold chicken left from the roast, cut into dice, mixed with cream dressing and covered with grated cheese, is delicious baked.

Ceilings where blackened with smoke can be washed with common house soda dissolved in water—about four ounces of soda to a large pail of water.

Curtail the quantity of meat used (meat once a day is sufficient, leading scientists tell us—some scientists advocate a meatless diet.)

Extend the flavor of meat by serving with it plenty of gravy and dumplings or vegetables in the form of a stew, salmi casserole, etc.

A good cleaning fluid is made of a bar of castile soap dissolved in boiling water. Add one pint ammonia and two pints clear water and shake.

In making gored dresses for little girls, stitch a long strip of selvedge material down the bias skirt seam of the back, and the skirt will not sag.

When a screw becomes loose, take it out and fill the hole with bits of sponge packed in tightly. Replace the screw and it will hold as firmly as ever.

The whitest stain left on a mahogany table by a jug of boiling water or a very hot dish may be removed by rubbing in salad oil, and afterwards pouring a little spirits of wine on the spot, and rubbing with a very soft cloth.

Use vegetable substitutes for meat, such as combination dishes of nuts and cereals, lentils and rice, dried peas, dried beans—which, although advanced price, are much cheaper than meat.

When potatoes are inclined to turn black in cooking add a few drops of vinegar to the water in which they are boiled. This is excellent as it makes the potatoes beautifully white and mealy.

A successful man is one who makes more money than his family can spend.

THE SUNDAY SCHOOL

INTERNATIONAL LESSON SEPTEMBER 10.

Lesson XI. The Arrest of Paul—Acts 21. 17-40. Golden Text.—Acts 22. 15.

Verse 27. The seven days—A difficult phrase, since our Jewish authorities imply that a Nazirite vow would last thirty days at least. Num. 6. 9 has some similarity, but our knowledge of the ritual usage is not exact enough to clear up the point. The Jews from Asia.—Who would recognize Trophimus.

28. Israel—Compare what was said last week on 2 Cor. 11. 22. The appeal is made to Jews who really have at heart the sanctity of the temple. Against the people—This count is added to that which had proved fatal to Stephen (Acts 6. 13). It means that Paul was always libelling his own people, inducing the universal Gentile verdict upon Jews. We who have his own letters know what to think of the charge. Greeks—The generalizing plural. The story that Paul had been seen with one Gentile could be "relied upon"! Hath defiled—The tense is changed to the perfect, which implies a permanent profanation. The verb (that of Acts 10. 15) suggests that the temple thus became "common," its awful aloofness destroyed.

29. Trophimus—See Acts 20. 4. This Ephesian was a very intimate friend. However little Paul now believed in "holy places," or in any difference between man and man before God, he was not likely to trample on religious sentiment by doing such a thing. Superstition is never to be stroyed by insulting it.

30. Doors were shut—For, of course, the intended murder must not be accomplished in sight of the sacred building, any more than the "price of blood" might be put in the treasury within it (Matt. 27. 6). The priestly conscience is always very particular about technical sins, and never more so than when busy with crime.

31. Seeking to kill—Here clearly "set about killing"; the beating had nothing less in mind from the first. This passage illustrates John 7. 1, where no mere plot is suggested. Came up—To the fort Antonia, built so as to command the temple, during feast times especially. How humiliating to believers in region to read so often in history that the civil power must specially watch against breaches of the peace at times when men are offering special worship to God; Military tribune (margain)—Literally, "commander of a thousand," ten times as many men as a "centurion." Of course this like cohort (margin), is a Greek term for a Roman institution, and is only approximate. Claudius Lysias (see Acts 23, 26 for his name) commanded a division of six hundred men or more.

32. Forthwith—For a sufficient force was always kept under arms; the policing of such a turbulent city was no light task.

33. The reason why Lysias put him instantly in a double set of irons appears later on. A notorious brigand chief was badly "wanted," and the official description of him, circulated in all likely places, contained something which Lysias recognized in Paul. There was accordingly the evidence of a prize, and the prisoner must be safely kept. The description would began with name and age, and would then mention shape of nose, kind of hair, and especially a scar somewhere. It this scar was on the head or face, we can guess from Acts 14. 19 (Gal. 6. 17) how Paul and the brigand had a mark in common.

35 Paul was very possibly almost unconscious after the savage beating, and unable to keep his feet as the mob surged up behind. The rapidity of his recovery reminds us of Acts 14. 20. As we might infer from his surviving all that we read in last week's lesson, Paul must have had an iron constitution; his "thorn in the flesh" and the alleged "weakness" (that is, unimposing figure) of his "bodily presence" are not in the least inconsistent with this.

36. Away with him—A vernacular phrase found in a rude papyrus letter, compare Luke 23. 18; Acts 22. 22, and in a still harsher tense John 19. 15.

3.. Dost thou konw Greek—In the official description of the brigand (see above) it would be stated that he knew no Greek. He must have come from an out-of-the-way part, for the papyri show us that very uncultured people in Egypt could write Greek.

38. The Egyptian—Josephus tells us about him—how he collected a mass of people on the Mount of Olives to see the walls of Jerusalem fall down, and how Felix attacked him, he escaping, but his people being mostly killed or wounded. Luke's independence of Josephus is well seen here. The latter brings to the Mount of Olives a horde which in one place he estimates at thirty thousand; but in another at no more than one thousand. Luke takes out into the desert four thousand practiced cut-throats. The two episodes, in the brigand chief's career are evidently distinct. The wilderness—Compare Matt. 24. 26. Assassins—In one of the chapters just referred to Josephus tells us of banditti found even in Jerusalem who went about with concealed daggers and committed murder unimpeded. The word here used—the Latin word sicarius—is derived from the word for "dagger."

39. A possible alternative punctuation (see paraphrase) connects in Cilicia with the next clause. No mean city—Tarsus was a famous seat of learning, and justified her citizens' pride in her. Citizen is emphatic: he was a full burgess, as was his father before him.

40. The daring of the man, turning to face the mob that had nearly done for him, combined perhaps with astonishment at his rapid rally from the state to which they had reduced him. A great silence—One thinks of the "great calm" in Mark 4. 39. The same God was working upon both tempests. Spake unto them in the Hebrew language—Not the old biblical language, which was extinct for spoken use, but Aramaic, which Jesus and the disciples usually employed.

GERMANY'S BRAVEST MAN.

Cannot be Silenced Despite Prison Terms and Bullets.

To mention the name of Herr Liebknecht among Germans is to bring down every kind of abuse on the politician who has been described as the "bravest man in Germany." Liebknecht is a Socialist, and has always been an implacable foe of Prussian militarism, against the dominance of which we are now fighting. Although he may not have a single supporter in the Reichstag—the German Parliament—he never hesitates to trounce the system which is bringing ruin to his country. He has been shouted down and assaulted in the Reichstag, and shot at in the streets of Berlin.

Karl Liebknecht.

Nothing, however, daunts Liebknecht, for he comes of fighting stock. His father, Wilhelm Liebknecht, fought for Bebel, the famous Socialist, almost precisely the same battle, during and after the Franco-Prussian War of 1870, and was sentenced to two years' imprisonment in a fortress for "treasonable intentions." Herr Liebknecht himself suffered confinement for 18 months in a fortress for refusing to stop what were regarded as "seditious" speeches. His imprisonment merely resulted in his being returned at the elections of 1908 to the Prussian Landtag, one of the Parliaments of the countries constituting the German Empire.

A still greater sensation was to come when, in 1912, he was elected to the Reichstag actually for the Prussian royal borough, the Potsdam constituency, where the court and military naturally constituted the greatest social forces.

An excellent speaker, with a temperament full of enthusiasm and fire, highly educated and well read, Liebknecht soon became a leader among Socialists. Although the Socialist Parliamentary group has expelled him from its supine ranks meantime, there is no doubt that Liebknecht has a tremendous following of sympathizers. These are growing stronger every day as the people recognize what he has insisted on telling them time after time, viz., that Germany is waging not a defensive, but an offensive, war, and that all the misery which has been brought to the country is the outcome of Prussian aggrandizement.

It is interesting to note that Liebknecht, like his father, is a passionate internationalist, and three years ago he visited Paris, London, and Brussels, holding forth on the necessity of combatting the machinations of militarists in every country and of preserving the world's peace.

Largest Teapot.

The largest teapot in the world was made at Shigarki, 200 miles from Tokio, Japan. It measures three feet three inches in diameter and without the handle is three feet six inches high. When the wicker handle is added the teapot is five feet six inches high.

The Use of Gossip.

"People should never gossip."

"No," replied Miss Cayenne. "And yet everybody wants to be a little bit entertaining. And so many of us can't sing or recite."

Just Let Her Go It.

Never ask a woman for her reasons. If you will only keep still and wait awhile she will give them to you.

The faster a man's gait the sooner misfortune overtakes him.

The AUTOMOBILE

No Economy to Save Lubrication.

"The car owner who takes pride in telling how he has covered 1000, 1500 or 2000 miles on a gallon of motor oil is practicing false economy," says the manager of a big Corporation. "The great mileage record he boasts of per gallon of oil may sound impressive but while such an owner is saving the price of several gallons of oil, he is setting up a wear in the working parts of the motor which will eventually cost more to replace than any amount of oil that would have been used.

"Motor oil, no matter how good, loses its lubricating qualities after being in the motor a certain length of time, especially in hot weather. It disintegrates, leaving only a remnant of what was once good motor oil, and it has no value as far as lubrication is concerned.

The wise owner will drain all the oil from the crank case of his car every 1000 miles of service, regardless of how much oil is still there at the time. He will then replace with good, fresh, clean oil. In doing this regularly he will prolong the life of his car indefinitely.

"Another place where lack of lubrication can do damage is in the rear axle and transmission. For here the action of the gears has the same effect upon grease as the action of working parts of the motor has on oil. It robs the grease in time of the lubricating qualities by the process of disintegration.

"It the owner will take care in adding fresh grease every 1500 miles—it is not necessary to replace the supply which is in the rear axle and transmission at the time—he will save many a dollar in the long run.

"It is well enough recognized that lubrication is the life of a motor car. It is a fact, too, that many owners keep enough oil and grease in their cars. But the freshness of the lubricant requires attention and is of greater importance than the quantity. Every dollar spent by the owner on proper lubrication saves ten dollars in other expenses, aside from the annoyances of poor operation and the delays due to trying to make a gallon of oil or a few pounds of grease perform their functions when they become 'pepless' from too long service."

Testing Steel's Hardness.

Machines and devices for testing the materials that go into automobiles are being constantly developed and improved. A notable advance is the new Brinell steel testing machine.

In testing a piece of steel it is placed in the machine and a small steel ball of great hardness is pressed into the piece to be tested. By the pressure exerted, which is indicate on a guage and by the dimensions of the impression made on the piece, the operator is able to make comparison with certain standard figures and arrive at the exact hardness of the steel tested.

This method of testing steel has largely superseded the old method whereby small steel balls were dropped on the test piece and the height of the rebound indicated the hardness of the steel.

SEEK TO MULTIPLY HOMES IN FRANCE

PLAN TO ENCOURAGE MARRIAGE AFTER THE WAR.

Steps Advised to Avoid Any Further Cases of Involuntary Bigamy.

Eugene Brieux, member of the Academy of France, with a view to encouraging marriage after the war for the purpose of multiplying French homes, urges the establishment throughout France of official matrimonial bureaus under the direction of the Mayors of towns and villages. He says:

"Many young men are willing to marry moneyless girls and many young girls are willing to marry poor or mutilated men, but the marriages do not occur because the men and girls do not meet. Special registers should be kept at all Mayor's offices where eligible young people sign their name and give their age and profession, so that anyone desiring to marry can find a life companion without difficulty.

Extend Legal Delays.

"Since we agree to-day that the preservation of the race is the greatest and most sacred duty, it is necessary to give all help to those inclined to build new homes."

An extension of legal delays before remarriage for widows of soldiers is being considered in order to avoid further cases of involuntary bigamy. Some legal circles advocate an extension of the legal delays until after the war for wives of mobilized soldiers. Many soldiers who have been reported as "believed dead," because they had not been heard of for a long time, have since reported as returned from Germany.

A well-known provincial editor, M. Renaude, estimates that during 1915 there were 70,000 French soldiers who as prisoners in Germany have been unable to communicate with their families in France. He declares that it is Germany's fault if soldiers reported as "believed dead" return maimed to France and find their wives remarried.

Involuntary Bigamy.
